WALTER MORRIS HART.

Berkeley, Cal., September 3.

Notes from the Capital

ALEXANDER GRAHAM BELL.

While battle-lines in the European war are doing their fighting on orders communicated by telephone from airships, it is natural that the name of Alexander Graham Bell should be on the lips of every well-read visitor to Washington, his career having been so largely associated with the transmission of the human voice by wire and with aerial navigation.

Dr. Bell is the typical Scotchman in appearance, speech, and manner. His broad face, framed in a mass of white hair which rises in a great shock above his brow and stands out around his jaws and chin like the unbroken mane of a lion, prepares you for the rattling burr that adds piquancy to whatever he says. He is a man whom you would describe as big rather than large, and the adjective applies to everything about him—his height, his shoulders, his hands, his carriage. I was going to add his voice, but that might convey a false impression: for, though his lungs are as leonine as his head, his long research in the field of vocal phenomena has cultivated in him a soft mode of speaking, with the most varied range of inflexions and an enunciation which is as clear as the stroke of a crystal clock. You are not surprised, after conversing with him, to learn that he began his career as a teacher of elocution and music, and that his first ambition was to become a famous composer.

Indeed, it was originally from his musical studies that he derived the suggestion of the telephone; for his analysis of the principles underlying differences of pitch in the human voice led to other investigations in phonetics, in the course of which he came upon the discovery of Helmholtz that vowel sounds could be reproduced by vibrating metal. The question arose at once in his mind: "If vowel sounds can be thus artificially transmitted, why not consonants also?" And with this began the methodical procession of tests which, reinforced by discoveries made by others in the same and related lines of inquiry, resulted in the telephone, and brought the remotest ends of the earth, to all intents, within speaking distance of each other. In the conquest of the air he has taken the same strides as in the enterprises more closely linked with his name. His experiments have been pretty carefully protected from public curiosity, but apparently have proceeded upon the basis of producing a burden-bearing dirigible kite rather than the cigar-shaped balloon or the mechanical bird, which have captured the world's fancy during the last few years.

Naturally, the student of phonetics became interested in the relief of deafness. His father, Alexander Melville Bell, beginning life as a professor of elocution, by degrees evolved a system of universal speech, whereby any person with the normal equipment of vocal organs, whether able to hear or not, could be taught to produce at will every variety of sound and articulation of which a human being is capable. This led directly to the theory of a visible speech—that is, the possibility of enabling one person, with fair eyesight and intelligence, to read, from the motions of the lips, tongue, teeth, and throat of another, the words and sentences which these organs are forming, regardless of whether any sound is actually uttered or not. From this, again, it was but a step to a system of audible speech by a person who is dumb, provided only that his muteness is not due to the absence of essential organs.

Alexander Graham Bell, as his father's assistant, acquired not only his mastery of his subject, but his enthusiasm as well, and ever since coming to this country in 1870 has devoted time, thought, and means most generously to the improvement of the condition of deaf mutes. He married a Miss Hubbard, who had lost both speech and hearing as the sequel to an illness of her childhood, and who became his most successful pupil. She is able to carry on a conversation by studying the face of her companion, and making audible responses which she cannot hear herself. Dr. Bell has weekly social gatherings at his house during the winter season, at which scientists, inventors, explorers, literary men, and other persons who "do things" come together to talk over whatever is new and striking in their several fields of endeavor; and one of the familiar sights on these occasions is Mrs. Bell listening to a speaker, either—if he be a distant enunciator who keeps his face turned in her direction—by reading his remarks with her eyes, or getting what he says at second hand through its silent repetition by her husband sitting at her side.

A recent philanthropic enterprise of Dr. Bell was interrupted by the outbreak of the European war and the mutual estrangement of the nations engaged in it. He has been for some years trying to induce our Government to promote an international agreement on a universal alphabet—that is, a union of all the peoples of the world in the use of one series of letters representative of sounds which shall be the same everywhere, so that any person who knows his own written language can read and write and pronounce all other written languages, not necessarily understanding them, but with the ability to convey the words to another person. A first step in this programme, of course, would be the establishment of a uniform and fixed relation of visible symbols to sounds in our English tongue, so that, for instance, "cough" will not be pronounced "cow" because "plough" is pronounced "plow." It is hoped that when the world's peace is fully restored, Dr. Bell will resume this effort towards a better understanding among all mankind. TATTLER.

Literature

A NEW LIFE OF EMERSON.

Ralph Waldo Emerson. By O. W. Firkins. Boston: Houghton Mifflin Co. $1.75 net.

Mr. Firkins is not unaware of the audacity of writing a new life of Emerson, and justifies himself by referring to the fresh material brought out in the "Journals," 1909-1914. As a matter of fact it does not appear that anything of importance for our understanding of the Concord sage has been taken from the "Journals" in print which escaped Cabot in the manuscript. Mr. Firkins might have done better to base his excuse (if any excuse were necessary) on the freshness of his own literary manner and on his high appreciation of Emerson as the philosopher of the future. There is at least the value of novelty in a biography written in the pointed, epigrammatic style of Emerson himself, and the novelty is not lessened by the addition of a subtle literary sense combined, oddly enough, with a pedantic, or perhaps better, pedagogic, meticulousness of method.

The continual use of ethical epigram, by a man whose mind works naturally in that manner, as Mr. Firkins's manifestly does, has this peculiar virtue, that it carries us immediately in the very atmosphere of the Emersonian circle. On page 69 Mr. Firkins quotes at some length Lowell's well-known characterization of the transcendental movement, and, were it not for the greater richness of Lowell's allusions and the keener edge to his sarcasm, one would pass from Mr. Firkins's narrative to his quotation with no jar of transition. And most of his arrow-like sentences, though they may scatter in their flight, come to some goal. Thus, we may point to the efficiency of the few sentences (p. 85) on Bronson Alcott, ending with the summary judgment: "Alcott was cooped up, so to speak, in his infinitudes." Emerson would have omitted the timid "so to speak," and, in his later years at least, if he had had to compress his opinion into a single sentence, would probably have been more caustic to the vapidity of that maundering Plato; but the words of our modern professor, nevertheless, have the right ring of old Concord. Sometimes, it must be confessed, our epigrammatist *se paye de paroles.* He has very early to deal with the influence of Mary Moody on the subject of his biography, and it cannot be said that he brings that cloud-wrapt figure down to the ground. Her personality, he says, "presents the same combination of vividness and blur which is found in the confused magnificence of the few published specimens of her iridescent and mazy rhetoric." The words sound well enough in themselves, but Mr. Firkins has missed his opportunity to show in this portentous woman a foretype of the loose thinking and ecstatic talking which were, unfortunately, to persist through the sturdier examples of transcendentalism and to come out as its characteristic product. He adds: "We are told that the Calvinism of her forefathers had become luminous in the white heat of her enkindling poetic imagination, and that afterwards it had been consumed and turned to ashes by the very ardor of its incandescence." Who first told us this, we do not know; but it is certainly rather a highfalutin way of stating a truth which Emerson, as appears from a quotation immediately following, was able to express in the simplest language. And we are sure that such a maze of words is a disappointing substitute for a clear explanation of the change which lies at the very heart of New England philosophy and which the reader rightly expects to have elucidated in the life of the greatest exponent of that philosophy. Yet as a whole the events of Emerson's life are related with a bustling vividness quite appropriate to the theme, and such important matters as his relation to Kant and German transcendentalism are set forth soundly and memorably, if almost too succinctly. We miss chiefly an adequate treatment of the connection of the New England awakening with the larger sweep of romanticism.

After the biography there follow a series of chapters devoted to a criticism of Emerson's literary art and an exposition of his philosophy. The various subjects here are arranged with exemplary neatness. For instance, the first of these chapters is entitled Emerson as a Prose-Writer, and is divided into sections, each with its appropriate head: Culture, Criticism, Clearness, Coherence, English, Diction, Unbendings, Hyperbole, etc., etc. Nor does the rage for division end here. Under the first section "Emerson's receptivities and opacities" are tabulated conscientiously in two columns in the fashion of a mercantile inventory. One feels almost the pedagogue in the classroom giving out his learning in digestible tablets, or the candidate for the doctor's degree industriously ticketing material for his thesis. Yet if the manner is a little too scholastic, the matter is that of a man steeped in literature and sensitive to the lightest *nuances* of style. The judgment is good, and from this exhaustive and unflinching investigation it is a pleasure to find that Emerson comes out greater in the pure technique of writing than might have been expected. Thus, in the section on Coherence, a minute comparison of two paragraphs from Macaulay brings out the sort of underlying and substantial solidarity achieved by Emerson as contrasted with the formal solidarity due to the use of connectives and other verbal articulations. Again, in the section on Criticism, after citing several aberrations of Emerson's taste, Mr. Firkins proceeds to analyze his critical leanings with a subtlety which cannot be estimated without reading the whole section. The principle of the analysis may be gathered from these three opening paragraphs:

> These judgments may be thought conclusive as to their author, and, indeed, they do peremptorily set aside his claim to *authority* in criticism. The case, however, will repay a little study.
>
> Figure to yourself a passion for literature *as such,* an intense preoccupation with spiritual ends, and an existing world-literature whose ends are for the most part mundane; a great passion crossed and confused by a fundamental misunderstanding; and the difficulties of adequate criticism on Emerson's part become clear.
>
> But if Emerson could extract good from every secular fact in life, why could he not turn the images of secular facts in literature to the same use? The answer may be put thus: the living fact may be insulated, and its spirit is, for Emerson, divine; the literary fact is a constituent of a whole, and the informing spirit is that of an author with whom one is likely to be discordant.

We shall not attempt to follow Mr. Firkins in his analysis of Emerson's philosophy. It is clear and notably penetrating and sound, though we confess to have smiled occasionally at this over-Emersonian's distress at the failure of his master to carry the liberty of thinking and acting always to its logical conclusion. We should scarcely, to refer to an earlier passage, have felt "a tinge of melancholy" over the fact that Emerson, as Overseer of Harvard, voted for compulsory attendance at chapel. The last chapter sums up Emerson's position as "a synthesis and an anticipation." His philosophy was a synthesis because in it we find, as Emerson already found in Plato, a reconciliation of "the many and the one," the everlasting flux and the motionless calm at the heart of things:

> An ample and generous recognition of this transiency and slipperiness both in the nature of things and in man's soul seems more and more a necessary ingredient in any estimate of the universe which shall satisfy the intellect of the coming man. But it seems equally true that the coming man who shall resolve our problems will never content himself with a universe a-tilt, a universe in cascade, so to speak; the craving for permanence in some form cannot be jauntily evaded. Is there any known mind which foreshadows the desired combination so clearly as Emerson's? Who has felt more profoundly the evanescence and evasiveness of things? He not only admits the fact cordially; he triumphs in the instability of the universe. In this endless novelty, this perpetual flux, he finds the authentic evidence of the divine power; as in the Gospel narrative the god is revealed by his power to tread the waves. The life of religion is proved by its transformations, and skepticism, as the agent or condition of these vitalizing changes, is its generous and beneficent support. Yet Emerson was quite as firm in his insistence on a single unalterable reality as in his refusal to believe that any aspect or estimate of that reality could be final.

The dualism that underlies Emerson's philosophy could hardly be better put, and the kind of synthesis, or reconciliation, in which Emerson floated is admirably expressed. So far we follow Mr. Firkins heartily; but we are not so entirely satisfied in his belief that this synthesis anticipates the final solution of the troublesome problems of life. After all, does not the power of religion for ma-

ture minds depend on its feeling for evil? How otherwise, in fact, shall religion meet those harder questions of experience when its aid is most needed? And in like manner does not the power of philosophy as the *dux vitæ* depend on its acquaintance with the scope and difficulties of skepticism? Both religion and philosophy would seem, therefore, to rest not only on a statement of the dualism of good and evil, knowledge and ignorance, but on a realization of the full meaning and gravity, practical and intellectual, of this dualism. Now Emerson certainly recognizes the dualism of experience, but it may be a question whether he realizes its full meaning and tremendous seriousness. He accepts it a trifle too jauntily; is reconciled to its existence with no apparent pang; is sometimes too ready to wave aside its consequences, as if a statement of the fact were an escape from its terrible perplexities. We know what Carlyle meant when he rebuked Emerson for his inability to see the hand of the devil in human life. Hence it is that Emerson often loses value for men in proportion to their maturity and experience. He is preëminently the poet of religion and philosophy for the young; but as one grows older one is inclined to turn from him, in more serious moods, to those sages who have supplemented insight with a firmer grasp of the darker lessons of history.

CURRENT FICTION.

The Research Magnificent. By H. G. Wells. New York: The Macmillan Co.

There is a striking if superficial resemblance between this book and the "Boon" volume, which, in spite of his protestations, we were attributing to Mr. Wells the other day. Boon will be recalled as a sort of hapless philosopher, groping for an ideal scheme of things, and continually rebuffed by experience. His story is lightly pieced together by one Bliss, a literary man whom Boon has appointed his executor. Here the same office is done for Benham under similar conditions, by a similar person, one White. Benham, like Boon, is a seeker, and like him dreams a dream of a future racial existence which shall supplant our little divisions of nation and class. But while Boon is a humorist, and so always half-despairing of his quest, Benham is the pure enthusiast, ready to sacrifice everything to the pursuit of his vision. He sees the hope of the race in the development and dominance of a true aristocracy, and his "research magnificent" is a quest for the formula of the aristocrat. He finds it to his own satisfaction: ". . . There is no honor or pride for a man until he refers his life to ends and purposes beyond himself. An aristocrat must be loyal. So it has ever been; but a modern aristocrat must also be lucid; there it is that one has at once the demand for kingship and the repudiation of all existing states and kings. In this manner he had come to his idea of a great world republic that must replace the little warring kingdoms of the present, to the conception of an unseen kingship ruling the whole globe, to his King Invisible, who is the Lord of Truth, and all sane loyalty." . . . "But," says White, "on one side your aristocracy means revolution. It becomes a political conspiracy." "Manifestly," Benham admits. "An open conspiracy. It denies the king upon the stamps and the flag upon the wall. It is the continual proclamation of the Republic of Mankind."

So much for the Research as a mental adventure; we have also here what we did not have in the Boon volume, the story of a man. Benham is shown in all his important human contacts. Three figures stand out among them: his mother, Prothero, his intimate friend, and Amanda, his wife. The mother is a Wellsian figure, a charming empty-headed little woman, who, in Benham's boyhood, has eloped with one man, and, being divorced on his account, has married another. The wages of sin have not been paid. Her lover has left her a fortune, and her second husband is a far better match than her first. Nor is there the social penalty. Of course, she does not understand Benham. Prothero does. Prothero, the gross Cambridge Don, with the flexible brain, and, somehow, the good heart. The chance by which Benham becomes responsible for his death is one of the ironies of the story. As for Amanda, she is even more purely Wellsian than the mother—near kin to Ann Veronica and other predecessors. After a single amour with a woman older than he, Benham has met and precipitately wed this Amanda; beautiful, passionate, and quick of wit, but shallow and worldly at heart. The moment when Benham realizes that she cannot help the Research is the moment of their separation. He leaves her in London to become another man's mistress while he fares upon the quest. For Benham the end comes as the result of a foolhardy protest against the brutality of war—a protest which takes the form of exposing his own body to the fire he wills to stop. A sublime ass—a new Quixote—such as no one could have chronicled with so affectionate and fruitful a ridicule as the author of "Mr. Polly."

Eltham House. By Mrs. Humphry Ward. New York: Hearst's International Library Co.

There has never been doubt about the sources of Mrs. Ward's novels. She has always written with a purpose; her stories have always been more or less obviously "problem" stories. The harrowing personal situation, religious, moral, or social, is her special field. In this latest instance she chooses one of the perennial situations—that of the couple who have come together by way of elopement and the divorce courts, and must meet the world thereafter on its own terms. Those terms vary with differences of place and time. One variation of the kind is really Mrs. Ward's theme. The famous story of the Hollands had been brought fresh to her mind, and she found herself wondering "what would have happened to Lord and Lady Holland if they had walked in—with their story—upon the London world of to-day—or, rather, yesterday." The question lingered, and finally took more concrete form: "Reproduce all Lord Holland's advantages and more, a hundred years later, and what could an ambitious man in a similar position do with them? Could he fight it through? And if not, how would the failure react on the woman?"

So come into being—into black and white at least—Alec Wing and his Caroline. Alec is eldest son of a peer of immense wealth and independent life. He has health, beauty, talent, and a natural power over men. His brilliant record at Oxford is expected to fulfil itself in politics. As a boy he has looked forward to winning the highest honors, and his road to them seems most promising, till he meets and appropriates Lady Caroline Marsworth. For him she presently leaves her two adored children as well as her dull husband. Marsworth divorces her, Alec marries her, and they return to London to make what they can out of life. Wing has no serious misgivings. He is used to having the world at his feet, and fancies it to be a liberated world. Even a century before, though Lady Holland had incurred the formal social stigma, Lord Holland had paid no penalty at all. How, in an age of feminism and of free speculation as to the worth of the marriage relation, should Alec Wing, with his talents, his magnetism, his father's wealth, his ambition, expect to fail? How he does fail, and how hapless Caroline pays for his failure, is the substance of the story. Eltham House, that magnificent London palace turned over to the young pair by Lord Wing, is to become a sort of centre and salon; but its triumph is a *tour de force* on Lady Caroline's part; it has no sound social basis, and, in the end, is able to effect nothing towards the career of the adored Alec, now Lord Wing. The rigid Dissenting influence in politics is too strong for him. When he fails in his attempt to buy a place in the Government, and flings off alone out of England to work off his rancor—which is so plainly in part a rancor towards Caroline—our opinion of him is merely confirmed. The chief weakness in Mrs. Ward's situation is that her male protagonist is merely an obstinate weakling. Strip him of his rank, his beauty, his wealth, and there is nothing left. To bring it out fairly, she should have shown a strong man and a strong woman in the situation. Poor Caroline does not lack elements of strength; but Mrs. Ward, after the fashion of all but the greatest novelists, cracks her up to be considerably more than she *shows* her to be. Very likely she may have had all this loveliness, and charm, and intellect: but we have to take her inventor's word for it. Yet we feel that poor Caroline, or the problem in which she is involved, deserved something better than, as it were, the quick Camilling process which conveniently and emotionally removes her from the scene.

The Prairie Wife. By Arthur Stringer. Indianapolis: The Bobbs-Merrill Co.

This is an analysis of a woman's soul, brought from the comfort and pampered existence of cosmopolitan society to hand-grips with the gaunt actuality of the bare Northwest, told with delicate, often merciless, psychology. Of plot there is next to none, but the diary-form which is used lends itself to a plasticity of character-drawing that holds the interest to the end. This sort of book is made or spoiled in the handling. It is either very good or very bad. With it all —the wide-eyed, half-eager, half-timorous self-growth of the woman-soul—there is a splendid, stirring picture of the great Northwest, the wheat country of British Columbia. On a limited canvas, and with surprisingly few strokes of his brush, Mr. Stringer manages to sketch in all the typical characters —the health-seeking Oxonian, the Scotch-Irish, the Scandinavian immigrant—the social intercourse, such as it is, the moulding of diverse types, and the brooding spell of the wide spaces.

INTERNATIONAL LAW.

The Collected Papers of John Westlake on Public International Law. Edited by L. Oppenheim. Cambridge University Press. $5.50 net.

The Relation of International Law to the Law of England and of the United States. By Cyril M. Picciotto. New York: McBride, Nast & Co. $1.75 net.

Professor Westlake has no tolerance for the idea that international law should be treated as an esoteric branch of study. On the other hand, in his introductory lecture as Whewell professor in the University of Cambridge, he declared that international law was "no more a subject for specialists than home politics are," and he invited to his lectures not only law students and those fitting themselves for diplomatic careers, but all members of the University. Every educated man, in his opinion, ought to follow writers and lecturers on this theme with intelligent appreciation, for all "ought to become interested participators in the international career and tasks which lie before the United Kingdom." Probably no one at the present time is disposed to take issue with Professor Westlake on this point. What are the settled rules of international law, applicable to the present relations of belligerent States? What are the principles to be applied to the novel problems raised by aeroplanes and submarines? What States are violating these rules and principles? What ought neutral Powers to do in the present confused situation? Such are typical questions presenting themselves over and over again to every intelligent citizen of every nation.

While none of these questions is specifically answered in the collected papers of Professor Westlake, the reader will find in them much to aid him in solving various problems presented by the great war. If he applies Professor Westlake's canons of international conduct, he will not hesitate to condemn Teutonic treatment of Belgium and Belgian towns, of the Lusitania and the Arabic, as contrary to the settled usages of international law, and in violation of the modern tendency to improvement in the laws of war. That treatment is justified only by the doctrine that national necessity shall always have precedence over humanity—a doctrine which Professor Westlake abhorred and which he believed modern states were discarding. But our author's canons will not lend themselves to partisan service. They will lead the reader to condemn the Allies' policy of commercial blockade and to question the wisdom of their contraband lists. It is true that the American reader in adopting such views would find himself condemning also former American practices.

Had Westlake been living when the present conflict began, there can be no doubt that his influence would have been thrown against resorting to commercial blockade. Nothing, he declared, had endangered British naval supremacy so much as blockades. They had produced three armed neutralities; and he prophesied that "in any war towards which two or three great maritime Powers should feel as neutrals, commercial blockades would bring down the indignation of those Powers" on Britain's head, and that the United States would not respect them. Westlake's influence might not have availed to save the Allies from their attempt to starve the Teutons, but it would have been powerful. No writer on international law has displayed a happier combination of profound knowledge, sound sense, and fascinating style than is found in these pages. There is no uncertainty either in thought or in expression. His exposition is always luminous, and he deals with controverted topics in a thoroughly judicial manner.

Professor Westlake's view that international law is a part of the law of the land is subjected to careful scrutiny by Mr. Picciotto in his Whewell Scholarship Dissertation. He inquires separately into the relations of international law to the prize law, the statutory law, and the common law of England and the United States, and reaches a conclusion quite at variance with that of Westlake. In his opinion, a rule of customary international law can be considered a part of the common law of a nation only if it has received the assent of that nation. Such a rule can be set aside at any time by an Act of Parliament. When it is so superseded, ordinary courts must ignore it and apply the statutory rule. That a prize court is similarly bound, is Mr. Picciotto's opinion, though he admits that there are judicial deliverances opposed to his view. Whether an Order in Council which is in conflict with customary international law will be enforced by a prize court at the expense of that law, he is in doubt, but believes that if the conflict is too great for reconciliation, the rule of international law will prevail. This is quite in accordance with Sir Edward Grey's note of July 31 to Ambassador Page. After quoting from a decision of Lord Stowell's that his observation and experience attest the general conformity of Orders in Council to the principles of unwritten international law, the note declares that "it is open to any citizen of the United States, whose claim is before the prize court, to contend that any Order in Council which may affect his claim is inconsistent with the principles of international law, and is therefore not binding upon the court. If the prize court declines to accept his contentions, and if, after such a decision has been upheld by the judicial committee of his Majesty's Privy Council, the Government of the United States considers that there is serious ground for holding that the decision is incorrect and infringes the rights of their citizens, it is open to them to claim that it should be subjected to review by an international tribunal."

Here is distinct recognition of the doctrine that international law, as interpreted by an international tribunal, overrules Orders in Council as interpreted by national courts. Mr. Picciotto will do well to note this declaration of the British Government in subsequent editions of his essay.

VOLUMES ON SOUTH AMERICA.

Selling Latin America: A Problem in International Salesmanship. By William E. Aughinbaugh. Boston: Small, Maynard & Co. $2 net.

A Guide to South America. By W. A. Hirst. New York: The Macmillan Co. $1.75.

The Argentine in the Twentieth Century. By Albert B. Martinez and Maurice Lewandowski. Translated by Bernard Miall from the French of the third edition. New York: Charles Scribner's Sons. $1.50 net.

Dr. Aughinbaugh wrote his book, we are told in a highly eulogistic preface by Mr. Maurice Switzer, only under protest and after the repeated urgings of his friends. His reluctance to tell what he knows about the South American market shows itself, unfortunately, in the published volume. He does not approach his subject in the first half of the book, which consists of summary descriptions of the different countries, and of which most could readily have been compiled by a competent secretary in any good public library. The remainder of the book is of much higher value. In chapters on business methods and organization, on trade regulations and commercial policy, the author gives the fruit of a varied experience as a salesman in South America, with contributions on many topics outside the field indicated by the title. Dr. Aughinbaugh is a doctor of medicine and a master of laws, a close observer, and an agreeable narrator of the incidents which his many travels have brought to his attention. Whether his book or any book of the kind, can effect a reform

in the careless methods of American exporters is doubtful. The man cited by him, who was seeking a market for snow ploughs in Brazil, is not of the kind to be diverted from his quest by any printed admonitions. Men of business, like others, learn best by personal experience. The author's catalogue of foolish and entertaining errors in the practice and policy of salesmanship shows at least how rich is the fund of experience already accumulated. To him who seriously wants to learn, the author offers much sensible and practical advice on placing orders, on packing and routing goods, on advertising, on the protection of trade-marks, on the proper methods of conforming to (or evading) vexatious commercial restrictions. The latter part of the book will interest many readers who have no thought of entering the South American market.

Hirst's "Guide," which was ready for the press a year ago, but which was delayed in publication by the outbreak of the war and the military duties falling on the author as an officer of the Yorkshire Hussars, is a welcome addition to the general guide-books on South America. The author has travelled extensively, has read widely, and has supplemented the information which he has himself acquired by much that he has obtained from consular officials. Any one who intends to make a tour in South America will certainly consult Hirst's new book, and will take it with him as a handbook, even if he does not discard Hale's "Practical Guide" and the little book published by the Royal Mail Steam Packet Company. An introductory chapter suggests plans for a tour of the Continent, discusses the expense, describes the general conditions of travel, and gives sensible advice on preparations for the trip. Ten chapters following take up the countries of South America in alphabetical order, and another chapter is interpolated on the Panama Canal, though the book does not pretend to cover Central America in general, or the West Indies. Rough sketch maps in black and white are provided for the separate countries. Each chapter begins with a general description, geographical, historical, political, and industrial, of the country to which it is devoted. The remainder of the book is arranged on the plan made familiar by the guides of Murray and Baedecker, giving the information desired by travellers under the heads of routes and towns, and closing with a list of books for reading and reference.

"The Argentine in the Twentieth Century" is a standard book on the most important of the South American countries, written by Martinez, an Under Secretary of State of the Republic, in collaboration with Lewandowski, a representative of one of the great French banks. It was published in an English translation in 1911, and the present edition appears to be merely a reissue without change; the title-page announces that it has been "revised and brought up to date," but the statistics, which form a very important part of the book, include no figures since 1909.

Notes

Hilaire Belloc's "High Lights of the French Revolution" will be published shortly by the Century Company.

Harper & Bros. announce for publication early this month William Dean Howells's "Years of My Youth" and two novels, "The Bachelors," by William Dana Orcutt, and "Jan: A Dog and a Romance," by A. J. Dawson.

Henry Holt & Co. have made arrangements to publish "The Stakes of Diplomacy," by Walter Lippman.

The Thomas Y. Crowell Co. announces for immediate publication "Woman and Home," by Orison S. Marden, and "Land Credits, the Farmer's Friend," by Dick T. Morgan.

The Macmillan Company announces the forthcoming publication of "The Kingdom of the Winding Road," by Cornelia Meigs; "The Pilgrim Kings," by Thomas Walsh; "Six French Poets," by Amy Lowell, and "Rivers to the Sea," by Sara Teasdale.

The following volumes are included in E. P. Dutton's list of forthcoming publications: "Katrinka," by Helen E. Haskell; "The Loneliness of Christ," by Robert Keable; "The Political Economy of War," by F. W. Hirst; "Eve Dorre," by Emily Viele Strother; "Unknown Russia," by Alan Lethbridge; "Simple Art Applied to Hand Work," by H. A. Rankin and F. H. Brown (in a new series entitled Practical Books).

The following list of books is announced for publication by George H. Doran Co. on October 23: "The World's Highway," by Norman Angell; "The Bronze Eagle," by Baroness Orczy; "Kings, Queens, and Pawns," by Mary Roberts Reinhart; "Ten Degrees Backward," by Ellen Thornycroft Fowler; "Vagrant Memories," by William Winter; "Jolly Jaunts with Jim," by Charles Hanson Towne; "The Folly of the Three Wise Men," by Edgar Whitaker Work.

October 16 is the date of publication of the following volumes from the press of Houghton Mifflin Co.: "The Fortunes of Garin," by Mary Johnston; "Life and Letters of John Hay," by William Roscoe Thayer; "Buddhist Art in Its Relation to Buddhist Ideals," by M. Anesaki; "A Hilltop on the Marne," by Mildred Aldrich; "The Fall of Tsing-tau," by Jefferson Jones; "More Jonathan Papers," by Elizabeth Woodbridge; "The Log of a Non-Combatant," by Horace Green; "The Normans in European History," by Charles H. Haskins, and a limited edition in the Riverside Press of Montaigne's "Essay on Friendship."

This month's publication by the house of Putnam will include: "A Rogue by Compulsion: An Affair of the Secret Service," by Victor Bridges; "The Letters of Washington Irving to Henry Brevoort, 1807-1843," edited with an introduction by George S. Hellman; "The Ethics of Confucius," with commentary by Miles Menander Dawson; "Belgium Neutral and Loyal: The War of 1914," by Emile Waxweiler; "Hermeneutic Interpretation of the Origin of the Social State of Man and the Destiny of the Adamic Race," by Fabre d'Olivet, translated by Nayán Louise Redfield; "Know Your Own Mind," by William Glover. As representative of the Cambridge University Press, the Putnams announce the publication of "An Introduction to Applied Mechanics," by Ewart S. Andrews, and "Miscellanea Evangelica (Christ's Miracles of Feeding)," by Edwin A. Abbott.

The Japanese Alps, a little known part of the country, where village life has remained unchanged for a thousand years, are described by the Rev. W. Weston in the *Geographical Journal* for September. Much light is thrown upon the life of the pygmies of Central African forests by Mr. C. Christy. The gradual development of the instrumental side of geographical science, beginning with the compass, is admirably shown by Sir Clements R. Markham. Among other things, he proved how groundless is the claim, made as recently as at Lisbon in 1907 by the Kaiser himself, that Portuguese discoveries could not have been made without the aid of German science.

Mr. Owen Wister's little book, "The Pentecost of Calamity" (Macmillan; 50 cents), is an eloquent presentation of the author's reflections on the war. Like most bits of eloquence, it is persuasive through the skilful suggestion of mood rather than by force of argument. The author manages to convey to his reader very vividly three impressions: admiration for the peaceful and well-ordered Germany of ante-belium days, detestation of Germany's long-prepared and malignant assault on the democratic nations of western Europe, sorrow over the moral failure of America in not protesting officially against the invasion of Belgium. In Mr. Wister's opinion, the world is now so unified that an attack on liberty in Europe is an attack on American freedom. The guilt of Germany is assumed, as if it were too gross and palpable for debate. The only form of argument used is to convict the Germans out of their own mouths. The climax of naïve self-betrayal is reached in the remark of the German Ambassador as he was being escorted away from England: "My future is broken. I was sent to watch England and tell my Emperor the right moment for him to strike, when England's internal disturbances would make it impossible for her to fight us. I told him the moment had come." If this startling confession, which Mr. Wister attributes to Prince Lichnowsky on page 93, is authentic, it deserves to be better known.

A former Chaplain to the Forces, the Rev. E. J. Hardy, has published a collection of anecdotes of the British troops in Flanders, under the title "The British Soldier: His Courage and Humor" (London: Fisher Unwin; 3s. 6d. net). The stories, of which there is an infinite variety, are culled from a number of different sources, the note books of soldiers and their letters home, the official reports, the descriptions of newspaper correspondents at the front—or as near to it as newspaper correspondents have been allowed to come—but the chief merit of the volume, as the author modestly claims for it, is as a compilation of extracts from the letters of Mr. Thomas Atkins himself. We are grateful to the author for selecting with a sparing hand passages descriptive of the horrors of the present struggle. These we are sated

with, and it is a relief to find them in this volume only as a rule in connection with some deed of simple courage or to point the contrast in an anecdote illustrative of the humor of the British soldier. That quality is happily unfailing and finds illustration on most of Mr. Hardy's pages. The following strikes us as rather typical: "He was a wounded soldier who was travelling in a train. At a point on the line where it ran parallel with the road he saw a brand-new Territorial battalion marching up to the front. He stuck his bandaged head out of the door and yelled, 'Are you dahn'earted?' The Terriers, from the colonel to the smallest drummer, shouted, 'No-o-oh!' The wounded man replied, 'Well, you —— soon will be when you get in those trenches.'"

Longmans, Green & Co. have done well to issue in their Pocket Library a new edition of Prof. J. W. Mackail's felicitous prose translations of Virgil's Eclogues and Georgics. For the present edition the translation has been modified "so far as was necessary to bring it into accordance with what at present may be regarded as the standard text of Virgil, that of Sir A. Hirtzel in the Oxford Classical Texts." No commendation is necessary of Professor Mackail's graceful translations which have already served as patterns of their art for many generations of students and which, in the present inexpensive and convenient format, will be appreciated by readers, whether Latinists or not, who love Virgil and the lore of the soil.

Among the extensive Muriana, ready or projected, is "Letters to a Friend" (Houghton Mifflin; $3 net), consisting of the letters written to Mrs. Ezra S. Carr—"dear Mrs. Mother Carr"—in the years 1866-1879. These letters, scant and often trifling as they are, hardly merited publication in a separate volume, especially since the relatively few significant passages could easily have been made public in the authorized biography. It must be said, however, that this little book, redolent of Muir's astonishingly energetic and enthusiastic personality, affords very pleasant entertainment to a languid reader; and of course friends of Muir will rejoice at its publication. The letters were written "in the third heaven of the Sierras" that this incurable mountaineer loved so passionately, mainly in the years when he was "observing ice" there. "In dreams I read blurred sheets of glacial writing, or follow lines of cleavage, or struggle with the difficulties of some extraordinary rock-form." An interesting letter, dated October 8, 1872, tells of his finding "a living glacier." Always he is rapturous in his praise of the beauties of nature, beauties "filled with warm God," "so equal in glory, so ocean-like, that to choose one place above another is like drawing dividing lines in the sky." "I will fuse in spirit skies." Characteristic of this indomitable Scot is the moonlight night among the spouts of Upper Yosemite Falls, in the course of which he is struck with a mass of water. "Suddenly I was darkened; down came a section of the outside tissue composed of spent comets. I crouched low, holding my breath, and, anchored to some angular flakes of rocks, took my baptism with moderately good faith. When I dared to look up after the swaying column admitted light, I pounced behind a piece of ice which was wedged tight in the wall, and I no longer feared being washed off." The volume is very attractively printed.

According to the late Professor Bartoli, "il Cristianesimo fece il Medioevo"; and, if there is some exaggeration in the statement, there is more of truth. One of the chief causes which conduced to the dissolution of the Empire was, as Mr. Cotterill admits, the marvellous growth and final triumph of Christianity, and it can hardly be denied that the attitude of the early church towards the old learning was eminently calculated to reduce mankind to a condition of intellectual imbecility. The desire of the Kingdom of Heaven had become the master motive of the Christian Fathers, and, if their intellectual processes were still pagan, pagan learning was frowned upon because the knowledge which would save and perfect was the only knowledge worth having. In the Saturnian age of ignorance which resulted, the statement of St. Paul that "God hath made foolish the wisdom of this world" was regarded for all practical purposes as a dogma of the faith, until, in the tenth century, an Apostolic Legate was not ashamed to declare in the name of the Church that, from the beginning, God had chosen the simple and unlearned to confound the wisdom of the world, and that the vicars of St. Peter and their disciples "needed not to be fattened at the trough of Plato or Virgil or Terence or any other such philosophic swine." The universe narrowed and closed upon the mediæval man till the seen became infinitely little, the unseen infinitely great, and both of them equally real and certain. It is with the history of Italy during this period of Cimmerian night that Mr. H. B. Cotterill deals in his "Mediæval Italy During a Thousand Years (305-1313)" (London: Harrap; 7s. 6d. net). The book belongs to the Great Nations series to which many capable authorities are contributing. It has already produced "Ancient Greece," "Republican Rome," and "Wales," and should form a valuable addition to the libraries of those readers who prefer to absorb their knowledge in a popular form. Authorities are rarely cited, but, judging from Mr. Cotterill's contribution, the general accuracy of the series leaves little to be desired. Only in the two chapters which he devotes to the Italian Republics does he fail to maintain a high level of excellence. The subject is, of course, a difficult one, but materials exist for a far more satisfactory account of the communes than Mr. Cotterill has been able to give us.

The volume is divided into five parts, and to each of these parts is prefixed a short account of the political events of the period under consideration. These "historical outlines," together with various tables and lists, enable the reader to arrange in chronological order the contents of the rest of the chapters, in which the author sketches with a freer hand certain interesting episodes and personalities. These, with the addition of subsidiary chapters, dealing with architecture, art, religion, and literature, make up a really useful book which, if written primarily for the "general reader," will be hardly less welcome to the serious student. Mr. Cotterill is to be congratulated on a very meritorious piece of work. In conclusion, we venture to call his attention to a passage on page 467, line 18. Personally, the reviewer is of opinion that "S. Miniato" should there be substituted for "Pisa," since the fact that Pier della Vigna committed suicide in S. Miniato seems to him to have been definitely established by Prof. G. Rondoni in his learned article in the *Rivista Stor. It.*, vol v. (1888), pp. 38 ff: "La rocca di S. Miniato al Tedesco e la morte di P. d. V." However, the earlier authorities are undoubtedly with Mr. Cotterill, and, as a student of Dante of over forty years' standing, his opinion is worthy of every consideration.

Mark Rutherford's "Last Pages from a Journal," edited by his wife (Oxford University Press), is a worthy supplement to the reflections, often so exquisitely written and so subtly philosophic, which he himself chose for the "Pages from a Journal" and "More Pages from a Journal." Mrs. White confesses to having selected from his notebooks with a sparing hand, inasmuch as her husband had taken great pains in his earlier volumes to reshape his intimate jottings for the press, and to eradicate from them their personal element. It is to be wished that she had been more liberal, for the peculiar charm of this posthumous volume is exactly in its revelation of Mark Rutherford's musing but robust, sanguine but self-controlled, temperament. "Never try to say anything remarkable," runs one entry: "it is sure to be wrong"—and this quietness characterizes all his utterances. But many of the notes let us into the heart of a man who was at bottom a radical, checked by sober reflection and sobering experience, a believer in moral ideas but a hater of the worn dogmas that clothe them, a meliorist but one who knew how slowly must come enduring reforms. One side of his nature is expressed in a note made late in life: "The public evils which weigh upon us most heavily are so formless, so universally penetrating, that it seems hopeless to combat them. Luther had a definite foe. He believed that if he could overthrow the Papacy the world would be regenerated. Happy prophet! What can we do against omnipresent dishonesty, moral skepticism, and modern political methods?" But the very next entry exhibits his sympathy for mercurial temperaments, remarking that to some people the world is never fixed, and "the sky, fields, human beings, philosophy, religion, are fluent and consequently always new: this temper has its delights and its glory." And the succeeding page shows his reasoned faith in the possibilities of change. "We should always be on the watch to see if the common course of life cannot be improved. Custom blinds us to such a degree that we go on day after day doing the stupidest things, though the right way is close at hand." Most of the reflections, however, are of an abstractly ethical or philosophic cast. We learn of his belief that in our time religion grows from morals rather than *vice versa*, springing of itself from a character pure and healthy; we see his contempt for people whose "principles are chucked into them by chance," but who stand by them obstinately; and his emphasis on the social aspect of life comes to the fore in such a declaration as that no view is worth a happy hour with a friend, or is compensation for a drop of bile in the wrong place.

The volume is rounded by a number of essays and narrative sketches, either written during Mark Rutherford's last years or then revised. The essays are in general literary; they show no particular acuteness, but they reveal Mark Rutherford's special liking for a number of authors—notably for the writings of Milton and Wordsworth, and for the personalities of Johnson and Bunyan. His

narratives are of a piece with the chronicles of Tanner's Lane, and, while not striking in any creative way, have the modest veracity and thoughtful characterization of his novels. The impression of monotony given by his longer pieces of fiction is not noticeable in them. One autobiographical fragment of some note is the paper entitled "George Eliot as I Knew Her."

No more interesting or dramatic story of railway building is to be found anywhere than that of China's six thousand miles of line, constructed in an atmosphere of diplomatic intrigue that has displayed at its worst the selfishness and greed of the predatory nations. We do not readily associate the railway with this land of mystery, in which the principal means of transportation of passengers are "the sedan chair, the mule litter, the cart, horses, mules, and donkeys," and of commodities, "barrows, pack horses, mules, donkeys, camels, and for short distances oxen." It does not surprise us to learn from "Railway Problems in China," by Mongton Chih-Hsu (Longmans; $1.50), that when the first railway was completed in 1876, with a two-and-one-half-foot gauge, and a locomotive was put on the rails, contrary to an agreement that only animals should be used as motive power, vigorous protests were made by the imperilled community. When a laborer was actually run over and killed, the concession was cancelled and the rails and the rolling stock were shipped to the Island of Formosa.

Up to the war with Japan in 1894 little was accomplished, although modern transportation as an institution was officially recognized by the Government in 1884, when, in its war with France, it became convinced of the military value of the railway. But with the Japanese victory ten years later, and the necessity of raising money by loans to satisfy the Japanese indemnity, there began that disgraceful exploitation of China's resources which has as yet no ending. Before this, no railway concession had been granted to a foreigner. From that time on, for the next ten years, there was a series of humiliating bargains, in which concessions, spheres of influence, and the alienation of sovereign powers were the usual terms. A railway loan was a political problem involving all the intricacies of international diplomacy. It is no wonder that a Boxer rebellion resulted. Beginning with the Russo-Japanese war and extending to the present time, there are evident a stirring of native enterprise and a determination that the Government shall exercise greater control over foreign loans. A distinct movement towards Government ownership and operation is at work, but its realization is hampered by lack of funds and by conflicts of jurisdiction between the provincial and the central authorities. Dr. Hsu has told his story vividly and well, giving his main attention to the international situation, but describing in detail the various railway undertakings, completed and projected. He finds China's greatest menace in the aggressive policy of Russia and of Japan. Apparently China's only real friend in whom she has entire confidence is the United States. This monograph should be read by those who would inform themselves on the various methods of political exploitation, masquerading in the pious garb of "commercial expansion." As railway projects, the lines of China can have but little interest. This is evident when we consider that China, with nearly twice our area and over four times our population, has a railway mileage which, all told, is only about one-fortieth of our own. The commercial surface has as yet scarcely been scratched.

Popular studies of the Græco-Roman world in the time of Christ appear to be in great demand. One of the most recent of them, emanating from the pen of Prof. S. Angus, of the University of Sydney, is entitled "The Environment of Early Christianity" (Scribner; 75 cents net), and forms the latest volume in the excellent series known as Studies in Theology. The purpose of the book is "to survey the ancient world in which Christianity was first planted, and to present a brief account of the genius and achievements of the three great peoples to whom the Gospel was first offered." In keeping with this purpose, the author discusses the new era which began with Alexander the Great, the social, moral, and religious conditions of the Græco-Roman period, the characteristics of the Jew, the Greek, and the Roman, closing with an estimate of Hellenistic Greek—a subject in which the author is perfectly at home—and an intimation that "Christianity is the synthesis of and the authority for the truths proclaimed by all systems." A serviceable bibliography is appended. Dr. Angus has not only read his sources, but has reflected upon them, with the result that the reader has at his disposal an uncommonly good book.

Two recent publications of the University of Chicago Press, namely, "The Bixby Gospels" and "The Freer Gospels," contain collations by Prof. E. J. Goodspeed of two Greek manuscripts of the Gospels which are in the possession, respectively, of Mr. W. K. Bixby, of St. Louis, and Mr. C. L. Freer, of Detroit. The Freer manuscript has already been made accessible to scholars by Prof. H. A. Sanders, who published both a facsimile edition of this fifth- or fourth-century uncial and a collation of its text based on the Oxford (1880) edition of the Textus Receptus. The independent collation of Dr. Goodspeed is made on the basis of the text of Westcott and Hort. The Bixby manuscript, a cursive probably of the eleventh century, is less important, its text being in general "very close to that of Stephanus." The collation is based on the Lloyd-Sanday edition of the Received Text.

In "Nelson's Legacy" (Scribner; $4.50), Frank Danby gives a well-considered account of the extraordinary career of the charming adventuress who was the mother of children by Capt. Willett Payne, by Sir Henry Featherstonehaugh, and by Lord Nelson, and who is known to history as Lady Hamilton. The author knows how to make up appropriate imaginary conversations which accord well with what is known from authentic sources of the character of Lady Hamilton and her companions. With commendable moderation details are omitted which might offend the susceptibilities of those to whom truth is less grateful than delicacy. Lady Hamilton's life, as it is told here, is something in the nature of a homily upon the evanescent nature of fortune won by means inconsistent with virtue. The charm which she exercised over Romney is fitly recalled by the reproduction of several of his portraits of her.

Science

SURGERY IN WAR.

A Surgeon in Belgium. By H. S. Souttar, Assistant Surgeon, West London Hospital, late Surgeon-in-Chief, Belgium Field Hospital. Illustrated. New York: Longmans, Green & Co. $2.40 net.

This book is a vivid portrayal of the effect of invasion on the cities, villages, and the inhabitants of Belgium. It gives the impression of having been written at white heat. While of tragic interest to the general reader, it should be especially recommended to those American surgeons who contemplate service in a base or field hospital:

> A surgeon is required who can deal with desperate emergencies and pull impossible cases out of the fire—a young man who does not believe in the impossible, and who can adapt himself to conditions of work that would make an older man shudder, and a man who will never believe what he is told until he has seen it for himself. For the conditions of work at the front are utterly different from those of civil practice, and it is impossible for any man after many years of regular routine to adapt himself to such changed environment. The long experience of the older man will be of far more use at the base, and he will have plenty of difficulties to contend with there.
>
> I have often been told that there is no opening for skilled surgery at the front. In my opinion there is room for the highest skill that the profession can produce.

Dr. Souttar, like every other surgeon who has been on duty in the war zone, reports that the battle with infection is the fiercest battle that is being waged by the medical men at the front. He adds that his most efficient treatment of infected wounds was exposure to the air; the open-air treatment being usually attended by improvement not only of the lesion, but in the general condition of the patient. The most difficult cases were fractured thighs, infected as they were invariably, and complicated by the loss of bone, deleted by the high-power missile which caused the wound. He used Lane's method of fixation of simple fractures, replacing the missing bones by long steel plates attached to the remaining bones by steel screws. He states that, in his opinion, it is folly to remove a bullet from any wound unless it interferes with some important structure. Spinal anæsthesia was employed for abdominal cases, and chloroform as the general inhalation anæsthetic, the latter being well borne by the abstemious Belgians.

Lack of professional jealousy, eager helpfulness on the part of all classes, a general exemplification of *noblesse oblige*, are among the good products of war—a tale which is told in each chapter of this book.

The tremendous labors which confront the surgeon in Belgian hospitals, and we may well believe practically everywhere where the fighting is intense, are demonstrated by the fact that in five weeks at Furnes, as Dr.

Souttar reports, one thousand cases were cared for in one hundred beds.

As to the future of Belgium, Dr. Souttar says:

The problem of the children of Belgium will be one of the most serious to be faced when the war is over. There will be a great number of orphans, while many more will be simply lost. They must not be adopted in England, for to them Belgium will look for her future population. There could be few finer ways in which we could show our gratitude to the people of Belgium than by establishing colonies over there where they could be brought up in their own country, to be its future citizens. It would form a bond between the two countries such as no treaty could ever establish, and Belgium would never forget the country which had been foster-mother to her children.

One suggestion made by Dr. Souttar might well be considered by every large city—the need for a base hospital to which patients could be transferred for convalescence after their first treatment "at the front"—that is, in the wards of the city hospital. "I wonder," he says, "how long it will be before each of the great London hospitals has its own base down in the country, with its own motor ambulances and its own ambulance coaches to carry its patients in comfort by rail to surroundings where they could recover as can never be possible in the middle of the London slums. And as to getting the staff to look after it, there would probably be a waiting-list for the week-ends!"

Dr. Souttar has drawn conclusions from his experiences "as a surgeon, as a Briton, and as I hope a civilized man." We have quoted some of his conclusions in two of these capacities; it would not be fair, therefore, to close the book without the concluding paragraph, which seems to exemplify his point of view as a patriotic Briton:

This war is not of our choosing, and we shall never ask for peace. The sword has been thrust into our hands by a power beyond our own to defend from a relentless foe the flag which has been handed down to us unsullied through the ages, and to preserve for the world the freedom which is the proudest birthright of our race. When it is sheathed, the freedom of the world from the tyranny of man will have been secured.

Prof. William Watson, secretary of the American Academy of Arts and Sciences since 1884, and an authority on technical education, who died on September 30, was born in Nantucket, Mass., January 19, 1834, the son of William and Mary Macy Watson. He graduated from the engineering department of Harvard in 1857, and then became a member of the Harvard faculty as instructor in differential and integral calculus at the Scientific School, where he remained until 1859. After studying at the University of Jena, where he received the degree of Ph.D., he went to Paris and took a course at the Ecole Nationale des Ponts et Chaussées. Returning to this country, he lectured at Harvard from 1863 to 1864. During his stay in Europe he collected information on technical education which was made the basis of a scheme of organization of the Massachusetts Institute of Technology, in which he was professor of mechanical engineering and descriptive geometry from 1865 to 1873. In that year Professor Watson was United States Commissioner to the Vienna Exposition, and in 1878 he was a member of the international jury of the Paris Exposition. The same year he was elected honorary president of the Paris Congress of Architects and vice-president of the International Congress of Hygiene. He was also honorary president of the engineering section of the French Association for the Advancement of Science in 1878, 1881, 1883, and 1889, and in the last year he served also as vice-president of the International Congress of Construction. He was secretary of the World's Columbian Water Commerce Congress in 1893. Professor Watson was a member of many American and foreign scientific societies, and was the author of a number of scientific and mathematical works.

Drama and Music

MODERN VIENNA.

Three Plays by Arthur Schnitzler. New York: Mitchell Kennerley. $1.50 net.

The three plays by Arthur Schnitzler, "The Lonely Way," "Intermezzo," and "The Countess Mizzie," which constitute a recent volume in the Modern Drama series, edited by Edwin Björkman, have qualities which make them well worth the reading. The English translation, though somewhat awkward and artificial in places, reflects enough of the spirit and manner of the original to show the uncommon literary merit of the dialogue, the keen sense of characterization possessed by the author, and his intimate acquaintance with that particular phase of modern society which he so minutely, skilfully, and often brilliantly depicts. In an interesting but not very judicious preface Mr. Björkman intimates that the true value of Schnitzler's art can only be fully appreciated by those conversant with the atmosphere and spirit of modern Vienna. That is as it may be. Certainly the personages introduced by the dramatist bear all the external attributes of veracity. They act and talk naturally, in accordance with their presumed stations, and frequently with a pleasant disregard of what are ordinarily supposed to be theatrical necessities. To this extent they are realistic, but they are selected types—of a kind to be found in all metropolitan communities, but not specially characteristic of them—and, in the aggregate, form eccentric groups which cannot be accepted as fairly representative of life in its broader and general aspects. The philosophy which most of them follow is abominably selfish, shallow, immoral, and materialistic, and although it is possible to enjoy and admire the naturalness, veracity, variety, and imaginativeness of their discourse, it is difficult to feel much concern in their fate. Dramatically, the plays are weak, not so much because they are deficient in plot or action, as because there is so little in them to excite honest human interest.

"The Lonely Way" is infinitely the finest work of the three. In many ways it is a masterly composition and, from one point of view, it enforces a potent and tragic lesson. Actually, the play is a tragedy, although written mainly in the mood of comedy, of which the illustration, if not the theme, is the emptiness and hopeless loneliness of lives devoted wholly to self-indulgence, without regard to the welfare or sufferings of others. Both the principal characters, Julian Fichtner, the artist, and Stephan von Sala, the dilettante poet and explorer, are egoists of the completest kind. Prosperous, accomplished, popular, both have recognized in self-gratification the ruling principle of their existence. The former sacrificed love, faith, and honor to his artistic ambition and passion for freedom, the other abjured every tie of love or friendship rather than compromise the irresponsible liberty he enjoyed. In purchasing their own exemption from care, both brought disgrace and sufferings to others, and, in the end, found themselves utterly alone, barred from the human sympathy and communion which they had consistently denied. Fichtner, in middle age, yearning for the love of an illegitimate son, disgracefully foisted upon an unconscious foster-father, is bluntly told by the youth that he has forfeited all paternal rights and esteem, while Sala, after coolly proposing concubinage to a woman (daughter of a trusting friend) who has confessed her love, commits suicide when he hears that she has drowned herself. The two men are finely and consistently drawn—each is a distinct, vital, and brilliant study—and logically and fitly reap the crop of their own sowing. They might supply the backbone of a very strong sociological drama. But they are intellectual fictions rather than human beings, for all their external verity, and they move among personages who belong in the same category. Professor Wegrat, who confides utterly in the wife who has grossly deceived him, and ignorantly accepts as his own the child of his intimate friend, is the most human of the lot; but even in him the indifference to everything but his scholastic duties is an unsympathetic trait. In behalf of the wife there is nothing, or very little, to be said in the way of excuse or exoneration. The dreamy love-sick daughter is an abnormal creature, invented for the part she is to play. Neatly as the puppets move in their appointed grooves, their very assemblage in one group suggests their invention for a special purpose, and, for all their realism, prevents their acceptance as living realities or true examples of normal conditions. Nowhere is there any hint that they are exhibited with moral or satirical intent. They are presented as actualities fairly representative of the daily human comedy in Vienna. A more reasonable assumption is that they were conceived in a fit of materialistic pessimism. That

there is a measure of truth in the fiction and a sound moral for those capable of extracting it, is indisputable, but the prevailing spirit is one of hard, glittering, intellectual cynicism, altogether unwholesome and uninspiring.

"Intermezzo," much lighter in substance and quality than "The Lonely Way," is an exceedingly clever study of the artistic temperament, in which morality plays no part. It is exaggerated, but of its essential verity, as a bit of possible experience in stage life, nobody familiar with the subject would have much doubt. Some of the psychology, especially in the case of the woman, may be open to question, but the whole piece is brilliantly written, contains a number of effective situations, and shows an intimate acquaintance not only with the conditions existing in the musical world, but with human nature in general. It is marked by a pervasive cynicism, but is by no means destitute of genuine emotion. Of this latter quality there is scarcely any trace in "The Countess Mizzie," in which cynicism reigns supreme. In this one-act play the heroine, a supposed spinster of nearly forty, carrying on an intrigue with her music teacher, is suddenly informed by Prince Egon, an old lover, now a widower, that he has reared and adopted their illegitimate son, whom she had supposed to be dead. She receives the youth without the least surprise or emotion, summarily dismisses her professor (of whom the Prince knows nothing) and has apparently made up her mind to marry her original seducer, and play the part of stepmother, when the curtain falls. Incidentally she gives a hearty welcome to her father's mistress, who is about to marry, and thanks her for the kindness she has shown to her parent. The sole merit of the story lies in the manner of its relation. In all three plays the characters speak and act as if totally unconscious of the finer instincts and principles upon which the foundations of any civilized society must rest. With scarcely an exception, they personify an immoral selfishness thinly disguised by a veneer of modern culture. Such drama, however clever, is not precious. The more brilliant it is, indeed, the more pernicious it is likely to prove. J. RANKEN TOWSE.

"THE NEW YORK IDEA."

Miss Grace George, who last week initiated her programme of a repertory company at the Playhouse, was wise in her first choice of play. Mr. Langdon Mitchell's "The New York Idea," in which, as our readers will remember, Mrs. Fiske appeared nine years ago, has sparkle and depends for its success largely upon the acting. This furnishes a combination with which any competent company might well be content. The piece is not farce, which puts supreme emphasis upon sheer situation; it is farce comedy of the sort which allows ample opportunity for the depiction of manners. When the divorced Mrs. Karslake, by her unconventionality, sets on edge the household of her divorced fiancé, Judge Philip Phillimore, the fun is got not so much from thought of the disarrangement caused in a solid family that regularly reads the *Evening Post*, as from watching its various effects upon individual members. This is manifestly a comedy of manners, and though artificial, and thus, strictly speaking, incredible, is scarcely more so than certain dashing dramas of the seventeenth and eighteenth centuries. Indeed, as the play was presented by Miss George and her company there was a suggestion of luxurious make-believe.

The New York "idea," at the hands of Mr. Mitchell, is, of course, the easy road to divorce upon which fashionable society is supposed to tread by preference. Only, in the particular instance which provides the main situation, the divorce is premature, since both parties to it, as it transpires, have continued to love each other all the while, even though the wife, having decided to entrust herself to a "second sober choice," just escapes marrying another. The author has preferred to treat this situation briskly instead of attempting a subtle psychological study of unwitting love, though he naturally stresses the theme in the last act, when the lovers are brought together. On the whole, the play is a clever adaptation to American conditions of a kind of play which is as old as Wycherley and on occasion as brilliant as "She Stoops to Conquer."

The level of acting in this company was surprisingly even. Miss George gave a sound performance in the part of Cynthia Karslake; she was free from the mannerisms which have spoiled much otherwise skilful acting of late, and she brought out in rich measure the tantalizing charm of the author's conception. It was only towards the close of the final act—and for this the author was largely to blame—that the spell of her performance was broken. As Philip, Lumsden Hare had a rôle for which he was well fitted—a rôle in which a dignified appearance counts for quite as much as acting. Besides these two, the company includes Conway Tearle, Ernest Lawford, Mary Nash, and Albert Reed, all of whom deserve commendation. F.

"THE PRINCESS PAT."

Hopes of a revival of the almost lost art of light opera, flattered last year by "The Lilac Domino," are further raised by the production at the Cort Theatre of "The Princess Pat." Victor Herbert's music is pleasing, full of color, and cleverly orchestrated; the book of Henry Blossom is not to be highly commended for any sparkling wit, but at least the story, though ancient, which is no drawback, is coherent and clearly told; the lyrics are not without some bearing on the plot, are occasionally clever, and are written in accordance with the elementary rules of prosody. A Neapolitan love song and a love duet in the second act and an Irish song in the third are musically so much above the average of the so-called light opera of Broadway that one is tempted by them, in the enthusiasm of relief, to exaggerate the merits of the production as a whole.

"The Princess Pat" is not by any means Gilbert and Sullivan come back to delight the world, but it differs from legitimate comic opera not in kind, as do most musical productions, but only in degree. Even that difference is minimized, so far as is possible, by the selection of the best cast that has been gathered together for a musical play in many seasons. Miss Eleanor Painter, who made a striking success last year in "The Lilac Domino," may justly be regarded as the hope of American light opera. Her voice, not strong, but perfectly trained and of delightful timbre, ideally meets the requirements of this type of production, and in addition she is a clever actress, is exceedingly pretty, and dances gracefully. In her acting this year the present critic seemed to notice, with regret, a hint of the sophistication of the popular prima donna replacing the absolute simplicity and lack of self-consciousness which was so delightful a feature of her performance in "The Lilac Domino" last season. Miss Eva Fallon, who played an important part on extremely short notice, gave a performance that was a good deal more than merely creditable. In Joseph R. Lertora, an American Italian, the management has found an operatic hero who not only possesses a high baritone voice of unusual quality, but knows how to act and makes a manly lover. The comedy is distributed among a number of parts. Alexander Clark, as Si Perkins, plays the rôle of a village sheriff in the manner that convention attributes to such a character. Al Shean is amusing as Anthony Schmalz, a *nouveau riche* of pronounced German origin, who, in alluding to an Italian rival, remarks that he hates "these foreigners." The genuine comedian of the play is, however, Sam B. Hardy, who, in the part of an adventurer, is constantly entertaining and obtains his effects quietly and by means of entirely legitimate comedy. To Mr. Hardy's performance may be attributed a good deal of the success of the piece, which is beyond comparison the best comic opera seen in New York this season, and is likely so to continue. S. W.

Mrs. W. K. Clifford is a clever writer, and she has put some excellent literary work into her three-act play, "A Woman Alone" (Scribner). This is a revised and amplified version of the piece which had some experimental performances in London some time ago. The theme, as the title implies, is the rights of women and the relations of the sexes, and the two sides of the question are argued, with no little dialectical skill, by the husband and wife, who are protagonists. The moral enforced is that in the long run nature is likely to prove more potent than theories or argument. As drama the parable would have been much more convincing if the contestants had been of less antipodal types. Each, of course, in his or her respective ways, is a paragon, and both are madly in love with each other. Richard Bowden, the husband, is an intellectual conservative, a shrewd observer and close student, with a hatred of publicity and all 'isms, a bit of a misanthrope, and a profound believer in the old-fashioned woman, the goddess of the home and the mother of good men. Blanche, his wife, with whom he fell in love at first sight, is a brilliant creature, raised in Vienna, amid the fine discussions of literary, artistic, and political salons, who entertains the most advanced ideas concerning woman's place in the activities of the world. She starts a salon in London, fills it with politicians, writers, artists, actors, visionaries—the whole "ambubaiarum collegia"—and drives her retiring, contemplative husband almost frantic with her continual exhortations to him to do something or

be somebody. A serious quarrel (an admirably written scene) ensues when he insists upon her leading a life more in accordance with his ideas, and he finally decides to leave her —without any legal form of separation—to go her own way, while he goes his. For a year or two, both loving, they remain apart, he writing a great book, and she striving to fill the void in her heart by engaging in all sorts of unproductive activities. But presently her old admirers and flatterers find a new idol. She grows lonely, and the sight of the happiness of a friend, an exultant young wife and mother, makes her utterly miserable. So she begs her husband to take her back on any terms, and he, loving her more than ever, and ready to grant her wider liberty, is only too glad to fold her again in his arms. The story is very well told, but is too evidently devised for the support of a particular thesis to carry much significance with it. Both consistency and probability are severely strained in the original mutual fascination of the couple, their quarrel, their conduct during separation, and their blissful reunion. The literary quality of the play, however, is of a decidedly superior order, and few persons would dispute the truth of the general proposition that, for the sake of true love, women, and men also, would willingly sacrifice much. But then, on the other hand, true love does not demand sacrifices, it makes them.

Among the musical entertainments to be given this season under the auspices of the Brooklyn Institute of Arts and Sciences are five concerts by the Boston Symphony Orchestra; five by the New York Symphony Orchestra; three chamber-music concerts by the Kneisel Quartet; song recitals by Schumann-Heink, Kitty Cheatham, David Bispham, Paul Althouse, George Harris, Julia Culp, Melba; violin and piano recitals by Kreisler, Elman, Spalding, Josef Hofmann, Percy Grainger, Mme. Laginska, and Ernest Schelling.

The genuine Japanese Madama Butterfly, Tamaki Minra, who appeared successfully in London in Puccini's opera not long ago, made her American début last week in Chicago. She will also be heard in New York and Boston as a member of the Boston Opera Company.

Among the soloists engaged to appear in Boston with its Symphony Orchestra are Farrar, Melba, Paderewski, Kreisler, Rosenthal, Harold Bauer, Ruth Deyo, and Ernest Schelling. The manager of these concerts, Mr. Charles A. Ellis, announces that after this season subscription tickets will not be sold at auction, subscribers being allowed to retain their seats from year to year, as is the case with other orchestral organizations.

New works by American composers, including Walter Damrosch himself, are to be a prominent feature of the New York Symphony Society's concerts to be given this season in Aeolian Hall, under his direction. The novelties of Damrosch will be selections from his incidental music to "Medea" and "Iphigenia in Aulis," which he composed for the performances of those Greek plays at the University of California. The other American composers represented are John Alden Carpenter, Victor Kolar, David Stanley Smith, and Daniel Gregory Mason.

The seventy-fourth season of the Philharmonic Society of New York opens in Carnegie Hall on Thursday evening, October 28; the next day marks the first of the Society's regular Friday afternoon series. The Philharmonic announces, as usual, twelve Thursday evenings, sixteen Friday afternoons, four Saturday evenings, and twelve Sunday afternoons in Carnegie Hall, and two concerts for young people in Aeolian Hall. A Bach-Beethoven Festival has been arranged for the month of January, at which the Philharmonic will be assisted by the Oratorio Society of New York, Louis Koemmenich, conductor. The two organizations will coöperate in productions of the Bach "Magnificat" and the Beethoven Ninth Symphony. The performances of the Festival are included in the regular Thursday evening, Friday afternoon, and Sunday afternoon series of the Society, and the "Magnificat" and Ninth Symphony will also form one of the programmes of the Brooklyn concerts. The list of Philharmonic soloists contains the names of almost all the great visiting artists, among them: Fritz Kreisler, Arrigo Serato, Francis Macmillan, Maximilian Pilzer, Yolanda Mero, Harold Bauer, Ernest Hutcheson, Ernest Schelling, Percy Grainger, Ossip Gabrilowitsch, Pablo Casals, Leo Schulz, and Beatrice Harrison. There are also Olive Fremstad, Elisabeth Van Endert, Melanie Kurt, Julia Culp, and Emmy Destinn.

THE SPECULATION ON THE STOCK EXCHANGE.

A week in which, with speculation on the Stock Exchange running wild and the "outside public" buying without restraint at the top of a violent advance, transactions have averaged 1,500,000 shares in each full business day, as against a usual average of less than half a million, would be a notable landmark in itself. This record has been exceeded on several previous occasions—by the 8,400,000 shares of the second week of November, 1908, for instance, the 10,500,000 shares of the third week of August, 1906, and the 15,400,000 of the week ending May 4, 1901—when sales on the single day of April 30 rose to 3,200,000 shares. But the frantic violence of this week's speculation, the furious alternate advances and declines, and the obvious fact that the speculative outside public has been the dominant influence, led old hands on the Stock Exchange to agree that nothing quite like it had been witnessed since the enormous speculation of 1901.

There are several particular resemblances to that episode. One is the fact that Wall Street itself, on both occasions, believed the "boom" already to have gone too far; tried to check it, and yet was swept along with the torrent. The tales in the newspapers this week, of huge speculative winnings by barbers, dressmakers, and trust accounts established for people's babies, exactly duplicate the similar publications of the final week of April, 1901. The physical exhaustion of the office forces of Wall Street commission houses, which led to the suggestion this week of a special Stock Exchange holiday so as to enable them to catch up with their office work, was a reminder of the time when, on Saturday, April 27, 1901, an arbitrary holiday of this sort was actually declared.

Such parallels make the question interesting to the new Wall Street generation, How did the famous speculation end in 1901? That "bull market" really reached its climax when professional Wall Street, well before the end of April, began to fear the consequences, and tried to extricate itself. This happened when the outside public was at its highest pitch of mania; with the result (as in this present week) of violent alternate upward and downward movements, in a single day, of 5 or 10 points apiece. On the 9th of May, when Northern Pacific stock was accidentally cornered, the whole market took sudden fright —it had been looking everywhere for trouble—and stocks broke 25 to 30 points within an hour.

The "outside public" was an enormous loser; it withdrew, sober and wiser. The "boom" itself was over for nearly a year. Yet it was far from easy, at the height of the mania of 1901, and it has not been easy on this occasion, to predict the immediate fortunes of a stock market in which such influences have prevailed. Especially at times when bank reserves are overflowing, and the precautionary signals of a tightening money market are therefore lacking, the naming of the exact moment when the ship will go ashore is impossible. It will often plunge along with triumphant immunity, for days and weeks after the pilot has been thrown over by the excited crew. Still signs of another sort have multiplied that the end of this infatuated business cannot be very far away. Sober capitalists withdrew from the market weeks ago; last week witnessed the manœuvres of professional Wall Street operators to withdraw.

As is usual on such occasions, their withdrawal is not characterized by visible and general liquidation. On the contrary, the invariable programme is to bid up one set of stocks with sudden violence while selling heavily in another group. The process alternates with great rapidity; it naturally causes the utmost confusion in the course of prices; but it serves to conceal from the excited mob of outside speculators just what is really going on, and the end of the whole performance always takes them in complete surprise. These are the axioms in the history of all such episodes, and every man of experience and observation knows what stage in the progress towards the reckoning was reached last week. Sometimes the end comes because of sudden and disconcerting news; sometimes because of a single occurrence in the market which frightens because it is not understood. Sometimes a market of the sort seems to topple over purely of its own weight. As to all this, we shall presently see what we shall see.

Essays for College Men

Second Series

Edited by NORMAN FOERSTER, *of the University of North Carolina,* FREDERICK A. MANCHESTER and KARL YOUNG, *of the University of Wisconsin.*

389 Pages. 12mo. $1.25

This collection of essays for freshman composition courses is alternative to the previous collection by the same editors. The authors represented are Emerson, Huxley, Newman, Symonds, William James, President Wilson, John Caird, Paul Elmer More, Alfred Russel Wallace, Arthur J. Balfour and Charles W. Eliot.

Henry Holt and Co. 34 W. 33d St., NEW YORK

Memories of a Publisher

By GEORGE HAVEN PUTNAM, Litt. D.

Author of "Memories of My Youth," "Books and Their Makers in the Middle Ages," "Abraham Lincoln," etc.

8°. With Portrait. $2.00 net.

In this volume, the author continues his personal reminiscences from 1865, the date to which had been brought the narrative in his earlier book, "Memories of My Youth."

The book contains also some record of the undertakings of the Putnam Publishing House from 1872, the year of the death of its founder. The "Memoir of G. P. Putnam," published in 1912, had presented an account of the publishing firm from the year of its organization.

The author records what he can remember of the people with whom he has had personal relations on both sides of the Atlantic during the fifty years since 1865, and he gives also his own views in regard to certain questions of the day in which as a citizen he has taken his part, such as Free Trade, Honest Money, Civil Service Reform, Copyright International and Domestic, and matters connected with municipal, State, and national politics.

NEW BOOKS OF INTEREST

NATHAN GALLIZIER'S New Romance

THE CRIMSON GONDOLA

A TALE OF VENICE AND CONSTANTINOPLE AT THE BEGINNING OF THE THIRTEENTH CENTURY

By the Author of "The Hill of Venus," etc.

The setting of this brilliant romance is at the time of the great tension between Venice and Constantinople, which culminated in the fourth Crusade and the Latin conquest of Constantinople. The story concerns itself with the fortunes and adventures of one Audran de Vere while in Constantinople—the most romantic city in the world—on a mission to take the Lady Eleanor of Montferrat from the witches' cauldron of the Greek capital.

With four illustrations in full color, net $1.35; carriage paid, $1.50.

TWO "BEST SELLERS"

POLLYANNA GROWS UP

Trade Mark

THE SECOND GLAD BOOK

Trade Mark

A sequel to "Pollyanna: The Glad Book"

Trade Mark

"Pollyanna's girlhood and maidenhood are just as cheery, helpful and actively optimistic as her childhood narrated in the first *GLAD* BOOK was *glad*. She simply twines the tendrils of her affections about the reader's heart and suffuses his soul with the glorious sunshine of her nature."—*Philadelphia Ledger.*

4th Printing (140th thousand). Net $1.25; carriage paid, $1.40.

ANNE OF THE ISLAND

A sequel to "Anne of Green Gables" and "Anne of Avonlea"

By L. M. MONTGOMERY

"It has been well worth while to watch the growing up of Anne, and the privilege of being on intimate terms with her throughout that process has been properly valued. The once little girl of Green Gables should have a permanent fictional place of high yet tender esteem."—*New York World.*

5th Printing (30th thousand). Net $1.25; carriage paid, $1.40.

THE COMPLETE CLUB BOOK FOR WOMEN

A Companion Volume to "Woman's Club Work and Programs"

By CAROLINE FRENCH BENTON

"An excellent guide for the woman who lacks confidence and thorough training in the subjects of interest, whether they relate to household affairs, literature, civics, philanthropy, music, or art. A complete encyclopædia for the club woman."—*Pittsburgh Dispatch. Net $1.25; carriage paid, $1.40.*

THE SPELL OF BELGIUM

By ISABEL ANDERSON (MRS. LARZ ANDERSON)

Uniform with "The Spell of Japan" by the same author.

As the wife of the American Minister to Belgium, Mrs. Anderson had special opportunities for observation and for securing information; and this, joined to a natural talent for description, has enabled her to produce in THE SPELL OF BELGIUM a volume of absorbing interest. This book in conjunction with Mr. Vose's SPELL OF FLANDERS gives the complete story of "the Belgium that was." *Ready October 15. Net $2.50; carriage paid $2.70.*

THE SPELL OF FLANDERS

By EDWARD NEVILLE VOSE

"Mr. Vose has succeeded at a time when we are looking for a truly reflective work in giving us a narrative in which the long romance of Flemish history is woven into the colorful tapestry of her splendid interpretative art."—*Boston Advertiscr.*

THE SPELL OF SOUTHERN SHORES

By CAROLINE ATWATER MASON

"Now that Italy has entered the European conflict, Mrs. Mason's charming book—the story of a leisurely journey from the Ligurian Riviera, through Sicily, and ending at Venice—will be read with more than usual interest."—*Chicago Evening Post.*

THE SPELL OF THE HOLY LAND

By ARCHIE BELL

"In all the voluminous literature on the Holy Land, there is no other work quite like this brilliantly yet faithfully written book. It is beautifully illustrated, and, after all, the author admits that he became intoxicated in the restful lap of the Orient and felt the 'spell' of the Holy Land."—*San Francisco Chronicle.*

Each, illustrated. Net $2.50; carriage paid, $2.70.

POLLYANNA THE GLAD BOOK CALENDAR FOR 1916

Trade Mark. *Trade Mark.*

"When you read the POLLYANNA books you registered a resolve that henceforth and forever you would play the 'glad game' every day of your life. And you meant it, too; but sometimes the sky is gray and you forget about the little girl who invented the great game, and you waver in your resolve. For just such backsliders a perpetual reminder has been evolved—a POLLYANNA CALENDAR for you to hang on the wall of your room."—*Kansas City Star.*

Boxed, net $1.50; carriage paid, $1.65.

NOTE: There are also a few copies remaining of the 1915 POLLYANNA CALENDAR, which will be supplied at net $1.00; carriage paid, $1.10.

NEW YORK, THURSDAY, OCTOBER 14, 1915.

Summary of the News

The situation in the Balkans has undergone no fundamental change since the dispatch of the Russian ultimatum to Bulgaria and the resignation of M. Venizelos, which we recorded last week. A defiant reply, the substance of which was contained in dispatches of October 8, was returned to the ultimatum by Bulgaria, and the Ministers of the Entente Powers left Sofia last week. An element of humor is introduced in a grim situation by the attitude of the Bulgarian Minister in London who remains at his post, complacently declaring that his country has no quarrel with England.

In Greece M. Zaimis has accepted the Premiership and has formed a coalition Ministry in which he will be his own Foreign Minister. Included in the Ministry are four other Premiers. At the first meeting of the Chamber since the formation of the new Ministry, on Monday, M. Zaimis declared that the policy of the Government would for the present be one of "armed neutrality." M. Venizelos said that his party would support the Government so long as there was no departure from the policy of the late Government which had been endorsed by the Chamber, but indicated his conviction that the question was not whether Greece should enter the war in aid of Servia, but only when she should enter it. After the speeches of the two leaders, the Chamber adjourned until next Monday.

The interpretation of the present anomalous situation would seem to be, therefore, that Greece's attitude will be one of "benevolent" neutrality towards the Allies and that no attempt will be made to interfere with the landing of French and British troops at Salonica and their transport by the Salonica-Nish railway into Servia. Public opinion in Greece, which, when the Cabinet crisis occurred last week, seemed to be strongly on the side of Venizelos, appears during succeeding days to have changed and to favor the efforts of the Germanophile King to keep his country from active hostilities with the Teutonic Empires.

The commencement of the long-expected Austro-German invasion of Servia, across the Save, the Danube, and the Drina, was announced in dispatches of October 8. Belgrade was occupied by the left wing of the Teutonic forces, after fierce fighting by the Servian rear-guard, on October 9, and the passage of the Danube has been made secure. News of the capture of Semendria came on Tuesday. As we write, the Servians continue to resist the passage of the Save and Drina, but it is not considered probable that a serious stand will be attempted north of the defensive line of the mountain range near Kraguyevatz. Dispatches on Tuesday reported that Bulgarian troops had also crossed the Servian frontier on the previous day and had begun an attack near Kniashevatz, twenty-five miles northeast of Nish.

The attitude of Rumania continues doubtful. Dispatches from Rome record pro-Ally demonstrations in Bucharest, and news received on Tuesday from the same source is to the effect that M. Bratiano, the Rumanian Premier, has given the Italian Government to understand that Rumania, although maintaining neutrality for the present, intends in her own good time to enter the war on the side of the Allies.

In England the unfavorable turn of events in the Balkans has been received by the section of the press controlled by Lord Northcliffe with the usual clamorous squealing for a scapegoat. This time it is the Foreign Office, headed by Sir Edward Grey, that is bitterly assailed, apparently on the ground that he did not feel in a position to promise to Bulgaria territorial acquisitions which were not his to offer.

The engagement of President Wilson to Mrs. Norman Galt, of Washington, was announced in the morning papers of October 7. On the same date was published President Wilson's statement that he would vote for the woman suffrage amendment in New Jersey on October 19.

Announcement was made by Secretary Lansing, on October 9, that the members of the Pan-American Conference on Mexico had unanimously decided in favor of the recognition of the faction led by Carranza as the *de facto* Government in Mexico. Before this decision was reached, it was stated, certain definite assurances as to the future had been obtained from Carranza. The formal sanction of President Wilson to the plan was accorded on Monday.

Secretary Lansing, on Saturday of last week, gave out the statement that the note to Great Britain on interferences with neutral commerce was completed and would go forward shortly, without waiting for the arrival of Mr. Skinner, Consul-General in London, who has been summoned to Washington to discuss the trade situation. The note, it is understood, was in President Wilson's hands for final consideration at the beginning of this week. Reports that the recall of Mr. Skinner had been requested by the British authorities have been officially denied.

The text of a memorandum prepared by the British Government on the detention and confiscation of cargoes of meats and meat products consigned by Chicago packers to Scandinavian countries, was published in Tuesday's papers. The British Government points out that these shipments were not seized under the Order in Council, but as conditional contraband, and declares that it has in its possession documentary evidence, so strong as to amount to certainty, that the shipments were made to neutral countries with the intention on the part of the packers of having them delivered in Germany.

The naval manœuvres, which ended on Sunday morning, resulted in the victory of the hostile "Red" fleet, which gained command of the sea over the Atlantic battleship fleet, and would have been free to enter Delaware Bay and attack Philadelphia.

As a result of the continuance of slides in the Panama Canal, Major-Gen. Goethals announced on Monday that the reopening of the canal, which had been tentatively set by Col. Harding for November 1, would be indefinitely postponed. It was announced on October 6 that Gen. Goethals had withdrawn his resignation as Governor of the Canal Zone and would continue in active charge until the work of clearing the canal should be completed.

The general elections in Norway were held on Monday, for the first time under the act of 1913, which extended the suffrage to all women, regardless of the amount of their income tax.

The appointment, announced on Monday, of M. Khvostoff, formerly leader of the Right in the Russian Duma, to the Ministry of the Interior, is interesting from the fact that M. Khvostoff is the first member of the Duma to have been included in a Russian Ministry.

German submarines have continued relatively quiescent. Since we wrote last week four British ships and one Greek vessel, the latter in the Mediterranean by an Austrian submarine, have been reported sunk. Retaliatory measures have apparently been taken by British submarines, coöperating with the Russian fleet, in the Baltic. In the last ten days the sinking of three German vessels by this means has been recorded. Opportunity to escape was afforded to the crews.

In France and Flanders the positions gained by the French and British troops in the recent offensive have been consolidated and some further progress is reported, notably by the French in the Champagne district, where the important positions of Tahure and the Butte de Tahure, constituting a point of support for the German second line, were captured last week. In Poland and Galicia the Austro-German offensive appears everywhere to have been brought to a standstill, and dispatches from Petrograd on Tuesday announced the beginning of an offensive by the Russians on the Stripa River, where the Austro-German lines had been pierced and a number of prisoners and guns captured.

In a speech on the Armenian atrocities in the House of Lords, on October 6, Viscount Bryce made the statement that the figure of 800,000 Armenians destroyed since May was "quite a possible number." Dispatches from Rome of October 10 stated that Pope Benedict had interceded with the Sultan of Turkey on behalf of the Armenians. Unwilling to allow such an opportunity for self-revelation to go unheeded, Count von Reventlow last week contributed an article to the *Deutsche Tageszeitung*, in which he expressed the conviction that the Armenians had received just about the treatment they deserved, and the earnest hope that the German Government would not attempt to interfere with the domestic affairs of its ally. Perhaps as a result of this indiscretion, news was received on Monday that the *Tageszeitung* had again been suspended.

The Week

In that brief passage of President Wilson's speech to the Daughters of the American Revolution in which he touched upon the nature of our neutrality, he pointed out, though in few words, no less than three distinct aspects of our attitude. He recognized the part that is played by emotional sympathy, by intellectual judgment, and by the conception of our duty and opportunity as a nation. The country's neutrality does not, and should not, preclude the entertainment of "intense sympathies"; it does not, and should not, stand in the way of our "assessing the merits of the controversy"; but we are not to allow ourselves to be drawn into the quarrel, because America is pledged to "stand apart and maintain certain principles of action which are grounded in law and justice." And upon our fidelity to this duty depends, says the President, our ability to do a lasting service to the cause of peace:

> We are not trying to keep out of trouble, we are trying to preserve the foundations upon which peace can be rebuilt. Peace can be rebuilt only upon the ancient and accepted principles of international law, only upon those things which remind nations of their duties to each other, and, deeper than that, of their duties to mankind and to humanity.

In his deep feeling for what is here laid down is evidently to be found the key to the policy to which, in the face of all manner of discouragement, Mr. Wilson has so persistently adhered throughout the manifold difficulties of the past eight months.

The first comments of the German press on the complete backdown of the German Government in its controversy with the United States express incredulity and consternation. What, take the word of perfidious English officers against the affidavit of a brave German commander? Certain words in Ambassador Bernstorff's letter of disavowal are considered by the party of von Tirpitz as little better than an insult to German naval officers. Count Reventlow is naturally bursting with rage. He protests that the Government has consented to an act which "publicly brands the report and oath of the German commander and crew as inaccurate." Several newspapers refuse to believe the humiliating dispatches, and call upon the authorities at Berlin to issue a denial, or, at least, a reasonable explanation. All this was to have been expected. It shows, what was all along evident, that a very strong feeling existed in Germany against making any concession to the United States on the submarine issue. That the Kaiser finally decided to defy this public sentiment, and to come to terms with President Wilson, even if he had to eat his own words in the process, is plain proof of his anxiety to avoid a rupture with us. Incidentally, these angry outcries by the German press serve to heighten the American triumph.

Allied opinion will agree with part at least of what the Berlin *Tageblatt* says concerning the war in the Balkans:

> This is the beginning of the final triumph of German arms over the world. Our German General Staff knows that the nearest way to strike Germany's nearest enemy is not to capture Calais, but to hold the Dardanelles.

London will agree that through Calais certainly does not lie the nearest way to the heart of the British Empire. The events of a year have shown that. When the *Tageblatt* speaks of what the German General Staff knows, it implies a finality of knowledge which the facts do not justify. It took the Staff a year to find out about Calais, about which at the beginning the German press was as certain as it is now about the Dardanelles and Egypt. In the early summer there was the same metaphysical certainty that the war was to be ended in Russia. On both sides there has been much boasting and vainglory since the beginning of the war; but in the expression of German opinion there is a tone of what we have called metaphysical certainty, the conviction that in the nature of the universe whatever the German General Staff sets out to accomplish must be accomplished. This absolute confidence in final victory may yet be unshaken, but it is eminently unsafe to specify places and dates.

If the Government of Greece should in the end notify the Allies that the dispatch of their troops to Servia by way of Salonica is against its will, and a violation of neutral territory, a very serious question would be raised. The case would at a score of points fail to parallel the invasion of Belgium by a country that had specifically guaranteed the inviolability of her soil, yet there would be a clear breach of international law and of the Hague Conventions. This must be squarely admitted. Till recently, however, it is only fair to point out that the British and French authorities had every reason to suppose that they were acting with the consent of the Greek Government and the applause of the Greek people. Indeed, the railway from Salonica to Servia has long been permitted to transport military supplies. Even military expeditions must have gone that way, for by what other route could the British naval detachment, with its big guns, have reached Servia? Greece has steadily treated Servia as an ally whom it was her wish to aid in every way short of war, and to war itself by Servia's side, in case Bulgaria attacked her, the whole Greek nation seemed pledged. All these circumstances make a moral difference which none but the blind will not perceive. But, as we have said, the technical, legal case, as brought about by the shifts in the Government at Athens, is one that it would be awkward for the Allies to meet, if the present ministry should decide seriously to protest their actions.

It may be a great find that a semi-official organ of the German Government has made when it charges that the French Yellow Book suppressed the last two sentences of a dispatch sent by the British Ambassador at Petrograd to Sir Edward Grey on July 24, 1914; but why the find should be exploited in that quarter is a little difficult to see. The Ambassador stated that it seemed to him "as if France and Russia had decided on firm resistance, even if we refuse to join them." This does not appear to be calculated to add much strength to the prime contention of the Germans in the whole matter—the contention upon which their "Gott strafe England" and the hymn of hate are founded. If England was in a conspiracy with Russia and France to bring on the war, Ambassador Buchanan must have been in a singular state of ignorance for a man in his position when he thought it worth while to give his home Government information as to the probable purposes of Russia and France, in case England "refused to join them." But there is nothing new about this queer blindness to the logical effect of the "revelations" which the German authorities from time to time give to the world. The letters of Baron Greindl, Belgian Minister at Berlin, which were found at Brussels and have been so industriously exploited by the German Government, were warnings to the Belgian Government that it ought to take as much precaution against the danger of invasion by England or France as by Germany. Now all that this could possibly prove was that one Belgian diplomat suspected England and France of evil designs; and it never seems to cross the mind of Wilhelmstrasse that what it *disproves*, or goes far towards

disproving, is something infinitely more important. Is it likely that the Belgian Minister would be warning his Government against danger of invasion by England or France if Belgium had an understanding with either of these countries that she would connive at such invasion?

The *Kölnische Zeitung* describes as wilful lying the statements by Cromer and the Marquis of Crewe that German consular officials have connived at the Armenian atrocities. The British are trying to kick up a cloud of dust to cover their violation of Greece, that is all. But what has that paper to say of the cheering-on of the Turkish and Kurdish savages by an influential figure in the very German capital—Count von Reventlow? Surely, the neutral world will arrive at two conclusions: that the German people admit the occurrence of the atrocities, and that, whether ashamed or defiant, they admit also some responsibility for the acts of their allies. Even in the Count there is to be detected a note of bravado, as when he asserts the familiar argument, so hollow, whether brought forward by Georgians in defence of a lynching or by the Turks in defence of the extermination of a nation, that a people's internal acts are its own affair. A series of misdeeds like those in Armenia are the concern of the whole world, as the protest of Ambassador Morgenthau, the utterances of the Scandinavian press, and the letter of the Pope amply testify. In the sensitiveness of the German people lies our hope that their Government may act.

The publication of a British Government "White Paper" has just shown Sir Edward Grey in a new rôle—that of benefactor of the enslaved laborers of Portuguese West Africa. The record of reforms achieved is most creditable. In late 1913 he proposed to Lisbon the appointment of a Consul-General for Angola, who should oversee the Consulates already established there; and he invited the Portuguese Government to afford this man and his subordinates facilities for acquainting themselves with the contracting for laborers, the conditions of work on the plantations, and the manner in which the men were repatriated when their contracts expired. Previous attempts at reform had been paralyzed by the efforts of planters, whose defence was that the natives preferred slavery to freedom, and that English interference was prompted by a desire to gobble up the impoverished holdings. But Sir Edward Grey's direct representations resulted in the necessary Portuguese action, and there is ample evidence that involuntary servitude is fast being ended. In 1910 only four imported laborers had been repatriated; in 1913 there were 2,071, and in the first five months of 1914 1,821. In 1912 the average amount paid each laborer for the season's work was under eighteen shillings, and in the first five months of 1914 it was twelve and a half pounds. Brutality has been checked, and the ravages of the sleeping sickness lessened. The work of the British Government and its agents, aided by the Anti-Slavery Society, promises well for the future of the natives of all southern Africa.

To the person who reads the war dispatches in the light of the war maps in his newspaper, the absence of a scale of distances is the cause of much darkness. The same two-column-width will one day represent twenty miles in the Champagne, and the next day four hundred miles in Russia. It is well, therefore, to bring the Balkan theatre of war into some general perspective. The presumptive limit of military operations lies within a parallelogram about 375 miles long, measuring east and west from the Black Sea to the interior of Servia, and 250 miles wide, measuring north and south from the Danube to the Greek frontier in Macedonia. The length of our parallelogram is about equal to the distance from Berlin to Warsaw, and its width is perhaps fifty miles greater than the distance from Budapest to Belgrade. The diagonal, measuring from Belgrade to Constantinople across country, is about 500 miles, or about the distance from Berlin to Antwerp. It is, therefore, apparent from the first that, in view of the possible number of troops brought into the field on either side, the lines must be much more thinly held than in France or Russia, or else that there will be no attempt to form unbroken lines, like those which stretch from the North Sea to Switzerland and from the Baltic to the Dniester, but that operations will take on the older form of free manœuvres, with rapid shifting of fronts, flanking and encircling movements, dramatic advances and retreats.

The Balkan terrain is mountainous country and poor in railways. From Belgrade the great Constantinople trunk line runs south up the valley of the Morava to Nish, which is the present Servian capital. At Nish the line bifurcates, one branch continuing south down the valley of the Vardar, through Vranya and Uskub to Salonica, the other turning southeast and running through Sofia, Philippopolis, and Adrianople to Constantinople. The two hostile Balkan capitals, Nish and Sofia, are at no great distance from each other, less than a hundred miles across country, a little more by rail. The line to Salonica comes very close to the Bulgarian frontier at Vranya, where it is less than twenty miles from Bulgarian territory. Near this point, in all probability, the Bulgarian army will make its attempt to cut the line on which Servia depends for her supplies. But the maintenance of railway connection is fully as important for the Teutonic invaders. The heavy guns, which constitute so important a factor of the German strength, could scarcely be brought into play in the difficult country. For defensive purposes the Serbs and the Allies will have an advantage in the mountainous country, but in a campaign where footwork is to count for a great deal, the notable marching qualities of the German soldier must be taken into account.

The extent of the work of the Bureaus of Information about prisoners of war in Europe surpasses all precedents. In 1870, the Berlin Bureau answered but 60,000 inquiries in all. The present Bureau at Berlin, with its registration of the rank, service division, and place of confinement of many more than a million prisoners, has been brought to an astonishing perfection by Count Schwerin. Nearly a thousand letters of inquiry are received daily, and it is his boast that every one, whether French, Russian, English, Servian, Montenegrin, Italian, Belgian, or Japanese, is answered within twenty-four or at most forty-eight hours. A catalogue contains a list of the dead, so far as names and facts are ascertainable. The British Bureau employs over fifty persons for the same work. In all cases, information is sent not merely concerning enemy dead, sick, and wounded, as the Geneva Convention stipulates, but concerning the unwounded prisoners and the civilians interned. It is indicated by the British report that inquirers after the dead are not merely informed as to the fact: an attempt is made to put them into communication with some one who saw the soldier in question fall, and thus are often discovered "personal details which are highly valued by relatives and friends."

Little dabs of praise for President Wilson seem to form the running accompaniment of ex-Secretary Bryan's lectures. From some hill-town in Pennsylvania we are told that he feels like heartily congratulating the

President on the success of his dealings with Germany. Out in southern Illinois he stops long enough to remind his audience that they ought to thank their lucky stars that they have a peace-loving President. And now from Georgia we are informed that Mr. Bryan is "much gratified" at President Wilson's coming out in favor of woman suffrage. Incidentally, the ex-Secretary gives other people cause for much gratification by his announcement that his plans for the future "do not include the holding of any office." But what is the explanation of Mr. Bryan's eagerness to be always saying handsome things of Mr. Wilson? His own generous and noble nature—perhaps. Even so, it is a pretty good proof of skilful political management on the President's part. To have broken with a powerful politician in a way to win the applause of the country, while allowing the other to put himself in the wrong; and then to leave that politician in a position and a mood which impel him to sing the President's praises—all this is not so bad a piece of work for a mere professor who knew nothing about politics!

On the one hand, remarks Senator Borah, we have President Wilson with a solid Democracy and a growing general popularity; on the other, we have the Republicans getting ready for an internal shindy. He did not openly predict a quarrelsome division; but the prediction was implicit in his fear that the Republican party would not "do the wise thing" and adopt a liberal platform.

Our ultra-conservative friends who assume that the liberal sentiment in this country has been dying out, or that the pendulum is swinging back, are greatly in error. Those who hold that opinion have not been out among those who cast votes; and so far as I am concerned, I feel more deeply interested in the liberal campaign of 1916 than I did in that of 1912, because I feel that the issues have become more vital.

The question is whether Senator Borah is not raising a bogey. As if in answer comes a résumé of the first issue of *Prosperity, The Republican National Magazine*, with articles by Mann, Herrick, and Fairbanks jostling others by the treasurer of the United Shoe Machinery Company, of Boston, the president of the National Association of Cotton Manufacturers, and the vice-president of the United States Potters' Association, lately rebuked by Secretary Redfield. The principal contributions are devoted to the Underwood tariff and to the consequent despair that "fills the air," the destruction that threatens "farm and factory interests, miner, and magnate." It is evidently not amiss for Borah to issue a warning that the Western farmer and miner will desire more liberal issues than that of the gloom-filled air.

It is not to be supposed that the Secretary of the Treasury would have come out for the retention of the duties on sugar without the President's approval. Hence we may expect that the Administration will urge Congress to repeal the section of the tariff bill making sugar free next year. This tariff tax can be defended as one for revenue. It actually produces a large revenue. Fifty millions a year, or thereabouts, are not to be sneezed at by a Treasury with a big deficit. This fact will doubtless be the great argument used with Congress. It can retrace its steps with good grace on the plea that the war has so dislocated our fiscal programme that we must now keep our hands on a tax which, in 1913, it was believed that we could dispense with. Of course, there will be "incidental" advantages, of a political sort, of which not much will be said, but which will nevertheless be potent in many minds. For example, the keeping of the sugar duties will almost surely make an end of the Progressive party in Louisiana. All those rays of hope which the Colonel lately saw in that State, portending a break in the solid South, will vanish.

Last year Joseph Walker was the Progressive candidate for Governor of Massachusetts. Now he has written a letter to Samuel W. McCall announcing his withdrawal from the Progressives and his adherence to the Republicans. "Many of the leaders of the Progressive party," he confesses, "have privately or publicly admitted the futility of further attempts to establish a new party. . . . Further fighting obviously means, not the success of the Progressive party, but merely the defeat of the Republican party." Mr. Walker polled only 32,000 votes last year against McCall's 199,000, and yet Walsh was reëlected Governor, polling more votes than he or any other candidate had received since 1911. Evidently, the break-up of the Progressives will not necessarily mean the triumph of the Republicans, as, indeed, the tendency of Massachusetts voters to elect a capable Democrat Governor now and then had indicated in advance. The Progressive Convention alternately cheered and jeered the name of Charles Sumner Bird, whose position in the campaign no one seems quite to know, but in the end voted a resolution of "love and sympathy for our former leader." Disappointment was expressed over a telegram from George W. Perkins, urging that the Progressives make no fight in the State this year, but concentrate upon 1916. They seem to be concentrating already in the enemy's camp.

Shortly the Federal law for the protection of migratory birds is to be brought before the United States Supreme Court, the Federal Court of eastern Arkansas having declared it unconstitutional. The case to be tried concerns three wild ducks which a hunter shot out of season as a deliberate test. That the law may withstand the assault every lover of wild life and every true sportsman must ardently wish. In the two years that it has been in force, reports from Federal game wardens show the increase in water fowl to be from ten to several hundred per cent., according to locality; while migratory land birds have also benefited. Wild fowl formerly ran a gantlet of fire from Louisiana to Maine. Ninety-one organizations, representing thirty-eight States, have joined under the National Association of Audubon Societies in a brief supporting the right of the Government to enact such a law. They declare that it is impossible for the several States to enforce their joint rights, that migratory birds are of great assistance in destroying the insect foes of crops and forests, that Congress has power to protect the agency which preserves the property of the United States from destruction, and, finally, that migratory birds are the property of the nation.

The gift by Jacob H. Schiff of $500,000 to Barnard for a students' hall is one of the largest the college has received. But one exceeded it—that of $1,200,000 made over ten years ago for Milbank Hall and Quadrangle. The list of benefactions to Barnard, indeed, is very short in comparison with that boasted by Columbia. The gifts for Brinckerhoff and Fiske Halls amounted to $150,000 each, the Carpentier Fund for general endowment to $250,000, the Rockefeller gift to the same amount, and the anonymous gift for Brooks Hall, the Gibbes gift, and the Kennedy gift to not much more than half a million taken together. Alumnæ of women's colleges are obviously unable to raise large sums, and the comparative youth of Barnard has made her task harder than that of established sister institutions. The twenty-fifth anniversary celebration last spring made evident the pressing needs of Barnard. A college that has done so much for the higher education of the women of New York city richly deserves generous treatment.

A GREAT CONTROVERSY ENDED.

There are two ways of belittling a diplomatic success of the first order such as President Wilson's Administration has won in the controversy with Germany. One is to assert that the result is good but the method of reaching it wrong. Able Republican editors have already been at work along this line. They grudgingly admit the achievement, but say that it could have been earlier and more satisfactorily attained if the President had not stubbornly refused to take their advice. But they really know well that the people will not listen to this sort of thing. Imagine able editors saying in the next Presidential campaign: "Men and brethren, this is all very fine, but we could have done it better." The able editors would only get themselves laughed at consumedly.

The other way of trying to whittle down the great triumph of our Government is to seek to go behind the record of Germany's complete yielding to the United States, and to discover secret motives. Thus it is said that the German Government gave up its lawless submarine warfare only when it had no submarines left with which to wage it. Otherwise, it never would have backed down before an American demand unaccompanied by a display of force. Still other hidden springs of Germany's surrender are suggested. She hopes soon for peace, and has her eye on recovery of her American trade. She knows also that, after the war, she will have to come here for money. Thus she is seeking to maintain friendly relations with us purely for selfish ulterior purposes; and merely for the sake of these reversed her submarine policy. She apparently ate humble pie, but was really thinking of the whole course-dinner which she might in that way enable herself to eat later. It was not the President's resolute stand that did the business, but Germany's own self-interest.

Now, plain people have a trenchant way of dealing with this kind of special pleading in abatement. They call it nonsense. The big thing stands there for everybody to see. As Secretary Lansing remarks, while refusing to talk, the German Ambassador's letter speaks for itself. The Administration, with characteristic and welcome modesty, is not doing any horn-blowing, but it does not need to. The country is not so stupid as not to know what has been done. And its answer to the minimizing gentlemen who point out the elements in the case that lie beneath the surface, and who affirm that Germany did only what she had a good selfish reason for doing, will be that President Wilson took all these matters into the account. If able editors see them after the event, he saw them before it. When they told him that he could not possibly do anything with the German Government except by the argument of pike and gun, he quietly persisted in his course because he thought of all these considerations which come to them only as after-thoughts. And he can certainly afford to smile at feeble efforts to detract from a diplomatic victory which is now complete.

Why may we confidently say that the great controversy is ended? The final German note deals only with the case of the Arabic. What about the Lusitania? What about other ships and other claims? Clearly, they are all implicitly covered by the concessions in the matter of the Arabic. That is to say, in law, in logic, and in practical effect, the German Government has assented to the entire contention of President Wilson. The expressions used by Ambassador Bernstorff in the instance of the Arabic are such as to prove the giving up of the very last point. Germany will pay the indemnity which a month ago she said was out of the question. But if so for the American lives lost on the Arabic, *a fortiori* for the Americans murdered on the Lusitania. Supposing the matter were left to arbitration: Germany would not have a leg to stand on. All that American counsel would have to do would be to read to the tribunal Germany's official admissions. She concedes that the sinking of merchant vessels by her submarines was both lawless and inhuman. What could the most prejudiced court of arbitration do after that but proceed to assess the damages which Germany must pay? The cause is finished. The crisis is over.

If the final solution has required great courage and inflexible determination on the part of President Wilson, it is only fair to bear in mind that the German Government, too, had to be bold and firm. It had not only to confess itself mistaken, and openly to repudiate its own Admiralty: it had also to face a strong and bitter public opinion at home. There can be no doubt that the news of the surrender at Washington will cause much heart-burning throughout Germany. It will take all the authority of the Government, all the severity of censorship, to prevent sharp criticism. This popular German sentiment has all along been one of the great obstacles to a peaceful settlement of the submarine controversy. Those who, from the time of the sinking of the Lusitania, feared war between the United States and Germany, feared it mainly because it seemed impossible that a proud and militarily intoxicated country like Germany could retreat in a diplomatic dispute. But she has now done it in the fullest manner. The President has had his way. Through good report and through ill he has held his steady course; and now he has the intense satisfaction not only of having been able to keep his country out of war, but of having made its stand for neutral rights, for international law, and for elementary humanity, brilliantly successful. It is needless to lavish laudation upon Mr. Wilson. The facts, the record, the things known of all men, praise him more eloquently than could any words.

BRIGHTER DAYS FOR MEXICO.

On October 7, 1910, Porfirio Diaz, having bestowed upon himself a new Presidential term of six years, felt secure enough to release from prison his rival for the Presidency, Francisco Madero. Five years later, almost to a day, our Government, acting in conjunction with the principal South American republics, announced the forthcoming recognition of Venustiano Carranza and the approaching end of an era of civil war which has brought upon the Mexican people sufferings probably as bitter as the war-ridden nations of Europe have undergone. We cannot speak with certainty of the future, but the signs point clearly to the termination of a painful period of transition, the establishment in Mexico, not merely of order, but of a new order. Despite the vicissitudes of the last five years, the trend of events has been moving towards one conclusion. The Mexico that will emerge from the bloody test cannot be the Mexico of Don Porfirio. When affairs were in their most chaotic stage, when no one could say with certainty whether the destinies of the republic were ultimately to be shaped by Villa, by Carranza, by Zapata, it was still plain that the old ideas were done for. The counter-revolution of Huerta and Felix Diaz had failed. All the men in the field were struggling for reform and reconstruction. It simply remained to determine who the one man should be.

Carranza is, first, the result of a long and severe process of elimination. Were Pancho Villa in the same military position which Carranza holds to-day, it is possible that the sanction of the Pan-American Governments

would have been bestowed on him. But it would be wrong to descry in the triumph of Carranza the mere operations of good fortune. In Carranza are most completely exemplified the qualities necessary for the establishment of a new order which should not be an impossible break with the old. By antecedents, by training, by culture, he represents enough of the old Mexico to make no such startling transition as would have marked the advent of Pancho Villa to the Presidency. The new order must bring a new life for the submerged classes, but the process of reconstruction must inevitably be the work of the class experienced in government; and Carranza comes from that class. His personality has shown the toughness essential in a severe struggle for the survival of the fittest. The dangers of a military despotism, which many people have regarded as the only form of government possible in Mexico, are lessened under a civilian who has shown a talent for keeping his generals under control. The rumors of mutiny by Obregon, Gonzales, and other Constitutional leaders are fabrications from Villa's press agency.

It is true also that recognition for Carranza has come as a result of the united efforts of the American republics. Our own Government has not merely coöperated with the "A B C" nations; it is likely that our attitude has been influenced by the wishes and opinions of the Latin-American Governments. Racially and by political experience they are better qualified than we to understand forces and personalities in Mexico. It used to be said that the representatives of Argentina, Chili, and Brazil were hostile to Carranza because their own political institutions were dominated by that Cientifico element against which the revolution of Madero was directed. All the more reason why their ultimate approval of Carranza should be accepted as evidence that Carranza is the only man possible. Working hand in hand with the nations of South America, our own Government reduces to a minimum the suspicion with which Latin America regards the motives of the United States, the natural fear of weak nations. Some justification for that fear could be found in the vociferations of our allied imperialist and big-business interests, the people who favor a speedy solution of problems in a neighboring republic by the simple process of going in and "taking" things. The participation of the South American republics is not only a guarantee to the Mexican people; it is a pledge imposed on ourselves and a check upon the jingo within our gates.

The problems which still confront the Mexican people are heavy. For some time to come the bands of Villa and Zapata will continue to make trouble, though an unmistakable expression of our good-will and, specifically, an embargo on the importation of arms into Mexico, would speedily discourage the guerrilla leaders and their financial backers. After the war there is a vast mass of social legislation to be put through, and this will bring friction. Even before that, the financial upbuilding of the nation must be undertaken. The Mexican people has a heavy bill of foreign indemnities to meet. But they can be met if the Pan-American Governments see to it that only the just debts of foreigners are exacted. The natural resources of Mexico are very great. The people, under a just system of taxation, can afford the interest on a very heavy loan for the payment of indemnities, the rebuilding of railways, and the beginnings of a system of land distribution among the people. While this necessary work is being carried on by Carranza, critics of his Administration in and out of Mexico are undoubtedly in the position of pointing to the failure of the democratic movement which Madero set on foot. Don Porfirio is gone, but Don Venustiano, another "strong man," is in his place. It is on a smaller scale the French Revolution ending in Napoleon. But if Carranza can do for the Mexican people what Napoleon did for the French people, he will be justified. It was the error and crime of Porfirio Diaz that, while he gave Mexico order, he did not concern himself with laying a foundation for the national life.

Looking back over the policy of our own Government during these five years of turmoil, it is only too easy to point out errors, inconsistencies, disappointments. The only answer, and a sufficient answer, is that the men in charge at Washington did their best according to their lights. We were compelled to show our sympathy with the liberal forces of Mexico while leaving untouched the sovereignty of the Mexican people. In the expedition to Vera Cruz this anomaly was at its sharpest. Yet underlying was the feeling that this country could not tolerate the triumph of a Huerta. The American people were under no burden of official propriety. Their sympathies with the struggle of the Mexican people for liberty were unmistakable. Looking back over these five years we cannot but feel a great pride in the faithfulness of our people to a fine sentiment. We had much provocation. But in spite of the injuries inflicted on American interests, in spite of the loss of American lives, in spite of affronts to our national dignity, the democratic instincts, the moral sense of a great nation, and the spirit of fair play have spoken out unmistakably for giving the people of Mexico a chance.

THE METHOD OF ZIGZAG.

The phrase is Burke's. In the second of his "Letters on a Regicide Peace" he wrote of the fanatics who go "straight forward and openly," and contrasted them with "the politicians" who prefer "the surer mode of zigzag." It is a difference which has since appeared a thousand times in public affairs; and is as visible to-day in the United States as it ever was in France. In many of the questions now confronting the American people, we have to reckon both with the men of passionate convictions who desire to press on in a right line to their goal, and with those actually in office, or desirous of getting there, whose instinct it is to temporize and compromise, to go slowly if they can and to move tortuously if they are forced to move at all. Our experience has amply demonstrated the fact that when some large issue fairly gets into politics, progress with it is usually attained only by the mode of zigzag.

Take the matter of national "preparedness," of which we have been hearing so much. It has now got into politics. President Wilson, whose political acumen nobody worth listening to will now deny, has quietly annexed the issue. He has proclaimed himself in favor of "very adequate" preparation, "not for war, but for defence." On hearing of this, a great many people heaved a sigh of relief. The thing was settled. The President had committed his Administration and his party to "preparedness," and now all troubled folk could dismiss the affair from their minds and sleep in peace. What these persons did not perceive was that the question had merely been removed, for the time being, from the hands of the fanatics, and taken charge of by the politicians. More definitely, the President had seen to it that the issue of preparedness could not be used to injure his Administration. He had dished the Whigs. But that this proves that the whole matter will now be dealt with in a swift and determined manner will be believed only by those who know little of politics.

Wendell Phillips used to tell a story of the building of the first railway between Petrograd and Moscow. The engineers brought large-scale plans to the Czar, show-

ing how the route followed the sinuosities of the country. But the Czar laid a ruler on the map, drew a straight line between the two cities, and said: "Make me a railway like that." Now, we have plenty of czars of preparedness in this country who desire to do that kind of thing. There are the experts who would, if they could, put an American garrison in the planet Mars, and build coast-defences against the sweet influences of the Pleiades. There are the doctrinaires who would take their bill and sit down quickly and write, 3,000,000 soldiers, 300 battleships, and have the whole done instanter. But they will learn something after they are compelled to walk long in the zigzag paths of politics. For example, there is a renewed report that the Secretary of War and the President will strongly urge the abolition of useless army posts, so that the money saved in that way can be spent upon real military needs. But what a lot of zigzagging the local politicians will do before anything of the kind is permitted! And what an amount of moving in any line but a straight one will Congress and the newspapers and the press do when it comes to translating the large and genial terms of preparedness into those of cold cash! A bond issue of $500,000,000? The income tax doubled or trebled, and extended down to those having no more than $1,000 a year? Why, Congress and the country will be full of zigzags, when it comes to that.

This is always the way with big new questions thrust upon a democracy; and the advocates of preparedness need expect no special dispensation to save their projects from such a fate. There will be speeches and bills in heaps; political discussions and manœuvres without end; but short of some startling development or sudden threat now unforeseen, there is no reason to believe that Congress can be got to do anything in this business except in piecemeal and patchwork fashion. Who is to draw up the programme? Who to decide, or to persuade Congress to believe, what is "adequate" preparedness? If the whole problem may be radically altered by the course and end of the war in Europe, how can it be expected that Congress will not insist upon waiting before making a definite and irrevocable plunge? Such questions as these should not be left out of the reckoning of those who wish to weigh coolly the chances of future action. Just now we are comforting ourselves with words. "Preparedness" is blessed with power to soothe many an anxious breast. And many are relying upon the obvious sentiment throughout most parts of the country in favor of doing something. This sentiment is partly manufactured, partly genuine and sincere, but in either case is highly vague. It is, at present, just the sort of feeling which politicians like to deal with. They try to make sure that it cannot be used to hurt them, and they encourage those moved by it to expect great work by them when the time comes. But between all such coddling, with vague promises, and actual performance, there is a great gulf fixed. Across it the fanatics of preparedness may hope to throw a bridge as straight as the Czar's ruler; but we warn them that the politicians will seek to find every kind of rail-fence route, to the side and backwards, and north by south.

ARE WE GIVING GENEROUSLY?

About a month ago there appeared in the *Nation* a letter of very unusual character, entitled "A Word to the Moderately Rich." The writer defined that class, to which he stated that he himself belongs, as comprising persons with an income of $10,000 to $25,000 a year. "With millions suffering for food and care in Belgium, Servia, and Poland," he said, "I doubt if there is a single one of us in the whole United States who has taken the situation sufficiently to heart to make any appreciable sacrifice to help relieve it. By an appreciable sacrifice, I mean any real curtailment of our pleasure at all comparable to that involved in the giving of half a dollar by a laboring man or woman." The great majority of all of us, including himself, he declared, "have been acting like hogs."

Whether the epithet which, in his contrition, the writer applied to himself and his fellows is too harsh or not, is a question on which opinions will differ; but there is no room for question as to the fundamental fact—the fact that, considerable as has been the amount sent by our well-to-do classes for the relief of the appalling suffering in Europe, the number of cases in which the contribution has been so large as to impose upon the giver any real sacrifice is so small as to be negligible. It is pleasant to record that at least two persons have been so struck with the appeal as to have sent to the *Nation* their subscriptions of $2,000 each, in accordance with the writer's conditions; and it is to be hoped that his list of ten will be completed.

We are convinced, however, that if nothing but "hoggishness" stood in the way, there would flow into the coffers of the various admirable relief agencies a sum many times as great as that which America has thus far given. Inertia and want of imagination are the great obstacles. In some sense, it is true, these may themselves be interpreted as indications of "hoggishness"; if one were less in the habit of thinking of one's self and one's nearest concerns, and more in the habit of vividly realizing the needs of others, one would have less inertia and more imagination. One would see that there would be infinitely more satisfaction in the consciousness that a hundred homeless families were succored from misery and despair than there could possibly be in the acquisition of the latest type of automobile. But that is not the way in which we are in the habit of thinking of the matter. Most of us simply feel that the little we should do if we did our best would make so slight impression upon the total mass of wretchedness and destitution that it is hardly worth while to do anything. The reasoning is natural, but it is false.

There is one service that such a letter as that from which we have been quoting ought to be peculiarly effective in performing. In the early days of the appeal for the Belgians, a year ago, one heard a good deal of the plea that "charity begins at home," that there was danger of our own poor suffering by diversion of humane gifts to the war-stricken people on the other side of the Atlantic. With this plea we have never had a particle of patience. From persons who, in the enjoyment of every comfort and of many luxuries, can think of no other way to meet such a call of unparalleled tragedy and distress as arose from the devastation of Belgium except by cutting off their usual dole of charity at home, we ask and expect nothing. If you are unwilling at your own expense to give more in this year of wrath and desolation than you give when all's well with the world, if your help to the sufferers in Belgium, or Servia, or Poland, is to be imposed as a sacrifice upon the poor whom you have been in the habit of helping more or less at home, by all means let your charity stop where it begins, at home. But it is a monstrous idea that under no circumstances shall a man trench upon what he has been accustomed to devote to his own spendings or his own savings, and that any new call for his aid, however tragic, however overwhelming and urgent, must be met, if met at all, at the expense of the little fund which in ordinary times he devotes to charitable purposes. In point of fact, we are convinced that out of the several millions of dollars

that have gone to the relief of the war-plagued peoples of Europe, only a very insignificant amount has been derived from so ignoble a source. It has been a large sum, as such things are usually measured, though it has been far too little in view of the occasion; but, big or little, it has represented, we are sure, real generosity and not a robbing of the poor at home to give to the desolated abroad.

It is in the personal service of hundreds of devoted men and women that our country has shown the genuineness of its sympathy and its humanity. The physicians who crossed the ocean to risk their lives in the midst of war and pestilence, the nurses who have ministered to and succored the wounded, and last but far from least the men who have devoted their great ability and tireless energy to the vitally important work of organizing and directing works of charity and relief—for these representatives of what is best in America no words of praise can be too high. It will never be possible to estimate the good that has been accomplished by Mr. Hoover, the head of the Commission for Relief in Belgium, under whose direction difficulties almost inconceivable have been overcome; and the work of Mr. Bates, of the Belgian Relief Committee in New York city, has been of a similarly admirable nature. The devotion of the expert skill of these men gives one a peculiar thrill of pleasure. And when they tell us—as does Mr. Hoover in his recent report on the work of the Commission—that there is imperative need of a continued flow of help, if the women and children and helpless men that have been rescued are to be kept alive through the dark days still to come, shall the rest of us begrudge the trivial sacrifice of a few dollars, to back up the splendid labor which is *their* contribution to the good work?

INDIANA'S SENTIMENTAL BARD.

Hoosierdom made its annual sentimental journey to the capital on Thursday of last week to burn incense before the altar of its greatest poet. It was a successful occasion. Everybody who came was full of sentiment, and by banquet-time the air was thick with it. In so favoring an atmosphere, it is not surprising that a village blacksmith, surpassing the one commemorated in Longfellow's lines, who was content to allow some one else to write him up, fell into verse. The silver horseshoe that constituted his offering to the shrine in Lockerbie Street was accompanied with the couplet:

> Hang your neckties in this shoe,
> It's hand-made and made for you.

This evidence that Indiana's poetic virility is in no danger of decay was one of the most inspiring features of the celebration. But its most distinctive element was the nation-wide interest that it has aroused. Part of that interest is mere curiosity, part of it perhaps a good-natured envy, and part of it a genuine response to the sentiment that was unloosed in a flood in intoxicated Indianapolis.

One thing that is clear is that Indiana is honoring, not a mere poet, but Indiana's poet. It is just possible that if you caught a Hoosier off his guard, he would admit to you in confidence that Burns or Tennyson was in some ways greater than Riley. But what did Burns or Tennyson ever do for Indiana? Now, what James Whitcomb Riley has done for Indiana is simply beyond computation. It is not so much that he has helped in putting Indiana on the map. He has rendered a sweeter service in making Hoosierdom conscious of her own pretty, careless, pathetic little ways. In the glow of his poetic fire, her limitations become resources, her faults are transformed into charms with which you can no more quarrel than you could quarrel with a kitten that insisted upon playing with you when you thought you wanted to work; and her virtues are elevated into qualities for which the rest of the world has hitherto waited in vain. By referring to Hoosierdom as "her" we do not mean to suggest that Riley's verses deal mainly with woman's feelings and activities; on the contrary, one gets the impression that boys constitute the chief part of Riley's commonwealth, with men coming not very far behind. But in his handling of these men and boys, the poet is unmistakably feminine. That is, he presents them as they appear to the fond eyes of mothers, sisters, and grandmothers, or to their own eyes in retrospective and pensive mood.

In a word, Riley is Indiana's minstrel, and it does not matter whether what he writes is poetry or doggerel, or floats uncertainly in the twilight zone between. You may not think the Stars and Stripes beautiful, or find "The Star-Spangled Banner" inspiring in either words or music, but patriotism demands that you honor them for the sake of the sentiment behind them. So with Riley. Not his verses, but his sentiments, carry him into the Hoosier's heart.

> An Indianian no more than anybody else
> really wishes himself
> back to Griggsby's Station—
> Back where we ust to be so happy and so
> pore!

But it is easy for him to fancy that he does, and besides, Griggsby's Station is in Hoosierland and so must be a heavenly sort of place. Any lingering doubt about its delights is dissipated by the imprimatur of Hoosierland's poet. The wheel has come full circle. At first the minstrel was listened to because of his praises of a land flowing with milk and honey. Now the land is seen to be fair because the minstrel calls it so, and every fresh breath of laudation inhaled raises land, people, and poet—all of them together—a notch higher in their joint imagination.

> But not all of Riley's rhyming about
> The Hoosier Folk-Child—all unsung—
> Unlettered all of mind and tongue;
> Unmastered, unmolested—made
> Most wholly frank and unafraid;
> Untaught of any school—unvexed
> Of law or creed—all unperplexed—
> Unsermoned, ay, and undefiled,
> An all imperfect-perfect child—
> A type which (Heaven forgive us!) you
> And I do tardy honor to.

—not all this would have sufficed to win him admiring readers in places far removed from Hoosierdom. In Indiana, one of the numbers on the programme arranged for the proper celebration of Riley Day in the schools consists of a "Paper, or speech: 'Why We Celebrate This Day.' (The value of the poet; the value of our poet.) See the poem 'They Had No Poet and So They Died' [Anonymous] . . . " But the rest of the country remains strangely careless of the fate in store for the people who lack a rhymester. Why, then, the Riley cult outside of Indiana? Well, it must be admitted that others than Hoosiers are susceptible to sentimental appeals. The most patriotic Hoosier, one can safely aver, would have no reason for limiting the universality of the confession:

> *Lord!*—we all know we're as common as sin!

The main cause for Riley's popularity in distant parts, however, is undoubtedly his verses about children. And surely here sentiment is to be excused, and tear-and-smile poetry forgiven. One is tempted to make the sentimental observation that the divinity of childhood is thus shown to be proof against anything. But this circumstance should not lead us into confusing appeals to our feelings with the demands of art. Riley and Eugene Field have handled the same ore. In Field's hands only was it apt to turn into pure gold.

Foreign Correspondence

ENGLISH PAMPHLETS ON THE WAR—THE SUPERNATURAL HOST IN THE RETREAT FROM MONS.

By JAMES F. MUIRHEAD.

LONDON, September 21.

The elder Disraeli once wrote: "Wherever pamphlets abound, there is freedom; and therefore we have been a nation of pamphleteers." A moment's reflection on the course of English history seems to bear out the truth of, at any rate, the second limb of this sentence. Every political, religious, or social crisis has been marked by the outcrop of hosts of brochures, tracts, and broadsides, vehemently championing one side or other of the subject in dispute. Without going back to the era before the invention of printing, we can all recall, without effort, the propagandist tractates of the Reformation; the innumerable pamphlets of the days of the Civil War, Commonwealth, and Restoration, and the extraordinary series of political pamphlets published in the days of Queen Anne. Even when the spread of newspapers and magazines offered easier and more effectual channels of publicity, the pamphlet did not lose its vogue, and the nineteenth century is prolific in controversies carried on with this weapon, of which it may be enough to mention those connected with the Corn Laws and Chartism, and Cardinal Newman's "Tracts for the Times." The great struggle of to-day offers no exception to the general rule. Never, within living memory, have such piles of pamphlets and booklets been seen in our bookshops; and the enormous quantities sold testify that they have been read as well as published. The Central Committee for National Patriotic Organizations publishes a selected list of over 300 pamphlets connected with the war, defining pamphlets by a rough-and-ready rule of price (6d. and under). This list, naturally, does not contain many of the publications of such societies as the Union of Democratic Control (though it does catalogue some of the productions of the "Fatherland Corporation" of New York); and no doubt the pacifists, premature and otherwise, could marshal nearly as long a line. In fact, the number of brochures published in connection with the war may probably run into the thousands. The names attached to many of these pamphlets are a voucher for their quality. The list of to-day cannot boast of a Milton or a Swift, an Addison or a Steele, a Burke or a Defoe, a John Knox or a Thomas Paine, a Shelley or a Wordsworth; but it at least includes many men of light and leading, such as Lord Bryce and Henry James, Gilbert Murray and Lowes Dickinson, Frederic Harrison and Sir Frederick Pollock, Maurice Hewlett and Anthony Hope, Sir A. Conan Doyle and Sir William Osler. The Oxford Pamphlets, published by the Clarendon Press and now numbering nearly 100, present a body of sound, unprejudiced, and scholarly work that cannot easily be overvalued. If we include the pamphlets that we are reading by men of other countries, the list is further adorned by such names as Henri Bergson, Paul Sabatier, and Charles Eliot. Enough has been said to show that, in giving up books for pamphlets, we are not necessarily debasing our literary currency. And it may be incidentally noted that, while the market for large new books not connected with the war is now somewhat circumscribed, the publishers who issue standard works and own good copyrights have no great reason to assume that the war has destroyed the taste for solid reading.

The causes and issues of the war naturally form the burden of the great bulk of the pamphlets. The policies of the Allies and their opponents, the responsibility for the war, the sociology and psychology of the conflicting nations, the science and methods of war, the economics and financing of the mammoth struggle, the prospects for the future, the possible terms of peace, the effects of the war on the status of women, the experiences and psychology of the individual soldier, the attitude, rights, and duties of neutral countries, the relations of the British Dominions to the war, the question of conquered colonies, Belgium and the significance of small states, the church and the war, and the actual military and naval operations represent only a few of the different aspects under which the all-engrossing subject has been discussed. Interest has been quickened in all that throws light on the history and character of our enemies and our allies; and this has been particularly marked in the case of Russia, not only in the shape of books and pamphlets about that country (*e. g.*, "Russia's Gift to the World," a twopenny brochure by J. W. Mackail), but also in the form of numerous translations from Russian literature. The outburst of pamphlets by the so-called "pacifists" (though there are few of us who would object to that label, if used in an ultimate sense) is very natural, very characterisic, and in many ways very laudable. And yet the question may well be asked whether these pacifists are not, for the moment, practically the only militarists, since the form of peace which they are willing to promote or accept would infallibly mean a world of armed camps for generations to come. The great mistake into which they almost all inevitably drift is to write as if there were really no great moral difference between one side and the other. All wagers of war are so intrinsically wicked that it is futile to try to make distinctions between them. Such, at least, is the suggestion to my mind of various utterances by men whom I should, temperamentally, like to agree with, such as Mr. Norman Angell, Mr. Bertrand Russell, Mr. E. D. Morel, and perhaps even Mr. Lowes Dickinson. Take, for instance, these sentences from an article contributed by Mr. Bertrand Russell to the *International Review:* "This war is trivial; for all its vastness no great principle is at stake, no great human purpose is involved on either side. The supposed ideal ends for which it is being fought are merely part of the myth." I imagine that some of these pamphleteers are inclined to welcome the charge of "bad citizenship" as a halo of martyrdom, and console themselves with the reflection that the Early Christians were "bad citizens" of the Roman Empire.

In striking contrast to these publications of the pacifists are such pamphlets as "How Can War Ever Be Right?" by Prof. Gilbert Murray, and "To Them that Say Peace, Peace, When There Is No Peace," by Miss Isabel Fry, member of a well-known Quaker family. These writers have at least as much predisposition towards peace on earth and good-will to men, as the strongest of the Pacifists; but they have come, through agony and bloody sweat, to a very different conviction as to the incumbent duty of the moment.

The pamphlets approaching the subject of the war from the point of view of religion and the church are by no means the least interesting of the heap. They represent all shades of opinion, from the most literal interpretation of turning the other cheek down to the unhesitating belief that this war is a stage of "the eternal and irrepressible conflict between the forces of Ormuzd and those of Ahriman, between darkness and light, between good and evil, between God and Baal, between love and lust, between Christ and Cæsar" ("Christ or Kaiser," by Paul Tyner, in the Victory Series of threepenny booklets). Many of the writers, of course, argue that the facts, nay the very existence, of the struggle demonstrate more clearly than ever that there is no God, or at least no omnipotent and infinitely benevolent Deity.

At the opposite pole from this reinvigorated atheism there has taken place a most extraordinary recrudescence of the belief in magic, miracle, and the direct intervention of the supernatural. The most striking instance of this is the story of the saints or angels who are reported to have appeared to the British soldiers in the retreat from Mons, and saved them from inevitable disaster by the exercise of some supernatural influence on the overwhelming masses of the pursuing Germans. This story has appeared with varying details, in innumerable newspapers and magazines. You are constantly meeting people who believe in it implicitly, and can tell you all about it at second or third hand. A lieutenant-colonel of some eminence has testified that he and four other officers, as well as a large number of men, saw phantom horsemen riding on each side of the retreating column. A private soldier has made an affidavit that he "saw a vision of angels with his own eyes," though unfortunately his C. O. has shown that this witness did not reach France till after the retreat was over. Hot controversies have been waged about it by letters to the press. The pulpit has also been busy, and leading divines both of the church and of non-conformity have apparently accepted the mystical appearances as proven fact. And then came a little booklet by Mr. Arthur Machen (now in its second edition of 50,000 and readable in several different languages), tracing the genesis of the whole legend from an imaginary sketch he contributed, about a year ago, to a London evening paper. This sketch ("The Bowmen") he reprints as it appeared. To most of us this demonstration is conclusive; but there are still people who cling to their belief, just as there are others who cannot be convinced that huge bodies of Russian troops did not pass through England in August, 1914. Mr. Harold Begbie, for instance, is very angry indeed with Mr. Machen for what he considers "a most lamentable failure upon his part to realize the acuteness of human suffering, and the intense eagerness for consolation, which are now lying at the heart of English existence." This sentence appears in a rejoinder to Mr. Machen, issued by Mr. Begbie in the form of another little book, entitled "On the Side of the Angels," the object of which is to prove that there is evidence enough to show that the story of St. George with his white steed and his celestial bowmen (converted, in later versions of the tale, into angels) did not originate in Mr. Machen's sketch. He even goes so far as to suggest that Mr. Machen's literary effort may have been a telepathic reproduction of something that actually happened. In any case, more robust Christians than Mr. Begbie fail to see

why their faith or hope or spiritual consolation should stand or fall with the truth of the reported miracle.

There is no room, and it would be an invidious task, to single out individual pamphlets of special significance from the huge selected pile before me. Mr. Henry James is, however, so unexpected a passenger in this galère that I cannot forbear mentioning the striking little tribute he has paid to England in the leaflet called "The Question of the Mind." It ends with the characteristic passage: "The mind was so drenched with the character, in opposition to the examples in which the character was drenched with the mind, that all one could at the very best feel (though goodness knew indeed it quite sufficed!) was that the value finally run to earth was a value which would do for everything"—the interpretation of which I take to be that England has shown an unsuspected but very efficient fund of strength and resource. Another very striking pamphlet is "The True Pastime," by Mr. Alexander Gray. This is substantially an epitome of "Der deutsche Chauvinismus," a little book by Otfried Nippold, a German professor, published in 1913. Professor Nippold's object was to impress his countrymen with the danger to the peace of Europe involved in the chauvinistic utterances of German newspapers, societies, and prominent individuals. He gives the text of no fewer than 127 of these; and this list, along with Herr Nippold's own remarks, gives Mr. Gray the material for a very significant and arresting brochure. Another recent tractate that Americans might (and should) read with interest is "The Neutrality of the United States," by Prof. J. Shield Nicholson. This opens by explaining that our disappointment over the fact that the sympathy of the United States has not found a more forcible expression in our favor, is largely due to a want of appreciation of the difference between national interests and national sympathies. It closes with something approaching a demonstration that the real ulterior interests of the United States are not (to say the least) incompatible with sympathy for England and her allies.

No less than a million books (chiefly sevenpenny novels) and magazines have been distributed to the soldiers in the camps and trenches by the Camps Library alone; and there are other organizations doing the same kind of work. It is impossible to say how many of them belong to the category of pamphlet; but within the last week or two a new series of pamphlets has been produced expressly for the use of the army and navy. These so-called "Times Broadsheets" consist of "a selection of the best passages, grave and gay, from English verse and prose, printed on fly-leaves or broadsheets," suitable for enclosure in letters and sold for 1d. per set of six. Those already published range from selections from the Bible and Shakespeare to "Bob Acres's Duel" and "Mr. Mantalini at Breakfast," and furnish a most tempting bill of fare to those whose taste or circumstances demand a diet of titbits. The sale of the first series of these broadsheets reached the figure of one million within a week.

In conclusion, it may be noted that the British Government has not disdained to issue penny booklets on such topics as "Why We Must Save, and How"; but possibly this sort of thing may be done even better by the French Government, whose "Livres roses pour la jeunesse" (1d. each) form a quite admirable channel for putting the real issues of the war before the rising generation. Let us hope that the efforts of the "German Bureau for the Enlightenment of Foreign Countries" (*e. g.*, in its "A Dozen of English Sins Against International Law") may be less successful.

VATICAN NOTES—M. LATAPIE'S INTERVIEW—THE POPE AND THE BELLIGERENT POWERS.

By HOMER EDMISTON.

Rome, September 17.

As a consequence of the now famous interview with Benedict XV, by M. Latapie on June 13, which was mentioned in the *Nation's* Summary of the News of July 1, I was afraid I should have to take back all I had written about the Pope's generally benevolent disposition towards the Allies. It will be remembered that this Latapie is a correspondent of the *Liberté*, a Clerical newspaper of Paris, and that among the other strange utterances which he attributed to the Pope were the assertions that the blockade, which has for its object the starving of Germany and Austria, is no more humane than the sinking of the Lusitania; that, as regards the destruction of Louvain and of the cathedral of Rheims, the German apology that the inhabitants of Louvain fired on the German troops and that there was a military watch-tower on the roof of the cathedral, must be borne in mind; and that, to a question in regard to the violation of the neutrality of Belgium, he could only reply that this had happened during the reign of his predecessor.

These statements were not disavowed so soon, nor at first so completely, as the Allies and their sympathizers had hoped, though it afterwards became known that the reason for this was the absence of the Secretary of State, Cardinal Gasparri. As soon as he returned, which was just a week after the first publication of the interview, he gave an audience to a representative of the *Corriere d'Italia*, a liberalizing Clerical journal of Rome, in which he asserted that Latapie had not in a single point faithfully reproduced, while in some instances he had completely falsified, the Holy Father's meaning. He cited, for example, the Pope's saying, according to Latapie, that he had had a letter from von Bissing, the German Governor of Belgium, containing the assurance that the Germans had committed no act of violence against the Church or its ministers. Cardinal Gasparri said that no such communication, direct or indirect, had ever been received in the Vatican. He also denied the absurd reply to the question about the violation of the neutrality of Belgium, that it all happened in the reign of Pius X, and reproached Latapie for not keeping his promise to submit the text of the interview to the Secretary of State before publication.

But the incident did not end here. On June 28, M. Fernand Laudet, editor of the *Revue Hebdomadaire*, of Paris, and formerly secretary to the French Embassy to the Vatican, had an audience with the Pope in which he was assured that the Sovereign Pontiff loved with a constant affection the "eldest daughter of the Church," and that his neutrality was far from meaning indifference. Laudet also reported him as having said—and his statement met with no subsequent correction or denial—that, although every one knew that the Germans had been guilty of atrocious conduct, it was too much to expect the Pope to condemn explicitly what he knew but vaguely. And about two weeks later Dr. Van den Heuvel, Belgian Minister to the Holy See, not satisfied with Cardinal Gasparri's denials as published in the *Corriere d'Italia*, sent him a memorandum asking for a more definite statement on certain points. Gasparri's reply was given in part to the press, and gave complete satisfaction to the Belgian Minister and to the Allies generally.

"Concerning the question of the neutrality of Belgium," his Eminence wrote, "I am bound to assure you in the most positive manner that the Holy Father did not make the reply which M. Latapie has ventured to invent for his article. The fact of this matter is the following: The Chancellor of the German Empire, Herr von Bethmann-Hollweg, declared in open Parliament on the 4th of August, 1914, that Germany by invading Belgium violated its neutrality in a manner contrary to the law of nations. Whereas, therefore, in this present conflict, one side usually accuses and the other denies, and for this reason the Holy See, being unable to verify the facts, finds it impossible to pronounce a judgment, in this case the German Chancellor himself admitted that by the invasion of Belgium a violation of neutrality was committed in disregard of international law, in spite of his attempt to justify it by military necessity." As to the maltreatment of Cardinal Mercier and other Belgian ecclesiastics, the Secretary of State averred that, while it was not true that Mercier had, strictly speaking, been put under arrest, he had been interfered with in the exercise of his ministry, whereupon the Holy See had promptly, by diplomatic means, secured the restoration of his liberties; and that after the shooting of the Belgian priests, the destruction of Louvain, and similar barbarities, it had solemnly protested, at the same time doing its utmost to alleviate the condition of the suffering populations.

Finally, the Pope himself has lately sent a letter, published on August 17, to Cardinal Lucon, Archbishop of Rheims, in which he says: "It has been a pleasure and a consolation to us to learn that the commotion produced in France by a newspaper article that has had too wide a publicity, which represented neither our thoughts nor our sentiments, and of which some passages were entirely fictitious, has subsided, that uneasy suspicions have been dispelled, and that peace has been restored to anxious hearts."

Nothing more need be said about this incident except that, curiously enough, the editors of the *Liberté* thought they were doing the Papacy a service by publishing the interview. Their notion was, as appeared from a statement in their issue of June 24, that, owing to the lack of a French diplomatic representative at the Vatican, the Austrian and German Ambassadors could make what statements they chose without fear of contradiction. The object of the publication was to create another argument for the resumption of diplomatic relations between France and the Holy See, and this preoccupation may partly account for the slight accuracy with which the interview was reported.

A significant utterance occurred in the Pope's invocation for peace on the first anniversary of the outbreak of the war. After noticing the historical fact that "nations do not die, but, if humiliated and oppressed, bear unquietly the yoke imposed upon them, while

conspiring for the recovery of their liberties, and hand down from generation to generation a gloomy heritage of hate and vengeance," he goes on to ask, "Why not from now on consider with a clear conscience the rights and just aspirations of nationalities? Why not in a willing spirit begin a direct or indirect exchange of views in order to take account, as far as possible, of those rights and those aspirations, and thus make an end of this terrible conflict, as has already happened in similar cases?" Thus, without mentioning names, the reproof strikes in very high quarters, while it is perhaps worth noting that "just aspirations of nationalities" was precisely the phrase used by the Italian Prime Minister Salandra in setting forth the reasons why his country took part in the war.

In my letter to the *Nation* of December 10, 1914, I had occasion to allude to Pius X's reform of the Roman congregations. "One of the most notable of these changes," I then wrote, "and the one that has perhaps commended itself the least, was the enormously increased importance of the Congregation of the Consistory, which became invested with the nomination of bishops. Before that time the suggestion of candidates for vacant sees, and the collection of information concerning them, was the duty of an officer called Uditore di Sua Santità, who was a titular archbishop residing at the Papal court. This office, naturally left vacant under Pius X, will probably be restored by Pope Benedict."*

This office has indeed been restored in the person of Mgr. Nicolò Marini, Secretary of the Tribunal of the Segnatura, which is the Papal Court of Cassation, made famous by Raphael's frescoes in the room of the Vatican in which it formerly was held. It should be observed that the Court itself was restored by the reform of Pius X, to which I have alluded, and that anciently its Secretary was always Uditore di Sua Santità, or Uditore Santissimo. His function was originally a purely legal one, and it was only by degrees that he came to have the other duty of adviser to the Pope in the nomination of bishops. With the extinction of the Tribunal of the Segnatura, the office remained for this latter purpose alone, and was continued by all the Popes up to Pius X. Benedict XV has for the present invested Mgr. Marini with only the legal attributions of his office, but there is little doubt that he will soon take the nomination of bishops from the Congregation of the Consistory and restore it to the Uditore.

Of the late Cardinal Serafino Vannutelli, Dean of the Sacred College, it may be recalled that after the death of Leo XIII he was considered the most likely candidate for the Papacy after Rampolla. The poor showing he actually made in the Conclave is attributed largely to the injudicious zeal of his friends. Personal jealousies and antipathies are rife in the Roman Curia, and the Cardinals of the Curia were tired of Vannutelli's candidacy before the first ballot was taken.

The diplomatic mission lately sent by Benedict XV to Switzerland had a double object. In the first place, the Vatican feels the need of corresponding more easily and securely with the nunziatures and episcopates of the belligerent Powers; and, secondly, the mission is intended to render effective the Papal initiative for the maintenance of the invalid prisoners sent by the various warring states into Swiss territory. It should be observed that the Italian Government made no objection to the sending and maintenance of this mission.

In regard to the prevalent rumor of an early Consistory, I have good authority for saying that none is likely before November, and that if it takes place then it will probably be private, and will not be signalized by the nomination of either foreign or Italian Cardinals.

*See also my letter to the *Nation* of January 7, 1915.

UNITED STATES OF EUROPE—POOLING THE ISSUES.

By STODDARD DEWEY.

PARIS, September 25.

The United States of Europe was a favorite dream of Revolutionists of 1848. Not more than the lifetime of a man has passed and long ago the dream faded utterly. Now the disunion of states has broken out worse than ever before. Perhaps the salutary reaction from excess of evil may bring about a revival of the dream and its fulfilment in part.

President Eliot, looking forward from the start, pointed to the extension of the Federal system as a safeguard when war should be over. Last Sunday, John Hodge, Labor member of the House of Commons, spoke to French Socialists of the many things that matter here and now. And these "militants of the Federation of the Seine," as they style themselves, answered with pregnant resolves:

"We hail the grandeur of the military and civil effort of the English nation and its labor class to help France and martyred Belgium repel the invader;

"We affirm the full and entire solidarity of the French proletariat and the English proletariat in the impious war let loose on the world by German Imperialism;

"We declare that we are decided to struggle with our own and other allied nations until German militarism and imperialism have been reduced to impotence and until there are realized the conditions of a just and durable peace which, without annexation or conquest, shall assure the independence of all nations and make possible, in democracy and fraternity, the constitution of the United States of Europe."

Deputy Cachin, of the French Parliament, in the name of his constituents of the Socialist Federation, added that the united action of the two proletariats would outlast the war and grow. In our days of democracy, proletariats and states are one and the same. Dr. Vaillant, also a Deputy, was presiding. He was in at the beginning of the old Internationale. He recalled his first acquaintance with the Englishman who was now interpreting, Adolph Smith, during the storms of the Commune. From the French interpretation, I retranslate a few words of plain-speaking Labor-member Hodge, setting forth his idea that a union of states and peoples is already going on:

"I am a pacifist, but I am not disposed to let myself be crushed by my enemies. They attack me, I defend myself. And, defending ourselves, all civilization rises up together against the menace of barbarism. We do not wish a premature peace, but an entire peace —not conquest, but the liberation of all oppressed peoples. If it must be, my Socialist friends and I will accept compulsory conscription." Then the order of the day was voted with unanimous acclaim, "Affirming the union of English and French proletariats and their resolution to keep on to the very end."

So history repeats itself. Those who forced the issue of secession on our own United States brought about the emancipation of slaves which they most wished to avoid. Those who have planned to profit by the disunion of Europe are welding together against themselves United States of Europe.

It is not Labor Federationists alone who welcome the coming change. At Como, on Friday of this same week, Signor Luzzatti, who is *bourgeois* enough to have set the Italian State on its financial feet in the past, spoke to the French delegates of the Congress for an Economic Entente words prophetic of the future:

"There are moments in history that create new moral forces, moments of great emancipations when peoples give themselves up to sacrifice and death and cast off all their dross and clothe with sunlight splendor whatever is purest and most heroic in their soul. Such moments of grandeur we also know. This war has for its mission to secure the independence of nations, the liberty of nations that are oppressed. But, colleagues of France, before we leave, allow your old friend to offer a counsel which may work as efficaciously in your country as in ours.

"Only lately, German newspapers expressed the cruel hope that our rivalries in the Mediterranean would be for ever the smouldering centre of enmities. We ought here to take the solemn engagement that France and Italy, united with England, have the duty to persist in these beginnings of Mediterranean concord, which are destined to give new splendor to civilization and to traffic new force. France and Italy and England hold like property in the Mediterranean, each with fullest independence occupying herself with the part which interests her in this sea of fate. To this living truth we have given today consciousness more substantial by our conference. Besides the Economic Entente, our international committee shall keep watch assiduously and strike without pity those who try to renew those Mediterranean dissensions which have always spoiled everything. We shall meet again in Paris, we shall meet again in Brussels freed."

In the great days of Transcendentalism, Alcott, who was mainly a talker, defended himself. "Let an idea loose and it will take care of itself!" The Federal idea—United States—had been a care to so many in the past that it was all but given over. Perhaps henceforth it, too, will take care of itself, having been let loose anew by the logic of events.

European peoples are being prepared for it and for the common-sense union of classes which is needed beforehand. Soldier laborers have discovered that their *bourgeois* officer is a *chic type*—and he that they are worthy comrades. French soldiers and British soldiers, since they have been dying together, have learned that they like each other living. Kitchener combines policies with Joffre and Joffre talks momentously with Cadorna. When war is over, public opinion among all these allied peoples will be ready-made to keep on together.

United we stand, divided we fall—

I remember seeing this copybook line embroidered on a prize counterpane at some country fair during our Civil War. It was commonplace and it served a better turn

than finer drawn verse. So it is now that war has burned into the consciousness of one-half—perhaps, before it is over, of two-thirds—of Europe the same truism, trite no longer.

Putting aside what may be but one more dream of the ages, consider what is likely to be the outcome of all this in concrete reality. What shall this union of European States be?

Socialists fondly work into it what is left of their Internationale, with Republics everywhere. Signor Luzzatti, whose finance has always been matter of fact, does not look further forward than to a "Mediterranean union." It is not the first time he has tried his hand at pooling international issues. Not long before the war, he proposed a pool of the world's gold—a much more surprising and difficult proposition than the pooling of economic issues which is now foreseen.

It is the very division of war which is forcing men's minds towards this continued union. Prussian militarism was fed up on German success in trade, to which nearly all nations had been made tributary. Against this, these would-be United States of Europe have now to take their stand. It is like the early American hunger and thirst for Independence:

> (Your Highness knows our homely word.)
> Millions for self-government,
> But for tribute never a cent.

Poor psychologists as the Germans have shown themselves to be, their practical business men are alive to the danger. This week, too, their responsible delegates have met to consider how best to secure a revival of their trade—when war shall be over—with now belligerent nations. The *Russkovoïe Slowo* has this from a neutral:

"At Berlin and Cologne and Leipzig, there are organized unions to encourage an economic *rapprochement* with Russia. Herr Schumacher, director of the *Fremden Verkehr*, of Leipzig, said to me: 'You are wrong to be astonished at our preparations. We cannot live without Russia nor Russia without us. Peace is indispensable. Do you believe Germany capable of accepting bloody sacrifices endlessly? I am persuaded that peace will be made sooner than Europe thinks. It is true Russia has rejected proudly our offers of peace; but she is also persuaded that we cannot be crushed. Perhaps President Wilson, though he threatens us, will play the part of Intermediary.'"

So those who tried to crush others to create a hegemony for themselves have come to this—"Our enemies are persuaded we cannot be crushed!"—and at once begin pleading for a union of states. On the other side of the great gulf dug by their war, we have an honest endeavor to continue in peace the union of the Allies, including the "friendly" nations if they wish to join. This union must take the form of an Economic Entente, which must also embrace labor and emigration, and, owing to the dovetailing of national debts, must include a Financial Entente as well.

It is too soon to surmise what may be the part of the United States of America in all this. Americans are apt to ask suspiciously: "Does that mean we shall have Congress putting through another tariff bill?" No, but it does mean that we shall have no end of new commercial treaties to make.

The New Movement in Poetry

THE SELF-EXPOSURE OF A REACTIONARY CRITIC OF THE IMAGISTES.

By O. W. FIRKINS.

English prosody records the story of three notable revolts—the revolt against parity of line-lengths which reverts to the Middle Ages, the revolt against rnyme which slightly antedates Elizabeth, and the revolt against parity of feet which is scarcely older than the last century. The culmination and combination of these three revolts has declared itself in the unequal line-lengths and the variable feet of the rhymeless prosody of the imagistes. The attempt of prose to put on regularity has met half-way the attempt of poetry to cast it off, and the tendencies have coalesced in a movement to which the example of France has added definite theory and artistic prestige. The philosophic basis that underlies the more typical (not the exclusive) verse-form favored by the imagistes may be briefly stated at the outset of this notice.

I.

Consciousness is a variable, an incessant variable, and the rhythmical expression of its meaning can be confided only to an instrument as supple and versatile as consciousness itself. To say that a given line must be cast in iambic pentameter because iambic pentameter is the metre of the foregoing line or of the body of lines that constitutes the poem, is the culmination of fatuity. The only reason for using that metre anywhere is its relevance to the impetus and import of the specific line or phrase. The correspondence of expression to feeling is no longer the correspondence of tract to tract or block to block; it is the correspondence of particle to particle. No order is to be tolerated that obstructs for a pulse-beat the instant and absolute response of the momentary expression to the momentary thought. Fixed rhythm is routine; fixed rhythm is dogmatism: its relation to the independence of the specific phrase is the relation of militarism to individuality. The philosophic basis of imagiste prosody is consistent, definite, and striking; it is the abolition of the collective order in the interest of the absolute enfranchisement and complete though passing ascendency of each fleeting unit in the individual consciousness:

> Let Hercules himself do what he may,
> The cat will mew.

Objection from certain quarters is imaginable even to these finalitics, and I propose to divert my readers with the reply that a defender of use and wont might make to propositions which their own better judgment will perceive at once to be incontestable. Poetry, this reactionary might say, is variation, but variation on a ground of permanencc. Passion, of which lyric verse is the scion and the image, while sometimes disorderly in relation to law or morals, is itself a principle of cohesion, order, even of discipline, in relation to the mere vagabondage of a disengaged and desultory consciousness. In spite of the scope it gives to superficial and transitory variation, passion in the form of love, of patriotism, even of avarice, synthetizes and compacts the life; the spray may fall in "wayward indolence," but the billows, even of the storm, are rhythmic. It might be said that the element of permanence in passion found its proper correlate and symbol in the regularity of an unswerving metre, while the element of change was amply taken care of in the variations of pause, inflection, quality, and speed which are to metre what the play of expression is to the lasting substance and unshifting profile of the face. Poetry springs out of the wish to say a particular kind of thing, and therefore the option of saying all kinds of things at any time, however precious in itself, is not relevant to poetry.

II.

I have a certain pleasure in imagining that this conservative, whose foreseen discomfiture imparts a certain pathos to his courage, might go on to tempt fate by the ensuing specifications.

The variations in metre are related to its permanencies as the ivy is related to the stone wall which it overruns and lightly envelops. The wall is stupid in its tedious regularity: the grace, the expression, the spontaneity, of the object are traceable to the roaming shoots and flying tendrils of the lawless and capricious vine. But remove the wall, let the ivy fall sprawling and prostrate, and the grace and expression vanish in the collapse of the soulless structure which their airiness and playfulness had mocked. Deviations in metre are parasitic; they feed on the norm which they violate. Take a stanza from "La Belle Dame Sans Merci":

> I met a lady in the meads,
> Full beautiful—a faery's child,
> Her hair was long, her foot was light,
> And her eyes were wild.

Any competent ear will decide unhesitatingly that nine-tenths of the beauty of this inimitable stanza lies in the irregular anapæst, "And her eyes" (licentiously substituted for the normal iambus) with the glamorous suggestions it artfully elicits from the elvish long vowels in "eyes" and "wild." Now let the reader make two experiments. To understand the witchery of the deviation, let him first normalize the metre by substituting "Her eyes" for "And her eyes." The disenchantment is intolerable. "The sedge is withered from the lake, and no birds sing." But if, further, he wishes to realize the dependence of irregularity on the norm for all its power and seduction, let him revise again; let him smuggle in a single contraband anapæst into the line preceding the fourth, and watch the light and color fade out of the beautiful phrase whose fortunate eccentricity he has just admired.

> I met a lady in the meads,
> Full beautiful—a faery's child,

Her hair was long, and her foot was light,
And her eyes were wild.

The reason for the loss of power is unmistakable. Up to the moment of aberration, Keats wrote the stanza in undeviating and unimpeachable iambics, and thus built up, fortified, consolidated, a clear-cut expectation against which the impact and rebound of that unforeseen anapæst defined itself with incomparable force. An imagiste version would differ from the last form only in admitting still further regularities; thus:

In the fields, full beautiful, a faery's child
I met her;
Her hair was long and her foot was lightsome,
And her eyes were wild.

The misadventure of the imagistes lies in the fact that in extending deviation they have annihilated the one point which makes deviation influential or even perceptible—the basis of defined expectation. The variations have consumed the standard; the transgressors have repealed the law. Where all expectation is vague, all unexpectedness is vapid. Meet a libertine in a convent or a priest in a bagnio, and interest is actively aroused; meet either in a street-car, and the encounter is pointless.

III.

I am sure that all my readers will share my disapproval of the headstrong, almost arrogant, bearing of this champion of yesterday, a fault always regrettable in one who argues the wrong side of a case with his betters and doubly offensive when employed against the unaggressive and self-doubting imagists. I understand that he still invites disaster by wishing to assail his opponents on the score of imaginative expression, a point on which the position of the imagistes is impregnable, since it is evident that the rejection of uniformity in metre leaves them free to devote their entire strength to the elaboration of the correspondence between feeling and form.

By imaginative expression (he may be supposed to continue) are meant such adumbrations of reality as we have in Shakespeare's "high and giddy mast," "churlish chiding of the winter's wind," and "sunken wreck and sumless treasuries." Let us show the defencelessness of imagism even in its citadel by setting down a highly imaginative passage, first as Keats wrote it, secondly in a prose, and thirdly in an imagistic, version.

KEATS:

O for a beaker full of the warm South,
Full of the true, the blushful Hippocrene,
With beaded bubbles winking at the brim,
And purple-stainèd mouth.

PROSE:

O for a beaker full of the warm Southland, full of the true, the blushful Hippocrene or Falernian or Chian, with a purple-stainèd mouth and with beaded bubbles winking at the brim of the chalice!

IMAGISTE:

O for a beaker
Full of the warm South, full of the true, the blushful
Hippocrene with beaded bubbles winking
At the brim, and purple-stainèd
Mouth beloved by the lips of Olympians.

Now observe one fact. The prose version has lost not only the metrical structure which a true prose could not conscientiously retain, but, keeping intact every phrase that made the poetry delectable, it has watched the charm expire in the wake of the withdrawing metre. The effect in the imagiste version is similar, though the effacement is a trifle less complete. The ground of this phenomenon is not obscure. Between Keats and the reader there existed an understanding which told the reader when and how long to pause, where to quicken or retard the voice, where to expand or attenuate the syllable. That understanding is known as iambic pentameter (with trimeters sparingly interspersed). The reader is too dull to find the imaginative effects for himself in the jungle of prose or the network of imagism, but he is not too dull to find the rhythm, and the matter is so carefully ordered that, in finding the rhythm, he stumbles inadvertently upon the effects. "Follow my road," says Keats, "and you shall see the obelisks and the porticoes." In the prose and imagiste versions, the understanding is revoked; the road is wholly or nearly obliterated, and, though the obelisks and porticos still dot the Campagna, the guideless reader never comes within their range.

The theory of imagism breeds forecasts of incisive and picturesque variety, of darts and sallies, of clashes perhaps and bickerings, such as one dramatizes in some Genoese or Florentine market-place in the bright turbulence of the receding Middle Ages. But the truth is that a metre of this kind cannot be multiplex for the same reason that a liquid cannot be supple; it is not firm enough. The psychology of the transaction is pointed. The cautious reader is afraid of these disparate and dissentient lines. He interposes, therefore, the cushion of a long, ceremonious pause; the movement becomes leisurely and calm; and, by a curious and pungent paradox, the incarnation of the versatile is entrapped by a phase of monotony. An air of dissipation and evanescence is the fitting Nemesis of a rhythm in which repetition and climax make no provision for the storage of metrical effects. Take Mr. Aldington's

O blue flower of the evening
You have touched my face,
With your leaves of silver.

Never was so quiet an innovation made the subject of so clamorous an outcry; the gong has advertised the reed.

There is no reason for disputing the legitimacy of this versification on its own ground. In its proper task of gently laving the imagination, of spraying the consciousness with its dainty syringe, there is no occasion for denying its rights or disputing its capacities. It has a right to its own modest place in a tolerant and balanced commonwealth; its mistake was to unfurl the banner of revolution.

IV.

I must own that I have listened to this invective with diminishing forbearance. The insolence of this upstart in palming off his own travesty of Keats as *imagiste poetry* is trying even to my veteran patience, and should debar him from the honor of refutation at the hands of any self-respecting imagiste. The only atonement I can make to the persons whose time he has ruthlessly squandered is to invite their participation in the spectacle of the speedy completion of his self-disgrace.

The psychology of imagism (I again dramatize the opinions of our adversary) contains matter of undoubted interest. Not the least conspicuous of its traits is the supineness or passivity of the attitude which the faithful assume in relation to the overshadowing or incumbent universe. They have the air of patients, of people under treatment; they *undergo* the things which other men observe or contemplate. In watching the shadows of the clouds, the long, still grass, or "the rose and white colour of the smooth flagstones," they remind us of persons taking a medicated bath. A polite inquiry as to their health and spirits seems the appropriate sequel to their emergence from the ordeal.

Another point of interest is the extraordinary detachment and solitude of the beings subjected to this curious regimen. The loneliness in which they dwell is almost polar; they are exiles who have actually accomplished the traditionally impossible feat of fleeing from themselves. One feels the futility of ransacking city directories or parish registries or voting lists in quest of an evidence of sonship or fatherhood or citizenship or occupation on the part of these landless and homeless men. They are not substances in their own right; they are receivers of sensation, leaves of a scratch-blank torn out by Nature for the hasty jotting of a casual memorandum. The man has vanished; what is left is a retina.

But this is only half the story. The solitude above described is not restricted to the observer; the object likewise is a drifting, homeless, expatriated thing. It is destitute alike of a place in a charter globe and a function in a civilized order. It has no history, no prospects, no causes, no sequels, no associations, no cognates, no allies. As the man is abridged into mere vision, the object contracts into pure visibility.

The results of this double shrinkage are peculiar. In this convergence of the power to see with the faculty of being seen, we have an encounter as strange and fantastic as the inosculation of two mouths from which the bodies on either side have been supernaturally detached. We do not get emotions: an emotion is part of a rich contexture and varied aggregate called life. We do not even get things: a thing is a part of a concerted whole and complex fabric called a cosmos. What we do get is the sensation that holds these opposites together, and a sensation in

the absence of its cognates is about as significant as a hyphen still visible in a parchment from which the words it linked have been hopelessly effaced. One recalls the teaching of those contemporary philosophers who place the core of reality in the flux to the depression or subordination on either side of the cosmic aggregate and the human personality.

The want of self-direction, of story, evolution, climax, in the typical poems of the group allies itself naturally with the foregoing traits. The reservation implied in "typical poems" is imperative. Justice to the delicate talents of which Miss Amy Lowell and Mr. Ezra Pound have been in some respects the thriftless and impolitic custodians exacts the confession that there are phases of their work in which the recession of the imagiste ideal gives space and freedom for the cult of better things. Miss Lowell, indeed, expressly declines to be included by any school; the inclusiveness is all the other way. With all due candor in the allowing of exceptions, it may nevertheless be said that the failure of imagiste poems to "arrive" seems ominous of the destiny of their creators. What the poetry lacks is *reference*. In the adaptation of consciousness to ends, if evolution be correct in its seizure of their psychology, the barnacle or the polypus might give lessons to the aimless imagistes. The difference between the Wordsworthian and Emersonian brand of contemplation and that which flourishes in their circle is the difference between a gaze and a stare. They have intentness without intention: fixedness without clear choice. They furnish roadway but no route, or, as Richard Burton pointedly remarked, a sentence without a predicate. Their concision is the proper accompaniment of the stress they lay on the self-enclosing, self-sufficing flake or globule of experience. Consciousness resolves itself into a succession of insulated, needle-like punctures which approximation or articulation would but dull.

Let me take advantage of the pause for breath which his own violence forces upon our perspiring opponent to remark that his patronage of Miss Lowell and Mr. Pound has the merit of achieving the same level of taste as that displayed by the remainder of his diatribe. The imagistes can readily understand, moreover, that, in the trim little reticule of his spinsterly universe, he should see only anarchy in any finer order which might threaten to displace the immemorial relations of the card-case and the smelling-bottle. But, by all means, let him proceed with his philippic.

V.

It is sometimes thought (so the conservative may be presumed to continue) that the imagistes are distinguished for concreteness. Now, it is quite true that when one turns to the "Irradiations" of Mr. John Gould Fletcher, for example, one finds, in lazy and florid abundance, picture-words, mention of fountains, houses, grasses, trees, and especially of clouds, for which, as the most unattached and disengaged of natural objects, Mr. Fletcher cannot repress a fraternal tenderness.* But let us not be misled. The concrete, as a literary virtue, is not primarily the material, the sensible, the objective. A rock, a star, a lyre, a cataract, do not, except incidentally and indirectly, owe their command of our sympathies to the bare power of evoking reactions in a series of ocular envelopes or auditory canals. Their power lies in their freightage of association, in their tactical position at the focus of converging experience, in the number and vigor of the occasions in which they have crossed and recrossed the palpitating thoroughfares of life. It is not in its *material*, but in its *historical*, aspect that the empire of the imagination is remitted to the concrete. A babe's formless scrawl on one side of a scrap of yellowed paper is as concrete, in the technical sense, as the seal of Cavour or the autograph of Leopardi on the other; but sense-impressions are poetically valuable only in the measure of their power to procreate or re-create experience. The divination of etymology teaches us that the concrete is "grown together" with the fibre and substance of authentic life, while estrangement from the normal interests of mankind is suggested in the very texture of the word "abstract."

Now, it is this segregation from the normal activities and sensibilities of life—just identified with the essence of abstraction—which stamps the psychology of the typical imagiste. The concrete as a means of tapping our reservoirs, of subsidizing the present from the accumulations of the past, is clearly useless to writers whose object is to give to each new experience an Adamitic simplicity and independence. Hence the singular association of profusion and vacuity in their performance. The concrete, in their rhapsodies, is the mirage that spans the desert.

There is one possibility which cannot fairly be left out of the reckoning by any impartial judge, or even any upright assailant of the new school. They might respond to the foregoing strictures in a fashion parallel to Napoleon's "Je suis ancêtre." They might assert the plenitude of their relation to vital and rational experience, declaring at the same time that that relation was not hereditary but ancestral, that they renounce indebtedness to the past to become the creditors of the future. May they not be breaking into new fields whose so-called abnormality is only the biting comment of destiny on the rawness and barbarism of contemporary man? To this we may reply by a supposition. A Spanish muleteer looking over the shoulder of Averroës, while that scholar perused an epistle in Arabic, would have no right to conclude that the contents was unexciting because his ignorance was baffled by the script. But the face of man is legible even when his writing is obscure. If the reading was unattended by smile or frown, the curled lip, or the kindling eye, if the language of emotion in which all men are scholars were replaced by a dull composure or an unmeaning stare, even the muleteer would be justified in concluding that the letter had no message for the heart. It is their own impassivity that convicts the imagistes.

VI.

A question akin to the problem of concreteness must be dismissed with a still briefer answer. Are these writers realistic? There appears to be some modest evidence for the affirmative. Miss Lowell's neighbor is fat and has a bald head: Mr. Hueffer's "eight driblets of water" gurgle and drain out of "eight leaden pipes" in a ball which is itself encircled by exactly "eight lead and copper bands." Mr. Fletcher, when he tires momentarily of watching "the crimson peonies explode in the humid gardens of his soul," recruits himself by an inventory of the "straw, chaff, old bottles, broken crates" that litter the sands. The hopefulness which these symptoms must arouse in all true votaries of modernity is a little belied by a view of the product of the school in the aggregate. Pulverize life and grind imagism in a mortar, and similarities will undoubtedly be found in the resultant dust-grains. But realism is a question not so much of the *material* as of the *order* of life, and were the identities in matter much more frequent than they really are, the abrogation of the natural order would quash the claims of the imagistes to any share in the assets or liabilities of genuine realism. Again, the ground of realism is community of experience. A world in which all men's universes were totally dissimilar would afford no foothold for realism, however punctilious might be each man's transcript of the data furnished by his insular experience. Not the veritable merely, but the verisimilar and the verifiable, is demanded by the realistic principle. The very danger of that movement is found in its temptation to fall back upon the primitive in its quest of the universal. It follows that a school which aims to isolate rather than combine, which reserves its enthusiasms for the peculiar, the unshared, the remote, the inaccessible, has no standing in the realistic court. If the imagistes had profited by the example as much as they have rejoiced in the encouragement of Miss Harriet Monroe, they might have learned how readily a humane and catholic responsiveness to the varied amplitude of life may blend itself with receptiveness to radical ideas, and even with a taste for experiments in metre.

VII.

In conclusion, certain strong analogies between the form and the contents of imagism must be lightly touched. The small, particular unit dominates the versification; the brief, concentrated impression governs the experience. As imagism rejects continuous rhythm, which is the assertion of the control of the whole over the parts in prosody, so it rejects structure, which is the assertion of the same control in rhetoric. The metre is standardless and the thought is undirect-

Irradiations: Sand and Spray. By John Gould Fletcher. Boston: Houghton Mifflin Company. 75 cents net.

ed. As vast theoretic command of variety in the prosody does not preclude its capture by monotony in practice, so the claim of universal freedom for the thought is found compatible with great, practical restrictions in the domains both of treatment and of matter. Metre and substance are like in their freedom to do anything, and their wish to do little. As imaginative power is denied to versification which strains every nerve in the pursuit of expressiveness, so imaginative clearness is vainly sought in a treatment which advertises its stress on the concrete and the pictorial.

My power of comment on this crude invective is merged in thankfulness for its cessation. So consummate an exhibitor of his own follies robs his critics of their opportunity.

Notes from the Capital

GOVERNOR OF THE FEDERAL RESERVE BOARD.

Before we get through with the various projects for raising additional revenue, now under consideration by the Administration, we shall probably hear more than heretofore of one of the few men in Washington who can accomplish a large quantity of important work with so little noise in the process that we well-nigh overlook their connection with it. Just at present he is paying close attention to another class of financial problems, for he is Governor of the Federal Reserve Board, and was chosen for that position because the system under which the Board operates is not only rather intricate, but still in its experimental stage, and a man was needed at its head who combined knowledge and experience with uncommon resourcefulness. His name is Charles Sumner Hamlin, and he hails, as one might guess from this fact, from the old Bay State. He was one of the little group of young men of spirit and antecedents whom Grover Cleveland inspired with a desire to take a turn in the public service; and in 1893, when he had been only ten years out of college, he was called to become an Assistant Secretary of the Treasury under Mr. Carlisle.

It is characteristic of Hamlin's methodical ways that, having been consulted almost continually during the framing of the Federal Reserve act, he should have put in his spare hours preparing a card index covering every feature, large or small, of that measure, so that to-day he holds the eel of banking by the tail. The same trait manifested itself at the outset of his political career, when, knowing that public speaking would have to be one of his weapons, but that he had an insufficient voice and would be thrown into a blue funk by heckling, he put himself at the disposal of the Massachusetts Democratic State Committee with the express stipulation that they would send him to speak, not in large cities and to fine audiences, but at the remoter points where only from ten to one hundred persons could be counted on at a meeting. That is the sort of audience that puts an orator's powers to the supreme test, as every one who has any experience at campaigning will testify. Hamlin met his ordeal manfully, and with profitable results. His voice is not yet mighty, but it is trained to the highest efficiency that nature will permit, and quizzing interruptions have ceased to terrify him.

The tariff has been a special hobby of Hamlin's from the day of his graduation at Harvard. Of course he is a reformer, and President Cleveland's message of 1887 sounded for him the very keynote of pure Democracy. His enthusiasm for its subject-matter, moreover, was heightened by the circumstance that its author was conciously courting political ruin in listening to the dictates of conscience rather than the whispers of expediency, for there was a strong strain of hero-worship in Hamlin. Incidentally to his study of the tariff as a revenue-producer, which took on fresh energy thereafter, he was able to bring his ingenuity to bear upon the question of how to make the collection of Federal taxes most workable, and did it with so much effect that the Republican Senate leader, Nelson W. Aldrich, needing a collaborator on an administrative bill, took this robust young Democrat into partnership for the job, ignoring his party affiliations for the sake of his special knowledge and capacity. But a yet greater compliment awaited him; for the High Priest of Protection, President McKinley, having observed his management of affairs as one of Cleveland's Assistant Secretaries of the Treasury, gave him an urgent, though vain, invitation to remain in office.

All of which indicates that Hamlin has tact. He has, and affability, a comely face, good taste in dress, a knowledge of the piano, and a fair singing voice besides. With this equipment, it is not strange that he is a social favorite, and accomplishes diplomatically what he might never attain by a colorless discussion. How far he carries the graces of polite intercourse is illustrated by an incident of his Treasury days in Cleveland's time. A man with flowing side-whiskers entered the Assistant Secretary's office one morning without the customary ushering by the messenger posted at the door. His broad brow, the iron gray of his hair, the sweep of his black frock coat, and his air of being at home anywhere, marked him, in Hamlin's eyes, as unquestionably a distinguished member of the Canadian Ministry who had been for some time expected in Washington for a conference on international issues. Hamlin cut short a letter he was dictating, and advanced with hand outstretched, a most effusive smile, and cordiality enveloping him like a cloud, to greet his guest, who, being stone deaf, found it difficult to respond to these flattering overtures in appropriate terms. But he did understand the virtue of brevity in explaining one's errand in a Government department. He was the official clock-winder of the Treasury, and he had called to make sure that the timepiece on Hamlin's mantel was running right!

The Governor of the Reserve Board must often bless the stars that blinked upon his christening. To bear about the surname of a noted Vice-President, linked with both names of a majestic Senator, must keep before him a pretty stiff ideal to live up to; but how would he have liked it if his sponsors in baptism had taken a fancy to perpetuate in him one or more of the names his Revolutionary ancestor, Major Eleazer Hamlin, bestowed on four sons: Europe, Asia, Africa, and America? TATTLER.

Varieties of Realism

By H. W. BOYNTON.

Breaking-Point. By Michael Artzibashef. New York: B. W. Huebsch.

The Genius. By Theodore Dreiser. New York: John Lane Co.

The Song of the Lark. By Willa S. Cather. Boston: Houghton Mifflin Co.

It is the fashion just now to discredit the word "realism" as a shabby counter of speech possessing little or no intrinsic value. In so far as it confounds reality with mere detail, truth with fact for fact's sake, it is contemptible enough. But such confusion may as readily stultify any other term, "veritism" or what not, which we may try to substitute for it; and a term we need. That airy nothing to which the poet gives a local habitation and a name thereby becomes an embodiment of reality; and so may the "slice of life" in the hands of a creative artist. In most novels of high merit, as in other works of art, both processes are involved. But they remain distinct processes; when in a given work one or the other conspicuously prevails, it is convenient to use such labels as "romantic" or "realistic."

These three novels belong pretty clearly to the second order. They are all strongly bound to fact, though in different ways. In "Sanine" M. Artzibashef conveys an impression of a force often morbid and brutal, but still a force. "Breaking-Point" is a disheartening example of that frantic and unfruitful pessimism to which the Russian realist has so often descended. This nightmare of lust and despair and death is the more dreadful because of the intellectual energy relentlessly devoted to its weaving. The persons themselves, a galley of lost souls, harrow us because, despite their manias, their vices, their paltriness of conduct, we cannot quite turn away from them as inhuman. And their humanity is not that of piteous ignorance. They think, they philosophize, their minds torment them with the consciousness of their own enormity. And the upshot of the thinking is that life has no distinguishable meaning, and the sooner one is rid of it the better.

The scene is laid in a provincial village among the Steppes, remote, forlorn, shrouded in dust. It has its wretched little society, its handful of merchants and manufacturers, its garrison which is a grave for military ambition. There are also a few attendant figures, Tchish the tutor, old Arnoldi the physician, and an unexplained exile or two from the larger world, of whom young Dchenieff the painter is chiefly important. A perilous place: there are warnings from the outset: "It is in such a gray hamlet," reads the first page, "rather than among blossoming trees, sun-lit mountain peaks, the azure of the sky, or in the midst of cities, that those terrible thoughts must be born which later enter the world to creep across her face like the pale portentous ghost of death." The dwellers in this fated spot

have been going on through the years like dingy mechanisms, to all appearance, but each under his own strain of boredom: finding momentary relief now and then in drink, or sex, or games, but unconsciously approaching the "breaking-point" which in the end is to be signalized by a very orgy of self-destruction. The author declares in the beginning that he does not hold them responsible: "The human will is incapable of changing in any minute detail what Life has ordained." Puppets, then, are these, but puppets tortured by self-consciousness and the phantom of volition. Gleams of fine feeling they have—old Arnoldi, with his belated and hopeless passion for a dying woman; Ryskoff, with his devotion to poor Nelly: they are only gleams. Steadily the victims march towards those final pages along which their dead bodies are to be strewn thicker than the last-act corpses of a tragedy of blood. Among these gloomy figures Dchenieff the artist maintains his bad eminence in the affairs of love. Nelly, Genitchka, Lisa—so runs the pitiful list of his victims—dust in his mouth. "I don't believe anybody does believe in anything," he cries before he shoots himself: "either God, or the devil, or humanity, or in ideals of beauty and truth. And nobody cares for life, nobody loves Nature or mankind."

Requiescat Dchenieff! He has lived under a heavy handicap, for was he not an artist, of that celebrated tribe born without backbones and seldom achieving them? At least he lived long enough to see himself for what he was. We may rightly prefer him to Mr. Dreiser's "genius," who, reduced from the multitudinous facts in which his author envelops him, is a bounder pure and simple, a genius by sheer assertion. Often as, in the course of these seven hundred closely printed pages, we are assured of Eugene Witla's brilliant mind and charming manner; there is nothing that he says or does which enlightens or fascinates us in the smallest degree. If a duller fellow ever lived in a book, we have never met him. As for his character of Lothario, it would be hard to imagine a practitioner of more primitive methods: he is a drummer in a frock coat, a Don Juan of the streets. On the whole, his morals are less distressing than his manners, since he is supposed to be a gentleman, or as near as we can get to it in America. His father, to be sure, is a sewing-machine agent in an Illinois town; but his author believes him to have outgrown that, early in his career. The course of that career we cannot here trace in detail—it has been done by Mr. Dreiser, Heaven knows! Eugene Witla has an early knack at drawing. While still a boy he goes to Chicago, and presently becomes staff artist on a minor newspaper. His editors and associates tell him how remarkable he is and urge him to find something bigger in New York. He consents, and has not been in New York long when he wins fame as painter of a series of city scenes. He is hailed as a genius, and his road to success appears secure. But in the meantime (after, and contingent with, several amours) he has married, and his sexual life saps his powers. He becomes a neurasthenic, can do no work, and as a last resort becomes a manual laborer at 15 cents an hour. A year or two later he is able to draw again, and finds a position with an advertising "firm"; one step leads to another, and in no time at all he is in control of a great publishing business at a salary of $25,000. Unluckily, he always has an amour or two in hand, and presently one of them threatens a scandal, and makes him neglect his business; so he loses the job. His wife dies in giving birth to a daughter (all recent records in obstetrical data are here broken). We leave him sentimentally dallying with Christian Science, mysticism, fatherhood, and art. "What a sweet welter life is," he murmurs, as for the last time he runs his hand through his hair, "how tender, how grim, how like a colorful symphony." Welter is the word for such life as is here painted—and romantic welter, that is the funny thing. Stripped of their patiently amassed and chiefly meaningless details, these pages give a record of the paltry business and sex adventures of a common little hero of amatory romance. Far enough this from the sincere realism of a "Sister Carrie" or a "Jennie Gerhardt," in which Mr. Dreiser was working upon his own last.

If one were to ask me for an example of sound and creative realism, I could suggest nothing better, among all the attempts which have been made within recent years, than Miss Cather's new story. "O Pioneers!" was a book of uncommon sincerity and power. This strikes even deeper, and will, we think, carry farther. One episode—Thea's three weeks' relation with Fred—will attract more attention from a certain class of readers than all the rest of the story. It is novel in fiction rather than in fact, and has here, convention to the contrary, the place which such episodes have so frequently in real life: it *is* an episode, important, but not determining or even focal.

In this book Miss Cather also has attempted that most dangerous of feats—to trace the genesis of genius. How many prima donnas alive have recent novelists alleged in vain! They were either merely pretty women forced to pretend that they were the idols of two continents, or viragos under the same compulsion. The roots of genius, its growth as a creative force (as against a factor of public "stunts")—how often have they been successfully studied in literature? Thea Kronborg we believe in. She triumphantly refutes the legend of the invertebrate artist. She becomes a great singer not only because she is born with the gift, but because she has the strength to develop it. And (the distinctive idea in the book) that strength of hers is rooted in the soil. To Moonstone, the little Colorado town in which her childish life had once appeared so limited—to her mother, her Mexican friends, poor old Wunst—to the place itself, the ground upon which it stood, the air it breathed, Kronborg the great singer was to trace back the stream of her powers, as to an only possible source. "Nearly all my dreams, except those about breaking down on the stage, or missing trains, are about Moonstone," she says to her old friend Dr. Archie. "You tell me the old house has been pulled down, but it stands in my mind, every stick and timber. . . . That's the house I rest in when I'm tired. . . ."

And these people of Miss Cather's!—not an artificial or strained figure among them—Thea's mother, her rather disagreeable family, Archie, Fred Ottenburg, Harsanyi the pianist, Bowers the time-serving singing teacher—they are all actual persons of our acquaintance; and they all have their natural places in the action, quiet as it is. It is a story of something better than suggestiveness and charm—a thing finished, sound, and noble.

Correspondence.

THE HAITIAN PROTECTORATE.

To the Editor of The Nation:

Sir: Ten years ago Mr. Roosevelt, with his characteristic high-handedness, quite without the advice and consent of the Senate, and without any adequate public discussion, established a financial Protectorate over Santo Domingo. A Democratic Administration is now engaged in a similar enterprise in Haiti, and as before, makes its arrangement by a sort of autocratic "Order in Council," as Prussia might do, and without taking the time to wait for the slightest constitutional debate or vote in the Senate. We have now on our hands a miniature war in Haiti, and are requiring our soldiers to shoot the natives of the island, who suppose themselves to be defending their country against invasion. What conduct could be more undemocratic and "un-American"!

Have we not here under way one of those silent trains of precedents which, as history shows, like a great tidal drift, may alter and revolutionize the character of a Government? Grant, if you will, that the course of our Government, however arbitrary and wilful it is, may be beneficent; suppose, also, that we may be sure, as we are not now sure, that this action is free of any sinister and selfish commercial interests, or any taint of contempt for a colored people; the fact remains that we are entering upon a line of conduct, fraught with momentous possibilities, involving the chances of vast extension and great expense, of continual friction within a given Protectorate and of collision with foreign Powers, without the slightest thought on the part of the American people and without information to guide our way.

What is the nature of a Protectorate? Sir John Macdonnell aptly says in the Encyclopædia Britannica in the summary of his answer to this question: "The fact is that, in the case of protectorates over uncivilized or semi-civilized countries, a development is inevitable: control quickly hardens into conquest and international law more and more takes account of this fact." Do we really wish to take over one state after another by any form of ultimate conquest? Is it not really a very effective form of control, when you annex the Treasury and Custom Houses

of a state, and keep battleships in its harbors to suppress insurrection?

If we ought to do this sort of thing, on what ground are we doing it? Is it by reason of our benevolence? Is it because we have done so handsomely at home in securing our people in "life, liberty, and the pursuit of happiness" that a duty is imposed upon us, after the Prussian scheme, to extend our system over other people, and even to be prepared to kill them if they resent our control?

Do we not here touch close to great issues, far more important to our destiny and the welfare of mankind than most of the questions (including the tariff), on which our old parties are supposed to be divided? Thus, it will be said that we must be tax-collectors in West India Island and other states "for the sake of the Monroe Doctrine." But the deeper question follows: What is the Monroe Doctrine to-day? Who can tell us what it means, and what it involves, and why we must bow down to it like an idol? Is it an instrument of national safety, or, rather, a point of rather perilous friction? Is it in any way philanthropic, or is it not a counsel of selfishness, and very unwise selfishness at that? Is it for the good of the people of America, or rather for the benefit of certain exploiting interests? Do the people of the A B C Powers desire it? Is it not fairly outgrown, and is it not now time frankly to put an end to it? We seem to need wise and disinterested public men to advise us. Never was there a time when a just and humane national policy was so needful.

Is it not, then, time to remonstrate with a government which in a typical instance of such moment as the case of Haiti is seen drifting in the wake of Mr. Roosevelt's most dubious conduct, opportunist and yet arbitrary, while the people are at sea as regards any knowledge of what policy in its dealings with neighboring nations the United States ought to follow, and on what rational grounds our policy is based? With one kind of policy we are likely to be handicapped for an unknown period with increasing military expense and with the arrogant behavior which calls for armies. Do we desire the policy of a "Great Power"? On the other hand, we could adopt a policy which would put us in the lead of the world in the terms of humane civilization. If we reason and think and discuss we can have the latter. If we and those who guide our affairs at Washington merely drift, as we are drifting at present, how can we help the direful consequences of our negligence? CHARLES F. DOLE.

Jamaica Plain, Mass., September 30.

UNFAIRNESS AND BIAS OF WILSON, HIS CABINET, AND OTHER PRO-ENGLISH.

To the Editor of The Nation:

SIR: After glancing over your correspondence column, I cannot refrain from hurriedly writing down a few incoherent thoughts in reference to "standing by the President and presenting the case of the other side."

It is doubtless true that we should stand by the President and his Cabinet, especially so at this critical time; but our doing so does not blind us who are fair, honest, and just from criticising deliberate acts and expressions of unfairness to a people who are entitled to at least equal consideration. The old saying that a dog knows whether he has been kicked at or stumbled over is quite true with the Germans. Every open-minded American knows that Wilson and his Cabinet have been as favorable to England as they dare be—even before this great war. Time and space will not permit of details were it necessary; fair Americans are convinced of this fact; and pro-English cannot and will not be convinced. Their minds are closed to all arguments, if any were needed for demonstration. If you please just one concrete instance, the billion-dollar loan, the blockade of lawful American commerce. Reverse this situation and Wilson would consider these to be unfriendly and unneutral.

Doubtless many have heard the remark that the other side has never presented its case—has never had a convincing argument. The other side thought that the plain statement was all that was necessary in the first instance; later, however, discovered that it was presenting its case to the lonely winds of the desert of Sahara so far as its material purpose was concerned; for it discovered that the audience through bias, passion, and prejudice had the characteristics of those who have ears and hear not.

Milwaukee, Wis., October 6.

THE EARLY WRITINGS OF WALT WHITMAN.

To the Editor of The Nation:

SIR: In collecting materials for a study of the early life and writings of Walt Whitman I have unearthed a considerable mass of new material. May I have space in your columns to enumerate some of the more important of these fugitive pieces, with the hope that any of your readers who may have knowledge of others will be good enough to let the existence of such writings, whether in verse or in prose, be known?

In the *Democratic Review* for March, 1842, Whitman published, over the pen name of "John Quod," a Dickensesque story called "The Burglars." In November of the same year this magazine presented a novelette in seven chapters designed to aid the propaganda for the abolition of capital punishment. It was entitled "Harry Blake; A Story of Circumstantial Evidence, founded on fact." The same *nom de plume* is used. Later Whitman reprinted the story as a serial in the Brooklyn *Daily Eagle*. The *American Review* for November, 1845, contains "Tear Down and Build Over Again," a brief essay on the destruction of historic buildings in New York. Two poems appeared in the *Eagle* during Whitman's editorship; first, a descriptive poem in conventional form called "The Play-Ground"; and second, an "Ode—to be sung on Fort Greene; 4th of July, 1846." The former of these appeared in the issue of June 1, and the latter in that of July 2, 1846. The second volume (January-June, 1848) of the *Union Magazine* has "The Shadow and the Light of a Young Man's Soul," a sketch evidently reflecting Whitman's experience as a boy school-teacher on Long Island. I have also discovered what I believe to be the earliest extant portrait of Whitman, which shows him as a well-dressed, black-haired school-teacher beside the schoolhouse in which he taught. Of other writings which appeared from Whitman's pen in the New Orleans *Daily Crescent*, in 1848, I have written in the current number of the *Yale Review*.

I particularly desire to see a copy of the *Long Islander*, published by Whitman at Huntington, L. I., in 1838-9, and of the Brooklyn *Daily Freeman*, published, off and on, in 1848 and 1849.

R. EMORY HOLLOWAY.

Adelphi College, Brooklyn, October 5.

THE JUBILEE "NATION."

To the Editor of The Nation:

SIR: May I be allowed to add my small voice to the chorus of praise that has greeted the fiftieth anniversary of the *Nation*?

My father, Gen. J. D. Cox, was an intimate friend and sincere admirer of its editors and a frequent contributor to its columns from the earliest numbers until his death in 1900. The voluminous correspondence between him and Mr. Garrison is an illuminating record of the impact of two great minds, often differing in opinions and tastes, but always rejoicing in one another. Among my own treasures are two of Mr. Garrison's letters to my father, one relating to an article which I wrote at the ripe age of seventeen and which my father sent to Mr. Garrison for criticism, and the other on the occasion of my marriage. I might be said to have been "brought up" on the *Nation*, and it has always stood to me for all that is highest and best in journalism. It has followed us in all our many wanderings, and by sharing it with fellow-exiles of many nationalities, we have left other admirers and "constant readers" in remote and out-of-the-way corners of the world. Since the European war began, I know of no other journal to compare with it on either side of the Atlantic.

It is not only the men of America who owe to the *Nation* their broader and saner political outlook and their keener appreciation of the best in literature and art, the women, also, have many of them been formed in its fine school, and one of these gratefully acknowledges her debt. HOPE COX POPE.

Montevideo, Uruguay, September 14.

DEMOCRACY AND THE UNIVERSITY.

To the Editor of The Nation:

SIR: The case of Scott Nearing at the University of Pennsylvania, the summary dismissal of Professor Brewster by the University of Colorado, and the wholesale removal of teachers by the University of Utah bring painfully to mind the problem of the university. There are few other problems of more transcendent importance to us if we are to make this country more of a democracy. One of the great causes of the present German madness is the suppression of free teaching in all their great universities. In this way almost all of the articulate classes in that country were brought into unanimous support of the "might" theory of government.

It is the might theory of social control that underlies the actions of the trustees of the universities whose teachers have been so severely disciplined in recent months. All unknown to the great body of the American people the authorities of many of our greater training schools have come to claim for themselves and through themselves for the community the same directing powers which made all Germany a unit behind the Kaiser. It is a subtle process. Personal interests, the sense of class superiority, and the

natural fears of radical popular movements all conspire to make successful business men and representatives of the greater religious denominations distrust teachers and other leaders who claim for themselves the right to speak their minds freely on social and religious questions.

It has always been thus in this country, and the denial of freedom of speech has always paralleled over-developments of conservative group interests. Notwithstanding the positive guarantees of the Federal Constitution, the Federalist party, when the radical influences of democracy threatened the existing social order, denied freedom of speech and imprisoned men for no other reason than that they criticised the social order, the dominant party, and its allies. Although Jefferson was one of the greatest protagonists of freedom of speech, and the Constitution of Virginia assured the right of free speech to every citizen, he, as rector of the University of Virginia, was compelled by the dominant religious influences of the time to dismiss the first and greatest professor engaged to teach in the new university. With shame and regret he did it, for the new teacher was not only one of the most learned men of his day, but a personal friend of the ex-President. He yielded against his better judgment; but had he not yielded, the funds for the University itself would have been denied him. The conservative forces of Virginia society had gained control, and the exponents of these forces could not easily be denied their wants.

It was Thomas Cooper, the co-worker of Priestly and the discoverer of hydrogen, who was thus prevented from teaching chemistry in Virginia. But in South Carolina the love of learning was stronger at that time than the fear of democracy, and the trustees of the State University made Cooper president a year later, 1820. But fourteen years afterward, when religious orthodoxy became the rule in that community and owners of plantations began to fear the dangers of free speech, Cooper was dismissed at the age of seventy-six, although it must be said that the aged scientist was still employed by the State, which desired to avoid the appearance of turning an old man out to die.

These facts are cited to show how much more powerful is public opinion, when directed by the well-to-do and the conservative leaders of society, than is any State or national guarantee of individual rights. Between 1840 and 1860 no college teacher in the South could proclaim disagreeable doctrines and hold his position. There, as in modern Germany, the masterful property interests had gained complete control of the machinery of the common life and legal declarations gave way. The result for the South was not unlike what is certain to be the fate of Germany, for one can hardly imagine that the whole world is to become indoctrinated with the theory of might.

Since the end of the Civil War the masterful elements of Northern society have been uniting the more closely as they have become more powerful. The freedom of speech which the Republican party demanded in 1856 is now denied by the leaders of that party, and it is the same with the Democratic party, in so far as the representatives of great wealth affiliate with its organization. This means that the same sort of social power is now seeking to regulate the affairs of our common life which regulated so effectively the life of the old South and which speaks so powerfully from the battlefields of Europe.

Do we mean to say now that our university teaching shall be free, that all scientific men, all historians shall really enjoy the protection of State and national guarantees of freedom of speech? If there is an effective public opinion behind a demand like this, university teaching may become the most important thing in the country, for expert opinion in the social sciences does not accord with the views which are now the canons of action in many of our leading communities. College professors may not be capable of self-government, and I suspect that most men who have the responsibility of directing the affairs of our universities really think them not equal to this rather elemental task; but they think, nevertheless, that it is most unwise to leave the direction of national life in the hands of those whose personal interests run counter to those of the majority of the people.

Holding this view, their notion of a well-ordered society is that every social organization should supply at all times the means of correction necessary to prevent its running "amuck." Who is in a better position to supply the corrective than the trained man of the university? He is, as a rule, not well-to-do; yet he is not, as Bismarck asserted, a member of the proletariat. The college professor loves the truth as much as others, and he understands better than most how difficult it is to know the truth, to ascertain what are the facts of a given situation; and his opinion, if invited and respected till a better be found, would doubtless become a valuable social asset.

The problem is to mobilize under existing circumstances the university forces. While some teachers "go off half-cocked," and some, doubtless, undermine in their classrooms the respect of the young for some of the conventions of modern life, the great majority are cautious, sober, and thoughtful, desirous of improving the conditions of life for all and not too snobbish to favor a real democracy in this country. But how can the teacher aid the public if his calling is to be regarded as closely akin to that of the mendicant, if the trustees of the institution in which he works treat him with a good-natured contempt, if the great class which the trustees represent look upon him as an inferior, and if the president of the university is to enjoy two, three, or four times the income of the scientific discoverer? The young are always imitative. How shall the rising generation be led to examine the facts of life fairly if their teachers are only "hired men"?

Not that it is any disgrace to be a hired man, but that we are all taught to think so. It is not going to be an easy task to make the university specialist a great social asset if we have already made up our minds that he is only a purveyor of certain information necessary to make one a fit member of "good society." Even in Germany the professor is more than that. He is an instrument of the Government in the conquest of the world.

Until we attempt to revolutionize the opinion of well-to-do people, of business men, for business men direct the life of the country, we might as well cease to revile the crude trustees in Pennsylvania and Colorado for removing teachers who criticise their way of doing things. Trustees may have too much power, but the public has given that power. Whether a university be directed by State authorities, by a religious denomination, or by a self-perpetuating board, the result is the same, and the same kind of men are found on all governing boards, that is, they believe in the methods and in the ideals of successful business men.

Is a great banker or a rich meat-packer peculiarly qualified for determining what shall be taught in universities, who shall be engaged as teachers, and whether the constitutional guarantees of free teaching shall be suspended? Is not such a one disqualified by the very processes of his mind, by his innate fear of change, to determine these most important of social functions? A governing board of a university should perhaps not have the authority to determine these questions. A group of teachers might be better qualified to exercise some of the powers in question, though this raises the difficulty of a self-perpetuating group.

If college professors are not to be allowed to decide what shall be taught, who shall teach, and when teachers become unfit for their important task, might it not be possible to have some professors on the boards of control, some business men, some representative of the so-called radical forces of our society? What might it not have been worth to Germany to-day to have had Karl Marx, Lassalle, and Liebknecht members of university faculties or even members of the Imperial Council? They represented the interests, feelings, and prejudices of the masses of toilers in Germany. Their voices were worth more to the Government than that of the Kaiser himself, or at least they might have become of more worth.

But are we going to remedy these things? How shall we bring a generation of success-worshippers to the point of recognizing the need of change? It was impossible to bring the dominant element of the South to entertain any suggestion that their system was not the best in the world. The makers of industrial America are equally impervious to-day. They give employment to university professors, they must see to it that no effectively revolutionary teaching is allowed. To put professors on boards of control would be to many trustees the same thing as to put the laborer in the place of his master; and to make radical social leaders participants in the control of higher education would be like the suggestion in 1850 that an Abolitionist be made a member of the board of control of the University of Virginia. Yet that was just the thing Southern universities needed in 1850.

Of course, there is always the possibility that the people of moderate means may establish institutions for their children, and that a class of independently trained leaders may thus come into existence. This was the way Princeton began, the way of the Middle States and Southern up-country in the founding of their many "log colleges," and it is the way of earnest religious denominations of to-day; but the character of the modern university, with its necessarily expensive libraries and laboratories, makes this very difficult and less likely than formerly to produce the desired social results. The need is, therefore, a responsive university, a university whose professors are social in outlook, whose president longs to coöperate with all classes, but not "von oben herab," and whose trustees respond to the aspirations of Socialism itself.

What all need to understand is that the university, regardless of the sources of income or support, belongs to the people; and some practical recognition of this is neces-

sary if the country is to be spared another social crystallization like that of the old South. Young men are trained for public service, not for self-realization, least of all for the mere enjoyment of the literatures and the learning of the past. And, if young men are educated for the common good, they must not be educated, as was the policy of the Jesuits, away from the people.

WILLIAM E. DODD.

University of Chicago, September 10.

"PREPAREDNESS" AND A TELUGU TALE, ALSO AN ANCIENT "PACIFIST."

TO THE EDITOR OF THE NATION:

SIR: I suppose that I am almost the only American professor who has not written to some paper a letter on the war. It is no excuse that I am in retirement, for I am not only supposed to be master of my time, but I should probably have escaped the risk of the unkind criticism on the part of the authorities that I might better have devoted my labors to the more immediate purposes of my professorship.

It is not my intention at this late date to break my silence and inform my fellow-countrymen of my personal opinions on the questions of the day, but in the course of the desultory reading for which a retired professor may be charitably forgiven, I happened upon a document which proves that the problems with which we are wrestling were not unknown in former times and in other lands. The document in question is contained in a little book, "Folk-lore of the Telugus, a Collection of forty-two highly amusing and Instructive Tales," by G. R. Subrumiah Pantulu, Madras, no date. The ninth story (p. 21) is entitled "The Washerman Minister," and, although it would perhaps have been more apropos three months ago, I trust it is still not altogether untimely. The story is as follows:

"The King of Kalinga had a washerman who used to wash his clothes exceedingly well and bring and give them to him daily. One day, the King was exceedingly pleased with the scrupulously clean manner in which the clothes were brought to him and promised the washerman to grant any one prayer he might make. The washerman looked at the King and said that he was most anxious to become the King's Minister, and requested the King to bestow the post on him. The King did so, dispensing with the services of his old Minister, who had served him for a very long time.

"It came to pass that, not long afterwards, a certain other King, having heard of the weakness of the washerman Minister, raised a huge army and gave battle. His master having heard of what had come to pass, called upon the new Minister to muster his forces, to which he replied that, as he had already made the necessary preparations, there was no cause to fear the enemy. The King fully believed in this statement, but was sorely disappointed, for not long afterwards the city was bombarded by the hostile armies. The King sent at once to the Minister, told him of what had happened, and inquired of him as to the arrangements he had made.

"The Minister responded: 'There is nothing to fear in what has come to pass. But I find that the task of ruling a kingdom is a big affair, and while I was thinking of how best to rid ourselves of this difficulty, the enemy chanced to enter and blockade the city. Let them, therefore, undergo the perils of governing the kingdom. As for me, I used to wash the clothes of about a hundred families in this city, but since my elevation to the Ministership I have had to give up my calling. I will now, therefore, resume it, and give you one-half the work and reserve the other half for myself; the calling being no trouble to me. On these considerations I have made no preparations for war.'

"The King was very much grieved when he heard this, but thought the result to be the natural punishment of linking himself to a fool."

In this connection I may say that I think I have discovered the earliest reference in literature to the "Professional Pacifist." It occurs in Ovid's lament over his dead parrot (*Amores*, ii, 6), which he characterizes as follows:

non tu fera bella mouebas;
garrulus et placidæ pacis amator eras.

SOME MORE NEOLOGISMS.

TO THE EDITOR OF THE NATION:

SIR: Our language grows apace. In evidence I submit a few words which strike my fancy.

(1.) In Horace Annesley Vachell's "Quinneys," Posy, the up-to-date girl, says to her mother, a Victorian survival: "I'm jolly glad that I'm a twencenter."

(2.) Rupert Hughes, in "The Barge of Dreams," in the chapter which describes the hero's experience in watching his young wife on the stage, speaks of one of the hero's neighbors, a stout *bourgeoise*, as the "gumstress."

Will you not agree with me that "twencenter" and "gumstress" for "a person of the twentieth century" and "a woman who chews gum," not to overlook the male "gumster," as specimens of condensation, leave nothing to be desired? H.

October 4.

"WHILST" AND "WHILE."

TO THE EDITOR OF THE NATION:

SIR: Englishmen almost invariably write "whilst" and Americans "while." Yet Jonathan Swift preferred the latter. In a letter to Thomas Beach, April 12, 1735, he says, "I now proceed to what I would have corrected in your poem." In the long list we find, "for whilst, put while." When Thomas Sheridan published his edition of Swift in 1784, he made the following protest in his preface, which was retained by John Nichols in the edition of 1808. "As the living speech has never engaged our attention, the whole being employed about the written language, many barbarous words of uncouth sounds are still retained, notwithstanding there are others of the same import, more pleasing to the ear. Such as"—and then in parallel brackets he gives "whilst, amongst, betwixt, amidst," for "while, among, between, amid." John Nichols added a footnote to the word "whilst": "See this barbarism corrected by Swift himself," and then he calls attention to the letter mentioned above.

I have never heard the word "whilst" in oral speech—but I think it is all but universal in contemporary English books.

WILLIAM LYON PHELPS.

Book Notes and Byways

ROBERT BRIDGES.

A JAPANESE IMPRESSSION OF THE POET LAUREATE.

By YONE NOGUCHI.

A motor car ran up the gradually heaving country road through the pitch-dark silence of late night from Oxford, carrying us, Robert Bridges, his daughter (whose clear gentle voice was like that of Bridges's beloved Silver Thames, shady with birch and beech and odorous pine), and myself, toward Boar's Hill; I smiled in my innermost heart musing that my own children at home when they grew older would feel proud their father once sat close as a sardine in a can by the Poet Laureate who has sung, to use Dr. Warren's lines:

Such song in England's flowering day
Made merry England brave,
From Honied Chaucer shrewdly gay
To Wither blithely grave.

Only I wished that it were daytime to make me sure that Bridges's love of the country was well responded to by the beauty of the surroundings of his choice. When the car reached his house, my mind was filled by the graceful lines of his Invitation to the Country:

And country life I praise,
And lead, because I find
The philosophic mind
Can take no middle ways;
She will not leave her love
To mix with men, her art
Is all to strive above
The crowd, or stand apart.

The large entrance hall or vestibule, quite new to me as I had hitherto only experience of city dwellings, hugely pleased me, as its spaciousness at once suggested the rich hospitality of a country gentleman; how often I had heard that Englishmen show their very best in the country. Mrs. Bridges, who greeted me heartily at the door, conducted me into the sitting room whose generous fire would, as she said, warm me up before going to bed upstairs. The little room where I was soon taken by Bridges, as the night was already advanced, gave me the most tender impression by the candle lights; the hospitable consideration I fully perceived in the hot water on the washing stand and, above all, in the foot-warmer secretly buried in the soft bed. I had brought a copy of Robert Bridges's poems in the Oxford edition with me, whose pages I opened by the soft lights; what a sweet chivalrous soul with lyrical joy and rapture, I thought, this author of the "Growth of Love" and "Shorter Poems" has hidden under his seemingly uncouth, rugged personality. He was, I could not help thinking, personally a rough diamond before it was handed over to the hand of city jewellers; his stoic severity and even cynical resignation should be taken, I thought, for a mantle which always protects him from running carelessly. As in his personality, his beloved art is a kind most conscientious, tender, and true in heart; I was glad that my acquaintance with his rare personality made me well understand what he said about the "art that most I loved, but little used." He is unique and even original (who says he lacks originality?) since he has written what the others forgot when their songs were finished; I was very happy to

read, before I blew the light out, many times over, the following lyric:

I love all beauteous things,
I seek and adore them;
God hath no better praise,
And man in his hasty days
Is honoured for them.
I too will something make
And joy in the making;
Altho' to-morrow it seem
Like the empty words of a dream
Remembered on waking.

When I awoke on the morrow, I observed nature through the window of the room where, as Robert Bridges wrote,

Hale winter, half resigning ere he go,
Doth to his heiress show
His kingdom fair.

The birds sang; the leafless trees in the wood were softly wrapped by the gray morning mists which made them appear even more attractive than with their green leaves in the season. I was congratulating myself on seeing Bridges's country beautiful even in winter, when I was called by the Poet Laureate and asked if I liked to take a hot morning bath. After my bath, I soon appeared before the breakfast table where the simple but wholesome food was prepared; Bridges took me, when our breakfast was over, into his own house of study or sanctuary, independently built as a sort of annex to the principal house (a long passage or arcade between them), where, to use Whitman's phrase, Bridges would loaf and invite his own soul; the first thing in this spacious studio which attracted my immediate attention was a large old-fashioned fireplace where many huge logs had been piled. Bridges lighted them; the fire went up, making a tremendous voice. There was a grand piano at one corner to remind me that the Poet Laureate, unlike most poets, was a cultivated musician: two sides of the walls at least were covered by the range of his chosen books which I was afraid to touch only to expose my own ignorance. By the most luxurious fire we sat, I listening to his enthusiastic talk on English prosody; he all the time fluttered, while talking, the pages of a copy of Milton's poems. Somebody's lines of greeting in the *Oxford Magazine* came to my mind:

O eagle-eyed, knowing the lofty music
That Milton also knew,
To-day the heart of the land with thee rejoices,
Hearing, far from the murmur of city voices,
Thy magic known to few.

Bridges dwelt at length on a certain letter addressed to the Editor of the *Times* in connection with Bridges's Christmas Song (1913), speaking of the poem as a revival of a dead ancient art; he laughed good-naturedly over people's want of knowledge on the art which was, while looking old superficially, decidedly new. I thought that the technique itself in his case was the very living spirit; by that I mean that he alone holds a rare genius to make the form aspire to the spirit. I thought that he did not fully and clearly express it, when he said that the form alone was poetry as humanity never has changed since the beginning; in his dignity of being a technician, I dare say, he has enough reverence towards the spirit. By this time, you will know that we were already in the garden commanding a mighty view over the valley where, if it were Christmas Eve, you would see the realization of Bridges's following lines:

The constellated sounds ran sprinkling on earth's floor
As the dark vault above with stars was spangled o'er.

The Poet Laureate, I thought, had every reason of satisfaction with this Christmas Song printed in the *Times* by the King's command; while walking in the garden, he talked on the poem and explained even with the pictures of a bell and its ropes the following lines:

Blessed be their founders (said I) and our country folk
Who are singing for Christ in the belfries to-night
With arms lifted to clutch the rattling ropes that race
Into the dark above and the mad romping din.

Then he showed me all the stretches of his garden; when I saw a little sequestered corner, one of the stories I had heard (how many stories about Robert Bridges I have heard since I came to England!) came to my thought, that he had exclaimed offhand to a visitor, after conducting him to a place where Bridges was pleased to hide himself from the people of his hatred, that he would find him there when he came again. "It's a newspaper story," he said when I asked him of its truth. And he gleefully told me how he had baffled and fooled all the reporters on the day of appointment, who utterly failed to find out his hidden place. He is a hater of publicity. And he said: "I never deny in press even when anything wrong is told of me."

We soon started towards Oxford on foot, now over the meadow, then crossing the fences or by the stream; he talked on many things, of poetry and the laureateship which had for some years its sad decline. Robert Bridges exclaimed: "The King knows I will never do anything foolish." I was happy to think that the Laureateship is going to shine grandly in the sun.

Literature

THE PHILOSOPHY OF SOCIETY.

Societal Evolution. By Albert Galloway Keller. New York: The Macmillan Co. $1.50.

The Social Problem. By Charles A. Ellwood. New York: The Macmillan Co. $1.25 net.

Professor Keller, of Yale, is a sociologist who has something definite to say, and in his hands sociology becomes something more than a string of borrowings and platitudes. That society has arisen through a process of "evolution" has long been a commonplace for sociologists—though a commonplace which they have often found it necessary to illustrate and enforce by lengthy and minute elaborations of the obvious. But when Professor Keller speaks of the evolution of society he means by it something that is neither vague nor obvious, and his arguments concerning it are something more than general analogies. In brief, his thesis is that societal evolution is in a very exact sense a continuation of biological evolution. This means more than may at first appear. Society, for Professor Keller, has not merely had a story of increasing complexity; its changes have been due to exactly the same causes which account for biological evolution. These causes, according to the author's analysis, are four: namely, variation, selection, transmission, and adaptation. As we shall see later on, it is a question whether this biological analysis is justified. However that may be, Professor Keller takes it over from biology into the study of society, and the remainder of his book is devoted to the application of these four factors to societal evolution.

The changes to be traced in both animal and human evolution are due to methods of escaping the fatal sweep of natural selection. In the case of animals these methods consist of structural modifications, while with man they are to be seen in mental and social adaptations. These social changes which the environment forces upon men living in groups are crystallized into the institutions and ideas, the "folkways" and "mores" by which society controls its members. And the operation of the four dominant factors of biological evolution enumerated above continue to act in a perfectly real and not merely analogous sense in the development of these forms of social control.

It is not difficult for Professor Keller to demonstrate the importance of the first of these four factors—variation—in the folkways; and a single chapter suffices for the illustration of the subject. Variation reduces ultimately to the mental reaction of the individual. But selection is a more complex and also a more distinctively social process. It is society, not the individual, which selects out from the mass of incipient folkways those which are to survive and to be adopted as "mores," or consciously approved customs. And its action in so doing is usually of a quite automatic nature. "To bring about any selection at all there is need of conflict as between variations. In the case of the folkways this contest, plainly enough, cannot take place as between ideas. The real struggle is between the adherents or exponents of the mores in question, and it is through the issue of that struggle that a given set of mores is carried forward towards universality or consigned to oblivion." Thus it is a truly biological "struggle for existence" that, in the primitive stages of society, determines societal selection. "But as the mores develop and civilization advances, the nature of the test becomes decreasingly severe, eliminative, and decisive. Not only are the sanctions of life and death displaced, but even where they still remain, their incidence is often determined by the mind of man rather than by the elemental forces of nature." Thus political and then economic subjection take the place of annihilation, and the mores of the victorious or powerful class are "selected" through the force of prestige and imitation.

Is there such a thing as rational selection? Though not so extreme in his views as Sumner, to whom he is indebted for his general point of view, Professor Keller is very chary of allowing any considerable influence to the teaching and preaching and leading of individual reformers. The "leading classes" can, indeed, do a little—especially through legislation; but their influence is extremely limited. "Rational selection can come about only to a slight degree as the result of the dominance of any single class or sub-group, let alone individual. So-

cietal selection is too massive a phenomenon to take its origin elsewhere than in masses of men: it is due to the largely unconscious contortions of the whole social body."

But this does not mean that societal selection is and always must be irrational. Individual initiative, indeed, can do little; but there is one large group of interests in dealing with which society itself (not merely its leaders) may be trusted to "select" its customs and institutions rationally. These interests are those that have to do directly with physical nature and with the survival and economic welfare of the group. For here competitive folkways are subjected to very definite tests, and the same evolutionary factor that gave the bird its wings will force society to make rational choice. Hence the primacy in social progress of the economic forces. The moral, religious, artistic, and intellectual forces of society are all secondary, and their development is dominated by the "maintenance-mores." "All the way down the scale, each special group of mores is conditioned as to selection within it by the nature of the wider generic group of which it is a part, until at the bottom all the wider groups are determined as to their form by the maintenance-mores—which themselves reflect the nature of the struggle in societal self-maintenance, the form of this struggle being itself determined by natural conditions. Thus societal evolution runs back ever to natural evolution."

It is a question whether Professor Keller has here proved as much as he seems to believe. One might conceivably admit that the maintenance-mores offered the best opportunity for the injection of reason into the evolution of society, and yet refuse to acknowledge that they had been the dominant factor in this evolution. Professor Keller seems to put more into his conclusion than he gets out of his premises. Nor can it be said that he has by any means demonstrated that only through the maintenance-mores can reason be largely introduced into societal evolution. One might challenge Professor Keller's reading of history and insist that the purely spiritual factors—such as education, religion, the dissemination of ideals—have had a much greater share in guiding the development of the civilized races than one might suppose from reading "Societal Evolution." Particularly is this true of religion. Professor Keller, of course, does not deny the influence of religion, but religion seems to mean to him chiefly the fear of ghosts. But when one considers the influence exerted upon society by Buddha, Mohammed, the Hebrew prophets, and Jesus, one feels that here there is something else than ghost-fear, and one is likely to conclude that there is some other factor of importance in the development of civilization besides the maintenance-mores.

But to return to the argument of the book. Variation and selection having been shown to be in principle identical in organic and societal evolution, the rest of Professor Keller's task is relatively simple. Imitation or "tradition" so obviously corresponds to organic heredity that the chapter on Transmission offers no difficulties. Finally, "adaptation" is treated in three chapters in which the attempt is made to show, by examples from primitive, frontier, and highly civilized societies, that all sorts of human institutions are ultimately to be explained as adaptations to environment. These three chapters, with their illustrative material, are persuasive; yet one may question whether they add as much to the value of the book as they detract by confusing the issue. For confuse it they certainly do. The four chapters on selection (which form the body of the work) are meant to show that in societal evolution, just as in organic, survival is determined by adaptation. It is adaptation that guides selection. It is therefore somewhat disconcerting, after having been persuaded that the whole of societal evolution may be accounted for by variation, selection, and transmission, to find a fourth factor of explanation on one's hands with nothing left for it to explain. The origin of this difficulty is to be traced to Professor Keller's analysis of *organic* evolution into four factors, when three are quite sufficient; after which the application of a mistaken biological formula to societal evolution was natural, though unfortunate. The true relation of these factors, as expressed by Professor Keller in a personal letter to the reviewer, is that "variation, selection, and transmission work out to produce adaptation; and you get a better conception of adaptation if you emerge from the workshop, so to speak, and take a look at the product."

As the reader of this review will quickly see, Professor Keller is a loyal disciple of the late Professor Sumner; and while at times he softens down some of his master's extreme views, he is open in general to the same type of criticism as his predecessor. But whether one agree or not with Professor Keller's conclusions, one can hardly fail to recognize that he has made a real contribution to the study of society, and has demonstrated (what some of us had begun to doubt) that there is such a subject as sociology—or at least "societology."

Professor Ellwood's problem, unlike that of Professor Keller, is not the evolution of society as such, but the particular way in which society can now be made to evolve in desirable directions. That Professor Ellwood regards this as a practical question, a question about which something may be done, indicates at once that he takes a radically different view of societal evolution from that of Professor Keller. The physical and economic factors, in his view, play a relatively subordinate rôle.

"When men ascribe the origin of ideas to various influences in the environment, they forget the part played by human instincts, by the creative imagination, and by constructive reasoning. They forget, in other words, that the mind of man is self-active and needs no compulsion from without. They have committed the fallacy of accepting as a theory of human nature a passive psychology which is utterly discredited by science to-day. Thus economic determinism, or any other materialistic theory of human progress, is without scientific foundation." Civilization "is, in large measure, the substitution of a 'subjective environment' of ideas and ideals for the objective environment of material objects; and cultural evolution is possible only through the continuity of this subjective environment, that is, through the continuity of ideas and social values. *Civilization*, in other words, *is at bottom the creation and transmission of ideal values by which men regulate their conduct.*" "We mean, in other words, that the ideas and ideals of our present civilization have had a life-history of their own, not to be understood from the study of material conditions alone; and that it is the conflict between inharmonious traditions and ideals in our culture on the one hand, and the lack of adaptation of our ideas and ideals to the present conditions of life on the other, which has produced the modern social problem."

As the last part of this quotation shows, Professor Ellwood does not overlook "the present conditions of life," whether geographical, physiological, or economic, as having important bearings on the development of society; but he regards these conditions as capable of being handled and directed through the application of the conscious reason of individuals. Not only is a direct attack beginning to be made upon the evils of waste and of disease through deliberate efforts for conservation and public hygiene (in all of which Professor Keller doubtless would heartily agree); but various evil conditions which are not directly connected with the "maintenance-mores" may, in Professor Ellwood's opinion, be remedied by a concerted effort on the part of the intelligent and altruistic members of society through the education of the young and the inculcation among them of the ideals of service and unselfishness. This, he insists, is not an unreasonable expectation. For the three roots of individual character are heredity, the general social environment, and personal education. By a conservative application of the principles of eugenics, criminality, weak-mindedness, and other undesirable characteristics might be considerably reduced; while the social environment and the personal education of the next generation are what we make them.

Unfortunately, Professor Ellwood does not stop to consider who "*we*" are—"we" who make the social environment—nor to face squarely the fact that to change the social environment society itself must be changed. Truly, *if* we should bring about a proper social environment, we might expect all sorts of good things of the next generation; but the production of a proper social environment is exactly the problem to be solved. And from some of the pages of Professor Ellwood's book one gets the impression that he regards this as fairly easy to do if we should only inculcate the ideals of social service in our schools and else-

where. For any such sanguine view of the social problem Professor Keller's book is a needful antidote.

In short, the two books under review supplement each other fairly well just through their disagreements. It is quite true, on the one hand, that societal selection is "too massive a phenomenon" to be quickly or easily determined by the preaching of individuals. Yet, on the other hand, the faith that individuals can do something, and by concerted effort perhaps much, is the precondition of every endeavor for social improvement. We are more likely to make progress if society's leaders believe profoundly in the power of ideals than if they are persuaded to leave things to the "largely unconscious contortions of the whole social body."

CURRENT FICTION.

The Story of Julia Page. By Kathleen Norris. New York: Doubleday, Page & Co.

This appears to be an attempt on Mrs. Norris's part to escape, or to advance, from the fiction of emotional domesticity with which she has been so successful. It is to her credit that she has not been content to go on indefinitely with stories of the type of "Mother" and "The Rich Mrs. Burgoyne"—stories excellent in their kind, but a trifle monotonous in motive. A mother is worth more than a clubwoman, and it is better to be happy than to be rich: Mrs. Norris freshly emphasized these truths, but she could not keep on doing it freshly: nobody could. It is not surprising that she should now be trying a different kind of thing; but the kind of thing itself is surprising. This purports to be the life-story of a girl of the people, told with that minuteness of detail and attention to observed fact which we label realism. It sets out, and progresses well towards the end of the first of its two parts, as a story of the same general order as the "Sister Carrie" of Mr. Dreiser, the "Clark's Field" of Mr. Herrick, or, more closely, the "Rise of Jennie Cushing" of Mrs. Watts.

Julia Page, like Jennie Cushing, is of the most unpromising origin, the vulgar child of vulgar people, but, like her, almost as a child determines to make the most of herself, to become a lady. Up to the moment when Julia runs out of her grandfather's house, purse in hand, after her jailbird uncle, the narrative strikes us as natural and authentic. But at this point hastily Mrs. Norris trumps up a coincidence which is as improbable as any ever invented—and which changes forever the whole course of Julia's life. Thereafter it is as if, having once succumbed to her romantic habit, the story-teller were unable to control her hand. Suddenly, without the slightest hint of warning, at the end of the first part, when Julia has fairly made herself over and been rewarded with the confessed love of a gentleman—all at once, from a cloudless sky, falls the alleged fact that our Julia has a "past." Julia herself hurls it at her betrothed. He believes it: we do not. Either it was an afterthought with Mrs. Norris, or she has grossly misrepresented her heroine. Nowhere during the many recorded dialogues between herself and Mark Rosenthal, extending over a period of years—dialogues in which he persistently urges marriage—is there a hint that she has been his girl-mistress. Yet the whole of the second part is built upon this preposterous supposition; is, in fact, a long and tiresome account of the inability of Julia's husband to forget the fact he has supposably forgiven before their marriage. The affair becomes more and more sentimental and unreal as the pages turn. In short, the book is neither a human document nor a poetic representation. The conclusion is nominal: Jim is supposed to have really forgiven and forgotten at last; but we see no reason for supposing that the cherished spectre will not rise again in due season. If he only had the sense to see that nothing of the kind can possibly have happened, that Julia's creator has made her slander herself! But, then, there would have been no Part II.

Pegeen. By Eleanor Hoyt Brainerd. New York: The Century Co.

Aunt Jane. By Jennette Lee. New York: Charles Scribner's Sons.

Our authors are, as it were, professional purveyors of good cheer. In "Pegeen" Mrs. Brainerd applies the hand of use to materials well tested by time. Here is another of these wonder-children who, to go by recent American fiction, are rightly at the helm of society. The other day it was Michael O'Halloran, the newsboy who filled a city with sunshine, and lectured all sorts of people on their duty. To-day it is Pegeen, the drunkard's child, special luminary of a countryside, whose smile will never come off, and who is qualified to lecture even an O'Halloran. Her special function is "seeing to" people, which means getting them under the influence of her hand and smile. The protégé who figures chiefly is a (rich) painter with a broken heart, who has attempted to be a hermit in the wilderness—vainly, for Pegeen promptly undertakes to see to him. Several rustic characters have their places in the slight action which follows. But it is not a tale of low life, or even of rural life. The hero is our (rich) artist friend, and the heroine another importation from the city, known chiefly as the Smiling Lady. She is engaged to Another; but it is clear from the outset that this is only the necessary obstacle in the course of true love. The Other (very rich) is too old for the Smiling Lady, and, most magnanimous, he withdraws pleasantly in due season, and leaves everybody happy and hopeful and neighborly and loving and smiling indefatigably. Pegeen, we gather, is now to "see to" the retiring fiancée. It is striking merit in a tale of this sort that it escape silliness, as, unless under a very literal eye, this tale does.

So also, on the whole, does "Aunt Jane," though it steers very near the edge, in more than one particular. Here is the gospel of determined sunshine again. The scene is a hospital of which Aunt Jane, leading lady-optimist, is matron. Thither comes a millionaire, but for his good looks drawn to pattern—hard, self-centred, and lonely. His wife is dead, and his only son a wanderer. Under a cold surface he hides a yearning for affection; like all millionaires, he is persuaded that nobody cares for him, but for his money. It is a great surprise to him to find that he must obey the hospital rules, but of course he has to, and we enjoy the always comic spectacle of a man worth millions of money knuckling under to a plump woman in a cap and a doctor whose clothes do not fit. But Aunt Jane is not an ordinary plump woman. She is the homely philosopheress who has so flourished in fiction since the apparition of Mrs. Wiggs. She emanates good cheer and common-sense. She is never in a hurry or a worry. She has an occult influence over her hospital and her patients. When things go wrong, Aunt Jane makes a point of being most exceeding calm: "And then, somehow, through the hospital would run a quiet, steadying force that seemed to hold them in place and use them for its ends; and they would be conscious, as they worked, of being bigger than they had guessed." She has also a power of willing, or wishing, fellow-beings back from the gates of death. So does she rescue the millionaire after his operation. But her greater service is to rescue him from himself. Gradually, under her tutelage, he discovers that it is pleasant to be friendly, to help other people, and possible to be cared for by them. It turns out that his son is fond of him, and that his nurse (who is, we believe, red-haired, like an extraordinary number of nurses in recent fiction) is just the wife for that son. There are also some fellow-patients whom he learns to befriend, and a new wing to be given the hospital when he leaves it. The point at which the story becomes strained and very nearly silly is the foisting upon good, plump, middle-aged Aunt Jane of a double romance. The millionaire and the shabby surgeon become rivals for her hand, the latter winning, as it were, by a neck.

Around Old Chester. By Margaret Deland. New York: Harper & Bros.

Two of the seven tales here collected have been printed separately in book form: "An Encore" and "The Voice." They typically embody the author's sound humor, her affectionate optimism, her insistence upon the right thing as against the merely accepted thing—above all, the quaint, kind atmosphere of that "Old Chester" of her youth in which her imagination works most fruitfully. More specifically, these qualities are at their best in the beloved figure of Dr. Lavendar, which reappears in most of these tales. The chilly analyst might find that Mrs. Deland has only a few situations. One of them rep-

resents Dr. Lavendar upholding the spirit as opposed to the letter of the law. Sometimes it is an accepted moral law, such as that one must always tell the whole truth (illustrated in the older tale, "Good for the Soul"), or a point of honor, such as that one must never cheat at a game, illustrated here in "The Third Volume," or a sentimental convention, such as that one's first duty is towards one's parents ("Sally"), or towards one's children ("An Encore"). Oddly enough, there is one convention of this sort which goes almost unchallenged—that of sacrifice. It is challenged in "Sally," because her lover's happiness, as well as her own, is at stake. But in tales like "An Exceeding High Mountain" among the earlier stories, or like "Turn About" and "Miss Clara's Perseus," it is fairly held up for admiration. In these two instances sacrifice is at its most fatuous. Young "G. G." marries an absurd widow because she has understood him to be proposing for her hand instead of that of her niece (shades of Mrs. Malaprop!). Good Oliver Ormsby marries a bore, because it is the only way to rid his beloved's house of her. Sometimes again, it is a question of the letter of the civil law which is braved. Dr. Lavendar is an accomplice in the destruction of the will in "The Harvest of Fear," as he was the principal in a similar act in "The Note."

As to situations, also, one may find Mrs. Deland's range curiously small. Prim youth and gallant age are a contrast she loves to point. Young "G. G." in "Turn About," young Paul in "The Third Volume," young Cyrus in "An Encore," are solemn prigs all; gayety and charm and courage are the property of their elders. So her older women have usually more attractiveness, as well as infinitely more sense than her youthful heroines, who are for the most part painfully shrinking, modest, Victorian. But all this is mere matter for curiosity. Old Chester is as real as Cranford; Dr. Lavendar—as real as the Vicar of Wakefield—is one of the few living American figures in American fiction; and both have the representative quality, the universal quality, which is to be found only in work absolutely true to time and place and character as the artist has known them.

Little Miss Grouch. By Samuel Hopkins Adams. Boston: Houghton Mifflin Co.

An amusing little comedy of the sea, with farcical episodes, and a plentiful supply of American humor. Some of the best families and largest fortunes in New York are involved, to begin with, which places us in the most favorable atmosphere for current romance. Little Miss Grouch is daughter of "Hurry-Up" Wayne, a self-made man of millions, whose father came over in the steerage, and who now, like most American self-made men of fiction, is an ardent social climber. He has betrothed his daughter Cecily to one Van Dam, whose name describes his pretensions. Cecily runs away, and on board the Clan Macgregor, bound for England, encounters and, in the military sense, engages with the young American humorist, who gives his name as Sanders Daddieskink, and whose real name is Smith, but with a Forsyth before it, which proves him to be of the most ancient and aristocratic lineage. There is a very spirited action, assisted by wireless messages, a partly disabled ship, and a general readiness on the part of all hands to see and hear only what their author wishes them to see and hear. Van Dam is grotesquely represented aboard by a female cousin and vulgarian: he himself, it turns out, is an usurper of the name. In the end Alexander Forsyth Smith, otherwise Daddleskink, otherwise the Tyro—but the reader knows what happens in the end.

THE JURISPRUDENCE OF WAR.

War: Its Conduct and Legal Results. By T. Baty and J. H. Morgan. New York: E. P. Dutton & Co. $3.50.

This is an admirable book, well written and wisely planned. On perhaps the most difficult subject in the whole province of jurisprudence it is yet so clear and free from technicalities as to be intelligible to the general reader, while its copious use of cases and documents renders it of utility also to the specialist in this field. To say that its discussion of the commercial aspect of international law is by Mr. Baty is sufficient to proclaim for it a special authority; while the discussion of the result of war on the English Constitution by Professor Morgan is distinguished at once by a refreshing vigor and freedom from conventional restraint.

It is worth while noting some of the points raised by the learned authors. Professor Morgan holds that possibly the withholding of the English food supply might be considered illegal, because though it is no longer an offence under statutory or common law, "it continues to maintain a place, although a somewhat uncertain place, in the law of contract or tort." Theoretically, this may be true; but we may well doubt whether the courts would enforce the breaking-up of a combination to corner, let us say, the supply of wheat because it was in restraint of trade and against public policy. Cases of this nature have been sufficiently rare in Great Britain. That of Maxim-Nordenfeldt v. Nordenfeldt seems to show the favorable attitude of the courts to the principles termed for convenience Benthamite. Lord Bowen, in the famous Mogul case, would not pronounce, held, indeed, that it was *ultra vires* for the courts to pronounce, on the distinction between fair and unfair competition. In the event of such a case arising now we doubt whether that "uncertain place" would be maintained.

We are very glad to have the definite condemnation by Professor Morgan—and the opinion is concurred in by Mr. Baty—of the English press regulations. As he points out, they make it possible to construe anything—whether leader, military criticism, or political controversy—as a serious offence. What this may mean is seen from the fact that when the London *Jewish Times* published (in wholly innocent error) a statement as to the district visited in a recent Zeppelin raid, the paper was at once suppressed. It is more serious that the decision of what is "directly or indirectly" useful to the enemy should be left to the verdict of a court-martial. History is not very lenient in her judgment of the intelligence of military censorship. How inconceivably stupid that censorship has been the episode of the Audacious and bungling at Neuve Chapelle made distressingly clear. When there already exists a sufficiently wide law of seditious libel, it seems a work of dangerous supererogation thus to supersede the rule of law.

We agree most heartily with Professor Morgan that the Defence of the Realm Act is the most dangerous invasion of public liberties in three centuries. An Englishman may be sentenced to death without trial by jury for a crime which is still punishable in common law by the severest penalties known to that law. Citizens can be compelled to answer any question on any subject that an officer holding a major's commission thinks fit to ask. Houses can be entered without leave or warrant. Compulsory change of residence can be enforced. We may, if we will, justify this on the ground of *raison d'état*, but the older way was to leave the courts to pronounce on the justifiability of the military methods. That may be less summary than the new jurisdiction; assuredly it is also more consonant with political freedom.

One of the great difficulties after this war will be the discovery of sufficient sanctions for international law. How difficult that will be Professor Morgan has made abundantly clear by his skilful juxtaposition of the Hague Conventions and the opinions of the German war-book. When an authority like von Clausewitz can call the legal usages of war "hardly worth mentioning," when the Kriegsbuch can solemnly write that the "reckless application" of certain severities which Germany herself has agreed to condemn may be in accordance with humanitarianism, we can only throw up our hands in despair.

On one point we may permit ourselves a criticism. "The principal advance made by international law," write the authors wisely, consists "in treating war primarily as an act of hostility between states rather than individuals." That is well said. It is, of course, tantamount to the recognition of the reality of the person of the state, and the refusal to identify its personality with that of its members. A state, in fact, is somewhat more than the sum of its parts. Why, then, should a footnote suggest that the "general proposition cannot be accepted unreservedly"? Surely, half the difficulty of mutual understanding consists in the refusal to accept the distinction between the personality of the state and that of the individual. We think Germany nothing more than all the

Germans, and so we condemn them all. John Bull has slain his tens of thousands by being identified no less with Bow than with Belgravia. Here was the line of true advance—the throwing overboard of the *persona ficta*—and we could wish that Professor Morgan and Mr. Baty had helped in the weighting of the coffin.

We could wish that Professor Morgan, further, had been less generous to those who interpret laxly the regulation of Hague Convention (No. 42) dealing with occupation. Deeply as we respect the opinion of Professors Holland and Oppenheim, to argue that a flying column can establish occupation is really unthinkable. If a troopship of Uhlans landed at Scarborough and dashed across to London, that would surely not be occupation. We should not consider the resistance of the people as treason to constituted authority. Yet this is in effect what the view of Professor Holland maintains. There will continue to be no respect in certain quarters for international law if such latitude of interpretation is to be tolerated.

For Mr. Baty's chapters on the relation of war to commerce we have nothing but praise. He seems to us to have dealt most admirably with the tortuous and debatable problems raised by the existence of foreign corporations. Sometimes we think he treats a problem a little too cavalierly, as when he says that a Trust cannot have a nationality because it is "an ideal conception." Maitland's articles on "Trust and Corporation" might have warned him that the chief invention of English lawyers ought not to be dismissed so lightly. But it is churlish to criticise where there is so much that is wholly excellent. Particularly interesting is the treatment of blockade.

The volume is enriched by a hundred pages of appendices containing the various documents issued by the British Government since the beginning of the war. They add very materially to the value of the book.

FROM THE CATHOLIC POINT OF VIEW.

Catholic Democracy, Individualism and Socialism. By Henry C. Day, S.J. With a Preface by His Eminence Francis Cardinal Bourne, Archbishop of Westminster. New York: Longmans, Green & Co. $1.80 net.

Father Day's book has the special merit of clearness in the presentation of the subject-matter. This is due at least in part to the sharpness of his definitions and the exactness of his terminology—matters in which modern argumentation, in English at least, leaves as a rule much to be desired. Writers of our day might with profit learn something from the old scholastics in this respect. However intricate their argument, however fine their distinctions might be, they left no reasonable ground for misapprehension of their meaning. Nor does Father Day. Here, for example, is a typical case of proper distinction and accurate terminology: He is speaking of the object of the state. "For this reason its end is described as being the common as opposed to the public good. To understand the force of this discrimination or distinction of meaning the following consideration should be borne in mind: Society or the state being a moral body and existing only by its component parts, is incapable of having its end in itself or of enjoying any good independently of its members. Its only true end consists in the social good accruing to all its members. Now, this is precisely what is meant by the common good, for it represents the sum total of advantages arising from association, and consequently attaching to all members of society. This common good can never be opposed to the real good of individuals, nor can it differ from it in kind. It is properly its crowning perfection. The public good is something very different. It consists in the well-being of the collective body as a whole, and can exist even when the good of individuals is sacrificed. The public good is attained when the nation is prosperous; the common good only when the people are happy. The public good can survive under oppression; the common good can exist only in an atmosphere of justice and freedom" (p. 248).

This is a fair sample of the author's method. Whether one agree or not with what he says, it is a great advantage to have it said in this way.

Naturally, one cannot very well hope to summarize in a few lines the substance of Father Day's book and condense into a few phrases the teaching of the Roman Catholic Church on politics and economics. But by keeping in mind the fundamental postulates of the church, it is not difficult to follow their application to particular cases and understand just why the church approves or condemns. In her eyes, man is not the latest known term in an infinite and inscrutable evolutionary series inextricably tangled in the toils of an iron determinism, but a genuine and immortal self-determining personality, created by God to a destiny of unspeakable importance, the character of which he himself of his own free will may determine in his life upon earth. Subject to the consequences of original sin, but redeemed by Divine act, and equipped with all the necessary means of salvation, he yet must work out that salvation in fear and trembling. Church and State have for their sole earthly object the assistance of man in this task; whatever helps him in this is, for the church, good, whatever hinders is bad. That is the supreme test which the church applies in all human activities, and it is, therefore, the test which Father Day applies to the economic and political questions treated in his book.

The criticisms of the various forms of democracy and of Socialism are along lines more or less familiar to students of these matters, but are better expressed than in many of the other Catholic polemics on these matters. It is in the last four chapters (xvi to xix) wherein the author lays down the doctrine regarding the origin and constitution of society, the rights and duties of the state, land, labor, and capital that most interest will probably lie for the non-Catholic reader.

MATTER AND METAPHYSICS.

The Limitations of Science. By Louis Trenchard More. New York: Henry Holt & Co. $1.50 net.

To the student of philosophy who has learned from the natural scientists that to be a "metaphysician" is to be little better than an astrologer, it is highly interesting to find a scientist distributing this epithet broadcast among his brethren. Professor More applies the term not only to Einstein, for his principle of relativity; to Lorentz and Sir Joseph Larmor, for their corpuscular theories of matter, but to Lord Kelvin, for his mechanical models; to Helmholtz, for his vortex-rings, if not also to Dalton, for his theory of atoms. Descartes, of course, is the father of them all. It seems, indeed, that none are exempt from the taint of metaphysics who will not subscribe to the Newtonian mechanics as containing all that is necessary for scientific salvation—with the single addition of the law of conservation of energy.

"The Limitations of Science" suffers somewhat in systematic, if not here and there in consistent, presentation from the fact that it is a compilation of articles published in periodicals. It is, however, a stimulating book, and incidentally an informing book, for those who wish to get a clear idea of the recent and rather startling developments of physical science. Mr. More is evidently equipped with the broader scholarship necessary for that criticism of science of which, he rightly holds, we stand so much in need (though why a philosophically enlightened scientist should come nearer the point than a scientifically enlightened philosopher is not made finally clear). He writes in a clean, running style which makes his book enjoyable as well as "readable." And if he has missed the metaphysical beam in his own eye, he is not wrong about the motes in the eyes of his colleagues.

Mr. More's position may be epitomized by saying that he believes in laws and despises hypotheses; that he is in favor of matter, suspicious of energy, and hostile both to ether and to atoms. According to him, the scientist is confronted with an objective order of "phenomena." His sole function is then to derive by the abstractive method (which seems not to differ from the conventional inductive method) the laws embodied in these phenomena. It is not his business to explain the laws, certainly not to indulge in speculative hypotheses about realities underlying phenomena. Apparently, in Mr. More's view, hypotheses have not even a working or an auxiliary value, though in certain cases he appears to concede, reluctantly, a "temporary" value. It seems, however, that none of the phenomena of light owe their discovery to either the corpuscular or the undulatory theory, while from the fact that

latter-day science has shown the atom to be not indecomposable, he concludes (not quite logically) that chemical discovery could just as well have dispensed with the atomic theory.

The scientist who observes the proper limitations of scientific procedure finds that all of his laws can be safely expressed in terms of the conception of matter. The introduction of ether has resulted only in a mass of contradictions; and even energy, though apparently indispensable, shows a pronounced tendency "to subtilize objective facts into metaphysical ideas." But we are not to conclude from this that Mr. More is a materialist. Following the traditional distinction between reason and faith, he assigns separate fields to science, on the one side, and to ethics and religion on the other, and forbids either to adopt the methods of the other. In particular, he denies that science can deal with human life.

Now, if Mr. More means only that, in the general economy of human thought, it is important that science should retain its traditional distinction of solidity—and therefore that science should be cautious about engaging in theoretical speculation—there will be many, scientists and metaphysicians alike, to agree with him; and he is clearly right in holding that, as compared with matter, the conceptions of energy and of ether embody "dangerous tendencies." To romantic minds, both in and out of the circles of science, it seems that force, however blind and stupid, is somehow nobler than matter, while a rarer stuff is more spiritual than a denser stuff. Yet when the logical solidity of matter, as represented by the absoluteness of mass, is once called into question, *e. g.*, by the theory of relativity, "metaphysics" is no sufficient answer. The question is, How do science and metaphysics differ? And what accounts for the superior validity of science? Among the several answers to this question given by Mr. More, the answer to which he evidently pins his faith is this: scientific conceptions and laws are nothing more than formulæ to describe the sequence of phenomena, while metaphysical hypotheses pretend to deal with realities beyond phenomena. If this is the case, it would seem that, as a formula for facts, ether might be allowed to stand beside matter. But in point of fact Mr. More is not content with the formula-theory. On page 115 he tells us that we have no knowledge unless we believe in "something that has a continuous existence however changed in appearance"; in other words, metaphysics is permissible if it postulates nothing but matter. And in the end it seems that the real reason for an unyielding loyalty to matter is that under this conception science has grown and prospered. Upon nearly every page of the book we are informed of the *advantages* of matter. It seems, therefore, to be a pragmatic metaphysics that determines the limitations of science.

Nor would it be altogether difficult to prove that a metaphysical hypothesis underlies the objective phenomena—and here the metaphysics of matter. When I say that the surroundings in which I now write, a few miles from the Atlantic Coast, are objective phenomena, and that the vision of motoring in California, which comes to me the next moment, is not an objective phenomenon, part of the reason for refusing the name, at least to one or the other, lies in the assumption that, if both are to be objective phenomena, some three thousand miles of matter and four days of travel must intervene. If matter is derived from phenomena, it is none the less true that phenomena are derived from matter.

The truth is that to eliminate metaphysics from thought is about as feasible as to eliminate respiration from life. From the primitive magic of "The Golden Bough" to Spinoza's "Ethics" and Kant's "Critique" objective fact and metaphysical theory are linked everywhere hand in hand. Those who trouble the waters of our thinking are not the metaphysicians, but the unconscious metaphysicians. Mr. More has done well to expose the metaphysics of recent scientific speculation. There remains, however, the greater problem of the metaphysics of sober science.

RUSSIA IN ASIA.

Russian Expansion on the Pacific—1641-1850. By F. A. Golder. Cleveland: A. H. Clark Co. $5.

The author explains in his preface that he wished originally to study the history of Siberia only in connection with the main subject of Alaska and its history. The secondary material on Siberia is, however, unsatisfactory; it was necessary to go to source material, and thus "what was planned as the background became the principal part." The writer gives a detailed, documented account of the gradual penetration of Russian power across Asia to the Pacific, of the various expeditions of explorers and traders. The picture is not always pleasant, because of the "cruelty and deceit practiced on the natives." The conflict with the natives was constant, and was further intensified by the struggle against the climate and for food and supplies. "But cannon and powder proved themselves superior to bows and arrows." In this expansion Russia came into conflict with China. Chinese opposition, and the assistance given to the natives by China, made the struggle still more bitter. All this interesting history is described in great detail, the official reports of the explorers themselves often being cited in extensive quotations.

The difficulties of the task which Russia had undertaken must account in some measure for the fact that little was done to "civilize the natives" until a date later than that covered by the author. It is clear that Russia was intent on development of trade primarily; but she had other objects as well. Peter the Great gave instructions for the expedition, which was to determine whether Asia and America were united, in the words: "Now that the country is in no danger from enemies, we should strive to win for her glory along the lines of the arts and sciences." The Russian explorations made valuable contributions to knowledge, and at a great price. Of Bering's second expedition, "only a few of those who enlisted survived the years of hard labor, privation, cold and suffering. Even those who lived to return to the scenes of their childhood were so broken in health that the joy of living was nearly gone."

In conclusion the author points out that "one is struck by the crudeness, by the lack of well-laid plans at times, and by the tremendous amount of misdirected energy on the part of Russia." But a few lines further on he adds: "It is this strenuous struggle against savage man and wild nature that makes the story of Russian expansion so thrilling and fascinating."

In a work based on documents in a foreign language, the question of finding proper terms to render the idea of the original is one of great difficulty. The reviewer does not believe that the Russian word "slujiloi" (p. 72), as it was used at that time, can be translated "servant." This is particularly important, as the writer puts considerable emphasis on the very idea which his translation here implies. The word would seem to mean rather "servant of the state," which is quite different. The writer gives a facsimile of a Russian document, and an accompanying translation; this same word occurs in the original Russian, but here is omitted in the translation. In this same translation there is another mistake, which is, it is true, of no real importance, but which should not be allowed to pass in a book of this kind. The Russian text reads "on these islands," and not "on one of these islands" (p. 282). In the bibliography, where one is justified in demanding absolute accuracy in a book of this standard, there are several misprints and even mistakes. The Russian titles are transliterated, and a translation added. The reader unacquainted with Russian must rely on these translations for a judgment on the character of the book cited. "Accounts of Nartov about Peter the Great" is translated, "Narratives about Peter the Great," and the name Nartov is misspelled. Finally, there is no excuse for translating the title "Journal of the Ministry of Public Instruction" as "Journal of Enlightenment."

The question of transliterating Russian words is always bothersome, there being almost as many systems of transliteration as there are writers, but our author uses several systems, often transliterating the same Russian letters differently within the same page. Sometimes he transliterates the Russian *v* by the English *v*, which is the natural and correct method; at other times, for some unexplained reason, he uses the German *w*. As a result, the word "woewod," which is constantly occurring, is not only painful, but is misleading unless one is aware of the habit, still so prevalent, of transliterating Russian through the German.

Notes

There is a fairly vivid picture of the Irish dramatist, John Millington Synge, in a thin volume by John Masefield, containing recollections and biographical notes (Macmillan; $1). The writer's impressions are based upon a close if somewhat casual friendship, that began in 1903 and lasted until Synge's death in 1909. Such a friendship was characteristic of the gifted Irishman, whose strange, fascinating personality attracted many but revealed itself charily to a few so-called intimates. Synge was essentially a lonely genius throughout his roving life among primitive or sophisticated types, always preferring to let others talk, while he successfully remained the ever-ardent spectator and the occasional listener. Meeting him for the first time in a room full of London literary folk, Mr. Masefield recalls the air of detachment that Synge maintained unaffectedly towards the coterie for which he was supposed to play the part of lion. Except for the "kindling eye," Mr. Masefield detected no great interest in the talk or the people. Yet later, when their acquaintance ripened into the close but impersonal Synge type of friendship, Mr. Masefield was agreeably surprised to find the elusive Irishman possessed of an unusually keen idea of each personality present on that occasion. This cuttle-fish attitude Synge likewise observed when travelling among the simple folk of the Irish countryside, or when sojourning among his beloved peasants on the Aran Islands.

While preparing his favorite book on the Islanders Synge closely identified himself with their simple pursuits and pleasures. Mr. Masefield remarks that they liked Synge, but were a little puzzled by him. "He was an unassertive, unassuming man, with a genius for being inconspicuous. He has told us that his usual method in a poor man's cabin was to make them forget that he was there, but in Aran on these visits he always tried to add to the fun, and to his personal prestige, with conjuring tricks, fiddling, piping, taking photographs, etc. Some of the Islanders were much attached to him. I suppose that their main impression was that he was a linguist who had committed a crime somewhere, and had come to hide." Between Paris and the Aran Islands Synge spent the best years of his short literary life. Fresh from the Latin Quarter, where he had been writing poetry and criticism of the French Symbolists, Synge, on the advice of his friend, W. B. Yeats, went to the primitive life of the Islands, and the countryside of Ireland, to refresh his eye and brain. It was to the Islands that he continually returned with increasing enthusiasm, with some newly acquired accomplishment like juggling, or playing the penny whistle, or new jigs on his fiddle for their dances. Except for occasional trips to cities where his plays were being produced he devoted himself to his peasant friends and their Island life where he successfully shed the mantle of loneliness that shrouded him from the eyes of the literary coteries of London, Paris, or Dublin. It has elsewhere been stated that he expressed a naïve preference over his plays for his book on this rough, dour, and primitive community.

Prof. Henry Jones Ford's book, "The Natural History of the State. An Introduction to Political Science" (Princeton University Press; $1 net), is a suggestive attempt to construct, from a study of such facts or reasonable implications of biology, anthropology, and philology as relate to the origin of man, a scientific theory of the origin and nature of the state. Briefly stated, the theory affirms that the state is as properly to be regarded an organism as is any form of animal life; that it has its origin in the formation of communities among animals earlier than man; and that such communities, of which the "undivided commune" of Howitt is the primordial type, subordinated individuals to the general good, and developed, by processes of social adaptation, particular social institutions. Government, "a primary organ of the state," antedates the transition from animal to man. The individual, accordingly, is a derivative rather than an original; the state is absolute in its relation to the individual units; and different types of government develop according to the conditions and needs of different environments. Similarly, rights have their source in the state, and liberty consists in individual adjustment to the standards of right which emanate from the state, rather than in freedom from obligation or social conformity. "The test of value in any institution is primarily not the advantage of the individual but the advantage of society" (p. 177).

Professor Ford's statements of fact regarding the "ascent of man" are, apparently, in full accord with the teachings of contemporary science. His theory of the state, however, suggests some far-reaching questions of social philosophy. What becomes, for example, of the philosophical notion of free will? If man is the product of society, which in turn is contemporary in origin with, and approximate in organic character to, the physical organisms of biology or anthropology, have we not here a kind of sociological fatalism or determinism, of which the individual is, according to the point of view, either the product or the victim, but whose processes neither he nor any numerable mass of his fellows can control? If rights spring from society, and represent the surviving results of the struggle for adaptation to environment, is not the conclusion inevitable that, in the large sense, whatever is is right? How, for instance, on this basis, are we to condemn war? and is there any longer a place for religion as either an individual or a social guide, save perhaps as a mystical recognition of an unknown God? Moreover, if "individual life enlarges by participation in a larger life, ascends by incorporation in a higher life" (p. 177), what will be the nature of the family when society, which to-day subordinates the individual more thoroughly than ever, shall have attained that relatively perfect solidarity which would appear to be its ultimate goal as well as its primary characteristic? We venture to hope that Professor Ford has it in mind to follow up his extremely suggestive study with another devoted to expounding some of the possible social consequences of his theory.

Of the innumerable books occasioned by the present war, one of the most neutral comes from the Oxford University Press. It is "An Anthology of Patriotic Prose" (2s. net), selected by Frederick Page. The jingoes get a hearing in this modest volume—only to be laughed out of court. Patriotism in war is the alpha and omega of the compilation only in the sense that all the rest of the alphabet comes in between. The patriotism of England naturally bulks large, but it does not exclude expressions from other countries and from many varying points of view. Indeed, seventy-seven authors are drawn upon. Plato is heard. Camden and Selden and Stow and Lucy Hutchinson speak. Nor are Belloc and Chesterton allowed to remain silent. Parson Wilbur discourses in his inimitable Yankee style. Even Goethe raises his voice, but chiefly to declare that he had "often felt a bitter pain at the thought that the German people, so honorable as individuals, should be so miserable as a whole." To one who consults it in the quiet of the study the volume will furnish from many another writer a choice expression of that patriotic sentiment now so conspicuous in our so-called civilized world.

Two volumes issued simultaneously complete the Pittsburgh Survey, and give us a full work in sociological research comparable only to Booth's panoramic analysis of the people of London. "The Pittsburgh District: Civic Frontage" (Russell Sage Foundation; $2.50) is of major practical interest, for it covers the investigation into governmental charities, housing and factory inspection, health administration, the courts, schools, and playgrounds, taxation, and opportunities for city-planning. Writers, including E. T. Devine, Robert Woods, Charles A. Robinson, and Emily W. Dinwiddie, present in addition articles and notes bringing out the specific changes for good connected with the Survey, and revealing the importance of the civic revolution now under way in the Pennsylvania city. The improvements listed include a reorganization of the tax and school systems, the enactment of adequate housing laws, the work of a Morals Efficiency Commission, the adoption of industrial relief plans, and the rapid development of safety engineering, for all of which the Survey pointed the need.

The companion volume, "Wage-Earning Pittsburgh" ($2.50), is a study of the population by races. Native Pittsburghers trace the genesis of the community—the slow yielding of the old small-town institutions, the bitter social injustices of the period of transition, the recent awakening of reform. We have estimates of the new immigration by a Welshman of the anthracite region and a Bohemian who is interested in the betterment of the Slav-Americans, the impression made on a Russian engineer by a sect of eastern Europe transplanted to the bituminous field, and a negro's commentary on the influx of his own race. There is a study of crime by an expert from New York city, as well as studies of labor organization, of industrial management, of child waste, and of maladministration in the Department of Labor. An attempt has been made not only to preserve the validity of the reports as handed in at the time of investigation, but to make a record of the steps since taken to ameliorate conditions. This and the ill-defined bounds of the topics assigned to several of the writers in each volume, has led to a certain amount of repetition. The illustrations represent a distinct improvement over the four volumes previously issued, some being in color.

Dr. R. M. Haig's "History of the General Property Tax in Illinois" (Urbana, Ill.: University of Illinois Studies) is a carefully written history of taxation in that State since territorial days. It yields the usual cumulative testimony to the ineffectiveness of the property tax under local administration in the United States. Nor is the story brightened by any changes for the better, such as a number of neighboring States have introduced in recent years. Illinois has been singularly indifferent to the lessons afforded by States, like Wisconsin, Minnesota, and Kansas, that have made notable advances within a decade, largely as the result of centralized administration. Efforts for reform in Illinois are now directed towards securing a constitutional amendment that will free the hands of the Legislature and towards the establishment of a competent State Tax Commission. Dr. Haig has done his work very well; but in treating of the taxation of personal property is inclined to lay too much stress upon the difficulties inherent in the problem, and not enough upon the administrative and other conditions which would have made any other tax work about as badly as the general property tax has worked.

Robert R. McCormick's "With the Russian Army" (Macmillan; $2) devotes less than fifty small pages, out of a total of more than three hundred, to actual observations on the Russian front; and these are of a very mild kind in no way superior to the mass of material that finds its way into the columns of newspapers. The rest of the book is given up to two subjects—the distinguished Russians whom the author met and the history of the Russian army and of the campaigns which Mr. McCormick did not see but which were described to him by Russian officers. As the son of a former Ambassador to Petrograd the writer was honored with an invitation to come to Russia and see for himself. He met the Czar—the interview being somewhat overelaborate in its account of the furniture in the imperial antechamber—the Grand Duke Nicholas, the Chief of Staff, and generals without number. But in spite of these opportunities he has brought back, as indicated, little matter of value. Where the writer depends on second-hand information, he shows no particular critical judgment. Of the early campaigns he accepts the Russian version without question. A moving-picture operator accompanied Mr. McCormick, the only one so privileged, we are told, and we are inclined to think the pictures will prove more informative than the text.

Mr. A. A. Milne, the author of "Happy Days" (Doran; $1.25), who is now fighting and, let us hope, jesting in the English trenches, says, in his Foreword, that he offers this selection from his contributions to *Punch* "as a sample of that *Punch* humor (and perhaps, therefore, British humor) which Americans so often profess not to understand." If our tired business man were asked to explain his distaste for *Punch* humor, he would probably dismiss the question with some monosyllable. Pinned down to it, he would discover an impression of British official humor as lacking in that flash and gusto which we so readily acknowledge in our own—as, on the whole, a system of labored facetiousness. Now, the thing treasonous American admirers of *Punch* find to say for it is that it has somehow produced a good deal of permanent literature, while our own official humorous publications have done next to nothing worth preserving. Nevertheless, we can but admit that the British humorist "on his job," in the act of convulsing an empire, is frequently heavy-handed. And this is felt with special force when, as in the present volume, the sledgehammer beats steadily through some hundreds of pages unrelieved by a gleam of sobriety. Not that Mr. Milne and his confrères are really frivolous. There is not a little solid and trustworthy satire beneath the jollities of this book. It is, in fact, for one who is sufficiently Anglicized in taste to be willing to take his humor somewhat seriously, a book to be taken with enjoyment—in small doses.

"Nationalization of Railways in Japan" (Longmans, Green; $1.25), by Toshiharu Watarai, traces the history of railway development in the island empire from the opening of the first road, a Government undertaking in 1872, down to the present, when the total length is about 5,600 miles, only 577 miles being privately owned. Much the larger portion of the Government railways was acquired by purchase on terms which the author regards as over-generous to the owners. Various reasons for nationalization are reviewed—economic, political, military—but the cause is found in the desire for expansion in 1906, stimulated by victory over the Russians. Financial results of Government operation have not thus far been unfavorable, but there is increasing difficulty in raising funds as demands arise for the building of unprofitable extensions. There appears to have been no marked reduction of rates since nationalization became the settled policy, the Government preferring to operate the roads on private business principles and avoid the unpopular policy of drawing upon public funds for additions and improvements. It is apparently the author's idea that private railway building should be encouraged at least to the extent of permitting private capital to build the new and speculative lines. There is a full discussion of the financial procedure concerned with Government purchase and the systems of freight and passenger rates are discussed in detail. But one observes with regret the omission of the vital questions which face a country like ours in such an undertaking—questions of wages, labor efficiency, administrative efficiency, and the like. As a matter of fact, however, there is little to be learned by the United States from the experience of a tiny monarchy like Japan, with less mileage in the entire country than is contained in many of our individual railway systems. Socialists will derive little comfort from the author's pronouncement that the age-long subjection of the Japanese people to the influences of Buddhism and Confucianism, and the feudal system, drove out any individualistic aspirations and reduced the economic life of the nation to a low level, and so prepared the ground in which the disease of state socialism spread rapidly. The fact that this dissertation was completed under the guidance of the Columbia faculty should be sufficient guarantee as to the accuracy of the basic material. It is somewhat ungracious to comment on the English style of a foreign writer, yet the fact that in many places it is quite impossible to tell what the author means by what he says, would suggest that those who receive thanks in the preface for assistance in translation might well have remained anonymous.

Harald Höffding's "Modern Philosophers" (translated by Alfred G. Mason; Macmillan; $1.40), is designed in a measure to supplement his "History of Modern Philosophy" and to follow the course of philosophical thought from the point (for him, about 1880), where it can be no longer treated as history. The book consists of lectures upon Wundt, Bradley, Fouillée, Avenarius, Guyau, Nietzsche, Eucken, James, and Bergson (among others), the greatest amount of space being given to Nietzsche and Bergson. As Höffding remarks, recent philosophy is even more difficult to classify, or to treat impersonally, than the historical systems. What it chiefly suggests is that "the more profoundly one studies philosophy, the more one comes to realize how little worth are the wonted rubrics." Those who desire a bird's-eye view of recent philosophy will find the book a valuable source of information; we know of nothing else that quite serves the purpose. The treatment, however, strikes one as somewhat casual and sketchy, and too narrowly influenced by private interests. James is treated exclusively as a philosopher of religion. The deference accorded to Avenarius and to Eucken seems hardly justified by the text. New realism and Anglo-American pragmatism (except for passing references in connection with James) are wholly ignored. We have not the original text before us—whether Danish or German, is not stated—but the author's syntax could not possibly be so bad as that of his translator.

It is to be hoped that Prof. A. L. Bowley will bring down to a later date the lectures which he delivered at the London School of Economics and Political Science in January and February, 1915, and which have been issued to the public by the Cambridge University Press (Putnam), under the title of "The Effect of the War on the External Trade of the United Kingdom." The professor of statistics in the University of London in these lectures made an exhaustive analysis of the monthly statistics of the United Kingdom from 1906 to 1914. So much has happened since December, 1914, that these tables and diagrams have now hardly more than an historic value. Professor Bowley's analysis will, however, be found of no small value when the economic history of the war is finally compiled. Meanwhile, it is interesting to note how the outlook impressed this trained observer in the opening months of 1915. It was not then necessary, he thought, to assume that Great Britain was becoming a debtor instead of a creditor nation, and that it was realizing investments abroad to pay for imports; yet there could not be any great margin at the existing levels of trade. Up to that time the great part of the reduction of exports could be attributed to the cessation of new external investment. The apparent near equality of the values of imports in January, 1914, and January, 1915, was due to the inflation of freights, mainly payable to British owners. Professor Bowley's prophetic insight is attested by the following: "The first sign of difficulty will, of course, be shown by a movement against us of the foreign exchanges and a pressure to export gold."

Prof. Walter E. Clark, of the College of the City of New York, undertook a difficult task in "The Cost of Living," published by McClurg in the National Social Science series.

The causes and effects of rising prices are complex and obscure; the speculations regarding them have given rise to many misunderstandings and fallacies. To cover the subject in a little book that sells for half a dollar, in such fashion as to win the interest of the general reader, and deserve the respect of the professional economist, is no small achievement, and this the author has accomplished. It is quite unusual to find so much sense and substance in so small a volume. Brief chapters indicate the facts to be explained and the chief economic principles involved; the body of the book discusses in detail the causes that have been proposed to account for the rise in prices; and concluding chapters take up the effects and the possible remedies. Professor Clark finds the great cause of rising prices in the increased output of gold, and shows how the upward movement stimulates counteracting influences which may be expected to check it in the course of time. He is opposed to specific measures, such as Fisher's "compensated dollar," aimed directly against changes in the level of prices.

That there was a great deal of charm in the pen that the late Sister Nivedita (Margaret Noble) wielded in behalf of India is now in evidence for those accustomed only to her vitriolic studies of Anglo-Indian statesmanship. Collected into an attractive volume, "Footfalls of Indian History" (Longmans; $2 net), these discerning papers invite because of their success in capturing that charm of interpretation made classic by Pater. With a keen and observing mind, Margaret Noble's warm, Celtic imagination has illuminated all the mystery and revery of Indian thought and temperament, and these delightful excursions into the archæology and history of the spacious periods of India's past should prove welcome to those students of art and history who will appreciate an informal yet careful treatment of topics only just unfolding to western scholarship. While there is, due to predisposition, much that is controversial in Sister Nivedita's various readings and theories, many of which are now modified by recent research, yet her theme is brilliantly maintained—that India is, and always has been a synthesis. "No Indian province has lived unto itself, pursuing its own development, following its own path, going its own way unchallenged and alone. On the contrary, the same tides have swept the land from end to end. A single impulse has bound province to province at the same period, in architecture, in religion, in ethnic striving." But while the question of the Græco-Roman influence, as evidenced by the famous sculptural remains of the so-called Gandharan school, is still a matter of controversy, Sister Nivedita's sweeping conclusions must remain in abeyance until archæological exploration in India and West Asia, now in its infancy, has yielded the evidence it so richly promises.

In this book we are taken by a passionate pilgrim to all the great shrines of India's past—to the site of Rajgir, its ancient Babylon; to the famous abbey of Ajanta, where the only remaining glory of India's pictorial art is fading away on the walls of the rock-cut chapels, and through the province of Behar, or ancient Magadha, sacred to the Buddhist world because of its memories of Gautama. In her study of the Ajanta caves the reader will find Sister Nivedita's scholarship and method at their best. If we except Mrs. Herringham's study of its frescoes, which it fittingly complements, we know of no other more illuminating exploration of Ajanta. In time, let us hope, the feet of the tourist and student will lead to the caves of Ajanta instead of to the burning-ghat at Benares; but this will not be possible if the Indian Government fails to take effective measures for preserving these precious frescoes. In her papers on the rich evidences of civilization as found in the various manifestations of Hinduism, Sister Nivedita's enthusiasm has led her to read the present too vividly in the light of past cultural attainments, a method that too often avails itself of the special plea. There is no reason, however, why this stimulating volume should not become, together with Miss Noble's classic, "The Web of Indian Life," a useful companion to the inevitable Baedeker in India.

For a succinct review of the modern influences at work in China, both prior to and after the sensational reign of the Dowager Empress Tzu Hsi, the reader will find Adolph S. Waley's "The Re-Making of China" (Dutton; $1 net) admirably suited. The confusing rapidity with which events in the Celestial Empire began to move, when the new spirit made itself felt under the reactionary Manchu régime, makes this summary necessary. The vain and unfortunate Boxer movement was but an ineffectual weapon the Manchu used to stem the encroaching tide of western ideas; but the Boxer movement was vastly enlightening to all those patriotic officials who had the future of China at heart, and those who emerged from this harsh school helped to remake the democratic China of to-day. Always under obligation to the valuable work of J. O. P. Bland, Mr. Waley is especially illuminating in his estimates of these personalities and their individual reactions to the inevitable triumph of democracy. Chief among these are his studies of the two protagonists, the President Yuan Shi-Kai and the defeated leader of the revolutionaries, Dr. Sun Yat-Sen. There is no doubt of the native ability and far-sighted policy of Yuan Shi-Khi, even though he was a protégé of the Empress Dowager. Mr. Waley's analysis of the motives that impelled this statesman to disavow his Manchu allegiance and espouse the cause of reform is convincing. Mr. Waley credits Yuan Shi-Kai with a high degree of loyalty and patriotism to his country throughout his spectacular career, and he attributes the President's triumph over Dr. Sun Yat-Sen to the awakening desire of young China to evolve a racial and national consciousness based upon the old economy, instead of a wholesale remodelling and adoption of strictly western principles, as urged by the revolutionary leader.

That Yuan Shi-Kai may yet prove a victim to his great ambition is a question broached by Mr. Waley. Yuan Shi-Kai once hoped to temporize by establishing a constitutional monarchy, while retaining the old Manchu dynasty, and his present attitude may yet prove to be a concession to the exigencies of an impossible situation. Yuan Shi-Kai, while at heart a conservative, is an adroit politician. When he failed to save the Manchu dynasty he really adopted wholesale reform, and thus successfully robbed Dr. Sun Yat-Sen and his party of their *raison d'être*. Will his strong, despotic power of to-day, backed by a laudable ambition, lead him to feel the right of founding a new dynasty? When the people of Shensi heard of his election to the Presidency they believed, according to Mr. Waley, that Yuan Shi-Kai was actually ascending the lost throne of the Manchus. Still, judging from his brilliant career, one feels that this clever administrator will scarcely become a victim to his ambition; Yuan Shi-Kai was too apt a pupil of the valuable experience won at the expense of his Manchu mistress. Mr. Waley's sketch of the unfortunate Dr. Sun Yat-Sen, and the collapse of his revolutionary party, is an interesting key to the real issue at present before young China. The fact that this self-sacrificing and devoted leader of new China failed to realize the need of preserving a strong, national integrity in the face of the irresistible western influx, is to be attributed to the intensity of his single aim and vision. Having set his people on the path to reform and progress, he should have seen that a reconstruction similar to that of Japan was desirable. Instead, it was a rival, Yuan Shi-Kai's able lieutenant, Kang Yu-Wei, who turned the tide with ideals derived from Japan, and placed the political future of Yuan Shi-Kai on a stable and popular basis. Whatever the future of his country, the name of Dr. Sun Yat-Sen is deeply engraved in the annals of modern China, and she may yet have further need of his devoted service.

It is a pity that a careless editor should have marred Maurice E. McLoughlin's interesting account of "Tennis as I Play It" (Doran; $2 net) by putting wrong captions on pictures and inaccurately describing others. To the expert the blunders are obvious, and mental corrections are made in two cases, but in another even the best of players will be puzzled to understand the position of racquet and ball in Mr. McLoughlin's service, when he is shown at the base line, racquet high in air, with the ball at least two feet above it, and the description says: "The ball has been struck and is seen leaving the camera's field." Nothing but a lobb or a sliced service could bring about the position indicated. Those who expect to learn how McLoughlin makes the strokes which have placed him in the front rank of lawn-tennis players of the world will be sadly disappointed. His advice as to what to do is good, but has been told many times by experts who have written on the game, but in no case does he explain the method of making the strokes. The chapter on dress is to the point, and court surfaces and the relative merits of clay, asphalt, concrete, wood, and turf are treated with knowledge, but without the imparting of any new information on the subject. In discussing the various American services, Mr. McLoughlin says much regarding the position of the body, and a little about the way the ball is hit. The expert who has worked over the twist services will understand, but hardly the novice. In fact, the book is one for experts only. As a textbook of the game it cannot be recommended. It is, however, interesting for its good descriptions of the methods of play and generalship of the leading experts, and its graphic tales of the way games have been pulled out of the fire. In this respect much pleasure may be obtained from the book.

Science

SCIENTIFIC WORK IN SWITZERLAND; CENTENARY OF THE SOCIETE HELVETIQUE DES SCIENCES NATURELLES.

GENEVA, September 18.

Surrounded by nations at war, the Swiss are doing what they can to keep alive an interest in science. The universities, however, have suffered from the decrease in the number of male students. As the armies of other nations have been successively mobilized, Russians, Servians, Bulgarians, Germans, French, Austrians, Greeks, and Turks, who formed a very large percentage of those studying in Switzerland, have been called away. Moreover, there have been unpleasant incidents in at least three of the universities, caused by friction between the Swiss and certain professors who are accused of open sympathy with one of the belligerent Powers. But the war does not seem to have checked the activity of the learned societies. Switzerland in general—Geneva in particular—has always been a favorite meeting place for international scientific assemblies. This year foreign nations have not been represented, but in spite of the distractions caused by the war, the annual conventions of Federal and cantonal scientific societies have been held without interruption.

The most important of these has been the centennial celebration at Geneva of the Société helvétique des Sciences naturelles, which took place in the second week of September. This is one of the oldest societies of the kind. Oken founded the German association of physicians and naturalists at Munich, in 1822; nine years later the British Association was organized, and shortly afterwards the Société géologique of France held its first meeting at Auvergne. The Swiss society, however, was founded in 1815, at the close of the Napoleonic wars, and its hundredth anniversary had to be observed in the midst of the present European conflict. The founder was a pharmacist of Geneva, named Henri Albert Gosse, who, with the collaboration of Samuel Wyttenbach, a pastor of Berne, conceived the plan of forming a body of men devoted to scientific research and drawn from the German as well as from the French cantons. The undertaking was successful, and the association through various commissions, and by individual effort, has made valuable contributions to mathematics, physics, chemistry, geology, and zoölogy. It has counted among its members men like Agassiz, Charpentier, Carl Vogt, de Saussure, and more humble but enthusiastic workers—woodsmen, guides, and simple travellers or dwellers in the mountains, who have often made observations and discoveries of considerable importance. The situation and nature of Swiss territory has given to certain aspects of the society's work special importance and interest. The works published by its members form a complete encyclopædia of the physical characteristics of the country. Glaciers, rivers, lakes, and meteorological problems like those concerning atmospheric conditions in the Alps have been, and are now being, carefully studied. For this reason certain papers read at the centennial meeting are of great value, particularly a remarkable memoir by Professor Mercanton, of Lausanne, on the great Rhône glacier, a subject to which he has given constant attention for forty years. According to him the glacier has a circulatory system. It collects and it distributes. It grows in volume by the process of collection; it diminishes by the process of dissipation. In twenty years it has gained 200 millions of cubic metres, while losing 150 millions. Observations as to its behavior have been made by fixed marks, poles planted in the ice, stones placed upon the surface. There is a fixed icy substratum upon which the upper layer descends at the rate of about five metres every year.

The society, apart from its special work, has been of value in promoting good feeling among the Swiss cantons with their various languages and sympathies. It was significant that its proceedings this year should have been opened by M. Motta, the president of the Confederation, who came from Berne accompanied by other officers of state. M. Motta is a native of the Italian canton Ticino. In his address he spoke of the results which men of science had achieved in consolidating the Helvetic union. He, as well as M. Pictet, the president of the society, maintained that Switzerland, by reason of its neutrality, had a work to do in the future, a work of reconciliation of men of science to one another, by healing the breaches made in the present war. M. Pictet said:

"The economic independence of Switzerland is an impossibility, but we should make every effort to traverse national crises. Moreover, we have a national duty. In the domain of science, all peoples are engaged in a common work. We should do all in our power to repair the bonds between nations, which have unhappily been severed by war."

In like manner, President Motta declared that in the second century of its existence the Swiss society should become "the scientific Red Cross to heal the distressing and mortal wounds which are now tormenting our feelings and dividing our intellects." While he made no direct reference to the German "Intellectuals," a passage near the close of his address was loudly applauded, in which he said: "All races have their virtues and their weaknesses, and to none of them has been vouchsafed by a decree of nature the government of the world. To set Latins against Germans, to make them irreconcilable enemies, is not only an evil undertaking contrary to the moral and political constitution of our country, but an attack on Christianity and on civilization." A. A.

Every handy book which treats of the plants met with in one's walks in the country should have a hearty welcome. In a pocket-volume Mr. F. Schuyler Mathews has brought together a short account of the more important trees and shrubs of the United States, and has, by means of his skilful pencil and brush, made it reasonably easy to identify most of them. The title of his treatise, "Field-Book of American Trees and Shrubs" (Putnam), is perhaps a little too wide, for America is a large continent. It may be rather difficult to distinguish some of the species here described, even with help of the excellent figures, but the amateur will not go far astray. The Field-Book is a useful companion to Mr. Mathews's earlier volume, "Field-Book of American Wild Flowers."

Drama

AN INGLORIOUS MILTON.

Armageddon. By Stephen Phillips. New York: John Lane Co. $1 net.

Mr. Stephen Phillips quotes two texts as the inspiration of his "Armageddon," which he describes as a modern epic drama. The first is a sentence from a speech by Mr. Asquith: "This war is not only a material, it is also a spiritual conflict"; the second is an utterance of the Poet Laureate: "This war is a war of Christ against the Devil." His exposition of them is a remarkable but strangely uneven work, in which high ideals, rare poetic imagination, and noble verse are marred by passages of crude melodramatic violence. It is in dealing with the material side of his subject, when he writes in prose, that passionate indignation, perfervid patriotism, and a too hasty generalization betray him into an intemperance which, in the circumstances, may be natural, but is undignified, inartistic, and injudicious. In his spiritual scenes he maintains himself consistently upon moral and poetic heights.

His thesis is that Satan, foiled in his design, originating in Eden, to win the world by craft, determined to achieve his end by substituting for guile the gospel of force, of might for right. He stakes his all upon the last throw of the dice. So the play opens, as it closes, with a conclave in Hell, where Satan, enthroned, is in council with his peers. Here the poetry is not unworthy of the Miltonic model. To Beelzebub, Moloch, Belial, and the rest Satan thus unfolds his plan:

Hurl we a massive fury on the world
With engines and artillery of Hell,
With wail of women and cities thundered down,
Until beneath the bellowing, blind world blow
Justice shall reel, Love, Pity, and Mankind
Shall build to Force, not Faith, temples afresh.

But it is necessary, he says, to use a mortal instrument, and therefore he rouses Attila from his "sanguinary sleep" and dismisses him to earth to "enter into him to whom I send thee as a house prepared." The allusion, of course, is obvious. The scene then shifts to Rheims, where the German general Trenck is carousing with his staff. After two or three incidents of sheer melodrama (in prose), improbable in the circumstances, and surely out of place in a piece of such literary and imaginative calibre, the Abbé of Rheims prays that his cathedral may be spared. He says:

You batter no mere mass of masonry,
You burn the body of an eternal soul.
They who did build so high they feared not time,
They feared not man, and now shall man erase
This thought unchanging in the drift of change;
This Prayer that ever rising still abides;

This Rally of the Soul on days of dross,
With windows rose-flushed from heroic dawns;
A vision frozen, stationary sigh,
Time worn, yet wearying t'ward eternity.

But Trenck, who has been drinking heavily, is obdurate. Savagely scoffing at the Abbé's plea, he delivers a harangue to his officers, in the course of which he declares:

World-Power is our furious journey's end;
Therefore all Pity, Scruple, Truth discard;
There is no truth but one; that we alone
Are destined for the lordship of the Earth!
Then come like wolves upon the villages
And visit wasted cities at sunset,
Like the lean lion roaming Babylon!
Be deaf then to the wail of women blind
To children's blood; the cause demands of you
That you shall lie and burn, betray and snare!
Remember Attila, grand ruthless Hun!

In this there is more of passion and prejudice than of poetic inspiration. Even the best of cases—and the poet could scarcely have a stronger one—is not helped by too hasty generalization. Moreover, the mention of Attila is somewhat confusing. Trenck was not the originator of the war, and there is no reason for supposing that it was he whom the ruthless Hun was commissioned to inhabit. The scene ends with the instant extinction, in the midst of the revelry, of the whole German company by the fumes of a turpinite shell, each man, in death, maintaining his last conscious attitude. This, doubtless, would constitute an effective tableau in the melodramatic theatre, but is perilously akin to tricky sensationalism. Mr. Phillips is at his best in an English orchard episode, where a mother and her destined daughter-in-law hear of the death of son and lover. Here the contrasted griefs of mother and betrothed are depicted with keen and delicate insight in some exquisite verse. The passage, too long for quotation, is a fine tribute to the noble spirit of bereaved and patriotic womanhood. The broad humor of a scene in a German press bureau is somewhat cheap and conventional, but there is much stirring poetry, intermingled with some much less worthy matter, in the scene laid in Cologne, supposed to have been captured by the Allies. The French and Belgian generals—it may be questioned whether the poet in his fervent Anglicanism represents them quite fairly—would exact eye for eye and tooth for tooth and lay Cologne Cathedral in ruins in expiation of Rheims, but are restrained by the British commander—who pleads that they are fighting for the great cause of freedom and liberty, not for revenge—until he hears that his only son has been killed and mutilated. Then he wavers, and asks time for reflection. In his absence the French general sees a vision of Joan of Arc, who converts him to the nobler spiritual view. She says:

Listen! The Powers of Darkness loosed this war;
They hurl cathedrals down, women profane,
Fear then, lest these shall tempt you to repay
Till you at last they whelm in their own darkness.
Have I not seen the very stars in Heaven
Flash all together at some splendid "No"?
And what is all the injury they have wrought?
What flame of body, or what woman's cry,
To the injury they do to their own souls?
Because they ruined Rheims, spare ye Cologne.

So rapine is foregone, and upon this note of mercy in triumph the play ends. In a brief epilogue in Hell Attila reports to Satan that he is encountering a new and strange influence, uncomprehended by him, more potent even than Force, and, as a soft light from above falls upon him, the Prince of Darkness cries, in a bold and striking paraphrase, "My Power, my Power, why art thou leaving me?" Upon the entire work the most obvious comment is that it but imperfectly realizes an ambitious conception. To the title of drama it has small claim. At most, it is a series of dramatic episodes. In much of the verse Mr. Phillips justifies his high repute as a poet, but the prose passages might easily have been written by a much lesser man.

J. Ranken Towse.

"THE TWO VIRTUES."

The absent-minded professor of "The Professor's Love Story" and of popular tradition has been enriched for purposes of the stage by passing through the mind of Bernard Shaw. The scholar of "Pygmalion," though outwardly naïve, is scarcely the ingenuous figure that scholars were once supposed to be. He is blended with the unconventional, direct-thinking creations in whom Shaw delights. He is no longer an object of good-natured satire, but a vehicle by which satire is carried into other camps. There is nothing quite so capable of momentarily staggering the universe as the straightforward question of a child, and no one has recently so succeeded in putting society to it to justify its foibles and inconsistencies as the queries of Shaw's speciously innocent heroes.

Mr. Alfred Sutro's Jeffery Panton is merely a faint reflection of "Pygmalion's" professor. The middle-aged brother of a lady of fashion, he has shut himself off from the world because of a desire to write a monumental history of historians. The original motive for his seclusion is of no real consequence, namely, the jilting he has received at the hands of a butterfly; and equally insignificant in the illumination of his character is the fact that for years he has kept his lady's portrait and other mementos of her in his study. This romantic moonshine furnishes only an arbitrary excuse for his secluded life; it jars with his subsequent indifference to emotional influences, and thus may be thought inartistic even in so trifling a play as "The Two Virtues." Be that as it may, the main situation is furnished by Panton's intellectual companionship with a Mrs. Guilford, a person of good birth but, through force of trying circumstances, possessing a past. Besought by his lady-love to intervene in an affair—harmless it transpires—of this woman and the former's husband, he refuses, until, made defiant by his sister's shock at thought of his approaching a woman unknown to him, he decides to do that very thing.

In the second act the friendship begins. For he discovers that Mrs. Guilford has great intelligence and, more important, a consuming interest in history. It is arranged that she shall come every day to help him at his work. The third act discloses the two with heads together over Mommsen and Froude. The heart so far is entirely in abeyance to the head, and would doubtless have remained so forever, had not his first love, Mrs. Jervoise, and his sister, Lady Milligan, broken the spell by their presence. Mrs. Jervoise, fancying that, still true to her, he is seeking out the other merely in her behalf, assures him that her husband's infatuation is at an end. But Lady Milligan, suspecting a more serious attachment, coldbloodedly rehearses the history of Mrs. Guilford, until the latter, become indignant, storms out and protests that she will never return. Panton is furious but perplexed. But the word "marriage," which his sister drops unfortunately, gives him the clue, and he rushes off to propose. It is not love, at least on his part, yet the final curtain goes down on the two in each others' arms.

Lacking smart lines, this play would have fallen flat, for there is nothing fundamental in the satire heaped upon fashionable society. Obviously only a person specially constituted can to advantage take such liberties with convention as are taken by Jeffery Panton. But Mr. Sutro's pen was sharp enough to create a character who for the moment actually does put milady in an amusing light, and this despite the sharpness of her own wits in fighting back.

Mr. E. H. Sothern, as Panton, turned the trick with such ease that many are wondering what he might do in other eccentric parts. We suspect that he would be highly successful in the important rôle, already referred to, in "Pygmalion." As Lady Milligan, Miss Haidee Wright gave a most enjoyable performance. Miss Pauline Whitson greatly overdid the part of Mrs. Jervoise, and Miss Charlotte Walker was a rather disappointing Mrs. Guilford. F.

"THE UNCHASTENED WOMAN."

Mr. Louis K. Anspacher's new play at the Thirty-ninth Street Theatre both interested and perplexed its audience. They were interested because "The Unchastened Woman" is rather different from any American drama of recent times, even in these days when so much is made of novelty. It pretends to be a thoughtful play, and does indeed go through the motions of thinking. But the spectators were also perplexed, because it has no direct message, is indeed a jumble of half-articulate messages. One suspects that the author has been reading Strindberg and has been captivated by one or another of his heartless women. Caroline Knolys, wife of Hubert Knolys, a wealthy New Yorker, and herself possessed of a fortune, is chaste only because she is passionless. But she enjoys the excitement of exercising her power over men, and not least her advantage over her husband, whom she refuses to divorce, even though he has been unfaithful to her. Their life together is the hell of bickering in which she most delights.

In this central situation alone Strindberg would have found ample material for a clear-cut drama. But Mr. Anspacher, less despairing of womankind than the Swede, de-

sired to contrast his heroine with a stable, full-hearted woman, and this necessitated a plot so complicated as to dull the artificial lustre of the main theme. We need not recount the story, which in simple outline would betray, more than the play actually does, the reliance upon coincidence and other crude artifices. The main defect is apparent enough in the crucial situation. These protagonists, for all their pretensions, lack the intellect to make them really interesting. Strindberg, warped though his outlook on life was, contrived nevertheless to send momentary shudders through his audience at thought of the horrid possibilities of married life. To gauge the calibre of Mr. Anspacher's Caroline Knolys, one has merely to imagine in the part an actress of established intellectual capacities. She could have found herself attracted by numerous openings and confounded by their shallowness. This must be taken in account in judging the performance of Miss Emily Stevens, whose acting was greatly impaired by meaningless giggles and shrugs. In general the play was competently presented, though Mr. H. Reeves-Smith, as Hubert, might improve his work by disciplining his facial expressions and avoiding the little trick of clapping his hands behind him. The cast includes R. Hassard Short, Christine Norman, Willette Kershaw, Isabel Richards, and Louis Bennison. F.

"THE BARGAIN."

"A Modern Shylock," the original title of Herman Scheffauer's new play which was produced last week at the Comedy Theatre, had at least the merit of conveying some idea of what the piece was about, and it is difficult to assign any reason not absolutely childish for the change. There are, however, more serious grounds for quarrel with Mr. Scheffauer's drama than the choice of a title. The promise of the first act, which is well written and introduces a situation and an array of characters that seem capable of developing distinct interest, is not fulfilled. One is tempted to the verbal flippancy of saying of the rest of the play that it is "Hamlet" with the Prince of Denmark omitted; this is not quite accurate, but it is accurate to say that it is "The Auctioneer" without Mr. David Warfield. "The Auctioneer" is a very poor play made interesting by the superlative performance of a clever actor in a part written expressly for him; "The Bargain" is, as a play, but little better, and Louis Calvert, for all that he plays the part of the protagonist, Simon Lusskin, extremely well, has neither the opportunity nor, we think, the ability of David Warfield.

The initial situation is sufficiently interesting. Simon Lusskin, a worthy Hebrew pawnbroker of the East Side, has taken for his second wife Sarah, a woman but little older than the son and daughter, Sam and Rebecca (the latter part charmingly played by Miss Josephine Victor) of his first marriage. Simon, a Polish immigrant, is of the orthodox faith of his fathers; in his children, born in America, and in his young wife, there is the inevitable conflict between the new freedom and the old orthodoxy. Sam is in Wall Street paying to the dollar more reverence than to Jehovah; Rebecca is indulging in a clandestine love affair with an artistic Gentile; Sarah recites Shakespeare and is made restless and hysterical by histrionic ambitions. The motive of the play is obvious from the first: the old Jew, rigid and harsh in his orthodoxy, is to be left alone, and we are to see whether he will curse God and die or will accept his bereavement with Job-like resignation.

This is well enough for a beginning, but after the first act we never again get the sense of clashing wills and ideals. The tragedy of Job—and of Shylock—repeats itself, but it does not march, it saunters; there is no sense of cumulative fate, the loss of goods and children succeeded by sore boils and the mockery of friends. Sam steals a diamond necklace from his father and money from his employer; Rebecca is seduced by her Gentile lover and insists on marrying him. But we do not care whether Sam goes to prison or not, and Rebecca is obviously seduced only in order to give occasion for a scene between Simon and Sam's employer, who happens to be the father of Rebecca's lover, in which the Gentile, in consideration of the wrong done by his son, offers to overlook the peccancy of Sam—hence "The Bargain." As for Sarah, the young wife, who in the first act has promised to play an important part in the action, she peters out into nothing, only returning at the end from an unsuccessful attempt to be a great actress. Miss Dorothy Donnelly's efforts in this rôle, conveying the impression that she was about to dance before Herod, failed to atone for its inherent lack of interest. In the end, Simon curses neither God nor his Gentile son-in-law; nor does he rise to any Job-like heights of religious faith. Instead, he accepts a weak compromise, refusing, indeed, an Hebraic blessing, but apparently accepting the flabby doctrine that love transcends and excuses all and that since Rebecca and her Gentile are happily married the little matter of the seduction really doesn't matter. S. W.

Music

ENGLISH COMPOSERS AND SONGS.

Granville Bantock. By H. Orsmond Anderton. New York: John Lane. $1 net.

One Hundred Songs of England. Edited by Granville Bantock. Boston: Oliver Ditson Co. $1.50.

In the opinion of the brilliant young Australian pianist and composer, Percy Grainger, the greatest of living composers, not only in England, but anywhere, is Frederick Delius. The greatest two in England are Edward Elgar and Granville Bantock, in the opinion of Orsmond Anderton, author of the latest addition to John Lane's series of Living Masters of Music. He eliminates Delius on the ground that he is "more Continental than English." Before taking up his subject proper, Mr. Anderton passes in brief review the other prominent modern composers of the British Isles, among them Elgar, Sullivan, Goring Thomas, Parry, Mackenzie, Stanford, Corder. He draws a parallel between Elgar and Bantock, who, he thinks, are in a true sense complementary, the former representing music in the abstract, while Bantock's has a pictorial quality, often tinged with Orientalism. Of his leaning towards realism an amusing instance was furnished by an early Miltonic overture called "Satan in Hell." At the rehearsal, after a fearful cacophonous passage, in which the players had got tangled up inextricably, Mackenzie, who conducted, exclaimed in despair, "Where are we now?" To which came the demure reply from the author, "In hell, sir."

This was an extreme case; but Bantock's sympathies were from the start with Wagner and Liszt, who were at that time the symbol of all that was daring and revolutionary in music. His start was made about 1884. His father, a famous surgeon, who had boldly defied Lister and his new methods, quite as stubbornly opposed his son's determination to become a musician, but finally had to yield; and young Bantock was allowed to become a student at the Royal Academy, where he made a thorough study of the orchestral instruments, in particular, under Frederick Corder. That ardent Wagnerite deepened the natural proclivities of his pupil, whose early works consequently reeked of Wagner. For a time he tried, like his idol, to write his own poems, but subsequently he left that to his wife and others. Like most young composers, he had his lean years, a favorite procedure being the buying of a huge cabbage and presenting it to his landlady with instructions to serve it in instalments as long as it lasted. To earn a few pennies he corrected examination papers by the hundred. He felt compelled, in the lean years, to accept offers to conduct cheap travelling opera companies, one of which, however, compensated him by providing a chance for a trip around the world. On returning, he began his more serious work both as composer and teacher, and also as conductor. In these two capacities he occupied some of the most important posts in England, and always his effort was chiefly in behalf of modern musicians, including those of his own country, who seemed to him unduly neglected in favor of foreigners. He could not see why, when the national picture galleries of foreign countries were competing for paintings by British artists, their musical colleagues should be ignored.

So far as Bantock is concerned, it must be admitted that his music has been surprisingly ignored in America, whereas the works of some of his colleagues, notably Elgar and Stanford, have received considerable attention. Mr. Anderton appends a list of Bantock's works which takes up eight of his 156 pages; and the more important of these songs and pieces are briefly described in the book. He speaks with particular enthusiasm of the Sappho songs, the symphonic poem on the subject of "Thalaba the Destroyer," and the *magnum opus*, "in which Bantock is most completely himself and unlike all others," the "Omar," which, unfortunately, is a work of such large proportions that parts of it are more likely to be performed than the whole. Of particular interest are the author's remarks on the pioneer work done by Bantock and Elgar in fostering a style of unaccompanied choral music which has become one of the

most remarkable artistic phenomena of our time. "A subtlety, delicacy, and force have been achieved which differentiate this music strongly from all that has gone before." Bantock was so smitten with enthusiasm over this style that he "went about proclaiming orchestral music to be no good, that it was played out, and that we must all henceforth write unaccompanied part-songs only."

These sudden enthusiasms were among Bantock's harmless foibles, at which his biographer likes to poke fun. Mr. Anderton has been for years an intimate friend of Bantock, with whom he travelled to Bayreuth, and for whom he once wrote a libretto; but when the composer saw no operatic opening for himself, he gave up the struggle and consoled himself with the reflection that opera anyway is, as an art-form, "an unsatisfactory hybrid."

Mr. Anderton has also supplied an introduction to Mr. Bantock's "One Hundred Songs of England," one of the latest volumes in Ditson's admirable Musicians' Library. In this introduction he discusses in some detail the reasons why the English have achieved less in music than in some of the other arts. They have done more, however, he contends, than they generally get credit for; English song is "analogous to the Shakespeare and the Herrick lyric, in poetry." The comments on the hundred English songs included in this volume were written by Mr. Bantock himself. They take up nearly sixty columns, and in erudition and sympathetic insight they are models of their kind. We know of no other publication which gives so satisfactory an idea of the spirit of English song (up to 1855) as this volume. It begins with the thirteenth century "Sumer is icumen in" and includes specimens by Byrd, Weelkes, Morley, Dowland, Gibbons, Purcell, Arne, Dibdin, Brahm, Bishop, and many others. Not a few of these songs, thus brought forward by Mr. Bantock, will no doubt soon find their way into our concert halls, in company with the favorite Continental products.

HENRY T. FINCK.

Walter Damrosch has chosen some interesting foreign novelties for the coming concerts of the New York Symphony Orchestra; among them a new symphonic excerpt from Ravel's "Daphnis and Chloe," and two charming mood pictures by Delius, "Summer Night on the River" and "On Hearing the First Cuckoo in Spring." Among the symphonies to be played this winter are Beethoven's Nos. 2 and 5, Berlioz's "Romeo and Juliet," Brahms's Nos. 3 and 4, Chausson's in B flat, Schubert's Symphony in C, Schumann's No. 4, Tchaikovsky's "Manfred." Among the plans of the Symphony Orchestra for this season will be a programme devoted to compositions by the great masters which have been inspired by the dramas of Shapespeare.

The Symphony Orchestra's season will comprise, as heretofore, eight Friday afternoon and sixteen Sunday afternoon concerts. At the opening pair, on October 22, 24, the soloist will be Mischa Elman. Other soloists already engaged are Frieda Hempel, Louise Homer, Mme. Schumann-Heink, Julia Culp, Fritz Kreisler, Harold Bauer, Pablo Casals, John Powell, Alexander Saslavsky, George Barrère, Josef Hofmann, Merle Alcock, and Percy Grainger.

In the thirty years following the death of Wagner (1883) the number of new operas produced in seventy-one German cities was 520. In the first of these decades there were only two big successes: Humperdinck's "Hänsel und Gretel" and Nessler's "The Trumpeter of Säkkingen." The most prolific of all composers was d'Albert, who wrote thirteen operas in twenty years. The number of seven operas was reached in the three decades by Brüll and Goldmark; six was the number attained by R. Strauss, Kienzl, Blech, Siegfried Wagner, Zoellner; five by Bungert, Kistler, Sommer; four by Humperdinck, Heuberger, Kaskel, Kaiser, Neitzel, Weingartner; three by Bittner, Kretzschmer, Reinecke, Ritter, Waltershausen. The number of composers who succeeded in getting only one of their operas performed was 213.

The first visit of the Boston Grand Opera Company to New York, occupying the two weeks beginning Monday, October 25, at the Lexington Theatre, will bring several attractive novelties, both in the répertoire of operas to be presented and in the ballets and divertissements to be offered in the same programme by Anna Pavlowa and her Imperial Ballet Russe. The engagement will open with Auber's "The Dumb Girl of Portici," more often presented under the title of "Masaniello" in Europe, although it has not been given in this country in twenty-five years. This work was a popular selection in the répertoire of a former generation, presented in the manner of the time, but in this revival it is given in a more modern guise, in conformity with the new artistic development, which includes mimo-dramatic and mimo-choregraphic opera. In this new form of art, which has become quite popular in Europe, the portrayals of pantomimists and dancers are as important in the dramatic action and the depiction of the story as are the vocal and instrumental portions of the performance. The one mute character, the title rôle, is assumed by Anna Pavlowa, while the other parts are taken by Giovanni Zenatello, Felice Lyne, and other vocal stars. Other interesting operas to be presented are "Madama Butterfly" with a real Japanese prima donna, Tamaki Miura, in the title rôle and Riccardo Martin as Pinkerton; "Carmen," with Maria Gay and Pavlowa, who will give added zest to the wonderful ballet music in this opera; "Otello," with Zenatello and Pavlowa; "Faust," with the complete ballet and Walpurgis Night (usually omitted); "Rigoletto," with Felice Lyne as Gilda, a part in which she made a sensation in London; "Pagliacci," "Coppelia," and others.

In spite of the difficulties attending the importation of music scores and parts from Germany and Austria, the Philharmonic Society of New York is able to announce for its Carnegie Hall concerts an unusual number of novelties. Mr. Stransky has obtained the rights to first production in America of Reger's new "Variations on a Theme by Mozart," and to Strauss's latest work, his "Alpine Symphony." Stransky will also produce with the Philharmonic Orchestra the symphonic poem, "Pelléas and Mélisande," by Schoenberg, for the first time in America. Among other novelties is the new piano concerto by the foremost of English composers, Delius, the piano part of which will be played by the Australian, Percy Grainger. Considerable space has been given in the Philharmonic programmes to American composers, among them MacDowell, Rubin Goldmark, Seth Bingham, David Stanley Smith, Cornelius Rubner, Edmund Severn, A. Walter Kramer, and Fritz Stahlberg. Some of these compositions will be played from manuscript. Mr. Stransky will also appear on the programmes as composer. Two of his symphonic songs will be rendered this season by Mme. Julia Culp.

Leopold Godowsky will make his first appearance in America this season at Aeolian Hall next Sunday afternoon. He will play Beethoven's "Sonata Appassionata," Brahms's Paganini variations, Chopin's sonata with the funeral march, a Liszt concert study, and "Au Bord d'une Source," and Godowsky's Symphonic Metamorphoses of a Strauss waltz, preceded by a Chopin étude (op. 10, No. 6), arranged for left hand alone.

Dr. Karl Muck, the conductor of the Boston Symphony Orchestra, has announced in Boston his purpose to play this year John Alden Carpenter's suite, "Adventures in a Perambulator." This work was on two different programmes of the Chicago Orchestra last year, and had an extraordinary success. It is said to be humorous music that really is humorous.

Finance

THE GREAT AMERICAN HARVESTS.

To the public at large, the central and spectacular feature of the Government's October report on the grain crops of the United States in 1915—the last advance estimate of the season—is undoubtedly the total indicated yield of wheat. This reaches and passes the interesting round figure of one billion bushels, whereas even last year's great crop stopped at 891,000,000, with the average of the past five years 686,000,000, and the largest yield on record prior to that period nearly a quarter of a billion bushels under the harvest figure now foreshadowed. The estimate on corn passes the three-billion-bushels mark for the second time in our history; the crop as indicated would be 354,000,000 bushels over that of 1914, and second only to that of 1912. The oats crop, like the wheat crop, will break all records in our history, exceeding by 100,000,000 bushels even the enormous yield of 1912. The country has never before equalled the present year's production of rye, or barley, or hay.

Taking the harvest of the six staple grain crops, the aggregate yield this year would be 5,843,265,000 bushels, as compared with 4,914,494,000 in the season of 1914, and with 5,552,087,000 even in the hitherto record-breaking season of 1912. As compared with what was considered the exceptionally brilliant grain year, 1906, the results for the present year would show for all six crops a total increase of nearly a thousand million bushels, or upwards of 20 per cent. That this should be among the possibilities, in a year when grain production in the outside

world is under such abnormally restrictive influences, is notable testimony to the power and natural resources of the United States.

Under ordinary circumstances, it would have been assumed that a harvest of such enormous magnitude would result in continuous lowering of grain prices; for, although large crops had long been foreshadowed, the actual Government estimates were much larger than expectations of the grain trade. It was, in fact, predicted, when the report was given out, that prices must decline. But the grain trade has looked on every successive Government report of the season in the same way, and a substantial body of opinion existed, in the face of these latest estimates, to the effect that even the very large crops now indicated had been sufficiently "discounted" by the previous decline of 75 cents a bushel in wheat and of 20 cents in corn, from the year's earlier high prices. It is very recently that prices have been down to the lowest of the season.

That this feeling was rather general, the wheat market itself has given evidence. Last week a movement of prices was under way, not wholly unlike that which was witnessed on the outbreak of war in Europe, fourteen months ago. In the four days preceding the publication of the crop report, wheat advanced 11 cents a bushel, making 16 cents' advance in thirty days. In great measure this was a matter of speculation; in the Chicago "wheat pit" the general spirit of speculation, which had already affected so strikingly the stock and cotton markets, seemed to be in the air. But the movement was not wholly a concerted policy of professional speculators.

With supplies of wheat on the farms admittedly very large, stocks in the city granaries, whence they can be delivered instantly to consumers, are unusually small—which usually means that the farmers have been unwilling to sell at the recent low prices. Until very lately, the argument for low prices as a result of our enormous harvest was that the rest of the wheat-producing world had also greatly increased its crops—every country being stimulated to plant more wheat than ever before, with an eye to the very high prices of last season and the European situation. And, in fact, our own wheat exports, during August and September, were considerably less than in the same months of 1914.

But in the past few weeks rather plain signs have come to hand that prospects of foreign crops were by no means of the best. A wet harvest on the European Continent supplemented the necessarily bad effects of war on the grain-growing industry. Russia and the Balkans seem to have an abundant crop, but the Balkan surplus is going to Austria-Hungary and Germany, where it does not compete with our grain exports, while Russia cannot ship, owing to blockade of her two ports. Even were the Dardanelles open, it is not believed that the usual shipments could be made, with present inadequate railway facilities in Russia.

Although Argentine acreage has been increased, drought has prevailed in that country, where the present season compares with May in this country. General and heavy rains are necessary for a crop. India is not now a factor in the grain trade, the surplus there having been badly overestimated. Australia has the promise of the largest crop on record, but as the Government has guaranteed farmers about $1 per bushel for their wheat, and with freight-rates to Europe about 50 cents per bushel and over, Australian wheat at best cannot be called cheap, in comparison with our present prices.

As to our own export business for the season—which will mainly be done in the next three months—exporters are divided in opinion. Some predict shipments fully up to last year's, their argument being that the outlook for foreign harvests has become more unfavorable of late, and that stocks are smaller than last year. But how much domestic wheat will be taken in the aggregate by Europe remains to be seen. It is perhaps impossible to export as much in the remaining nine months of the crop year as in the previous season; even the ocean tonnage is not considered to be available, when there is so much ground to be made up. Yet it remains to say that even in August value of the country's exports of grain far exceeded that in any other year except 1914.

THE NEARING CASE

By LIGHTNER WITMER, Ph. D.
Head of the Department of Psychology
University of Pennsylvania.

The whole world is discussing the dismissal of Dr. Scott Nearing from his position as Assistant Professor of Economics, Wharton School, University of Pennsylvania. A great fight for free speech will revolve around this incident. Few persons are fully informed as to the facts. This 140-page book contains a complete statement, the charges, the evidence, the arguments and many documents that may become historic. These include Dr. Nearing's famous letter to Billy Sunday.

THE NEARING CASE

may be obtained from booksellers for 50c. net. If purchased by mail add postage for 1 lb. and remit to the publisher.

B. W. Huebsch, 225 Fifth avenue, New York

This week's issue of THE NATION comprises 15,000 copies: of this 8,026 go to paid subscribers and 4,900 go to exchanges or are sent out as free copies. The average weekly newsstand sales during the first eight months of the year 1915 were 811; August average, 739 copies.

In view of the large library and college and family circulation of THE NATION, it is safe to assume that not less than 30,000 people read it each week.

NEW YORK, THURSDAY, OCTOBER 21, 1915.

Summary of the News

Ae we write, there is evcry lndlcation that the prescnt week may prove the most momentous onc in the fortunes of the Allies since Gen. Joffre rallied his forces at the Marnc. Rumors of dlssension in the Britlsh Cabinet and sevcre crlticlsm of the Government's dlplomacy in the Balkans culminated on Tucsday in the definite announcement that Sir Edward Carson, the Unlonist Attorney-General from Ulster, had resigned. For some days prevlous Sir Edward had ostentatlously absented himself from meetings of the Cabinct. Early comment on the withdrawal of the Attorney-General took thc view that the dissension in the Cabinet was not over the question of conscription, but over the Government's policy in thc Balkans. Further complications were added to the situation by the news on Tuesday of Mr. Asquith's illness.

Slmultaneously with the news of Slr Edward Carson's rcsignation came the announcement by the official press bureau that Gen. Sir Ian Hamilton, thc British Commander-in-Chief in the Dardanelles, had been recalled to England "to report," and that Major-Gen. Sir Charles C. Monro had been appointed to succeed him. Rumors that the campaign in Gallipoli might bc abandoned and the troops transferred to the Balkans have been abroad for the past week and received additional currency through a suggestion that this course should be adopted, made by Lord Milner in the House of Lords on October 14. On the same day in the House of Commons Sir Edward Grey made a statement on the situation in the Balkans, giving a résumé of Allied diplomacy there during the war.

In France, also, a Cabinet crisis arising out of the Balkan situation has been narrowly averted. As a result of friction in the Cabinet over the foreign policy of the Allies, the resignation of M. Delcassé, the Foreign Minister, was announced to the Chamber of Deputies by Premier Viviani on October 13. M. Viviani himself has assumed the portfolio of Foreign Affairs in addition to the Presidency of the Council. A considerable amount of criticism was directed at the Government in the course of the debate, but the Ministry finally received a decisive vote of confidence—372 votes to 9—although many Deputies abstained from voting.

Events have moved rapidly in the Balkans. Diplomatic relations between England and Bulgaria were broken on October 13, and war was formally declared by Great Britain on October 15. On the same day a note was received by the British Government from Greece announcing her decision not to intervene in the war on behalf of Servia at present and setting forth the opinion that the treaty with Servia did not in the circumstances call for intervention by Greece. On October 12 Greece had presented the same contention in her reply to the Servian inquiry as to whether the Greek army was ready to operate against Bulgaria. The Greek excuse for repudiating the treaty with Servia is that it was meant to apply only to a purely Balkan struggle and not to a general conflagration. The Rumanian Cabinct also declared for neutrality on October 13.

M. Viviani, in the speech in the Chamber referrcd to above, announced that Russia would take part in the war against Bulgaria, and on October 15 he told the French Senate that Italy would also take part. So far neither Italy nor Russia has furnished troops for the Balkan campaign, but a formal declaration of war was made by both of these countries on Tuesday. Russian forces could only be sent to the field in two ways, through Rumania or by effecting a landing on the Bulgarian coast on the Black Sea. For the latter purpose it is not thought that Russia possesses sufficient transports. There were reports last week that Russia had asked Rumania to allow the dispatch of troops through her territory, but these reports have not been confirmed. A blockade by the Allied fleets of the Bulgarian coast on the Ægean was announced on October 16.

The Allied expedition that landed at Salonica has made progress, and on the quick success of this expedition, it is believed, depends not only the fate of Servia and more far-reaching results affecting British interests in Egypt and the Orient, but the solution of the political situation in Britain. As we write, the military situation appears, if anything, to favor the Allies. The progress of the Teutonic forces which have invaded Servia across the Save, the Danube, and the Drina continues to be slow, and obviously the Servian army has so far offered more stubborn resistance than was expected by the German General Staff. The Allied expedition from Salonica has crossed the Bulgarian frontier at a point just north of the Greek border, and has taken the fortified town of Strumitsa. On the other hand, Bulgarian troops have cut the Salonica-Nish line at Vranya. A second Allied expedition on Sunday or Monday effected a landing at Enos, on the Ægean Sea, at the frontier of Bulgaria and Turkey, and has seized the railway running east from Dedeaghatch (twelve miles away) to join the main line from Sofia to Constantinople. Dedeaghatch, a strongly fortified port, is therefore threatened both by land and sea.

The extent to which the German submarine campaign continues cannot be accurately gauged, since the official press bureau, in reporting the destruction of vessels, has adopted the practice of not always stating the agency. During the past week three British, one Swedish, and one Norwegian vessel have been reported sunk. News was received on Monday that the French steamship Amiral-Hamelin had been sunk without warning by an Austrian submarine in the Mediterranean, with the loss of seventy-one lives. On the same day Count Bernstorff gave out a statement that German submarines had recently sunk twenty-three vessels of the Allies, including four transports, in the Mediterranean. British submarines in the Baltic have continued a successful campaign. Official announcement was made in Petrograd on Sunday of the sinking of five German transports. Late last week a German destroyer and a torpedo boat were reported sunk. Recent dispatches have indicated that the activity of British submarines has virtually brought to an end traffic between Germany and Sweden in the Baltic.

Two more Zeppelin raids were made over London on the night of October 13-14. According to a long official report of the raid published on Monday, 127 persons were killed or injured, and "except for one chance shot the damage was exclusively on property not connected with the conduct of the war."

The text of the latest note on the Frye question to be sent by the United States to Germany was published in Tuesday's papers. The note, which is dated October 12, is in response to the German note of September 19.

Formal recognition of Carranza as head of the *de facto* government of Mexico was accorded by the United States and the South American republics which have participated in the Pan-American Peace Conference on Tuesday.

At a dinner of the Republic Club in New York on Monday night several speeches were made by prominent Republicans urging ex-Senator Root to accept the Republican nomination for President in 1916.

In the election in New Jersey on Tuesday the Woman Suffrage amendment was defeated by a heavy majority. Early returns yesterday showed an estimated plurality against the amendment of some 55,000.

President Wilson has definitely come out in favor of a considerable increase in preparation for national defence. The programme to be adopted by the Administration, it is stated, will involve an expenditure of close on a billion dollars and includes a large increase in ships and personnel of the navy and extensive reorganization of the army, with special attention to the creation of a reserve force. The President, it was announced this week, will outline his plans in an address at the Manhattan Club of New York on November 4.

Count Bernstorff on Monday announced that he had forwarded to Secretary Lansing affidavits of some American mulemen alleging that the British patrol vessel Baralong, while flying the American flag, had attacked a German submarine, and that the crew of the patrol had killed several of the German survivors when they were endeavoring to reach or had reached safety on the Nicosian, the vessel from which the incident was witnessed. As the use of a neutral flag as a *ruse de guerre* is legitimate, and as it is not the business of the United States to inquire into the good faith of the affidavits, the document has been put on file.

News came on Saturday that the American Embassy had notified the British Foreign Office of the execution by the German authorities in Brussels of Miss Edith Cavell, an English school teacher, after her conviction by court-martial on a charge of having assisted British and French soldiers and Belgians of military age to escape from Belgium. Sir Edward Grey has requested the American Government to investigate the case.

The Week

A witty American has said that the English are just now acting as if they were "bears on themselves." It is certain that the political squabbles and the Governmental differences of opinion and the violent press campaign, occurring as they have in the midst of a war which Englishmen have been told means life or death for their Empire, make a bad impression. They seem to imply a lack of unity, and even of patriotic determination, in the face of a great national crisis. But to conclude that this is true would be a mistake. If such manifestations were made in Germany, then, indeed, we might think that the foundations were breaking up. In English history, however, events such as we are now witnessing are familiar. In England, war is not permitted to still the strife of tongues. For bitterness and for recrimination, nothing that is passing now equals what took place at the time of the Crimean War. We Americans would do very much what the English are doing if we were engaged in a war going badly. We, too, would be crying out on our blundering Government, demanding scapegoats, and all that sort of thing. All this is in the Anglo-Saxon tradition. It has to be borne constantly in mind when trying to get a true measure of such political agitations as are now afflicting England.

Behind the whole undoubtedly lies the feeling that British ill success in the war has been due to mismanagement. This is believed to be partly military and partly diplomatic. But any fair consideration of the matter must take into account the enormous difficulties that had to be faced. In the whole question of foreign policy, for example, both military and diplomatic, it must be remembered that the British Government has not been free to play its own hand. It has had to consult with its allies. And if it is hard to make a Coalition Government run smoothly, to conduct a gigantic war through a Quadruple Entente is vastly harder. Long-range consultations are necessary. Different views have to be compared and reconciled. Conflicting interests have to be composed. All this takes a great deal of labor and a lot of time; and the misery of it is that, when a decision is finally reached, the situation may have so changed that the work has to be begun all over again. Under such conditions, the real wonder is, not that there have been so many delays and disappointments, but that there has been such marked and unbroken harmony, among Russia and France and Italy and England, and that together they have accomplished so much. All told, the political excitements in England are superficial—not to say a trifle artificial. They do not go to the heart of the English attitude or the English purpose. The members of the Government know that the reproaches now heaped upon them are only of the sort that were showered upon the Aberdeen Ministry in the '50's, upon Gladstone at the time of the Sudan campaign, and upon Salisbury and Chamberlain in the first months of the Boer War. These things will pass, and, so long as the strength and will of the English people continue bent to the great tasks laid upon them by the war, cannot materially affect the long result.

To what extent the departure of Théophile Delcassé from the Ministry of Foreign Affairs is the sign of national dissatisfaction with his policies, to what extent it is the outcome of personal politics, we cannot say. We know that even in the midst of great national crises personal interests and ambitions persist. We have an example in England. Assaults upon Kitchener and the campaign for conscription have not been actuated by pure patriotism. The supposed personal ambitions of Lloyd George not so long ago agitated the English people. Factional politics could not ask for a better opportunity to drive home its attack than a situation like that which has developed in the Balkans. There the Allied diplomacy has unmistakably suffered a severe defeat, with corresponding loss of prestige for the responsible Ministers, whether it be a Delcassé or a Grey. Under any other interpretation the resignation of the Minister who has been correctly described as the co-author with Edward VII of the present anti-Teuton alliance, and as the architect of the French policy of colonial expansion which sharpened the perpetual conflict between France and Germany, might be taken as a sign of discontent among the French people with their present situation. But against Delcassé's departure we must put the decisive vote of confidence granted to the Viviani Ministry, and the overwhelming evidence from every quarter that there is no thought in France of crying quits until the great issue has been fought out.

The departure of Delcassé means the going of one of the nation's Elder Statesmen. For a people whose parliamentary life is supposed to undergo exceptionally violent fluctuations, France has made use of its veteran politicians to a greater extent than any other Government. If we take the English Cabinet, we find that many influential members are comparatively new men, of the generation after the Boer War. Balfour and Lansdowne alone go back to the nineteenth century, but their position is one of prestige rather than of direct influence. Asquith was Home Secretary as far back as 1892, but Lloyd George and Grey began their Ministerial careers in 1905. Bonar Law and Winston Churchill's growth are of a later date. New men are in power in Germany, in Russia. But Delcassé was a member of the national defence Ministry organized by Waldeck-Rousseau in the Dreyfus days of 1899. He had for colleagues then Millerand, who is now Minister of War, and Caillaux, whose departure from the Cabinet shortly before the outbreak of the war has apparently not destroyed his influence in Parliament. Perhaps it is no coincidence that the Opposition has concentrated its attacks against the veterans, Delcassé and Millerand. In times of national emergency there is a demand for new blood, new energy, new methods.

The sending of a formal letter of recognition to Carranza will bring at least to a pause a Mexican programme that has zigzagged along ever since President Wilson took the oath of office on March 4, 1913. President Wilson's own friends acknowledge that there have been many inconsistencies in the record, and they realize that it will be one of the grounds upon which the Wilson Administration will be attacked with the greatest effect.—[The New York Sun.

For I must assail something, then why not you? Apparently, that is to be the attitude of President Wilson's critics towards his Mexican policies. It is a position of little promise from the point of view either of practical politics or of broader national issues. The practical politician is the first to recognize that nothing succeeds like success, that we are a people of quick forgetters. Let Carranza reëstablish peace in Mexico, and we shall forget quickly enough the painful preliminaries. Let our difficulties with Mexico be settled, and few will care to think back whether the result has been attained by zigzag or by flank movement or by frontal attack. This is the practical side of it. On the moral side of the issue we do not envy the anti-Wilson orator who tries to make out a case against a policy dictated by a sincere regard for the strivings of the Mexican people towards a freer government, a policy which will have attained

its object without reproducing on this continent the war horrors of bleeding Europe.

One record has been gloriously broken by the United States, yet we do not perceive any popular jubilation over it. For the first time in peace the estimates to be submitted to Congress call for expenditures of $1,250,000,000. We have long hovered on the edge of being a billion-dollar country, but here we go over it at a bound, with a quarter of a billion added to set the high mark. To what the big increase is due is no secret. Almost the whole of it is accounted for by the new hundreds of millions to be spent on the army and navy. Thus the warm rhetoric of preparedness is translated into terms of cold cash. The alarmist orators will have to pay up. And we notify them now that, when they find their income tax doubled, or one levied upon them which they have not had to pay as yet, they must not go about the land complaining of the folly and imbecility of the Government.

Discussion back and forth of the question whether the Pacific Mail sold its ships because of the La Follette bill or for other reasons is bound to yield more heat than light. In the whole matter we need to seek the facts in a calm spirit, and to be moderate and cautious. Sweeping predictions that the Seamen's act will drive the American flag clean off the Pacific are to be listened to with a great deal of skepticism. We know that one San Francisco line—the Matson steamers—is preparing not only to stay in the business, but to enlarge its fleet. Last week the dispatches reported the letting of a contract for a $1,000,000 steamship, to be used by the Matsons in the Hawaiian trade. By so much, this bears out the assertion of Mr. Andrew Furuseth that some ship-owners on the Coast were not afraid of the Seamen's act. But that measure, nevertheless, is going to need overhauling by Congress. One of its chief aims was to bring foreign ships into our ports under the same regulations as American. An opinion has been given by the Attorney-General, however, that this cannot be done under the law. There we have one reason for revising the bill; and another is found in the provisions regarding the language used or understood by sailors. The legislation was plainly not well considered in all its parts. Changes are necessary, and Congress ought to make them.

The Federal Reserve Board has shown just the kind of judgment and competency that has been hoped for it, in declining to approve the recommendation that had been made by President Wilson, with the backing of Secretary McAdoo, for the establishment by the Federal Reserve banks of joint agencies in leading cities of South and Central America. A project of this kind presents obvious allurement; the idea of mobilizing vast financial power for the extension of trade in a region of expanding possibilities is on its face highly attractive. "The combined capital stock and resources of our Federal Reserve banks," said Secretary McAdoo in a report accompanying the President's letter, "utilized in this way for the extension and promotion of our foreign commerce, would give them unrivalled financial power." The Federal Reserve Board, however, sees, in the utilization of the combined funds of the Federal Reserve banks for "pioneer work" of this kind, a diversion of the resources of the system which, in view of the fluctuations of exchange and of other circumstances, would tend to impair the strength of the system. The Board also points out that in consequence of the restrictions under which the Federal Reserve banks are necessarily obliged to act, they would not be in a position to compete successfully with the independent banks or branch banks established by European nations in Latin-American countries. The Board's proposal that the Federal Reserve act be amended so as to permit *member* banks to coöperate for the purpose of jointly owning and operating foreign banks appears to meet the situation admirably, and has the concurrence of Secretary McAdoo.

No sober-minded man can read the full text of the speech which Secretary McAdoo made at Indianapolis, last week, without a feeling almost of dismay. It is one thing for the Secretary of the Treasury to launch a new scheme for putting the Government into the shipping business. If he believes in such a project, he is entitled to his opinion, and may publicly advocate the plan if he chooses. But from a responsible officer of the Government we have a right to expect, in so important a matter, a well-considered utterance. He ought to show signs of having studied the subject deeply, arrived at mature conclusions, and weighed his words carefully. But little or nothing of this is to be found in Mr. McAdoo's address. It is a slap-dash production of the kind which a Congressman, going off half-cocked, might have made, and we should have passed it by with a smile; but coming from the Secretary of the Treasury, and considered as outlining a policy of the Administration, it causes something like a sinking of the heart. For it is so filled with happy-thought suggestions, of the promoter order, dismisses so lightly difficulty after difficulty, and passes with such sublime unconsciousness from one inconsistency to another—all the while maintaining a tone of grandiose certainty—that it gives the distinct impression of Col. Sellers coming back to life and dropping jauntily into magnificent and infallible plans for Government shipping.

The purpose of the Cotton Futures act was to minimize speculative abuses in sales of cotton for future delivery by requiring the use of official grades, written contracts, and a system based on actual commercial values in making settlements, so that the market quotations would mirror accurately the value of spot cotton. To this end the adopted Lever bill authorized the Secretary of Agriculture to establish grades from time to time, and levied a tax of two cents a pound on all cotton not so sold. The rejected Smith form would have established grades, and have forbidden the use of the mails or telegraph lines for the transmission of quotations not complying with the regulations. Judge Hough's decision in the Federal District Court that the act is unconstitutional is based on the fact that it originated in the Senate, whereas the two-cent tax makes it one of the revenue measures that must come from the House. Whether the Smith law to prevent "gambling" in cotton would be held unconstitutional must remain unknown until the issue is brought before the courts on broader grounds—if it ever is.

The acquittal of Mayor Bell, of Indianapolis, of connection with any election frauds, which is taken as presaging the breakdown of the case against Taggart and others, had been foreseen. In Indianapolis the alleged poll-fraud conspiracies always wore a very different aspect from those of Terre Haute, where a frank plea of guilty was made by 89 out of 115 men arrested. A previous attempt—made in June, 1914—to press indictments against election officers in Indianapolis failed completely. But that something is wrong in Indiana's capital seems clear. In the last eighteen months three separate investigations by the grand jury have been held, and three sets of indictments brought in; and evidence has been

collected which, if not sufficient for the conviction of any one man, points strongly to the importation of voters by some agency, to the use of violence or threats, to tampering with election returns, and to repeating. As Indiana surveys the cases of corruption given publicity during the last year not only in the two cities named, but in Kokomo, Muncie, Newcastle, and Evansville, she must come to the conclusion that some sort of State housecleaning is necessary.

Reports of the extraction of potash on a commercially profitable basis from veins of alunite in Utah must be accepted with caution. Though Secretary Lane believes that permanent production from this source can be developed on a large scale, and announces the discovery of a new and simple process, the figures given out by the Department of the Interior indicate that the exploitation is still at an experimental stage. The possibility of obtaining potash from alunite has long been known, but it has heretofore been thought impossible to make use of the mineral, found as it is in remote sections of the country, in competition with the production from sylvite and carnallite at Strassfurt in Germany. Unless a cheap process of reduction can be perfected, the added cost of the long haul to Eastern and Southern markets would make it difficult to undersell the sea-shipped German potash. Everything depends upon the new methods announced by the Department. But in this activity, as well as in its encouragement of a greater use of the kelp of the Pacific for the making of potash, the Department deserves praise.

The rounding out of a hundred years of life is so rare as to make the occurrence notable when the centenarian is a leading citizen of one of our principal cities. On Sunday, at the First Presbyterian Church of Baltimore, the pastor of the church, of which Mr. W. W. Spence—a hundred years old on Monday—has been a member for seventy-three years and a ruling elder for sixty-seven years, well said:

> I question whether any of our younger men, however faithful, render a more valuable service to vital religion in this community than is effected Sunday after Sunday by the mere sight of that venerable figure slowly moving up the aisle to his accustomed place.

The impression of sheer personality, apart from any specific appeal for this or that cause, is a factor in life whose value we are too apt nowadays to forget. Mr. Spence has been a public-spirited citizen as well as one of Baltimore's leading financial men. His interest in the Johns Hopkins University was shown in many ways, and in a particularly effective way when, at more than fourscore, he made a stirring speech—as well as a generous subscription—at a meeting held to provide an emergency fund when the University became financially embarrassed. His love for his native Scotland was attested in a manner peculiarly acceptable to American sentiment by the gift of a colossal statue of William Wallace—a replica of the statue at Stirling—which stands in a commanding position in Druid Hill Park. But the note struck by the pastor of his church is that to which one responds most heartily. It is an inspiring sight, and one that makes life seem to have more substance and more value, to see a man at the age of a hundred going on serenely in the ways that he had marked out for himself in his youth, faithful to those things, great and small, which he cherished and found good when life was all before him.

Both by formal meeting, last spring, and the presentation of a sun-dial to the college this autumn, Harvard's class of 1918 has testified to appreciation of President Lowell's innovation of freshman dormitories. There are other signs of the success of the University's new policies in guiding the whole student body. A full college generation has passed since the authorities began to tighten up the elective system. As is, of course, true in other institutions, it is no longer possible for the student to treat each course as a unit, and to make up his schedule in a random way; his studies must be grouped. And the tendency of the student body a few years ago to choose too much history, government, economics, and allied subjects—studies representing the line of least resistance—has been checked in another way. Hereafter students of these departments will take a general examination in their subjects at the end of the four years' course; while there is a similar requirement as to final oral examinations in French and German. This final oxamination has so many merits in itself that it would seem that it might be much extended, after the Oxford plan.

British submarines in the Baltic have recently been accounting for German merchant ships to a degree comparable with the achievements of the German "blockade" of Great Britain. Formerly there was dissatisfaction in England with the supposed failure of the undersea boat to do its bit against Germany. It took some time for the public to recognize that the submarine cannot be sent against coast batteries or fenced-in harbors. In the North Sea there are no hostile ships, war or merchant, for the British submarine to strike at. It is different in the Baltic, which is the principal highway for such sustenance as Germany still draws from the outside. On the naval side it is apparent that if the British can get enough undersea boats into the Baltic, the German fleet may be held almost as closely to the eastern end of the Kiel Canal as to the North Sea end. It is a problem of getting the submarines through the difficult waters of the Scandinavian narrows. Once in the Baltic, the British boats can operate, of course, from Russian harbors. The signs indicate that they have already played their part in the defence of Riga. The Baltic offers the real challenge to British aggressiveness in submarine warfare. It may be harder for the boats to get into the land-locked sea than for the Germans to get out into the North Sea and the Atlantic, but once on the spot, the British boats can operate more easily than their opponents.

News of the victory of the Indian army under Gen. Nixon over the Turks at Kut-el-Amara, two-thirds of the distance from Basra to Bagdad, seems to have found most Englishmen ignorant that any force was attempting such a task. The London *Nation* speaks of the "gross lack of imagination which has deprived us of earlier news of . . . operations of the highest military and political interest." Apart from the romantic interest of a capture of the golden city of Haroun-al-Raschid, the taking of Bagdad would round out a British colonial policy that has been slowly taking shape for two decades and which contemplates control of fertile tracts in Arabistan, Luristan, and Mesopotamia. It would mean possessing the wheat fields of the Tigris and Euphrates, which will be of great value when Sir William Willcocks completes his work of irrigation, a firmer grip on the oil fields at Mohamera, and exploitation of the mineral wealth northeast of Bagdad. A successful campaign, moreover, would impress India with the safety of her bulwarks to the west, and would end with the British and Russians joining hands on a line reaching down from the Black Sea through Van, Nineveh, and Mosul to the deserts of Arabia. Returned missionaries from lower Mesopotamia speak of the work Great Britain has already done in improving Basra and other cities.

THE PRESIDENT AND PREPAREDNESS.

The announcement that President Wilson is shortly to make a statement explaining his reasons for adopting *in toto* the recommendations made by the authorities of the army and navy is most welcome, for there are many things about this lurch towards militarism that need explaining, lest the enterprise be regarded as largely a strategical move for the purpose of heading off Mr. Roosevelt and the Republicans. There are far deeper issues underlying this question of American "preparedness" than most people realize. Thus it is not a question affecting the United States alone. We cannot be definitely committed to a policy of steadily enlarging military and naval forces without its reacting upon Europe. The increase of the American fleet, even before the European war, was made an excuse by the German and British navalists to demand more sacrifices of their own people. Who knows but that this action by Mr. Wilson, if approved by Congress, may have a fateful and baleful effect upon the efforts to bring about universal European disarmament, which will surely be made at the conclusion of the war?

Certainly he is on the road to tie the hands of the United States and deprive it of its unexcelled moral position, from which it might use its influence at that hour to relieve the whole world of the crushing burden of armaments. When the German pacifists and Socialists, at that moment of reckoning and readjustment, cry disarm, will not their mouths be closed if the Chancellor or the Kaiser points to the United States arming in hot haste and adopting for the first time that vicious Continental institution, a five-year naval budget? There, they will say, is the freest of nations, and one of the richest. You see they have tried going on without militarism for over a century, and now they, too, find in it the "highest good." Moreover, this world of ours must at the conclusion of this frightful struggle abroad decide whether for generations it is to be reactionary, pressing down the masses not only by the staggering costs of this war, but by the burdens of new wars, or whether it is to be progressive and forward-looking. It is to the former possibility that Woodrow Wilson to-day seems bent on lending his own great influence and that of the United States. Surely, he must have some cogent, far-reaching, compelling reason to make him lean towards the side of force when he has just proved anew the moral power of the United States in his successful dealings with Germany.

But there are still other vital reasons why an explanation is due to the public from the President. Why can the United States not await the outcome of the war before moving to arm? It is admitted in Washington that the naval men are literally all at sea as to the lessons of the war in Europe; the British navy has had to meet new problems because of the German submarine. On land, too, the trench warfare has worked a revolution in fighting. But even the final verdict as to this the President does not await, nor the drawing of definite conclusions as to the extraordinary importance assumed by the field artillery. A year's wait could have injured us not at all.

Again, Congress should not hesitate to ask the President some searching questions, so far as the increase of the army is concerned, as to why he purposes to build further on the present inadequate and insufficient foundations. They cost, and continue to cost, enormous sums for which the public is entitled to receive a far better and more efficient army than it has. Why not, before the burden of taxation is heavily increased, and bonds are issued to cover the cost of current military expense, ask whether, by reforming radically our whole military service, vast sums could not be saved to devote to fresh extensions—if such there must be? What about those political forts that Secretary Stimson and so many others have loudly protested against as swallowing needless millions merely for the benefit of some politicians' fences? Are they to be left untouched by Woodrow Wilson? We cannot believe it—not if the President has given more than superficial thought to the matter. For if there is one branch of the Government service which more than any other needs scientific management of its expenditures, it is this one of the army.

Granting without question the cleverness of the political manœuvre by which the President has spiked the guns of his critics, we none the less feel that here was an issue so solemn and so full of the possibilities of evil that it should have been approached with the same complete detachment from partisanship which marked Mr. Wilson's admirable handling of the German issue. A temporary political gain—of what value is that when so much is at stake, when such profound moral issues underlie the whole? We are aware, of course, that those who would have us arm to the teeth are certain that we can embrace militarism and not be affected by its poison; just as the nation was so certain in 1898 that if we went into the business of colonizing we should do it altogether wisely and without walking into any of the pitfalls into which other colonizing nations have strayed. Time has shown differently; but that does not affect our superb confidence in military preparedness. But even this pales for the moment beside the question whether, in his new slogan of "America first," the President has not forgotten the fine note of his Philadelphia speech in which he correctly defined the real American motto as "Humanity first."

THE BALKAN PUZZLE.

In London and Paris the developments in the Balkans have plainly created a sense of bitter disappointment, with the suggestion here and there of something like panic. Critics of the Government in both capitals who are asking the reasons for the failure of Balkan diplomacy are not indulging in a mere bewailing of spilt milk; for the diplomatic and military situations are closely intertwined. Sir Edward Grey and Premier Viviani are at pains to explain the defection of Bulgaria, but the probable reason was stated some time ago in Berlin. It is the German armies that have supplied the logic which persuaded Czar Ferdinand to throw in his fortunes with the Central Powers. Bulgarian duplicity has gone only so far as to pretend that Sofia was hesitating when she had already made up her mind. But there can be little doubt that Bulgaria was all along prepared to go in on the winning side. One Balkan state has thus gone on record as believing in the ultimate victory of the Teutonic Powers. The question now arousing anxiety in London and Paris is whether the same argument may not operate in Greece. Lord Lansdowne has said in almost so many words that an attack by Greece is possible.

But Greece waging war on the Allies is as yet a development hard to imagine. The position of the Allied land forces would indeed be hazardous if the Greek army were to strike out in their rear, but it is a risk which Greece cannot afford to take. Whatever might be the ultimate outcome of the campaign, Greece, as the nation most exposed to the Allied naval forces, would suffer immediately. Her principal towns are seaports and open to bombardment. Even if we imagine the Piræus being secretly mined and fortified against an Allied attack, there are still Salonica, Patras, Corfu, at the

mercy of a hostile fleet. There is insular Greece—Crete and the Ægean islands—where the hopes of future expansion must lie; they would obviously be lost from the beginning. These facts must be taken in conjunction with the national public sentiment which inclines to the side of the Allies. It is not mere accident that Venizelos is on their side. He comes from Crete. He was the chief instrument in the annexation of that island, the first realization of the dream of a Greater Greece stretching across the Ægean to the coast of Asia Minor. If the test in the Balkans is now, as Berlin asserts, a test between land power and sea power, Greece belongs distinctly with the maritime nations. Such considerations render highly improbable the entrance of Athens on the Teutonic side, in spite of the difficulties arising from the present anomalous situation of a Government which refuses to live up to its treaty of alliance with Servia, yet permits its principal port to be used as a base for the succor of the Servian people.

Assuming the indefinite neutrality of Greece, the military situation in the Balkans presents itself somewhat as follows: On the side of the Central Powers there is the Austro-German army in Servia, which we may place at about 150,000 men. Servian estimates do not put it above that number, and the effect of the withdrawal of Germanic troops from the Russian front has been felt so immediately that a further thinning of the line in the east is not probable. Bulgaria's army may be estimated at a quarter of a million men. The Turkish forces in Europe cannot be more than 200,000. The Allies thus have some 650,000 men to deal with. Against this formidable display there are the Servians to the number of 150,000, if we consider the waste of previous campaigns and the ravages of disease, and the Anglo-French forces in the Dardanelles of about 200,000 men. The Allies would thus be outnumbered 2 to 1, and if we include the troops landed in Salonica, the odds against them must be at least 3 to 2. The Central Powers have the further advantage of forming a solid line. Bulgaria strikes hands with the Teutons in the north and the Turks in the south. The Allies, on the other hand, are broken in two, with a great gap between Gallipoli and the expeditionary force in Servia. More than that, the Gallipoli army is more than half of the entire Allied strength, which leaves less than one-half to face the onset of two-thirds of the Central armies.

This is the situation which Paris and London properly regard as grave. That it is not desperate is the teaching of the war up to the present. The strength of the defensive has so clearly been demonstrated that even if outnumbered three to two, the Allies should be able to stem the tide until the disparity in numbers is redressed. But here is where new doubts arise. If each of the Allies were to throw 50,000 men into the Balkans, the situation would be altered. Russia has promised to send men as soon as available, but Russia needs all the men she can raise, and the suggested landing in Bulgaria is full of difficulties. The Allies, however, might do without Russia. Italy might spare a hundred thousand men. The Anglo-French could make up the rest. But is the venture worth while? That is the question to the fore, especially in Paris. France needs her men. Unlike England, she is not at liberty to think of brilliant possibilities far away while her own territory is still in the hands of the invader. Even Italy might use her two or three army corps to advantage in the north against Austria. Hence there is talk in Paris and London of the possibility of giving up the Balkan campaign. It would mean a great loss of prestige. It would mean the abandonment of Servia. But the war might be won by a concentration in France and Belgium. Yet the indications are strong that as between the party that favors taking the losses in the Balkans and those who favor throwing in higher stakes, the latter will have their way.

FIFTY YEARS OF VASSAR.

The celebration at Vassar, marking the completion of a half-century of her existence, has not been wanting either in earnestness or in enthusiasm. New president and former president, and representatives of other institutions of learning, recognized in their addresses the importance of her work in the past, the significance of the work awaiting her in the future; and the great concourse of alumnæ attested that loyalty to alma mater which is characteristic of the American college graduate, male or female. The inevitable question of the aim of a college, the justification of its existence, was duly discussed; and the question of the limits of the elective system and of the claims of vocational as against cultural education received its share of attention. What we miss—trusting to the newspaper reports of the proceedings—is a certain note of jubilation which a vivid realization of what has happened in these fifty years in the field of the higher education of women would seem naturally to suggest. If it is a fault, it may well be classed as a "good fault"; it is certainly in striking contrast to the sort of self-glorification to which, in the earlier history of our country, we were far too prone when dwelling on national achievement in any direction. And yet it appears to argue a certain want of free-hearted enjoyment of what is in itself good and beautiful which, we suspect, is a by-product of the current worship of "service" as the exclusive object of all praiseworthy effort.

It may not be historically accurate to speak of Vassar as the first college for women; in these matters, as in questions of invention and of scientific discovery, there are almost always precursors, more or less important and approximating more or less nearly to the final achievement. But from the standpoint of a large survey, it is right to speak of the foundation of Vassar College not only as one of the chief events in the history of the opening of higher educational opportunities to women, the world over, but as distinctly marking the beginning of the era of the woman's college. Nothing that had been done before stood out as did this opening of a full-fledged college for women, one that not only pretended to a place coördinate with that of men's colleges, but was accorded that place in the general judgment and became familiar in that capacity to the general mind. Eighteen years before, Tennyson, in "The Princess," had set before the English-speaking world the vision of such a college:

> O I wish
> That I were some great princess, I would build
> Far off from men a college like a man's.
> And I would teach them all that men are taught.

But it had remained a vision, and it was reserved for an American brewer, instead of "some great princess," to realize the Tennysonian picture:

> Pretty were the sight
> If our old halls should change their sex, and flaunt
> With prudes for proctors, dowagers for deans,
> And sweet girl-graduates in their golden hair.

For a number of years, Vassar, as President Taylor said in his address, "stood alone in the popular estimate." And to any one who has felt a keen interest in the advance of the idea which Vassar did so much to establish the progress which that idea has made in the short space of fifty years must appear as one of the most remarkable developments of our time.

One has not to be an old man to recall the time when a young woman who was a college graduate was looked upon as a singular phenomenon. Now, in families in which it is regarded as a matter of course that the young men shall go to college, the sending of the young women to college is looked upon as just as normal and natural. The question of women's intellectual ability to pursue college studies has completely lapsed; nobody ever raises it nowadays. Indeed, the time is not distant—perhaps it is already here—when persons of the younger generation will have to be told as a mere matter of history that such doubts were ever entertained. But one does not have to go back anything like fifty years to remember the difficulty with which the opening of women's opportunities in university, as distinguished from college, work was attended. Gradually, but steadily, there has come recognition of the fact that there are women—comparatively few in number, it is true, but the same is true of men—who are gifted both with the intellectual power and the intellectual aspirations that go to the making of scholars and scientists, and that these should have the opportunity to develop their talents.

Not the least important aspect of the influence which has come from the founding of Vassar College, and of its successors at Northampton, Wellesley, Bryn Mawr, and elsewhere, is that which has been exercised on the other side of the Atlantic. Girton and Newnham came well after Vassar, and the opening of the German universities to women was largely the result of the desire of American women to avail themselves of the opportunities of those great institutions. The kindness, the liberalism, or the appreciation of special worth, shown by one or another of the great German professors, was, as a rule, the entering wedge; later what had been a special exception became the rule. How entirely unfamiliar in Germany was the idea of the American women's college, even as lately as a score of years ago, may be illustrated by a little incident. A young German scholar of distinction had been appointed professor in one of the best of our women's colleges. A former colleague of his had heard of the appointment, and, speaking to an American visitor, expressed his surprise that such a man should have been willing to accept a position in a Höhere Töchterschule! When informed that the "Töchterschule" in question had standards of admission and instruction approximately the same as those of Harvard College, he was utterly amazed. In the field of women's education at least, America may say that she has been a leader.

DANA AND OUR LITERATURE OF THE SEA.

The centenary of the birth of Richard Henry Dana, observed this week in Cambridge, brings to memory a type of minor author which we are too prone to forget. Dana is part of the anti-slavery history of his time, and on that aspect of his life Moorfield Storey was asked to speak. He had a distinguished career in international law, which was dealt with by Joseph Choate. He was of robust personality, and Howells and others have amusingly recalled the gusto of his public life and of his stories of the West. But his claim to immortality is based upon his masterly depiction of sea-life; and as it constituted his single book, even those who have read it with the interest it always holds are likely to underestimate his literary prominence. Historically, this is considerable. His "Two Years Before the Mast" carried the American name farther and wider than any other work except that of Irving and Cooper during decades in which our writers were very generally despised. More than a half-century ago it was read in England as of the stuff of the classics. Intrinsically, his book will never lack discriminating applause, whether it flags in the popular esteem or not. William Clark Russell is said to have called this production of a youth the most memorable of all contributions to the literature of the sea, and readers of Jack London may remember a recent dictum of his that when Marryat and Cooper have gone to dust, still there will remain Dana.

There is a sound reason why Dana, unlike Herman Melville, Cooper, Nordhoff, London, and other of our writers of the sea, was a "one-book author." His "Two Years Before the Mast" was a masterpiece, not because Dana was an imaginative genius, but because he was able and sober—clear-sighted, hard-headed, and self-controlled, with a nervous style to put down what he felt. With his nineteen years he brought to his voyage a trained mind and a fresh vision for the graphic details about him. For all his sense of the value of concreteness, dialogue, movement, and climax, there is never suspicion that he draws the long bow—and there is evidence that he lacked any faculty for doing so. Melville's "Typee" and "Omoo" are the best examples of actual sea-experience embroidered by sentiment and imagination. And beyond doubt Dana was even less capable of telling an ingenious and crowded narrative, of the kind Marryat and Cooper wrote. His power of showing in photographic detail the hoisting of the hides, the tarring of the rigging, the holystoning of the deck, the sailors' off-hours' occupation of making spun-yarn, was intimately connected with the poise which kept him safely out of such episodes as the brutal flogging of his mates off San Diego, and which made a prolonged voyage with the roughest of men a tonic and nothing else to his character. His shrewdness made picturesque his descriptions of character, and the faithfulness of his chronicle did not prevent his seeing the high lights in a fight, a fandango, or a ship's race; but it is significant that he saw but one beautiful or romantic spot in California. He tells us in a postscript "twenty-four years after" that his book had been used as a guide by all the flood of forty-niners, and its business-like simplicity would justify such a use.

Would it be possible to add to our sea-literature a modern picture in the mode of "Two Years Before the Mast"? It could not be done; and in the fact that the seafaring conditions of Dana's time have utterly passed away will hereafter lie his book's chief attraction. He struck the sea at the moment when its speedy clippers, its domineering captains, its dashing voyages to lands all but unknown, its speculative elements, its grim-fisted but hard-working sailors, gave it its greatest glory. The dirty Tyne traders of Masefield, the oil-tankers, the steady-going liners, the slow and sober type of sailing ship, are nowhere beside the ships of the thirties. Vessels, at the behest of admiralty courts, trade congresses, and underwriters, are no longer built for a crack pace. Instead of a gambling on dare-devil ventures, profits are calculated to the fraction of a cent, and runs are controlled to a knot by cables reaching every port. Sea-writers lament that crews have become simply a class of manual laborers, and that peril and distance no longer lure boys from the farm and office to the ocean. On Dana's voyage the old tars talked with wonder of the *chro*-nometer, the *chre*-nometer, and the *the*-nometer in the captain's cabin; and the first not working well on a single trial, it was discarded for the old-fashioned dead-reckoning. The tar and slush, the hand-windlass and pea-jacket, are gone as far as are half of the very nau-

tical terms Dana uses, or as the pirate, with "a black hull, armed, and full of men, and showing no colors," which chased the Pilgrim a whole September day and night.

There is thus a certainty that our books of the sea must depend increasingly for interest and value upon character and plot; that they will be of the school of Conrad, Kipling, Russell, and London; and that Dana's narrative will maintain a fairly undisputed precedence not merely for its high literary merits, but because its subject-matter sets it apart. He could write but one such book, and a second could no more be written now than a second "Oregon Trail." A people not of seafaring character should recall with satisfaction that it is an American who is credited with it—that England once paid us the compliment of distributing a copy of an American book to every sailor of her fleet.

FASCINATING SCIENCE.

Probably none of the men who have labored to make natural science interesting has so combined passionate curiosity, endless patience, and life-long enthusiasm for an ideal with an instinct for literary form as did Henri Fabre. So fast has the reputation of his books grown in the last few years that it is hard to comprehend that, though his first important entomological work appeared in 1855, a half-century later he was all but unknown. The ten volumes of the "Souvenirs Entomologiques" are a scientific series for which we have to go back to Buffon for a parallel. Yet not till after 1910 did the Institute crown them and the French Government grant him a pension. His early life was one of severe poverty; he endured constant snubs as a teacher and keeper of a museum at Avignon; and when rescued from his worst financial straits by John Stuart Mill, he went back to the life of a small agriculturist. Not even his casual services to Darwin brought him notice. His discovery we owe to Maeterlinck, himself author of an imitative life of the bee; and Maeterlinck's essay on "The Insects' Homer" was followed by a wave of international interest. Fabre's translator, A. T. De Mattos, doubts that the Anglo-Saxon world five years ago contained a thousand people who had heard Fabre's name, but since then a half-dozen of his books have sold in repeated editions, and new issues are still appearing.

The fascinating way in which Fabre depicted the life of the insects has been the admiration of naturalists; yet it was a natural result of the method in which he set out to observe that life. With the dryness of the schools he had no patience. He was constantly appealing to the intimacy with which he lived beside his insects to refute the critics who thought that a page that was read without fatigue could not be an expression of the truth. His impatience with literary dulness rose from his impatience with dull methods of observation. His colleagues ripped up an insect and turned it into an object of horror and pity, whereas he studied it alive and caused it to be admired; they labored in a dissecting-room, he under a blue sky; they subjected cell and protoplasm to chemical tests, he studied instinct in its farthest ramifications. Both methods are necessary, but his alone turns science into literature. "If I write for men of learning who will one day try to unravel the problem of the insect mind," he declared, "I write also, I write above all, for the youthful. I want to make them love the natural history that others make them hate; and that is why, while keeping strictly to the domain of truth, I avoid the scientific prose which too often, alas, seems borrowed from some Iroquois idiom." He made the discovery that the insect world is one of such strangeness, grotesqueness, and even terribleness that a close recital of the doings of its inhabitants revealed almost a new universe; and he was willing to give days and nights of acute inspection and quick comprehension to its weird occurrences. In volumes devoted, one after the other, to the Spider, the Fly, the Ant, the Bee, the Beetle and Weevil, the Wasp, the Grasshopper and Moth, and the Scorpion, he justified Darwin's praise of him as "the incomparable observer."

Readers of "Walden" will remember the description of the battle of the ants on the chip pile. The panorama which Fabre spreads out is a series of such engrossing pictures. We are introduced to the newborn blue-bottle fly, the pulsations of its forehead and eyes becoming the instrument of its deliverance as it pushes up through the rubbish; to the larva of the rose-chafer, which with legs on its belly always crawls on its back; to the praying mantis, the frightful aspect of which, in the "spectral attitude," deprives its victims of their power of movement; to the female scorpion, which devours the male in the act of mating. There is the heuscospis, which arms itself with horn and shield to slay its younger brothers and sisters in their cradle; the Tachytes and Ammophila, possessed of such anatomical knowledge that, as they wish to paralyze or kill their prey, they know exactly which nerve-centre to strike; the tarantula, her cave two perpendicular passages connected over a narrow ledge, on which she awaits her prey; the Eumenes, who makes of her stronghold a museum adorned with shells and translucent quartz. There is an account of such marvellous faculties as that of a species of wild bee which, housing its eggs in honey-pots cut from leaves, and working in darkness underground, knows precisely of what dimensions to cut the lid-disk so that it will fit in and yet not smother the eggs by sliding down on the honey. His retirement at Sérignan, near the home of that other venerable Provençal figure, Mistral, afforded him the leisure for his close and toilsome vigils beside his insects. His brief narrative of the slow progress of the scarab with its ball to its chosen retreat, its vicissitudes, its struggles with its rivals, and its eventual success, for example, is a concentration of the watching of weeks. In his chapters on the scorpion he himself tells us of how frequently he had himself roused at midnight to seize an opportune moment to watch its actions, and held his station till dawn. But it would be unjust to emphasize exclusively Fabre's observation, his scientific minuteness, and his powers of picturesque narration. He had an ingenuity in formulating hypotheses as great as the chemist's or physicist's, and he had an analytical mind which met successfully multifarious problems of environment, of anatomy, of the origin of species, and of instinct and intelligence.

The enthusiasm with which he labored was an animating force to which penury, misunderstanding, and obscurity were nothing. He was on the track of truth; he found, as he put it, every year "a few grains of sand on the shore," and that was reward enough. His life and monumental work are the most eloquent rebuke to the sort of pseudo-naturalist of which this country has seen so much in recent years—the nature fakers who, with something of Fabre's regard for interest, but none for accuracy, imposed spurious analogues to human society upon the animal world. While science always needs workers who must seem abstracted and dry to the layman, its more open aspects will require men like Fabre, who find in them a life so full and vivid that they cannot but write of it with vitality and glow.

Foreign Correspondence

THE BUDGET—READING IN ENGLAND IN WAR-TIME—GERMANISM IN RUSSIA.

By JAMES F. MUIRHEAD.

LONDON, September 28.

The announcements of the Budget have been received with a cheerfulness that seems to indicate that the immediately necessary new taxes are not quite so bad as we feared. The criticisms have on the whole been very favorable, and the only innovation to which anything like a widespread resistance is threatened is the abolition of the halfpenny postal card—a comparatively trifling matter. Mr. McKenna is generally supposed to have found his niche at last, and there are not wanting veteran members of the House of Commons to declare that his Budget speech was the best they ever heard. An exception to the general feeling that the new burdens have been distributed with equity among the working, the middle, and the wealthy classes is found in the *New Statesman*, which describes the Budget as cruel and inadequate.

The daily reading matter of the British public at this moment may be roughly divided into two classes: that connected with the war and that of pure distraction. It is not only the soldier in the trenches who welcomes the story magazines, the sevenpenny novel, and such delightful extravaganza as Mr. H. G. Wells's "Bealby." Here and there, there may be a few superior persons who can forget the blood and rapine of their horizon by absorption in the tomes of classical and standard literature; but I imagine that most people find somewhat lighter material a surer, if temporary, anodyne. All forms of seriousness are too much akin to that terrible seriousness radiating from the fields of Flanders and the rugged hills of Gallipoli, and are something to be eschewed.

The reading connected directly or indirectly with the war is largely furnished by the daily and weekly press, letters from the front in type or MS., the official and diplomatic publications of the various European governments, and the hordes of pamphlets which formed the subject of my last letter to the *Nation*. Not a few longer books have, however, also been widely read—a fact deduced not merely from publishers' lists and favorable reviews, but from the records of actual sale, from seeing them in the hands of one's friends, and from hearing them discussed at dinner-tables and in clubs. Thus, in the early stages of the war, the names of Nietzsche, Treitzschke, Bernhardi, von Bülow, Clausewitz, Frobenius, Houston Chamberlain, Münsterberg, Usher, and Cramb were in everybody's mouth. More recently we have been reading such books as the graphic histories of the first stages of the war by John Buchan and Hilaire Belloc; "How Belgium Saved Europe," by Charles Sarolea; "The War and Democracy," by R. W. Seton-Watson and others; the "History of Twelve Days," by J. W. Headlam; "The Soul of the War," by Philip Gibbs; "When Blood is their Argument" and "Between St. Dennis and St. George," by Ford Madox Hueffer; "Ordeal by Battle," by F. S. Oliver; "The World in the Crucible," by Sir Gilbert Parker; "The Political Economy of War," by F. W. Hirst; "With the German Armies in the West," by Sven Hedin; "Nationality and the War," by Arnold Toynbee; several American works such as those by J. William White, J. M. Beck, Owen Wister, John Jay Chapman, Morton Prince, and C. W. Eliot; "Russia and Democracy," by G. de Wesselitsky, and "J'Accuse," by an anonymous German. The last has recently been noticed in the *Nation*.

M. G. de Wesselitsky's "Russia and Democracy" is a book of exceptional interest, being principally a study of the "peaceful penetration" of Russia by Germanism during the last two hundred years. His judgment on this penetration is indicated by the alternative title of his book—viz., "The German Canker in Russia." As a strong advocate of the policy of "Russia for the Russians," M. de Wesselitsky may occasionally strain a point in his endeavor to prove that Germanism has always and invariably been a malign influence in the Russian body; but he certainly marshals a great deal of evidence that is always plausible and often convincing. His attitude recalls that of an American friend of mine, who is able to look on the bright side of this war because he believes it has come just in time to check the baleful permeation of the world by Germanic ideas of private ethics, intellectual training, and international policy.

M. Wesselitsky begins his tale with Peter the Great, who marred his otherwise beneficent work by a "fatal separation of the new bureaucratic noblesse from the mass of the people, which permitted the domination of the Russian state by a foreign nationality." His account of the privileges granted to German individuals and institutions is really startling. The Court, diplomacy, the army, and the higher administration became, to a very large extent, the private preserve of the Germans. Such names and influences as Biron and Nesselrode (who never even learned to speak Russian) are typical. It may surprise my readers to know that the Russian Academy of Sciences, until quite recently, published its proceedings in German; and that its hostility to Russian scientists was so pronounced that when Mendeleëv came to Oxford to receive an honorary degree, he was able to state that the Russian Academy was the only one in Europe of which he was *not* a member. Gen. Yermolov, when asked by Alexander I what reward he wished for his services, replied: "Give me the rank of German, and the rest will follow of itself." The Lutheran Church was long practically the most privileged church in Russia. M. Wesselitsky thinks that many, if not most, of Russia's wars have been really carried on in the interests of Germany, and he notes that Germany knew how to get a big price for her neutrality in the Russo-Japanese War. He quotes Jentsch to the effect that Germany would find in Russia "an immense field for the activity of the surplus of her population, which would not be lost for the Fatherland as when it emigrates to America." Apropos of this sentence, however, M. Wesselitsky refers to the bill for the "Conservation of Germanic Nationality" (1911), and the allegation that hundreds of thousands of Germans in other countries have made "private" declarations of their indestructible German allegiance. This seems to him a matter that demands the serious attention of the United States; and the timeliness of this warning is accentuated by the evidence he brings forward that German Ambassadors in Petrograd have been implicated in the instigation of strikes and internal uprisings.

A SUBMERGED PEOPLE RISES—LETTS AND LITHUANIANS.

By STODDARD DEWEY.

PARIS, October 1.

"If you wish to hear from human lips some echo of what the language originally common to Indo-Europeans may have been, go and listen to Lithuanian peasants talking."

This is what Professor Meillet, of the Collège de France, says. It is also said these peasants understand simple phrases of Sanscrit propounded to them by other learned professors, because their own rude speech is still nearest to that ancient tongue. The idea of the man in the street that they speak some kind of Slav dialect because they hail from Russia is quite wrong. They and their language are arrested developments from before the time when Greeks and Romans set out on the ways of progress. And for the last thousand years and more they have lived under their present name in the bogland which has made outlandish reading through this war—in the basins of the Niemen and the Duna and where the Nareff and the Bug drain the marshes and down to Brest-Litovsky, which means Brest of the Lithuanians.

Here they have lived for ages, sometimes serfs and rarely masters, and of late "organized" for the few of them under Prussian governors and ruled for the immense majority of them by Russians. When no one hindered, which was rare, they have emigrated. They state that 500,000 of their race are in the United States; 300,000 are still in Eastern Prussia, which was their own "Borussia" of the old time, but name and land were long since taken from them; and in Russia and Poland there have been anywhere from 3,000,000, which is Prince Kropotkin's figure, to 7,000,000, which their own representatives now put forward.

These representatives have twice met in the last weeks. On the 3d and 4th of August, in a conference at Berne, Switzerland, they, too, demanded a place in the sun and their right to exist on dry and independent land. Here the representatives came from all the habitats of their race under whatever sun, to claim the right of their immemorial bogland.

In September's third week, the Letts, who are an offshoot of the Lithuanian race when the world was younger and still neighbors, held their own congress in Petrograd. They, too, decided not to abandon their homes for many and sad reasons of war. The whole story is worth telling in these days when all of us are learning new geographies with maps colored by emotions. A people that has kept its immemorial seat and language, its customs of blood and race unchanged through the ages when rights of men were not, demands, as a result of this war, that it shall henceforth be a nation also, with at least that independence which is called autonomy.

Let us begin with the Letts. They inhabit Courland and Livonia, where the German threat has been strongest. Like prehistoric human animals, their first impulse has been to flee before the invader. Some of them scurried away to the Volga, where the people rose up against them, mistaking them for the dreaded Germans, since these Letts speak no Russian. Those who got to the Ural and Siberia met the same ill-treatment—veritable "pogroms," a name which we wrongly are accustomed to limit to race riots against the Jews in Russia. The Lett congress at Petro-

grad picads with these frightened brothers not to leave their peaceful homes and villages until their representatives can find for them safe refuges in inner Russia, with sure return when the invader shall have been beaten back. It seems not to have struck the Lett imagination that life under German rule might be possible.

Among all these Letto-Lithuanian peoples evil traditions survive of the Teutonic knights who first brought the terror of the German name. They got a footing at Königsberg, whence they subjugated the surrounding Borussi who were good Lithuanians. These were exterminated in short order or swamped in the tide of German immigration, until somehow, in our day, Prussia—which originally was Borussia—heads the German name and fame. It was under pressure of the Teutonic Knights that all these Lett-Lithuanians took shelter in their boglands where the Prussians, who long since stole their name and lands, have now found them out. This time they hope not to have to flee permanently.

Next the Lithuanians fell under the Poles and became an intermittent part of their rackety kingdom. It is Russia's promise of autonomy for Poland to-day which has stirred these Lithuanians to ask as much for themselves. True, they have no modern memories of independence, but it would be the irony of human things if the Poles should now oppose them. Such things have happened within my own memory.

As a boy in the United States, I was taught to declaim speeches of Kossuth and I wore a Kossuth hat. All of us were afire with Hungarian freedom. Thirty years later, a dark-bearded, sallow-skinned representative of the Balkans knocked at my door in Paris and asked my help in the American press—to disclose how Kossuth's Magyars had used their independence to smother the rights of their subject Rumanians of Transylvania. He proffered copious documents, evidently prepared by the still nascent Government of the independent Rumanians, and, coughing behind his hand, insinuated that I might be decorated with the Star of Rumania if I chose to write in defence of those unemancipated Rumanians. I put aside the temptation of the Star and accepted the heap of documents, in which I found authentic and interesting material for publication—but the Rumanians of Transylvania are still under Hungary, and the war is only now looking to uniting them with independent Rumania.

The Lithuanians are resolved not to let the nations free the Poles while subjugating to them their own millions of men so different in blood and speech and manners and religion—and even in the lands they occupy. And they wish their brother Letts to be freed from their Baltic masters.

Of course, freedom and autonomy do not mean, either for Poles or Lithuanians, the constitution of more warring states; but they do mean town meetings and federalism respecting nationalities. And what can make a nation more than common race and speech and habits of living together? These Lithuanians only ask self-government from below up, which is democracy, and Tocqueville's remedy for modern ills, and safety from neighboring and more powerful nations, which implies the Federalism that is President Eliot's remedy in the present. In what they ask in their Conference of Berne and in their Congress of Petrograd, I find nothing more than that autonomy which we know by the name of home rule—nothing equivalent to a beginning even of disruption of the Russian Empire. And, by the way, Czar Nicholas II, who is "Autocrat of all the Russias," also signs himself Grand Duke of Lithuania and Prince of Livonia and Courland and various other districts of the bogland in question.

Songs are still sung by Russian Slavs, acknowledging gratefully that Lithuanians protected them against the Tatars. Under the Lithuanians, these protected Slavs had liberal home rule, as Professor Lubavsky, of the University of Moscow, now admits.

In any event, here we have a typical example of the political problems which ought to be settled by this war. It has not been a melting-pot of nationalities like the peaceful existence of the United States. Rather, it is the breaking up and precipitating down of separate elements from a previous conglomerate. It is Russia—if she wills—that will have the least difficulty in settling all these vague autonomies.

The California Expositions

By WILLIAM MACDONALD.

There is probably no city in America which would have been so likely to diffuse, through every part of a great international exposition, its own peculiar spirit, atmosphere, and color as the city of San Francisco. From the rough, buoyant days of the first gold-seekers, through all the years in which other wealth than gold has steadily come to the ascendant, San Francisco has remained, as it began, a place of distinction. Its great bay, one of the most superb in all the world; its steep hills opening to view the mountains and the sea; the semi-tropical vegetation of its gardens and parks; its parti-colored population drawn from the four quarters of the globe; its eager, venturesome business life, with the spending of money, quickly made; the long-time corruption of its politics, punctuated by the fervid oratory of the sand-lots or by short-lived spasms of reform; the mellowing tradition of its Spanish past, set with missions and priests and a Roman faith; the penetrating chill of its summer fogs and winds; the gorgeous sunsets of its Golden Gate: all these and more, recounted by writers, artists, travellers, or men of affairs, have combined to surround San Francisco with the halo of a city apart, a unique community of indefinable attractiveness, a place where life, and the people who lived it, were different.

Such externals, however, were, after all, only the setting. What gave San Francisco its charm, alike for the resident as for the casual visitor, was its pervading atmosphere of freedom. Accessible to the rest of the Union, for twenty years after the first influx of English-speaking population, only by mail-coach or pony express across the plains, or a tedious voyage of weeks by way of the Isthmus or Cape Horn, and still remote in important domains of thought and interest from some of the currents of American life, the men and women of the formative period were thrown back upon themselves. Largely free from conventional restraints, and with no dominating social caste to bring them to book, they ordered their lives as they pleased. Personal and corporate conduct, if it so be that open lawlessness and public scandal were avoided, was largely unrestrained. No one asked the newcomer who he was or what he had been: it sufficed to know the name by which he wished to be called and the kind of work he could do. It was a society in which liberty was often license, in which money counted for more than virtue, and in which the cup of pleasure was drunk and drained. What has only slowly been perceived, however, what for the older American East has as yet hardly been perceived at all, is that underneath this energetic pursuit of wealth, lavish expenditure, and moral relaxation lay a profound and strenuous concern for art, for music, for literature; for everything, in fact, which embodied intellectual interest or the spirit of beauty. Around the Bay of San Francisco has steadily grown up a distinctive and worthy literature. The annual plays of the Bohemian Club, quite apart from their romantic staging, embody some of the best dramatic and musical work done in the United States. Here, too, has developed a group of painters, sculptors, architects, illustrators, and designers whose work need not fear comparison with good work in similar fields anywhere. One knows but little of San Francisco who does not know its higher life, or who sees only its business "hustle," its open-handed spending, or its brilliant cafés.

Naturally, this higher life of the intellect and the imagination, like the society in which it is set, has been throughout somewhat a life of unconventionality and even of revolt. Doubtless beauty, in whatever form it is expressed, has its sure foundations and its immutable laws, but its forms have found acceptance, in the Pacific metropolis, rather because they were themselves beautiful than because they were sanctioned by time or tradition. The love of classical simplicity and nobleness which builds a Greek theatre at Berkeley is as sincere as is the passion for romance which develops the wonderful stage-setting of the Bohemian Club plays; but the Berkeley theatre is loved because it is an embodiment of beauty, not because it is Greek. And so with every other manifestation of beauty or of thought. The men and women who best typify the spirit of San Francisco have consciously sought, not simply orientation in world culture, but an adequate self-expression. Where historical forms have met the need, they have used historical forms; where such forms have failed to satisfy, they have freely worked out novel, or at least unusual, forms for themselves. For them, at least, the sea was not always purple; nor were the groves of olive, nor the rocks of marble, nor life itself an alternation of tragedy and comedy. To the keen light and prodigal wealth of color spread before them in the external world, life added the allurement and picturesqueness of romance; while

to color and romance was further added the resource of a free life out-of-doors. That the pursuit of self-expression has often been highly self-conscious, that the lines of effort have not always been successfully concealed, and that the result has sometimes been bizarre, San Francisco itself would be the first to admit; for nowhere in America have artists so deliberately lived heatedly in order that they might speak vividly; but the ultimate aim, at least, has been always clear.

I have made these preliminary observations because, unless the local characteristics which they briefly summarize are kept in mind, both the aim and the achievement of the Panama-Pacific International Exposition are almost certain to be misjudged. Of international expositions we have had a sufficiency, if not a surfeit; and there was unquestionably a widespread doubt whether another great show, especially in time of war, would or could be worth while. While, however, each previous exposition has had its distinctive features, all have possessed suggestive points in common. The occasion, broadly crossed by the demands and ambitions of local or national display, has been some anniversary which, though appealing to patriotism or to the historical sense, has stirred national pride rather than the imagination. The architecture of the vast and numerous buildings, when not an attempt to reproduce, in unfamiliar surroundings, the principles or forms of some familiar type, has represented a conscious effort to produce a novel structure, more or less elaborately decorated, assumed to be typical of a great international bazaar; while the exhibits, widely chosen and elaborately displayed, have aimed, as a rule, to give a comprehensive view of the progress of civilization, particularly in industrial directions.

At all of these points the San Francisco Exposition, taken as a whole, is different from its predecessors. Those who planned and executed it have had two aims—one practical and historical, the other symbolical. On its historical and practical side the Exposition commemorates and celebrates the opening of the Panama Canal. No event in American history has appealed so powerfully to the imagination of the Pacific Coast as the construction of this great waterway. Beyond its significance as a great scientific achievement or a commercial aid, the Canal stands as a triumph of man over nature, a new linking of the East and the West, a new step towards national unity, a new act of national expansion. Like the watershed that divides the streams in their courses, it marks off the old time from the new. And out of this appeal to the imagination sprang the symbolism. Here was to be displayed, not examples of all that the world had ever done, but the choicest of what it had accomplished during the decade in which the Canal was building, and the opening of the new time could be foreseen. Here were to be symbolized, in one vast but unified group of buildings, avenues, and gardens, the past, present, and future of San Francisco, of California, and of the New World. In and about a Tower of Jewels, a Court of Abundance, a Court of the Four Seasons, a Court of the Universe, or an Avenue of Nations were to be grouped memorials of all that had made the Pacific littoral what it was, and all that, in the new era here commemorated, should make it what it might be. Here, at gateways or fountains, on walls, cornices, friezes, tympani, or pinnacles, was to be read the story of the West: the Indian, the buccaneer, the friar, the gold-seeker, the farmer, the mechanic; the discoverer, the soldier, and the pioneer; the canoe, the prairie-schooner, and the locomotive; the wealth of forests, fields, and mines beckoning the workers of the East and South, of Asia and the islands of the sea. What of history was portrayed was to be accurate, of course, but it was to be history spiritualized, the everyday and commonplace made ideal. With their feet planted on the past, the designers of the Exposition nevertheless looked towards the future. The western confines of the New World were their standpoint, but their outlook was towards a newer world beyond the setting sun.

It is significant that the architecture which sought to embody this symbolical conception should have found its inspiration so largely in the Orient and the Moorish age of Spain. To California, simplicity in art would appear to make as scanty an appeal as does Stoicism in conduct or Puritanism in religion. What was sought, apparently, next to spaciousness and even vastness—an indispensable condition, perhaps, of any exposition architecture—was color and gorgeousness, a sensuous beauty at once mystical and commanding. If buildings and their setting could ever be made to produce an impression of limitless and voluptuous wealth, or frame the matter-of-fact achievements of man in rich and scintillating color, the Panama-Pacific Exposition attained that end. It was not barbaric, for it was distinctly harmonious, symmetrical, and carefully wrought; yet it was not pagan, for it was neither severe nor impersonal; and it was not Christian, for it spoke no self-denial. Pleasure, ease, imagination, self-expression, and, most of all, unconventional freedom and unbounded ambition, were its keynotes.

Whether such an ideal is in itself worthy, or whether, if it is, its working-out in the present instance is on the whole successful, are questions on which volumes might be written. Critics for whom the art of the classical world or of Christian Europe is the last word, or with whom historical evolution must needs proceed by slow and guarded steps, could not but be startled by the bold mixing of architectural types, the frank departure from hallowed precepts, and the prodigal overlay of decorative device. The symbolism of some of the frescoes, figures, and figure-groups seems at times far-fetched, and the brilliant Tower of Jewels is obviously too low. Studied attentively by aid of the printed descriptions, both the structures and their details may clearly be seen to embody the ideals which they are said to embody; but it is also clear that they might as easily, in some instances, typify something else, or even nothing very definite at all. Something, too, would depend upon the physical point of view, for the high ridge of houses which forms the background of the Exposition on the south is not beautiful, and upon that part of the surroundings one does well to turn one's back.

In some other respects the success attained is certainly noteworthy. At no previous American exposition has the entire group of buildings given so marked an impression of artistic unity. Not only were the exhibition buildings proper built, as has been said, with a central aim, but the national, State, and administrative structures were kept strictly in harmony with the general scheme. Whether in style, color, or position, no building has been allowed to obtrude. Everywhere, too, both within and without, there was a commendable absence of garish signs or advertisements. The unified color scheme, studiously worked out to accord with the characteristic lights, shadows, and atmospheric effects of the locality, was harmonious and impressive; while the electrical illumination at night turned grounds and buildings into a wonderland of beauty and gorgeousness. Nor should the remarkable floral scheme, with its succession of flowers from season to season, and its skilful use of masses of green to break the great wall spaces, fail of appreciative recognition.

In estimating the range and significance of the exhibits, one again must keep in mind the theory on which their acceptance was determined. With a few exceptions, and those mainly in the foreign art exhibits, nothing, as has been said, was intended to be shown which had not been discovered or invented, or the process or application of which had not been substantially developed, within the last decade. Like the architectural and artistic scheme of buildings and grounds, the things shown were to be the latest words, the newest thought, the edge of day for the new world. Those, accordingly, who looked for comprehensive displays of progress in industry, science, or art from early times were disappointed; the test of acceptance was to-day, what is being done now. The barest attempt at enumeration, however, even under these limitations, would be only a catalogue of ships. Speaking broadly, the predominant characteristic of the American exhibits was utility. The widely ramified uses of electricity, particularly for travel and communication and in domestic processes; the elaborate but economical processes of manufacture and mining; the endless variety of tools and instruments of precision; the control and transmission of steam and electrical power; the array of devices for facilitating business or insuring personal safety, were among the things which bulked largest in the exhibition halls. Not everything was insistently utilitarian, however. One of the striking impressions made by the industrial exhibits was the extent to which

objects of utility, notably textiles and articles of domestic use, were receiving artistic forms even where the cost was small. Some of the exhibits of pottery and gold and silver work were very rich, and there was a small but choice display of book-bindings and an alluring book-shop.

The Federal Government, though contributing largely to the collections, had no building of its own, but scattered its numerous departmental exhibits throughout the Exposition halls and grounds. Never has the scientific and educational work of the Government, and its widespread activities in agriculture, irrigation, public health and safety, and the protection and encouragement of industry and commerce, been so amply and instructively displayed. Here, as elsewhere, extensive use was made of pictures, charts, and models, the finest example of the last being a model of the Isthmus of Panama and the Canal. The anthropological exhibit was beyond praise. The educational exhibits proper, generously representative of State and city school systems, were an informing illustration of the diversified range and practical spirit of the modern school curriculum. Several religious sects prepared exhibits showing their material activities in missionary and educational lines, from tracts and pictures to railway chapel coaches; the enormous growth of organized philanthropy and schemes of social betterment was set forth in pictures, diagrams, and models; while for those whose spiritual longings, attuned to the dominant note of the whole Exposition, demanded ampler fields, there were literary offerings in Christian Science, theosophy, and "new thought" of several strains.

The war, as was to be expected, narrowed the range of foreign exhibits; nevertheless twenty-two foreign Governments were represented by buildings, Great Britain and Germany being the two most prominent exceptions, while thirty-one Governments altogether were represented either by buildings or by exhibits in the great departmental halls, or by both. As a whole, the foreign displays made up in quality what they lacked in quantity. Selection here, like comparison, can hardly be made without injustice, yet the most casual visitor could not fail to be struck by the exquisite beauty of the collection of fabrics, metal work, tapestries, and paintings sent by the Government of France, and housed in a building which reproduced the Palais de la Légion d'Honneur; the brilliant richness and variety of the Chinese and Japanese exhibits (the former, indeed, rather outshining the latter), both grouped in one of the main buildings; the solid industrial and commercial quality of the Netherlandish and Swedish offerings; or the economic and educational development shown in Argentina and Brazil. Germany, participating unofficially, caught the spirit of the Exposition with characteristic exactitude and thoroughness, sending a small but choice exhibit of its latest products in chemicals, dyestuffs, and photographic devices, and a specimen of mesothorium, one of the newest derivatives of radium, valued at $300,000. As a skilful advertisement of a country's resources, however, the admirably housed Canadian exhibit must receive the first place, as the crowds which thronged it eloquently testified. The State and Territorial buildings, twenty-eight in number, with Massachusetts holding the place of honor at the head of the Avenue of Nations, were for the most part used only as social centres; but California in addition assembled a display of fruits and flowers which was a veritable orgy of richness and color.

In the great wealth of musical offerings which the managers of the Exposition provided, the most significant was the visit of the Boston Symphony Orchestra. San Francisco has never lacked good musicians, nor orchestral and ensemble organizations; and it has also done something to develop the resources of the orchestra for performances out of doors. But its instrumental performers, however great their ability, must seek a living mainly in the cafés, where music of a popular or highly modern sort naturally holds the chief place. In the concerts of the Boston Symphony Orchestra the music-lovers of California had, for the first time on their own soil, an opportunity to hear the works of Beethoven, Bach, Mozart, and Haydn played as they should be played, and by artists whose interpretations could not but be accepted as authoritative. The generous recognition of what was, to most who heard it, a revelation of the beauties of classical music and of the possibilities of chaste and dignified rendering, augurs much for the future of musical art on the Pacific Coast.

Very many of the travellers who journeyed to San Francisco went on also to the Panama-California Exposition at San Diego; and the briefest survey of this year of Western splendor would be incomplete if it failed to pay honor to the beauty and enterprise which the latter exposition displayed. Like the Grand Cañon of Arizona and the Grand Cañon of the Yellowstone, something of the comparative impression depended upon which was seen first. Yet it may well be doubted if any one who, whether in memory or in mere chronological sequence, exchanged the fogs and winds of San Francisco for the warmth and brightness of San Diego, will fail to recall the latter with peculiar satisfaction and delight. Where the northern Exposition was vast and overpowering, the southern was compassed and friendly. Where the artists of the one sought and attained an eager, passionate brilliancy, those of the other strove, with equal success, for restfulness, devotion, and quiet charm. The one voiced exuberance and revolt; the other, while no less joyous, was delicate and self-contained. Nowhere has the Spanish mission architecture been employed so successfully on so large a scale; while the landscape gardening, thanks in part to the superior artistic possibilities of the site—a high mesa overlooking the "Harbor of the Sun"—was distinctly richer and more fascinating than that at San Francisco.

One's residual impression of a great exposition is likely to be compounded of two somewhat diverse elements: the probable effect of the display upon those who participated in it, and its significance as a kind of cross-section of national or international culture. Both directly and incidentally, I think, the effect in this instance may very possibly turn out to be considerable. For one thing, the transcontinental journey, to far the larger proportion of the thousands who made it, was little less than a new discovery of America. The traveller to whom the only beauty worth seeing had thus far been the Alps, or Norway, or Greece, touched elbows with those to whom New England, or Ohio, or Kentucky had been almost the only known world; and to all alike the plains, the deserts, and the mountains revealed their wonders. Thousands made the journey, in whole or in large part, by automobile, and learned to their surprise that there were good roads, good hotels, cultivated people, and imposing scenery beyond the Mississippi. The novel types of architecture, the richness of a semi-tropical vegetation, the possibilities of life in the open air, and the picturesque reminders of a Spanish civilization indefinitely old, were full of suggestiveness for a more prosaic and formal East, as were the free, gracious, and hearty social ways of a cosmopolitan community. The distinctly educational character of most of the exhibits, with their emphasis upon that which was newest or most highly perfected, made in itself a strong appeal. It was worth while to have given, to some hundreds of thousands of the American people, an enlarged vision of their own country and of the world's life and interests; for without vision the people perish.

The cultural significance is less easy to appraise with certitude. With notable exceptions like those of France and China, the exhibits at San Francisco gave an overwhelming impression of practicality: a practicality which was, indeed, enhancing in every direction the physical comfort of life, and developing on every hand the resources of nature for the betterment of man; but an overpowering practicality, nevertheless. Yet it was a practicality set in marvellous external beauty, and opening everywhere to the sun and the air. Whether the imagination which seized upon the occasion as marking the dividing line between an old America and a new, and strove to symbolize the concept by a daring union of Oriental and Occidental ideas, will turn out to have been well grounded in the facts and tendencies of our national life, only time can show. Certain it is, however, that the San Francisco Exposition, in the whole scheme of its planning as well as in the details of its execution, has been a challenge to old forms, old methods, old standards, and old faiths. In Burke's phrase, it is the dissidence of dissent. One would fain hope that it may prove, to those who conceived it, as fruitful an inspiration to more permanent achievement as it is certain to remain, for those who saw it, a gracious memory.

Notes from Two Capitals

BRITISH CABINET CANARDS.

By SIR HENRY LUCY.

LONDON, October 6.

From time to time, *à propos de bottes*, there is a rush of rumor of dissentients in the Cabinet, pointing to its early break-up. It is an old habit, more active when a Liberal Ministry is in power than when the Conservative Leaders dwell in Downing Street. It was in exceptional force during the short-lived, troubled Ministry of Lord Rosebery. From the outset rumor most consistently buzzed round the head of Sir William Harcourt. Talking to a friend at a time when reports of his resignation were prodigally circumstantial, he likened his position to that of Louis XVI, practically a prisoner in the Tuileries after his attempted escape from Paris. Suspicious crowds of citizens and citoyennes formed the patriotic and pleasing custom of spending the night in watch and ward round the palace, from time to time insisting that the hapless King should show himself in testimony that he was actually on the premises. He accordingly turned up at the open window wearing the red cap of Liberty, with royally assumed geniality remarking, "Me voilà mes enfants." "At all hours of day and night," said Sir William, "I am called up by a News Agency man or an importunate reporter with inquiry whether it is true that I have resigned. All I can say is 'me voilà.'"

Two years ago there was a sudden—evidently an organized—outburst of rumor of revolt in Mr. Asquith's Cabinet. It was reported that Mr. Lloyd George and Mr. Winston Churchill, following the classical precedent of the lion and the unicorn, were fighting for the crown. It was assumed, as a matter of fact, that "Asquith was going," all that remained in doubt being issue of the struggle between his energetic young friends for reversion of the Premiership. The story had its day, ran its course, faded into the nothingness from which it emerged, and is probably forgotten by its inventors. Within the last fortnight another plot against the Premier has been discovered. Again Mr. Lloyd George and Mr. Churchill are at the bottom of it. This repetition is proof of the lack of fertility in the minds of the class of politicians who circulate these fables. There must, however, be some variety in other particulars. This is accordingly provided by the assertion that Mr. Asquith is to be "shouldered out" (the phrase used by one authority) "on the question of conscription." An active section of his colleagues in the Cabinet, led by the two who apparently are now working together, is determined to break up the Government, leaving out Mr. Asquith, an avowed believer in the efficacy of voluntary enlistment, in the process of reconstruction.

This is, of course, sheer nonsense. The Prime Minister is not the sort of man to be shouldered out of any position in which it suits his purpose and inclination to remain. If any body of conspirators, obscure or otherwise, are bent upon undertaking the job, they would do well to go into training by attempting to shoulder Dungeness off the mainland. Apart from his slowly gained, now complete supremacy in the House of Commons, his popularity in the country, and his authority in the Chancelleries of Europe, no Premier has been stronger in the personal affection of his colleagues. That enviable position has been further strengthened by accession of recruits from the Opposition benches in both houses. During the fiercest heat of battle round the question of tariff reform and home rule, Mr. Asquith's interposition in debate was suffered with a courtesy in marked contrast with the reception accorded to some of his colleagues. Once, it is true, he was refused a hearing by a small body of extreme advocates of Law and Order, who, upon occasion, did not even spare their own leaders. The outbreak was so promptly and sharply subdued that it was never repeated.

Between Mr. Balfour and Mr. Asquith there has through all the chances and changes of party warfare existed esteem born of mutual admiration of supreme capacity. This feeling, long existent, has naturally grown in the intimate relations of service to the State. In degree, the same feeling towards the Prime Minister exists on the part of Lord Lansdowne and other of his colleagues in the late Government who patriotically responded to the invitation addressed thirty years ago by Lord Randolph Churchill to Lord Hartington and his followers in the disruption of the Liberal host on the Home Rule question to "Come over and help us." The suggestion—rather, the affirmation—made that dissension within the Cabinet has reached a stage at which a break-up is not only inevitable but near at hand, is a gross insult to the statesmen who have been publicly named not only as contemplating but as scheming for such an event.

It is quite possible, indeed presumable, that there may be difference of opinion in the Cabinet on the question of national service for the army and voluntary enlistment. Such diversity will be found among any average score of men. To assume that therefore a Cabinet recently constructed with the avowed purpose of presenting to the enemy a closer, stronger front of national union is on the verge of disintegration is more than an unintelligent blunder. It is an unpatriotic crime, calculated to spread throughout Germany more joy than would follow on the sinking of a sister ship to the Lusitania.

It is probable that had Mr. Asquith chanced to see a circumstantial rumor of which the Speaker, when his attention was called to it, declared his ignorance, he would regard it with some measure of wistfulness. That Ministers tenaciously cling to office and its emoluments is a conviction cherished in some quarters. It certainly finds no confirmation in fact. Lord Rosebery, in one of the epigrams that sparkle in his speech, put the true situation in a sentence. "There are," he said, "two happy days in the life of a Prime Minister. One is when he receives the seals of office at the hands of his Sovereign; the other, welcomed with greater effusion, is when he sets forth to return them." Mr. Asquith has, with one exception, exceeded the length of the term of Premiership served by predecessors. Nor has he throughout enjoyed the comparative ease of normal times. At the commencement of his seventh year of servitude he found himself faced by the duties and responsibilities of a war beside which Armageddon was a skirmish. It is natural that he should sometimes yearn for the release that, after long conflict, came to the Happy Warrior, "his helmet now a hive for bees." But, like Pitt, till his work is done he will not seek it.

ROBERT M. LA FOLLETTE.

It is a long stride, perhaps, back to the first term of Grover Cleveland, but it must be taken by whoever would scan the career of Robert Marion La Follette as a national character; for it was then that strangers in the gallery of the House of Representatives, after picking out Carlisle and Morrison, "Pig-Iron" Kelley, and "Sunset" Cox, would inquire: "Who is the little man with the smooth, round face and the shoe-brush hair?" When told that he was "Bob" La Follette, a new man from Wisconsin, whose wife was his law-partner, they were satisfied with a mere second glance at him. Another item was added to his descriptive list in the Fifty-first Congress, for McKinley made large use of him in framing the tariff bill, which carried their party down at the next election; and for ten years thereafter he did not emerge from the wreckage but once, when his neighbors sent him as a delegate to a Republican National Convention. But he had not been idle, by any means, in the intervals of a fair professional practice; for in 1900 he was elected Governor, and thus received a chance to launch the popular government propaganda which in due course landed him in the United States Senate.

To call the roll of La Follette's traits as his contemporaries see them would be to exhaust the "f's" in any ordinary type-font. He is a free-lance, a firebrand, a fighter, a faddist, a fanatic, a fatuous fault-finder, according to the critic you press for an opinion; some go further and—but why carry the catalogue to its end? Suffice it to say, that wherever he is, you may count on finding something drastic on the day's programme. He put Wisconsin on the State Socialist map alongside of California. According to his theory, there is no good reason why the State should not dip its finger into every activity in which its people feel an interest, from free education to accident insurance; and his favorite tactics in controversy are to proclaim his thesis and discover a sinister cause for every bit of opposition it encounters. If the railways charge higher rates than he approves, they have been able to do it by buying lawmakers and newspapers wholesale. If abuses exist in the American merchant marine, knock it on the head with an act of Congress so radical that half the steamship companies would rather go out of business forthwith than attempt to comply with the requirements imposed. The logic of this remedy is simplicity itself: the fewer shipping companies, the fewer are the abuses complained of. If any one has the temerity to suggest that this is like burning down the barn to get rid of the rats, silence his treason on the spot by asking him how much the corporations paid him for airing such an opinion!

Jesting aside, La Follette is a strong man and a useful one—in his place. He belongs in the pioneer class, but resents not being counted among the successful constructives, forgetting that, though Lincoln is the supreme hero of our later history, it was the long-despised agitators who hewed through a hardened public conscience the trail which he developed into a highway of freedom for all mankind. Without the agitators we might never have had a Lincoln; and it is for men like La Follette to prepare the ground on which less fiery though not less patriotic followers can put the social order of the future upon a firm foundation. But, because he cannot wait for the clock of opportunity to sound

the hour, many of his best projects have been brought forward prematurely and cut short at an immature stage.

It is no discredit to him to say that the ambition of his life is to be President, or to prophesy with entire confidence that he will never attain it. Though we may pass over his ultra views and his tactless way of bludgeoning his adversaries, we cannot ignore the fact that no man of his personality has ever risen to the first place in the republic. We have had Presidents short and tall, fat and lean, straight and stooping, hairy and bald, elegant and clumsy, handsome and ugly, gay and serene, scholarly and scant of learning, sociable and undemonstrative. But we have never had one who meets all approaches with an air of suspicion, or whose mind is so chained to his hobbies that he takes them to bed with him and gives them the chief seats at his table. La Follette, with all his redoubtable pioneer qualities, is the kind of companion who soon wears you out. You cannot escape from his regenerative schemes or his vocabulary of anathema without raising an impassable barrier between yourself and him; but the man whom the American people are willing to trust with the Presidency must be one who, however sincere a reformer, is able to detach himself from his ideals now and then long enough to bring a fresh eye to bear upon them in perspective. Even so intense and unjudicial a person as Theodore Roosevelt has this faculty, thanks to his native sense of humor.

Like others of his temperament, La Follette has no conception of how to care for his physical well-being. He runs his nervous system to the last limit of endurance, and then suffers a reaction, during which he is not himself in any sense, is hardly able to eat or sleep, and can do only a fraction of his normal stint of work, and that pretty badly. It is of one of these periods—which are accountable for much of the antagonism he has aroused in the Senate—that the story is told of his being moved actually to tears when a new member came up to him with hand outstretched and a friendly word of appreciation of his latest speech. Imagine so emotional a collapse in the White House!

TATTLER.

Correspondence.

THE "NATION'S" WAR RELIEF FUND.

To the Editor of The Nation:

SIR: I presume that many persons who, while not in a position to follow the lead of "O.," the writer of "A Word to the Moderately Rich," were deeply impressed by his letter, would be glad to make such response as they can to his suggestion. Of the ten subscriptions he called for, of $2,000 each, for the relief of the terrible distress in Europe, it appears that three have now been received by the *Nation* and one by the New York *Evening Post*, which reprinted "O.'s" letter. I trust that more will shortly come in and the list be completed. But that result may perhaps be made more certain if persons acting in the same spirit but not able to subscribe so large an amount are permitted to join in the undertaking. May I ask you to accept my subscription of $200, to serve as the first of ten which shall jointly count as a subscription of $2,000? And of course the more tens of the same kind the better. F. F.

New York, October 17.

ANOTHER GERMAN "FIND."

To the Editor of The Nation:

SIR: In the issue of the *Nation* of October 14 (p. 448) it is stated that

> It may be a great find that a semi-official organ of the German Government has made when it charges that the French Yellow Book suppressed the last two sentences of a passage sent by the British Ambassador at Petrograd to Sir Edward Grey, on July 24, 1914; but why the find should be exploited in that quarter is a little difficult to see. The Ambassador stated that it seemed to him "as if France and Russia had decided on firm resistance, even if we refuse to join them."

There cannot be much of a "find" on the part of the German Government in this respect because in a pamphlet issued under the authority of "his Majesty's stationery office" in London in 1914, on page 14, there is the telegram mentioned above from the British Ambassador at St. Petersburg to Sir Edward Grey, the last paragraph of which reads:

> It seems to me, from the language used by French Ambassador, that, even if we decline to join them, France and Russia are determined to make a strong stand.

The language is somewhat different from that quoted in your editorial article, but in substance it is the same. It can scarcely be contended that there was any concealment in this Ambassadorial statement, since it appears, as I say, in a pamphlet issued by the English Government in 1914, and sold for the sum of ten cents.

SAMUEL A. BOYLE.

Philadelphia, October 15.

PRESIDENT WILSON'S "COCKED HAT."

To the Editor of The Nation:

SIR: If Mr. Wilson had read the Biglow Papers, he would probably not have written the letter in which he expressed the hope that Mr. Bryan might be knocked into a cocked hat. This is what Hosea Biglow has to say on the subject (p. 109—edition of 1892): "Formaly to knock a man into a cocked hat was to use him up, but now it ony gives him a chance for the cheef madgustracy." A. L. PINCOFFS.

New York, October 15.

ALOHA, THEN BANZAI!

To the Editor of The Nation:

SIR: Wednesday, September 29, may be said to have marked the closing of an era in the transportation history of Honolulu. On that date the last steamer of the Pacific Mail Steamship Company scheduled to call here, the S. S. Manchuria, sailed for San Francisco. With her departure transpacific shipping under the American flag via Hawaii terminated. The Mongolia, of the Pacific Mail Line, now in the Orient, will return to San Francisco direct from Yokohama by the Great Circle route.

The passing of the last ship of a great company was by no means unattended in Honolulu. A crowd of at least 1,000—described in the afternoon newspaper as an "immense throng"—gathered at the Alakea pier to bid a last good-by to ship, crew, and passengers. Flags of many nations waved from the dock, and Hawaiian leis of carnations, yellow ginger, and vari-colored crêpe papers were profusely scattered among officers and passengers. On the bridge with Capt. Andrew Dixon was a large wreath, on which was the inscription, "Aloha, 1915, After Sixty Years," the gift of the local Chamber of Commerce and promotion committee.

Mother Nature, as though to insure a favorable last impression for the "Paradise of the Pacific," provided a blue sky overhead, but in the air was that fine mist, blowing from clouds above mountain-tops afar, which here is called "liquid sunshine."

The Hawaiian Band, of native musicians—once the Royal Hawaiian Band—which has played at countless steamer sailings, was on the wharf. On the Manchuria were 124 German refugees, mostly women and children, and from respect to them "Die Wacht am Rhein" was played. The hackneyed strains of "Tipperary" and "On the Beach at Waikiki" were then employed to evoke a few more tears from other nationalities represented. As the last farewells were voiced and the handkerchief-waving began, the brown musicians played, with an intense fervency, the famous "Aloha Oe" (Farewell to Thee), which was followed by "Hawaii Ponoi," the unforgettable Hawaiian national anthem, and, finally, "The Star-Spangled Banner."

Of the sobs that were "choked," of the sighs that were "stifled," of the lips that "quivered," as the big boat backed into the bay, little need be said. It is enough that the manifestations of deep regret were everywhere visible. A wrinkled old lei vender stared at a few wooden boxes and pieces of rubbish floating by the pier and muttered "Pau" (through). Many voiced their sentiments in such words as "Shame," "Crime," and "Awful mistake."

It is certain, too, that in some of those present the last deep siren of the Manchuria's whistle provoked thoughts, not of the glorious past of the American merchant marine on the Pacific; nor of the painful present, when the Stars and Stripes is sailing away to other seas; but of an ominous future when traffic to the Orient may be monopolized by lines called "Kaishas" and steamships called "Marus."

And, while the attention still lingers on the irony of circumstances which make it necessary for the little brown men of Nippon to transport our persons, our freights, and our mails, dispatches from the Orient arrive that portend the strengthening of Japanese control in the Pacific.

The *Osaka Shoshen Kaisha* announced, on September 30, that two new liners will be placed on the run between San Francisco and the Orient via Honolulu. These, the Panama Maru and the Seattle Maru, have a tonnage of 6,000 each. They were designed for the Puget Sound-Japan run. Freight rates will be $1 per ton higher than the rate which at present obtains.

On the same day the directors of the Mitsu Company gave out the information that they will operate tramp steamers from Yokohama and Kobe to Honolulu and San Francisco, carrying freight at an increase of $1.50 per ton.

At the same time the established line on the semi-tropical route—the Toyo Kisen Kaisha—is declared to have increased its fleet by the purchase of three liners, in addition to the Persia, which was recently secured from the Pacific Mail Company, making a fleet of eight. An increased freight rate is, of course, in order. A new T. K. K. dock will be built in San Francisco at once.

Apparently, the existent freight and passenger congestion on the Pacific is to be alleviated. Reports have been circulated concerning a Chinese line and a new American line. As yet no definite announcement has been made. Seemingly "banzais" are in order.

HARRY W. FRANTZ.

Honolulu, T. H., October 1.

EXTERMINATED ARMENIA.

To the Editor of The Nation:

Sir: At this time of awful crisis in the history of unhappy Armenia, we, the Committee of the Women's Armenian Relief Fund, feel impelled to appeal to all Christendom for sympathy with Armenia's matchless wrongs and for offers of help to her people. It is time surely that all civilized nations, especially all neutral nations, should protest in the name of humanity against the latest and most infamous crimes yet committed by Turkey upon her defenceless Armenian subjects.

The thick curtain of oblivion and silence which has enshrouded Armenia since Turkey declared war upon the Allies has been at last partially lifted and we have caught certain glimpses of unrecordable horrors; of systematically planned massacres of all Armenians in the Six Vilayets, involving the total extermination of the nation; of their deportation to desert regions where they must inevitably perish by starvation, and of the appropriation of their lands by Moslems.

All friends of the Armenian people must to-day be full of indignation, full of sorrow. We, old friends of the cause, must especially sorrow for the present ruthless shattering of all our plans and hopes and work. But we can do more than sorrow, we can and we do most solemnly protest, and we can and do hold Turkey and Germany responsible for this last and greatest crime upon humanity. To-day we send to every part of the world where Armenians have sought asylum our true, deep, fraternal sympathy, together with our vow that, so far as in us lies, individually or collectively, we will see to it that freedom, justice, and full political rights be insured to the Armenian nation in the final settlement which must follow the great European war.

Madeleine Cole,
Hon. Treasurer, the Women's Armenian Relief Fund.

Danehurst, Putney, England, September 30.

THE AMERICAN HISTORICAL ASSOCIATION.

To the Editor of The Nation:

Sir: The tone of the so-called replies to my letter in the *Nation* of September 16 makes a rejoinder expedient. Mr. Bancroft cheerfully claims me as a catspaw and an unquestioning disciple. This I as cheerfully repudiate. Mr. Hart, in turn, accepts Mr. Bancroft's claim of me, and on his own score ascribes to me an expression as to ring and boss rule which I have never uttered or endorsed. He then lines me up in the detective squad to which he pays vigorous compliments.

My career as a detective has been brief, modest, and unconscious. Its one episode was an inquiry to the secretary of the Association asking for any documents which might show the official relation between the Association and the *American Historical Review*. I had no thought then, and do not now believe, that any of the officials desired to keep such data secret. The burden of the secretary's original and preliminary reply was as stated in my former letter to the *Nation*. Since then he has found and sent me three items which give some light, though not as much as could be wished. The first of these is a circular issued on October 1, 1898, by a committee of the Council notifying the members of the Association that at the approaching December meeting proposals would be considered for an official connection between the Association and the *Review*. The second is a note from the minutes of the Board of Editors, which, in lieu of the missing minutes of the Association, may be taken as recording the action of the December meeting. The third is an account of the transactions of that meeting, written by Mr. Hart, and published in *Book Reviews* for February, 1899. In the committee's circular the following are the passages pertinent to our discussion:

As standing for the historical scholarship of the country, the *Review* must have behind it some recognized organization which should have authority to determine its character and to which the editors should be responsible. After a most careful consideration it seemed to the editors, and to all whom they consulted, that the future success of the *Review* depended upon its adoption by the American Historical Association. As the general organization of those especially interested in history, both in the United States and Canada, the Association, by adopting the *Review*, would give it a standing and authorization not otherwise to be obtained. At the same time the relation of the *Review* to the Association as its official organ would at once remove the difficulty of a sufficient constituency and place the enterprise upon a permanent and secure foundation. On the other hand, it seemed a proper and suitable function for the Association to act as a sponsor for such a publication and to guarantee its success. In view of these considerations the Board of Editors presented to the Council of the Association a proposition for the adoption of the *Review*. After a full discussion at the meeting in Cleveland last December, it seemed to the Council that so important a question should be submitted to a general vote of the Association.

The note from the minutes of the Board of Editors recites that at the Association's meeting in December, 1898, the following arrangement, prepared by the Board, was adopted:

(1.) The Association to pay to the publishers $2 for each number. (2.) In return therefor a copy of the *Review* to be sent to each member. (3.) The Council to have the right to fill vacancies in the Board of Editors. (4.) This arrangement to be terminable at any time on one year's notice from the Association or from the publishers or from the Board of Editors.

Mr. Hart wrote in his contemporary account: "Perhaps the most important work of the meeting was the ratifying of an agreement drafted by the Council on one side, and upon the other by the editors of the *American Historical Review*." He then specified the terms of the agreement substantially as given in the preceding paragraph, and concluded with an interpretation of the agreement, as follows: "The result is that the *Review* will be continued on the same lines as before and in much the same hands. It does not become the organ of the Association, and is subject to no instructions, except through the process of replacing editors who may fail to satisfy the Council of the Association, as their terms expire."

Thus the Association's committee in charge of the business declared to the members before the event that the agreement formulated was to make the *Review* the Association's organ; while Mr. Hart, who was then one of the editors, asserted after the event that the same agreement when adopted left the *Review* in no sense the Association's organ. It may be, in spite of the contrary suggestions of the documents, that the terms of the agreement underwent a change between October and December. It may be, on the other hand, that the conflict of interpretations now active is but a revival of one which then prevailed.

Of all this the younger generation has grown up in ignorance. We have accepted the tradition of the ownership of the *Review* by the Association as a matter of course, and have been perhaps improperly startled at the contrary claim. But even if the question of ownership by the editors be conceded, for the occasion, the present problem of readjustment is changed only in its details. In such case, the editors are fully entitled to expend the funds of the *Review* at their discretion; and but two points remain to be noted. The first is that the editors would have done well to end the controversy at its inception last year by citing the documents and proving their ownership, if they could. The second is that if the editors are the owners and are accordingly in commercial relations with the Association, they ought not to be members of the Association's Executive Council. Interlocking directorates are nowadays deservedly unpopular. I for one shall be quite content if the *Review* be made indisputably the property of the Association, in which case the question of personnel may perhaps be somewhat easily settled, or if the *Review* be officially declared the property of the editors and the personnel of the Board be separated from that of the Association's Executive Council.

My original purpose in entering this discussion was to promote expedient changes in the spirit of the utmost good will. There is nothing but expediency, and perhaps a little propriety, involved; and there is no occasion whatever for epithets. If the discussion continues on the level of a dispute it will of itself defeat the end of expediency and will do positive harm to the Association whose improvement must be the common aim of us all. Let us forget one another's past indiscretions and pull together.

Ulrich B. Phillips.

Ann Arbor, October 12.

To the Editor of The Nation:

Sir: Among the charges made by the gentlemen who regard themselves as reformers in the affairs of the American Historical Association is one which asserts with considerable directness that the councillors of that Association and the editors of the *American Historical Review* have misappropriated both power and funds belonging of right to the American Historical Association. This being the case, one would suppose that these gentlemen would be specially scrupulous in the use of their own power and position, lest they appear to fall into the same sin that they castigate. Yet in a recent circular directed to certain "reformers" Dr. Dunbar Rowland, who is this year President of the Mississippi Valley Historical Association, signs himself in his official position, thus tending to create an impression that the Mississippi Valley Historical Association has a right or interest in the affairs of the sister institution.

It is of course proper for Dr. Dunbar Rowland to express himself in any manner allowed among gentlemen; but for him to address the public or his allies in his official position in this matter appears to constitute a lack of taste grievous in a reformer.

Frederic L. Paxson.

Madison, Wis., October 10.

RUGGERO FAURO.

To the Editor of The Nation:

Sir: To the list of the young men of letters who have fallen in the great European war, and who have been commemorated in your columns, I beg to add another name, that of Ruggero Fauro.

He was the author of a book on Triest which I reviewed with a number of others in

the *Nation* of April 29. When, in the preparation of this review, I called on him to discuss certain questions regarding Italia Irredenta, expecting to find in the author of such a book a man of mature years, I was astonished when I was received by a youth of barely twenty-three. In this, and the one other interview I had with him, I received a lasting impression of a mind of exceptional fineness and culture; of a character of which the enthusiasm was not a mere sentiment, but also the outgrowth of profound conviction; of the modesty and refinement of manners that best adorn such qualities; and of a strangely winning charm that now makes me mourn him as a friend.

He was born in Triest the 16th of February, 1892. After a preparation in the Liceo Dante of his native city he entered the University of Gratz, whence after a year, answering the call of the ancient Latin mother, he went to Rome in the spring of 1911, and at the University of Rome received his degree in letters, presenting a brilliant thesis on the poet Martial which will soon be published by his friends. The year of his going to Rome saw also the birth of the Nationalist party, to which he at once attached himself, and to whose journal, the *Idea Nazionale,* he was a constant contributor until the call to arms. In August, 1914, he was in Triest, but fled to Italy with an elder brother to avoid service, which to him would have been servitude, in an Austrian army.

When Italy declared war against Austria he at once enlisted as a volunteer common soldier, but with such uncommon qualities of mind and character, and having had a good military training as an Austrian recruit, he was soon promoted to a lieutenancy. At his own request he was transferred to the Alpine troops, went with them to the front, and in such worthy company, on the morning of September 14, fell in the foremost of a victorious charge.

O dolor atque decus magnum rediture parenti,
Haec te prima dies bello dedit, haec eadem aufert,
Cum tamen ingentes Rutulorum linquis acervos.

HOMER EDMISTON.

Milan, October 3.

"HOLDING BACK WHEAT."

TO THE EDITOR OF THE NATION:

SIR: Mr. James B. Latimer, in his article, "Holding Back Wheat" (*Nation,* September 16), offers, as a pertinent cause of the unusual activity among the farmers in stacking and holding their wheat off the market, the war and resulting prospective high prices. I, too, during the past sixty days have not only travelled, but have also stopped in "the richest part of the Nebraska winter wheat belt," and I can say without fear of successful contradiction that the prime reason for holding back wheat among the farmers is the fact that the entire season has been so wet that the wheat is not in a condition fit for threshing, and those even who have succeeded in getting their wheat threshed have not been able to market it, because the elevators are consistently refusing to take it in the condition in which it comes from the threshing machine. Even the few loads of grain which to my knowledge were taken were received at the elevator at a discount of from ten to fifteen cents per bushel below quotations for No. 2 grain. Nearly all Nebraskan grain will grade about No. 4 in quality, by reason of the excessive rainfall during the summer season. HOWARD O. COALE.

Tulare, Cal., September 23.

Literature

MATTER FOR STRIKING COMPARISONS.

The Industrial History of Modern England. By G. H. Perris. New York: Henry Holt & Co. $2 net.

The author of this work belongs to the impressionist school. He gives us as much of himself as he does of his subject; but we like him none the less for that. Most of the great historians have had their preconceptions, and none of these are less likely to lead the world astray than those of Mr. Perris. He is a sentimentalist; in other words, a radical liberal. Yet he is widely read in his subject, discriminates nicely in presenting his facts, writes exceptionally good English, and aims to be perfectly fair. He contributes little that is new, but vitalizes much that is unknown to the general reader. His subject is one that is now commanding the attention of the whole world.

When George III came to the throne, England was far behind Western Europe in many of the elements of civilization. Country life was isolated and stagnant. The towns were ill-built, insanitary, and ill-governed. Transport and travel were hardly better than in the later Roman Empire. The industrial arts were little developed; coal, iron, and steel were known, but little used. Within two generations these conditions were transformed. The conjunction of three main factors was necessary to this radical transformation—surplus capital, surplus labor, a new market. We are too apt to ascribe the change to Kay and Arkwright, Watt and Stephenson. As a matter of fact, the inventors were the servants, not the masters, of the moving forces of the industrial revolution. Mr. Perris is undoubtedly right in saying that whenever the three major factors just mentioned come together, the lesser conditions, such as invention, better communications, and a favorable state policy, will appear. It is not impossible to imagine a conjunction of the three factors which would proceed amicably, regularly, with little pain, to the general advantage. But, declares our author, few if any of the great economic changes known to history answer to that description; and what began to happen at the end of the eighteenth century in England is as far as possible from deserving it. The tale of the last hundred years is the tale of expansion, not along a straight, smooth path, but by violent oscillations, involving larger and larger numbers of people, bringing pure gain to few, pure loss to many, a mingling of gain and loss, in which it is hard to strike a balance, to most.

Such is Mr. Perris's theme—clearly defined, essentially modern, romantic rather than classic. His development of it is skilful. From the great amount of illustrative material at his command he selects enough to enlighten but not enough to weary the reader. His omissions are occasionally significant, if you are master enough of the subject to note them, and captious enough to care for them.

At the beginning of the great war, in 1793, the army and navy counted together scarcely a hundred thousand men; before its close, England was maintaining nearly a million men under arms, probably a fifth of the entire adult population, and was carrying a burden of expenditure and debt for which previous history could afford no parallel. Our author speaks of Pitt as the man who had five times raised the taxes on spirits and tea, who had taxed glass till the windows were built up, who had taxed sugar and salt, timber, bricks, tiles, stone, and slate, hats and hair-powder, sea-insurance and convoys, horses and dogs, parcels by coach and canal, clocks and watches, newspapers and advertisements, houses and the servants in them, and who had failed only in his efforts to tax gloves and mittens, the registration of births and marriages, and the modest handmaiden of the middle class. "Never have the possibilities of tax-gathering been so luridly illustrated." The only merit of this finance, in Mr. Perris's judgment, was that it hit everybody; "and Pitt's progressive income tax covers a multitude of sins." In May, 1803, England declared war against France, and there was no more peace till Waterloo. In 1806 Napoleon issued the "Berlin decrees"; at the opening of 1807 Great Britain replied with the "Orders in Council"; the latter eventuated in war with the United States in 1812.

In such circumstances was modern British industrialism born. The times were, in essentials, so much like our own that we instinctively turn to them for light on the future. During those years mankind underwent a great change, perhaps the greatest in all history. It began to lose its immobility. Henceforth men would no longer be isolated units in productive activity, but would work in large aggregates and thus gain for labor a constantly increasing power of political and economic bargaining. A year ago, like a thief in the night, came to pass a political situation throughout the world even more momentous than that occasioned by the rise of the first Napoleon, the economic consequences of which are likely to surpass in importance anything witnessed in the last hundred years at least. How close in many particulars is the resemblance of these days to those—in the increase in the number of men in arms, in the growth of the national debt, in the rise in taxation! Mr. Perris completed the work before us just prior to the outbreak of the present war, but, quite unconscious of what he was doing, has given us material for striking a balance for ourselves between these times and those of the Napoleonic wars.

Naturally we turn with eagerness to the description of the years following the declaration of peace. A melancholy account it is. People were astounded that peace did not bring immediate prosperity with it. They

would have been still more astounded, says Mr. Perris, if they could have looked forward over the next thirty years. It is difficult, he adds, even now to imagine the utter exhaustion and derangement produced by twenty years of warfare coinciding with radical economic reform. It must be remembered, however, in comparing those days with these, that much of the misery then rampant may be traced to circumstances which have had no counterpart in recent years—radical transformation in the methods of production, a favored agriculture, a vicious tariff, enclosure of the commons, suspension of specie payments in 1797 and resumption after the war, imperfect means of transportation and communication, decline in the world production of both gold and silver, to mention only a few things at random.

Though the present war has given a rare timeliness to Mr. Perris's account of the first quarter of the nineteenth century, the most permanently valuable portion of his work is that comprised in the last two chapters, entitled The Awakening and The New Age. In the one he treats of the change in the popular mind from the notion of *laissez-faire* to that of state action for the protection of workers and the community at large; in the other, of the social legislation since 1906. These two chapters embrace innovations fully as great and far-reaching as any of the last century, and perhaps as great as any in the whole social and industrial experience of Great Britain. In the space at the reviewer's command it would be impossible to recapitulate them with any satisfaction to the reader. They come at the end of a feast already over-bountiful, like the best wine that is brought out last.

CURRENT FICTION.

Duke Jones. By Ethel Sidgwick. Boston: Small, Maynard & Co.

In "Promise" and "Le Gentleman" Miss Sidgwick took her place on even terms with the most promising of her contemporaries, Messrs. Walpole, Cannan, Mackenzie, and Onions. In her work, as in theirs, the influence of that slightly older school, headed by Mr. Wells and Mr. Galsworthy, was patent. Youth was her theme, youth insurgent, or unfailingly dominant: prevailing in love and in art. And for all her election of poise and aplomb, of an intellect detached and a humor extra dry, sensibility was what gave color to her atmosphere. She is as quiveringly alive to suffering as Charlotte Brontë was—as eager in the quest of an ever-eluding happiness. Unluckily, she is slave to a mode already passing, a style allusive, finicking, beside which the nervous Brontëan structure appears fairly massive. After Meredith and James, we ought perhaps to stop asking that the men and women of fiction be permitted to speak as men and women might, and not as their authors do. Miss Sidgwick's dialogue is so relentlessly brilliant, her Ingestres and Shovells are so unanimously witty and subtle, that it is a relief indeed to fall back upon the faithful inarticulate Jones. We are not sure that he is any more real than Charles Shovell or Sir Claude Ashwin, but we have a strong feeling that he is more accurately reported. All these clever people are a good foil for him, at all events; and perhaps that was the main thing Miss Sidgwick was "after."

For Marmaduke Jones is a negation of the genius, or brilliant talent, or social perfection, with which Miss Sidgwick is commonly preoccupied. Reduced to bare terms, he is that ancient prop of romance, nature's nobleman—who, by virtue of his rarity, is at least as good as any other nobleman. All of these elect and clever people are to be beaten at their own vaunted game of gentleness and fineness and knightly service by Jones, the insufficiently born, the homely, the dull of speech. Just what there is about him to attract the interest of our young pair, the Shovells, in their honeymoon hour, is not made quite clear: unless it is his reverent if undisguised admiration of the young bride. At all events, he is there, at her elbow, and is there to fall a selfless, devoted victim to her bridal charm. For her sake he gives his life to hapless Lisette—Lisette, whose youthful glory has, in spite of Jones, been so meaninglessly thrown away. She has been casually "betrayed," and the blow, despite her superb health of body and hopeful shallowness of mind, has gone home. Miss Sidgwick's summing-up of the cause of her death, a year or two after she has reached apparent harbor as the wife of the good Jones, is characteristic in its delicate conclusiveness: "Howsoever it may be, Goldsmith, a man of genius and of heart, though sadly out of Honoria's period, came nearer to the final truth of Lisette than Honoria and her up-to-date authorities. She died for want of that little personal genius of hers, that had been so ruthlessly snatched away."

Some Women and Timothy. By H. B. Somerville. New York: E. P. Dutton & Co.

Timothy is not a guttersnipe charming the ladies, or a yokel Lothario, as one might guess from the title. He is an English lord of quixotic temper, poor but not fortune-hunting, susceptible but not a rake. Being jilted, he has fled to Canada with his broken heart. After two years he returns heart-whole and unconsciously ready for further adventure. He finds his younger brother entangled with a young widow from whom he is trying to free himself, but who holds him to his promise of marriage by means of the usual machinery of letters. Timothy offers to decoy her away, and during the process falls in love with her on his own account. The events which follow are of whimsical and not too preposterous sort. The widow frees the brother, but refuses Timothy, and thereafter shows herself a lady of the most fastidious delicacy. Various other women complicate the situation, particularly the one who has jilted him (and whose married happiness he now secures), and a maiden aunt of extreme wealth and bad manners (who ponies up satisfactorily in the end). The latter plays the traditional part of the dowager by trying to buy off the widow. Not unimportant links in the bond which is gradually formed between Timothy and his lady are a boy and a dog and a white kitten, whose function it is to bring out the lovable aspects of the pair, to their mutual edification.

Marie Tarnowska. By A. Vivanti Chartres. With an Introductory Letter by L. M. Bossu Bossi, of the University of Genoa. New York: The Century Co.

Mrs. Chartres is poet, playwright, and novelist, in three languages. "Who's Who" records that she published in 1912 "Le Roman de Maria Tarnowska." Nowhere, either in the three-fold introduction to the present work or in the long circular of information given out by the publisher, is there any suggestion as to the relation of the two books. The present narrative purports to to be not a romance, but a confession. Mrs. Chartres visited the Countess Marie in the penitentiary at Trani, and learned her story from her own lips, and was thereupon "moved by the puissant impulse of art, which takes no heed of learned theory or ethical code, to narrate in these pages the profound impression made upon me by that tragic personality, by the story of that broken life." However, it appears that Professor Bossi suggested the possibility of the book, to begin with, his interest in the Countess Marie being based upon the conviction that her career was determined by "morbid physical condition" rather than by depravity.

This fact is not brought out, or even clearly indicated, in the present narrative. It is, in her handling, a bit of literature rather than that bare "human document" which she has perhaps intended to produce. From the beginning her touch is emotional and fanciful. She reads the Countess's prison note-book: "Alas . . . in what school of horror had she learned the lesson traced on these pages by her slim, white hand—the fair patrician hand which had known the weight of many jewels, the thrill of many caresses, and was now held fast in the merciless grip of captivity." This is the court-memoir tone, the tone of sentimental admiration for a charming sinner, rather than of commiseration for a sick wretch—and it is the tone which prevails throughout this rendering of Marie Tarnowska's erotic or sordid or criminal experiences.

At seventeen she ran away with a handsome and vicious Russian nobleman, who married but debauched her. She was not fitted for maternity, and after the birth of her second child her health broke. Ill-used by her husband, she came into entangled relations with several other men. She became the mistress of one of them, a poor man, engaged herself to a second, a rich man, and conspired with the first lover to egg on a third lover to kill the second, who was as good and generous as he was rich.

Thus, in 1907, the death of Count Paul Kamarowsky was accomplished. Letters and telegrams were found: Kamarowsky had willed everything to the Countess Marie. She and her confederate were found guilty of inciting to murder and duly sentenced, the Countess to eight years' imprisonment. She has recently been pardoned to become a nurse in a Russian war hospital. Thus would seem to be disposed of the "appropriate medical treatment" by which Professor Bossi planned to restore her, on her release from prison, "to the complete sanity of moral well-being." In this book, certainly, she is not a pathological case, but a sensational subject for fiction.

AN UNREPENTANT CONSERVATIVE.

Subjects of the Day. By Earl Curzon of Kedleston. New York: The Macmillan Co. $3.25.

It has been the habit of English statesmen to turn from the cares of politics to the pursuit of a gentler art. From Sir Francis Bacon and that Thomas Smith to whom England was a commonwealth the line is long and it is honorable. Halifax and Montague have places there. When Sir William Temple could tear himself away from the building of diplomatic alliances and the fascinating dangers of cabinet-making he could write winningly of gardens. Bolingbroke and Burke are among the greatest of English publicists. Macaulay is still the most widely read of essayists. When Mr. Gladstone was not in the House of Commons he was defending the unity of Homer, or—and here he was no mean scholar—editing with loving care the works of Bishop Butler. Disraeli's novels are still the best picture of the society of their time. In our own day Mr. Birrell's delicately facile pen has added a new word to the English language. Lord Morley and Lord Bryce are probably the most distinguished of living English men of letters. Lord Haldane is among the most profound as Mr. Balfour is among the most whimsical of contemporary philosophers. Mr. Churchill has written one of the half-dozen best biographies in the language. Lord Rosebery is the modern arbiter of literary elegance. Here, truly, is a splendid tradition.

Lord Curzon has just published an interesting volume in which the same attitude of mind is manifest. There have been collected a number of his speeches on India, the Empire, domestic affairs, on contemporaries who were his friends, which show an astonishing variety of powers and breadth of interest. The book is welcome not so much for the intrinsic merit of its contents—Lord Curzon would be the first to admit that this must be largely ephemeral—as for the valuable indication it gives of an attitude to political affairs which is of especial importance if only because of its increasing rarity.

Lord Curzon is the leader of that section of English statesmen who may without injustice be called unrepentant Conservatives. They view novelty with distrust; change is the original sin. He is foremost in asserting, despite the lesson of 1861, that the Lords can touch money bills; he led that pathetic charge of the Die-Hards against the famous budget of 1909. It was "immoral," and "unsound"; taxation, he urges, cannot mitigate the consequences of poverty. The bill must mean plunder of and danger to property. In fact, Lord Curzon uses with skill and eloquence the same type of argument that was used against the Reform Bill of 1832, and the Corn Laws in 1846. He presents the complete gospel of the inherent rights of a traditional nobility.

Not less characteristic is his attitude to his Indian career. He was sent out to India to govern, and govern he did. There is no hint of a conception of India as a unity, as a country that may one day hope for the priceless boon of self-government—an ideal always implicit in Lord Morley's speeches. Lord Curzon is a believer in the child-nation theory and is firmly convinced of the virtues of political tutelage. It is an interesting sidelight on his essentially governmental mind that to him the great viceroys are Clive and Dalhousie—men who are perhaps more distasteful to the Indians than any other Governors-General. It is the quintessence of the bureaucratic ideal Lord Curzon here expresses, the ideal of a civil service well-equipped, unselfish, sincere, hard-working, doing everything that the people require. We are reminded of a dictum of Sir Henry Campbell-Bannerman that self-government is better than good government.

Much the best part of the volume is that devoted to personal tributes. What Lord Curzon has here to say is always well and gracefully said. He has not, indeed, anything of the verve and breadth which make the kindred essays of Lord Bryce so incomparable; but undoubtedly he adds to our knowledge of men like George Wyndham and Alfred Lyttleton, who were among the most lovable figures of our time. And nothing said of Lord Roberts by others so admirably depicts the qualities of that great soldier. His tribute to Sir William Anson is incomplete, inasmuch as it misses not the least important aspect of that Oxonian, Sir Roger de Coverley—his immense generosity to his juniors. There are not a few of the younger scholars of our generation who have benefited by his kindly wisdom.

No one can fail to be struck by the ease with which Lord Curzon can speak on a variety of topics. His oratory extends from the connection between poverty in literature to national pessimism and the black-smoke nuisance (things in England at least not entirely unrelated). He is perhaps at his best when he writes of the Eton and Balliol of which he is so typical a product. He was at Oxford in the days when the great Jowett was training half the rulers of England; and something of the master's impress (perhaps also a little of his benevolent ponderousness) is written deep on his pupil.

Lord Curzon is one of the most important representatives of those proconsuls whom it has been the peculiar genius of Great Britain and Rome to produce. Nothing is so valuable in the understanding of their imperial development as an insight into the thought of those who have guided that growth. If Lord Curzon seems to have in mind an England it is difficult now to envisage, if he takes his stand a little bitterly and defiantly on the ancient ways, fourteen years in India are an adequate explanation. Even if his ideals pass away and the Empire he cherishes so deeply is transformed, the sincerity of this volume gives us the assurance that Lord Curzon will spare no effort to postpone the onset of that evil day.

It remains to be said that the volume has an interesting preface by Lord Cromer.

THE WRITING OF STATE HISTORIES.

A History of Indiana from Its Exploration to 1850. By Logan Esarey. Indianapolis: W. K. Stewart Co. $3.

It is one of the peculiarities resulting from the uneven and inadequate exploitation of the field of State history that the narratives of certain of the Western commonwealths have been more fully, interestingly, and accurately told than any of those of the East. There is no single study of an Eastern State so good, for example, as McElroy's "Kentucky in the Making of the Nation"; the history of none has been so picturesquely detailed as that of California written by H. H. Bancroft and Josiah Royce. Eastern historians have been concerned rather with the relations of State to national and European history, and have avoided the more limited field; while the detached West has naturally produced more writers interested in the development of indigenous institutions. Even the encylical histories of Connecticut, Rhode Island, and New Jersey, produced by boards thought to be versed in their subject, must appear strikingly deficient in historical method when compared with so painstaking a piece of work as that now in preparation upon Illinois. It is but just to say that Eastern State history is the more complex, and that certain special studies, as Charles Francis Adams's "Three Episodes in Massachusetts History" and McCrady's "South Carolina in the Revolution," have hardly been equalled.

Mr. Esarey's volume is one of the best examples of State history as it ought to be written. The task of the historian in Indiana is even more difficult than in most States, from the fact that there is no considerable collection of historical materials to draw upon. The documentary sources of many commonwealths have been published, but since a short-sighted Legislature half a century ago prevented John B. Dillon from organizing them and from giving Indiana a State library to be proud of, Indiana has been consistently remiss in its attention to such matters. The most important sources, the Indiana State Publications, have not

been issued in anything approaching chronological order, and have not been indexed. The Indiana Legislative Records are like those of half the other States: the dates on the back inaccurate, the pagination confused, and the indexes imperfect. As for secondary authorities, J. B. Dunn's excellent volume in the American Commonwealth series is frankly sketchy on the political and military side, and as a social and economic history is preoccupied with the early struggle over slavery and the later fight against pro-slavery sentiment; John Dillon's scholarly work was—again through legislative narrowness—brought down only to 1816, and the work of Goodrich and others is negligible. But Mr. Esarey, whose previous studies on State Banking and Internal Improvements in Indiana have familiarized him with two difficult aspects of its history, has searched every possible source of information, made the closest study of newspapers and manuscripts, and painstakingly verified even statements hitherto unquestioningly accepted. His bibliography contains over three hundred items. The result is a record, brought down to the disappearance of the Whig party and the rise of the Republican, the definitiveness of which is unlikely to be questioned. It is to be hoped that we may some day realize such a history for every State in the Union, supplemented by detailed studies of important topics.

The first divisions of the book, dealing with the French and British occupations of Indiana Territory, are covered rapidly but adequately, as is the story of the Indian wars of the Revolution and the exploits of George Rogers Clark. It is with the period following 1783 that the reader becomes cognizant of several deficiencies. The writer fails to mention, much less discuss, the Spanish policy of fomenting Indian attacks in all the Western territory of the United States before 1795—felt in Indiana only less than in Kentucky; and he has nothing to say of the Spanish closure of the Mississippi as it affected southern Indiana's Ohio trade, or, indeed, of any of the matters treated in Green's "Spanish Conspiracy" and Ogg's "Opening of the Mississippi." This is in spite of the fact that Mr. Esarey discusses fully the stamping of French policy and personality upon the early Northwest, and those sinister British influences which were felt from across the Canadian border until long after the War of 1812. His account of the first Governorship under the Ordinance of 1787 does full justice to the firmness and ability of a man who was unfortunate in many undertakings—Arthur St. Clair. But that important episode in which St. Clair established the almost dictatorial power of the Territorial Governor—his controversy with Judges Varnum and Parsons—is not mentioned by Mr. Esarey. It will be remembered that the ordinance vested the legislative powers in the "Governor and judges, or a majority of them." The judges attempted in 1788 to interpret this as meaning that they, if all three agreed, could enact laws without the Governor's sanction, and were at once and emphatically told that this belief was untenable. "Congress thought," wrote St. Clair, "there would be an impropriety in leaving the adoption of the laws by which the people of the district were for a time to be governed to the persons who were to expound them; much greater, however, would that impropriety be if the clause of the ordinance goes not only to the adoption, but to the formation of laws. The judges would in that case be complete legislators, which is the very definition of tyranny." Nor is sufficient space given to the development of the legal code, civil and criminal, under the judges and Governors St. Clair and Harrison: a development shaping all the State institutions, and so advanced that the distinctive features of Indiana's growth were fixed by the time that Gov. Thomas Posey was ushered, in 1813, into his chair. The successive stages of Territorial government, through the enlargement of the franchise, the organization of a General Assembly, and the formation of a Constitution, are well traced.

By far the best portion of the book is its treatment of those aspects of State history which are most intricate and difficult, and superficially most repelling. The chapters on Economic Development, covering roads, stage lines, flatboat trade, and mailboat service; on Internal Improvements, tracing the policies which culminated in 1836 with Gov. Noble's signature of the Mammoth Internal Improvements bill, appropriating one-sixth of all the wealth the State then had and paving the way straight to bankruptcy; on the Public Lands and the frauds and speculations growing therefrom; on the Second Bank of Indiana, and on Religion and Education, leave little to be desired. The agricultural development of the State is hardly spoken of, and should not have been neglected. The fiscal history could also have been treated with more detail. But these general chapters are a refreshing find to any one who knows how exclusively most State historians have dealt with politics, constitutional history, legislative events, and the development of only the salient educational, charitable, penal, and general social institutions. For his account of Indiana banking, for example, the author has gone to the local records of many towns; for the history of the church to the records of the dioceses, parishes, and church districts. Breadth and correctness of view would have been furthered by some adversion to influences outside the State in the ripening of all these phases of Indiana life, but the author's sense of the limitations of his space doubtless prevented this wider treatment.

The matter on general social history would make a small treatise in itself; and in the chapters on The French in Indiana and The Pioneers and Their Social Life, the picture of homes, customs, occupations, primitive public utilities, festivals, and festivities, is living and interesting. Any reader of Eggleston or of Nicholson's "The Hoosiers" knows that Indiana has its own picturesque qualities of rural life. The charivari, the Christmas shooting, the maltreatment of the schoolmaster, the drinking and gambling, the tavern, the shooting match, the election day, the wedding and infare, the log-rolling, the quilting, the camp-meeting, and the open-handed hospitality of the prairies are described with a wealth of quotations from old chronicles and newspapers. The author justly remarks that the social customs of early Indiana are most clearly understood in the light of their history. One contention of some novelty is that the so-called Hoosier dialect, at the time it was current in Indiana, was that of a large fraction of the population of the whole Union, and represented the language of the commoner of the eighteenth century in England.

Notes

"H. R.," a novel by Edwin Lefevre, and "Ten Great Adventures," by Kate D. Sweetser, are announced for publication by Harper & Bros.

"A Peace Calendar and Diary for 1916," compiled by John J. Mullowney, will be issued shortly by Paul Elder & Co.

Mrs. Frances Hodgson Burnett's "The Lost Prince" is announced for immediate publication by the Century Co.

"Sunlight Patch," by Credo Harris, will be published by Small, Maynard & Co. early next month.

Saturday is the date of publication by Doran of the following volumes: "The World's Highway," by Norman Angell; "The Bronze Eagle," by Baroness Orczy; "Kings, Queens and Pawns," by Mary Roberts Rinehart; "Ten Degrees Backward," by Ellen Thorneycroft Fowler; "Vagrant Memories," by William Winter; "Jolly Jaunts with Jim," by Charles Hanson Towne; "The Folly of the Three Wise Men," by Edgar Whitaker Work.

Among the fiction included in Macmillan's autumn list are the following volumes: "The Star Rover," by Jack London; "Old Delabole," by Eden Phillpotts; "God's Puppets," by William Allen White; "The Extra Day," by Algernon Blackwood; "Heart's Kindred," by Zona Gale. The same house announces: War Books—"The Military Unpreparedness of the United States," by Frederic L. Huidekoper, and "A Mechanistic View of War and Peace," by George W. Crile. Poetry—"The Song of Hugh Glass," by John G. Neihardt; "Rivers to the Sea," by Sarah Teasdale; "The Pilgrim Kings: Greco and Goya, and Other Poems of Spain," by Thomas Walsh; "Scumas Beg," by James Stephens. Public Affairs—"Inventors and Moneymakers: Lectures on Some Relations between Economics and Psychology," by F. W. Taussig; "The Executive and His Control of Men: A Study in Personal Efficiency," by Enoch Burton Go-

win; "The Ways of Woman," by Ida M. Tarbell; "The Initiative, Referendum, and Recall in Oregon," by James D. Barnett.

Announcement is made that the Second Pan-American Scientific Congress will meet in Washington next December under the auspices of the Government of the United States. The Congress will open on Monday, December 27, and adjourn on Saturday, January 8, 1916.

Exactly fourteen years have now elapsed since Graham Balfour brought out the life of his cousin, Robert Louis Stevenson, and W. E. Henley printed his famous reply in the *Pall Mall Magazine*. To-day Stevenson is more popular even than in those times of heated discussion and glowing reminiscence. There may not be scores who have read "Treasure Island" once a year from their boyhood up, but a host of devotees call for edition after edition of R. L. S., a fresh army is recruited every twelvemonth through the prescribed readings in our high schools, and the last few years have seen steady additions to the books tracing his life and footsteps. It is therefore natural enough that the authoritative biography should appear in an abridged form adapted for circulation among this wider public. The one-volume edition of "The Life of Robert Louis Stevenson" (Scribner; $2 net) presents undimmed the picture of brave and cheerful living as it was first drawn with unwavering admiration. The reduction in scale is by hardly a fourth of the original. Sentences of generalization a little out of style now, paragraphs detailing the composition of minor writings, and towards the end accounts of Samoan politics contributing little to a knowledge of the subject—such passages have been skilfully eliminated. In some few cases greater care has been exercised in transcription of letters and quotations. Here and there a part has been rewritten or amplified in the light of later discovery or recent events. Indeed, echoes of the war are heard in the record of Stevenson's Continental trips. Various illustrations add their interest to the unfolding of the narrative. For the general reader therefore the present volume should be more serviceable in giving a full, coherent, yet compact version of a career more appealing than many of the author's works.

A further indication of the continuing popularity of Stevenson is Jacqueline Overton's "Life of Robert Louis Stevenson for Boys and Girls" (Scribner; $1 net). Its origin is revealed in the dedication: "To the boys at the Yorkville Library and to all other boys who love to tramp and camp and seek adventure I dedicate this book with the hope of making them better friends with a man who also loved these things." This feeling declaration reveals also the principle which has guided the author in her selection of event and circumstance. The boy of the upper East Side, whom she knows and has tried to entice, is so much like other boys in his love of healthy romance that her unrolling of the scroll of Stevenson's widely travelled years should catch any youth's attention. She also provides numerous illustrations to bring home the remote scenes of the Scotsman's sojournings. "Edinburgh Castle" and "A Feast of Chiefs" in Samoa will alike guide the imagination to a truer visualizing. The French Old Style type will increase the pleasure of reading. Nevertheless, the author has toiled too patiently. She has not merely chosen instances. She has carefully produced a mosaic of quotations to narrate these incidents. She provides the cement of connecting paragraphs, yet even the cement is colored by Stevenson's style. This is unfortunate. The preciousness of R. L. S., his fastidious care in expression, is not suited to adolescent tastes. It will draw a veil of unreality over what the author obviously wishes to render vivid and alluring.

Omnivorous readers will find a kindred spirit in Charles Leonard Moore, whose "Incense and Iconoclasm" (Putnam; $1.50 net) discusses such diverse topics as Hindu drama and Celtic lyrics and fiction of modern American magazines. He is interested in technique, and style, and movements, and varieties of subject matter, and the commonly recognized types of literature. He finds contentment in rehearsing long accepted judgments, yet he at times indulges in the perverse pleasure of contradicting opinions dear to the bourgeois. The reader has the comfortable sense of never being lured into any subtlety of discussion. The critic's views are always frankly and unreservedly avowed and his appreciation of nuances in individual productions is bluffly divulged. Appreciation, however, is not his predilection. He delights much more in general statement and broad comparison, yet beneath them are few philosophical or æsthetic or critical prepossessions. An interest in painting leads him to emphasize design in literature. On that score he lifts the image-breaking hammer against Goethe. A few pages later he burns incense before the romantic comedy of Shakespeare. But he is at heart an Aristotelian. His æsthetic theory was unconsciously formulated years ago. Consistency and a perfect interrelation of parts rather than immediate expression of emotion seem to him the acme of beauty.

Prof. Richard Green Moulton's "The Modern Study of Literature" (University of Chicago Press; $2.50 net) is the culmination of over forty years wholly occupied in the teaching of literature and in preparing various books which the author now regards as preliminary studies—discussions of particular principles in application to special literary fields. His life as university extension lecturer has made him acquainted with a large public who look upon college graduation not as a goal, but as the starting point of a culture with which the leisure time of their whole lives may be filled. This volume, then, presents a final formulation of the principles of literary study which shall gain all over the country a larger hearing from this intelligent reading public than his voice can hope to reach. His enthusiasm for literature, his intimate acquaintance with it in classical, Hebraic, and modern English forms, the analytical passion which issues in diagrams and charts and which finds delight in resolving a complex phenomenon into elements, the mingled precision and fluency of his style—these characteristics are familiar to readers of even one or two of his preceding books. Familiar, too, is the whole structure of theory which is here put together into a consistent system. Yet it would be difficult to find a theory that presents more points of view with which modern students are likely to disagree.

Certainly students of psychology would reject *in toto* Professor Moulton's conception of faculties by which the mind works. Of critics he says that taste is "an accepted term for the faculty of appreciation." In the same vein he abundantly endows poets with a faculty of creation. Incidentally, it may be remarked that the conviction leads him to assert frequently that the Greek μίμησις should be translated "creation." Unsatisfactory as the word "imitation" is, one may well inquire whether "creation" would not convey an even scantier understanding of the doctrine of Plato and Aristotle. In any case, the term "faculty" does not adequately represent the present-day conception. Nowhere does he seem to be aware that his belief in mystical powers that come to every man as his birthright is vanishing from the world of thought. Students of æsthetics, too, will be quick to question his theory of literature as a separate world entity with a development subject to laws of evolution. He does not, to be sure, adhere to the extreme scientific form that the theory attained years ago, but he holds to his modification of it so exclusively that the view of literature as a form of expression, the product of emotion, the embodiment in sensible form of the contemplation of passion—this doctrine that all beauty is expression he does not entertain for a moment. On the contrary, he establishes and charts a whole genealogy of literary types, with the origin of literary species lying in the differentiation of the conventional, a literary species being "constituted by all the works in which the convention is the same." The lines of descent and interrelation are charted with the exactitude of a geodetic survey. Criticism itself naturally is subjected to division and classification, and quite as naturally this axiom is laid down as fundamental to its practice: "A clear grasp of the external form is essential for entering into the matter and spirit of all literature." These prepossessions in favor of scientific analysis and classification and definition, as opposed to the infinite varieties of the free rhythms of life and literature, do not preclude the utterance of many true and sane dicta concerning both specific works and general features of poetry and drama. One so richly endowed with knowledge and feeling as Professor Moulton could hardly avoid illuminating discussions. But the student of literature, while perusing the work, cannot smother a sense of incongruity in contemplating the title, announcing the *modern* study of literature.

Granville Fortescue's "At the Front with Three Armies" (Brentano's; $2 net) offers as its chief attraction a clearer view of the Belgian situation early in the war than we have had. The author had the rare good fortune to witness the assault on Liège, the first actions against Namur and Dinant, and the occupation of Ostend. His testimony as to the absolute unpreparedness of Belgium is valuable and conclusive. The complete ignorance in which Brussels and all western Belgium were kept until the Germans were at their doors would be unbelievable were not the evidence complete. Mr. Fortescue's observations on the French and English lines, where his opportunities were restricted, are often second-hand, and, though well enough as newspaper correspondence, are, as chapters in a book, hardly better than so much padding. He provides, however, a new explanation for the shelling of Rheims Cathedral. A sightseeing party, including one or two French officers, was on one of the towers.

The Germans, taking them for military observers, opened fire. This would account for the flat contradiction between the French and German versions of the bombardment. The Germans would be justified in thinking the tower was being used for military purposes, the French in denying that such was the case. Certainly it was an unpardonably inconsiderate act for any one at the time of bombardment to occupy the towers. If, as Mr. Fortescue's story goes, the ecclesiastics of Rheims permitted such a visit at such a moment, they must assume a considerable share of the responsibility for the destruction of the cathedral.

Ex-Senator Beveridge has made an interesting book in "What is Back of the Great War" (Indianapolis: Bobbs-Merrill Co.; $2 net). Much of it was written in Germany and describes the heroic unanimity of the nation, its conviction that it is fighting for its defence, and its hatred of Great Britain. In all this there is little novelty, but the case is put concretely and vividly. Among the notables whom the author interviewed were Adolf Harnack in Berlin and Gabriel Hanotaux in Paris. From England he reports a considerable assimilation and division of opinion. This suggests a weakness of his observations. He has no languages. In Germany his contacts were limited to persons holding the official doctrine. In England he discoursed freely, and a few acquaintances seem to have told him obligingly what they divined he wanted to hear. His general prophecy is that the nationalization of industry occasioned by the war will continue, resulting in an approximation to the Socialist great state. Many of his data seem quite casually gleaned. It would be interesting to know on what authority he asserts that Germany can indefinitely replenish the firing line by 1,500,000 troops annually, thus making good her entire wastage. The general estimate is 600,000 in each new class as a maximum, figures which are being largely discounted through volunteering. There are a number of illustrations. The book is among the more readable of its numerous class, but its appeal to serious readers is slight enough.

Will Irwin's "Men, Women, and War" (Appleton; $1 net) is in part description of Belgian experiences, in part general estimates of the temper of France, Germany, and England. Mr. Irwin writes with sympathy and skill. He is quite without professional pretentiousness of any sort. Few of the correspondents who have followed the armies have given so sharp a picture of the squalor of modern war. Mr. Irwin's characterization of The British Calm, a quality which he regards as both a strength and a weakness, may serve to correct ex-Senator Beveridge's superficial statement of British conditions. The military part of the book is confined to a composite description of the battle of Ypres. The author has a high degree of perceptiveness, and his book well brings out those human and inhuman by-products of a campaign which it is his especial desire to emphasize. Mr. Irwin has had the good sense and right feeling to take himself as an observing human being and not as a military correspondent. Thus his book has a genuineness by no means common in its class.

Under the editorship of Prof. W. P. Paterson, of Edinburgh University, a group of British scholars discuss "German Culture, the Contributions of Germans to Knowledge, Literature, Art, and Life" (Scribner; $1.25). The object is to state the facts and especially to offset the excessive underestimate of German achievement which has been brought about by the war. The following are the topics and contributors: "History," Prof. Richard Lodge; "Philosophy," A. D. Lindsay; "Science," Prof. J. Arthur Thomson; "Literature," Dr. John Lees; "Art," Prof. Baldwin Brown; "Music," Prof. D. F. Tovey; "Education," Dr. Michael Sadler; "Politics," Prof. D. H. MacGregor; "Religion," Prof. W. P. Paterson. Usually the survey is made with entire impartiality. In the case of the eulogist of German politics this goes so far as to make him distort the political ideals of his own country. Naturally, no exact appraisal of culture is possible, but the display proves a distinct primacy for Germany in philosophy, theology, music, and the sciences of biology and applied chemistry. To these may fairly be added philology, which is not expressly treated. In literature and art the rating is low. The most informatory of the studies seems to us Prof. J. Arthur Thomson's "Science," the best conceived and most penetrating, Dr. Michael Sadler's "Education." It is a book that should be enlightening to honest minds who in a confusing war of opinion wish to get at the facts.

The twenty-sixth volume of Harvard Studies in Classical Philology is of a severer quality than some of its more varied predecessors. Dr. Otis Johnson Todd writes in Latin on the "Time Relations in Aristophanes." After an exhaustive time analysis of each of the eleven extant comedies, he concludes that, with due allowance for obvious comic adventures in topsy-turvy land, the probabilities and the unities of time are dealt with as skilfully and artistically by Aristophanes as by other dramatists. There is no reason, he thinks, for holding with Polczyk that the art of the New Comedy in this respect was derived from tragedy rather than from the older comedy. The chief artifices employed by the new comedy or tragedy to preserve the unity of time or to disguise and palliate the temporal foreshortening of actions taking place off the stage, may all be found somewhere in Aristophanes. The Aristotelian limitation of twenty-four hours is observed in the "Knights," "Wasps," "Peace," "Thesmophorlazousæ," "Frogs," and "Ecclesiazousæ," and somewhat exceeded in the "Acharnians," "Clouds," "Lysistrata," and "Plutus." The "Birds" of Cloudcuckootown defy all efforts to sprinkle this particular salt on their tails. Dr. Boak's monograph on the "Roman Magistri in the Civil and Military Service of the Empire" adds one more to the many recent illustrations of the way in which the multiplication of inscriptions and papyri makes possible a minute reconstruction of Roman, Egyptian, and Byzantine administration and law, with which few scholars can afford to burden their memories, but which is nevertheless an indispensable prerequisite of that authentic and documented history of ancient civilization that modern scholarship endeavors to substitute for the traditional moralizing and rhetorical legend. Mr. George W. Robinson's Notes on the Fourth and Fifth Centuries deal with minor points of scholarship such as the rectification of an error in the Loeb translation of Julian, and an oversight in the English translation of Negri's "L'Imperatore Giuliano l'Apostata."

A garden may cost a fortune (Mrs. Theodore Thomas knows of one the roses in which alone are worth $20,000), or it may be had for almost nothing, like her own, which she describes entertainingly in "Our Mountain Garden" (Dutton; $1.50 net). Her husband, the great conductor, needed rest for his overworked nerves, and she needed new strength from direct contact with the earth; so they bought a home of twenty-five acres of wild land in the White Mountains, built a cottage, and surrounded it with specimens of all the wild flowers of the neighborhood. Felsengarten, the place was called, and the dominating idea in the cultivation of it was to keep everything as nearly as possible as nature made it, providing for each blossom its natural surroundings. They did all the work themselves, getting therefrom the expected benefit, besides constant enjoyment. For persons who merely own gardens, expensive or otherwise, without knowing the joys of taking care of them, Mrs. Thomas feels the same pity she does for those who sit in opera boxes but do not understand the music. No one else has written of a garden so simple, inexpensive, and thoroughly home-made as hers; yet owners of all kinds of gardens may find useful hints as well as enjoyment in reading of her experiences and experiments; as when she tells how she combined weeding with fertilizing, thereby obtaining astonishing results; for example, three hundred blossoms from a single Shirley poppy plant. A chapter on Garden Enemies has been added to this new edition of a thoroughly readable, suggestive, and helpful book; a book which also incidentally throws interesting sidelights on the character and the habits of the leading missionary in the realm of music in America.

Drama

A GOOD ROMANTIC PLAY.

Red Wine of Rousillon. By William Lindsey. Boston: Houghton Mifflin Co. $1.25 net.

This play in four acts is a really good romantic drama, one of the best that has been produced in a generation. In form it is somewhat old-fashioned, requiring no less than eight scenes, but these would present no particular difficulty in a modern theatre possessing a double or a revolving stage. On the other hand, it is compact and well made, developing swiftly and logically a tragic love story of uncommon interest, and is, moreover, exceedingly well written, in simple, smooth, and vigorous blank verse, so adroitly handled as to offer no insuperable obstacles to the ordinary prose-speaking actor. There is scarcely a speech in it of half-a-dozen lines. Genuinely poetic as the work is in tone and quality, and felicitous as are many of its phrases and ideas, it essays no sustained imaginative flights. The conspicuous literary excellence of it consists in a terseness, directness, and pregnancy of expression nicely

corresponding to the rapidity of the action.

The plot is as old as the eternal triangle. It owes something to Dante, Boccaccio, and, perhaps, a dozen others, but it is freshly and ably treated. The passion with which it deals, if illicit, is not guilty. In the far past—the present scene is laid in the twelfth century—a Count of Rousillon planted a vine upon the breast of the enemy he had slain, and thereafter, according to the legend, the blood taint glowed in all succeeding vintages of his estate. Raymond, his descendant, drank deeply of his inheritance and in his rages saw red. When a rival won the fair Seremonda, whom he loved, he slew the bridegroom at the altar and bore the bride off to his castle, where he wedded her by force. Thus he fell under the ban of the church, and had to choose between fighting in Palestine or enduring eternal torment. When the curtain rises he has long been reported dead, and Seremonda is in love with Guilhelm, the page to whose guardianship he had entrusted her. The lady, who, though loathing her lord, has faithfully observed a year of widowhood, makes free offer of her heart and hand, in a charming scene, to Guilhelm; but the latter, though he has long worshipped her in secret, is loyal to his master, putting duty before happiness. As they confer, Raymond, no longer excommunicate, returns, and Guida, Seremonda's sister and confidante, knowing his jealous nature and foreseeing deadly peril, suggests that Guilhelm shall pretend to be her suitor. Meanwhile Raymond, whose faith in Guilhelm has been absolute, is stirred to suspicion by the hints of a wandering troubadour, and cross-questions his page so closely that the latter is forced to take refuge in the subterfuge agreed upon. Thereupon Raymond joyously approves his suit and straightway leads him to Guida, bidding him press it to a happy issue. Then he summons Seremonda to witness the union of the happy lovers, at the moment when Guida, in pursuance of the agreement, greets Guilhelm with a kiss. This is a new, ingenious, and striking situation, which precipitates the final catastrophe. Seremonda, sure of Guilhelm but doubting Guida, and fearing death less than Raymond's embraces, resolves to bring about a duel between her lover and her lord, confiding in the former's prowess. At her behest, during a feast in the castle hall, Guilhelm, when called upon to sing, makes open and unmistakable avowal of his passion, provoking thereby a furious attack from the maddened count, who falls in a fit after a vain attempt to kill him. This is a dramatic scene of great theatrical value.

In the final act Seremonda and Guida tremblingly await the final crash. They know that in the morning Raymond and Guilhelm, armed each with a boar spear, have gone together into the forest, and that Raymond has returned alone. Of his companion's fate he will say nothing, but presently gives the signal that summons all to the evening banquet. When Seremonda refuses food, he begs her to partake of a special dish prepared by his order. It is, he says, the heart of Guilhelm, whom he had killed when he would not defend himself. Thereupon Seremonda quickly leaps from a window into the raging sea. And Raymond, bewailing the curse that makes him kill what most he loved, strikes a dagger into his own heart and so dies.

This bald synopsis, of course, robs the story of all its freshness, charm, and power, but reveals enough of its general nature to show that in design and motive it is infinitely superior to the general run of modern melodramatic romances. This is no machine-made structure of conventional sensations, but true human drama arising out of the conflict of character and circumstance, romantic and pictorial, but entirely logical and natural. The one touch of mediæval savagery in it is appropriate to the period and has abundant warrant. Each personage is distinct, vital, and psychologically consistent. Raymond, maniacal in jealousy, is, in his milder moods, not entirely unsympathetic. He is brave and generous. Guilhelm is a fine type, innately noble and thoroughly virile. Seremonda is a feminine study of rare fidelity. Guida, an admirable foil to her, is equally well sketched. The subsidiary persons—the troubadours, the mute squire, the landlord and his waitress, the priest, and others—are etched in with the surest sense of contributory effect. Nothing is superfluous to the main theme, which is pursued with an intentness and rapidity seldom if ever equalled in recent drama. That the "Red Wine of Rousillon" is a remarkable work, both in the literary and dramatic sense, is certain. That it might be made as effective upon the stage as it is upon the printed page there is no good reason to doubt. Whether actors could be found to-day to do it justice—rooted as it is in those elemental emotions which plumb acting capacities to the depths—is another question altogether.

J. Ranken Towse.

"SHERLOCK HOLMES."

Very welcome in a theatrical season which has so far been conspicuous principally for its failures is this revival at the Empire Theatre under the Frohman management of a well-tried favorite. The play is so well known that comment on its merits, which are many, or on its defects, which are honest and obvious, is superfluous. William Gillette is the play, and custom has not staled the smooth perfection of his performance. After seeing Mr. Gillette's interpretation of the character, even in re-reading the tales, his is always the figure that presents itself to the mind's eye, his the low, throaty tones that one hears when the great detective puzzles the amazed Watson with one of his platitudes of deduction. Mr. Gillette has surrounded himself with an entirely competent cast. Edward Fielding plays the Dr. Watson acceptably and with commendable self-sacrifice refrains from emphasizing the fatuity of that character; Joseph Brennan is a good Professor Moriarty; Edwin Mordant plays James Larrabee, and Helen Freeman Alice Faulkner.

S. W.

Music

A PROLIFIC MUSICAL SEASON.

For a number of years October was not one of the musical months in New York. Last year eight concerts were given in Aeolian Hall during that month. This year the number is twenty-two, while for November the bookings are forty-eight, as against thirty-two last year. This is not the only straw indicating that the present metropolitan season will be the busiest on record. With the exception of a few notabilities (several of whom are held by military duty or duress), the leading professional singers and players of Europe are on this side of the ocean, not a few of them having come over last season and remained here—a novel experience for nearly all of them. Europe has little more use for them now than it had during the summer. In France, public musical activity seems to have ceased entirely. England has had spasmodic attempts at opera, and there are a considerable number of concerts, many of them for the war funds; the venerable Philharmonic Orchestra is to be conducted (and probably supported) this winter by that millionaire Mæcenas, Thomas Beecham. In Germany, operas and concerts have been and are being heard in considerable numbers, but the prices of admission are a mere fraction of what they are in ordinary times, while emoluments for the artists are on the same reduced scale; so we have them with us, ready to appear in operas, or concerts, or both, at the usual American rates.

Concert managers, interviews with many of whom are printed in last week's *Musical America*, seem to agree that the present season will be not only busy, but prosperous, for the deserving ones. Where there are so many great stars, the minor ones must suffer, and it is probable that more bookings even than last year will be cancelled. The operatic outlook is better than it was last season, when the Metropolitan was the only operatic organization left in this country. Campanini has organized a new company for Chicago, with many big artists and the promise of success in consequence. Boston has probably lost its own company for good, but some of its leading singers, with others of note, are in the new organization gathered by Mr. Rabinoff and called the Boston Opera Company. Three things give special distinction to this organization, which opens an interesting season of two weeks at the Manhattan Opera House next Monday: the presence of such distinguished artists as Felice Lyne, Maggie Teyt, Maria Gay, Tamaki Miura (a genuine Japanese soprano, cast for the title part in "Madama Butterfly"), Riccardo Martin, Zenatello; the unique scenery that distinguished some of the operatic performances given in Boston; the co-operation of Pavlowa and her company, which adds the attraction of first-class ballet and gives an unprecedented chance for a brilliant presentation of the ballet music

in "Carmen" and "Faust." The appearance, next Monday and the following Saturday, of this great Russian dancer as the Dumb Girl of Portici (in an opera better known over here as "Masaniello") will be one of the great events of the musical season. Wagner called this opera by Auber "a work of national importance such as no country can produce more than once." To the present generation of American opera-goers it will be a novelty.

Three novelties are promised by the Metropolitan Opera Company, which begins its performances on November 15. One of these, Bizet's "Pearl Fishers," is not altogether new here, as Emma Calvé appeared in two scenes from it at the Metropolitan a number of years ago; but in its entirety it will be a novelty. Borodine's "Prince Igor," deferred from last season, is the second. To the third, the "Goyescas" of Granados, special interest attaches, as it will be the first Spanish opera to be sung in Spanish and by a Spanish cast at the Metropolitan. The regular repertory will consist largely, as usual, of operas by Wagner, Puccini, and Verdi. The Wagnerian operas are to be conducted by the successor to Alfred Hertz, Arthur Bodansky, formerly associated with the late Gustav Mahler. Whatever his qualifications for such a post may be, he has already won the approval of most music lovers by declaring that he will make cuts in the Wagner operas, so that they may end shortly after eleven o'clock, following, in this matter, the precedent of Anton Seidl and of Hans Richter.

The failure of Arturo Toscanini to return need not be regarded as a calamity, for while he is undoubtedly the best of living operatic conductors, Giorgio Polacco, who succeeds him, is a close second, being, in fact, his superior in some respects which will be commented on as the season progresses. The task of conducting the Italian and French operas will be shared with him by Gaetano Bavagnoli, who will be new to this country. The general public is more interested in the singers than in the conductors, and it may be said that, while the absence of several favorites for the whole season, or part of it, is to be regretted, the list of artists is nevertheless impressive.

It is a singular fact that while the opera is able, under present conditions, barely to hold its own, and recitals, except by the greatest of artists, are less profitable than of yore, our orchestral societies are drawing larger audiences than ever before. The Philharmonic, the New York Symphony Society, and the visiting Boston Orchestra will each have a record season, and some interesting novelties are promised, including Strauss's new "Alpine" tone poem. Both Mr. Stransky, of the Philharmonic, and Mr. Damrosch, of the Symphony Society, have promised to pay particular attention to works by Americans. The Oratorio Society will produce "Joan of Arc," by Bossi, for the first time in America, besides uniting with the Philharmonic for a Bach-Beethoven festival. The minor choral and orchestral societies all remain in the field, while chamber music will be represented, as usual, by the Kneisel and Flonzaley Quartets, the Margulies Trio, and other organizations. As most givers of recitals appear also with the leading orchestras, one can get an approximate idea of their abundance by scanning the prospectuses of those orchestras. The Philharmonic has the longest list; it includes the following: Violinists—Fritz Kreisler, Arrigo Serato, Maximilian Pilzer, Francis Macmillen. Pianists—Yolanda Mérö, Harold Bauer, Ernest Hutchesen, Percy Grainger, Ernest Schelling, Ossip Gabrilowitsch. Violoncellists—Pablo Casals, Beatrice Harrison, Leo Schulz. Vocalists—Olive Fremstad, Emmy Destinn, Melanie Kurt, Julia Culp, Elizabeth van Endert. Paderewski, who plays and speaks on Saturday afternoon in Carnegie Hall for the benefit of the Polish Relief Fund, will appear later in the season at one of the local concerts of the Boston Symphony Orchestra.

WAR-TIME SPECULATION.

Is such a spirit of extravagant speculation as has been prevailing in the United States something anomalous for the period of a great and devastating war, or not? In ordinary conversation, one hears all sorts of answers to the question. A little while ago, the assertion was suddenly made in many quarters that a great war is not only always accompanied during its progress by a "speculative boom," but that a similar "boom" on the Stock Exchange and in general trade invariably follows the ending of the war.

It was not at all difficult to show that the second of these assertions was the reverse of the facts. Every prolonged and devastating war in Europe—notably the Napoleonic conflict which so closely resembled this one—has been immediately followed by a period of falling markets, great derangement of credit, and desperate hardship. The one seeming exception to the rule occurred in the United States after 1865; but the opening up of the West had at that time created most unusual opportunities for prosperity at the very termination of the war. Furthermore, paper inflation was continued. Yet even in the United States, the fall of commodity prices from a statistical average of 216¾ in 1865 to 191 in 1866 greatly emphasized the reaction, on our own financial markets, of the London panic of the last-named year.

But as to the general statement regarding periods of excited speculation in the period of war itself, the truth of that is attested by all history. There were repeated occasions in our Civil War when speculation in both stocks and commodities was rampant; and the speculation did not always time itself even to Northern victories. Cotton was naturally a focus of the wildest gambling. Gold was dealt in so actively at a premium (or, to put it another way, the discount on the currency in gold fluctuated so widely) that a special exchange for dealing in it was established at New York. But it was not merely war currency, war materials, and blockaded commodities, in which the market speculated. Railway shares, city lots, canal enterprises, had at intervals the most furious sort of advances; the Vanderbilts and the Drews were laying the foundations of their great fortunes in the speculative railway market of the day.

What our Civil War witnessed in the middle of the nineteenth century, the Napoleonic war witnessed at its beginning. That speculation in wheat should have been very violent, when France and England went to war, need have surprised nobody. It was not so easy then to draw on other foreign producing countries when the wheat supply at home had failed or had been blockaded. Blight and mildew on England's harvest of 1804, the year after the great fight had begun, sent English wheat from $1.50 to $2.50 per bushel. German wheat, usually sold around $1.50, rose to $10 in 1805; Spanish wheat was said to have sold in 1804 at six times the price of 1800.

These were partly the accidents of seasons. But the market for war materials in the Napoleonic wars had the same experience as in 1914 and 1915. Hemp, an article greatly needed by the British navy, rose from $290 a ton in 1807 to $590 in 1808, when Russia was cut off. Copper, with which warships were sheathed, got to $1,000 per ton in England in 1805. The price of lead doubled. Timber for ships, iron for cannon, canvas for sails, touched wholly unprecedented prices.

All this might have been easily enough explained by scarcity of such commodities, together with abnormal demand. The speculation of 1804 and the next few years would merely resemble last year's speculation in wheat and chemicals and dyestuffs, and this year's in raw material of explosives. But the destruction of capital in war might, it would be supposed, have kept down speculation in shares of other companies than those connected with manufacture of such articles. Yet this was not what happened, even in the Napoleonic period.

The year 1807 was one of great political disaster to England. Napoleon had crushed England's ally, Prussia, and had captured Warsaw from her other ally, Russia. In July of 1807, both of those Continental states made terms with Napoleon, who thereupon declared a blockade against England which excluded her from direct commerce with every country in Europe except Sweden. Yet it was in that very year that a great stock speculation broke out in London—described by an old historian as "producing almost universal excitement; leading, as usual on such occasions, to hazardous adventure, and extending itself to new projects of various kinds, such as canals, bridges, fire offices, breweries, distil-

leries, and many other descriptions of joint-stock companies." Fortunes were made and lost on the London market, even in those days of smaller things.

So that the speculation now under way, at the crisis of a doubtful and immensely destructive conflict, has at any rate historical precedent to warrant it. The question will naturally be asked, however, why London should not be the focus of such speculation now, as well as then, and why the whole fury of the present movement should be witnessed in the United States. Perhaps the answer is that the London Stock Exchange (which was open for all business during the conflict with Napoleon) has been under the closest restriction since it reopened last January; perhaps that the belligerent Governments have virtually commandeered their markets' capital for the war loans; perhaps that New York in the war-time of 1915 is what London was in the war-time of 1807—the financial centre of the world.

Pancoast's English Prose and Verse
From Beowulf to Stevenson
By HENRY S. PANCOAST. xxii+816 pp. 8vo. $1.75

This is a collection of readings intended to supplement a general course on the history of English literature. The author's previous books of readings—*Early English Poems*, *Standard English Poems*, and *Standard English Prose*—have been used as the basis, but a large number of new selections have been added, while others, especially in the period before Chaucer, have been omitted.

The more important writers, especially those of the Victorian period, have been given a relatively larger space. The selections from the Old and Middle English period are translated or modernized.

There are about 750 selections, the space given to prose and poetry being nearly equal. The number of authors represented is about 225.

The Letters of
Washington Irving to Henry Brevoort
1807—1843
Edited, with an Introduction, by
George S. Hellman, A.M.

Portraits and Facsimiles. 2 Vols. Octavo. $10.00. 225 Numbered and signed copies only, for sale.

From the New York Times: "Those who delight in getting more intimate glimpses of the great writers . . . will find golden treasure, treasure never before spread before the eyes of the general reader, in these letters just published by the Putnams."

A great number of these letters have never before appeared in print, and deal at first hand with such events as the War of 1812, the trial of Aaron Burr, the downfall of Napoleon, and intimately with such acquaintances as Sir Walter Scott, Dolly Madison, and others.

This week's issue of THE NATION comprises 11,226 copies: of this 8,140 go to paid subscribers and 1,021 go to exchanges or are sent out as free copies. The average weekly newsstand sales during the first eight months of the year 1915 were 811; August average, 739 copies.

In view of the large library and college and family circulation of THE NATION, it is safe to assume that not less than 30,000 people read it each week.

The Nation

NEW YORK, THURSDAY, OCTOBER 28, 1915.

Summary of the News

Efforts at the eleventh hour to attach Greece to the cause of the Allies have proved unsuccessful. Announcement was made on October 21 that Great Britain had offered to Greece the immediate cession of the Isiand of Cyprus if Greece would intervene in the war on the side of the Allies, and it is understood that other concessions, territorial and financial, were also offered. Nevertheless, on October 23 the Greek Government decided to reject the offers and adhere for the present to a neutrai policy. An identical note, published in all the Greek papers and said to be an exact representation of the Greek Government's point of view, was reproduced in the New York papers of Sunday. The note emphasizes the right of Greece to regulate her own fortunes, draws attention to the benevoience of the neutrality maintained towards the Allies, and indicates that in the opinion of her miiitary experts the Allied forces sent to the assistance of Servia are not sufficient for the purpose.

The attitude of Rumania causes as much speculation as it did in the early months of the war. In a Reuter dispatch from Odessa, published on October 21, considerable importance was attached to the military mission which Rumania has sent to France, and dispatches of Monday's date recorded a completc interruption of commercial relations between Rumania and Buigaria. Messages from Rome, thc capital which would naturaliy be in closest touch with Bucharest, are alternately hopeful and despondent regarding the ultimate decision of Rumania. There have been persistent rumors, which are to be accepted as rumors only, of internal dissension both in Rumania and in Bulgaria.

On the military side, reports of the campaign in Servia have been as conflicting as were those of the progress of the German invasion of Belgium at the beginning of the war. An official report of the War Office at Nish, issued on October 20, pointed to the serious situation of the Servian army, menaced on the north by the Austro-German invasion and on the east by the Buigarian, and undoubtediy emphasized the gravity of the position as an appeal to the Allies for instant help. Since then, so far as can be gathered, the situation appears to have been somewhat improved by the fact that the Allies, as officially announced by the French War Office on Sunday, have been able to effect a junction with the Servian troops north of the Greek frontier, and late last week a severe defeat was inflicted on the Bulgarians in this region. This victory has been followed up, and the Bulgarians, according to recent reports, have retreated on Strumitsa, which has not, as erroneously recorded last week on the strength of news reports, as yet fallen into the hands of the Allies. Further to the northwest the Bulgarian invaders have occupied Uskub. The Austro-German invasion continues to make progress at a slow rate. Nevertheless, only a few miles separate the Teutonic forces from their Bulgarian allies. Rumors are prevalent that Gen. von Mackensen has not at his disposal forces sufficient for the task in hand, and the determined offensive inaugurated last week by the Italians on the Isonzo front and the assumption of the aggressive by the Russians along a considerable part of their line are to be interpreted in the light of Servia's needs. The fleets of the Allies are reported to have caused much damage by the bombardment of Porto Lagos and Dedeaghatch on the Ægean coast of Bulgaria.

The full report of Brand Whitlock, United States Minister in Belgium, concerning the execution of Miss Edith Cavell, the English nurse who was condemned to death by a German court-martial in Brussels for having assisted soldiers of the Allies to escape from Belgium, was published in the papers of October 22. In our editorial columns will be found our comment on this latest manifestation of *Kultur*. The defence of the execution issued by the German Under Secretary for Foreign Affairs was published in Monday's papers.

Two diplomatic documents have been published recently. On Sunday the New York *Times* reprinted from the *Frankfurter Zeitung* of October 8 the text of a manifesto issued by the Bulgarian Government to explain Bulgaria's reasons for joining the Teutonic allies in the war. On Tuesday the Ministry of Foreign Affairs of Austria-Hungary made public another Red Book entitled "Diplomatic Documents Concerning the Relations of Austria-Hungary with Italy," covering the negotiations between the two Powers from July 20, 1914, to the time when hostilities were commenced.

Interesting reading is afforded by the confession of a person called Robert Fay, who declares that he is a lieutenant in the German army and was sent to the United States by the German secret service for the purpose of blowing up ships carrying ammunition to the Allies. Fay and an accomplice were arrested in New Jersey on Saturday, and their arrest and the discovery of documents in their rooms has led to the arrest of others charged with conspiring against the United States. Fay in his confession was careful to emphasize that neither Captain Boy-Ed nor Captain von Papen, the German naval and military attachés at Washington, had approved his scheme.

Interest in submarine warfare has shifted from the North Sea to the Baltic. During the past week there has been no record of any activity on the part of German submarines, the only naval success achieved having been the shelling by error, on October 21, of a Swedish trawler by a German submarine. In the Baltic, since we wrote last week, British submarines have torpedoed twelve German merchant vessels and one cruiser. The last was the Prinz Adalbert. An official statement from Berlin on Monday said that the cruiser was sunk off Libau and that only a small portion of the crew was saved.

By an Order in Council published on Monday the British Government declared its intention no longer to be bound by Article 57 of the Declaration of London, which states that "subject to the provisions respecting the transfer to an enemy flag, the neutral or enemy character of a merchant vessel is determined by the flag she is entitled to fly." The meaning is that the status of merchant vessels henceforth will be determined not by the flag, but by ownership.

The President's proclamation designating Thursday, November 25, as Thanksgiving Day was made public on October 21.

Elsewhere we comment briefly on the resolution "firmly opposing" the reëlection of President Wilson, adopted at Worcester, Mass., on October 24 by a convention described as representing forty-six organizations of German-Americans of Massachusetts.

Shipments of grain, ammunition, merchandise, and other goods sent out from twelve ports alone last week reached $98,777,000, breaking all previous weekly figures of exports by $25,000,000.

The situation in Mexico appears to be improving since the recognition of Carranza. Announcement was made by the State Department on Saturday that Carranza had formally assumed responsibility for the lives and property of foreigners in all parts of Mexico. The Villistas, doubtless as a result of the embargo on the export to them of arms from the United States, which was declared on October 20, seem to be weakening.

The illness of Premier Asquith has served the useful purpose of bringing temporary calm to the political situation in England. Sir Edward Carson, whose resignation from the Cabinet seemed about to precipitate a crisis, made an explanatory speech in the House of Commons on October 20.

The Parliamentary elections in South Africa have resulted in the return by a substantial majority of the parties supporting General Botha. The results, as cabied, were as follows: Botha's party, 54; Unionists (supporting Botha), 40; Independents, 5; Nationalists, 27; Labor, 4.

Closely following on the report, recorded in our issue of October 7, of the successful transmission of wireless telephone messages across the continent from the Atlantic to the Pacific Coast, came the news, on Friday of last week, that telephone communication by wireless had been achieved between Arlington, Va., and Paris. Unfortunately, the French Government has found it necessary to interrupt the experiments on account of interference with important military messages.

Counter-charges against the barbarous Armenians for their dealings with defenceless Turks, which in vigor leave nothing to be desired, were filed in Washington on October 21 by the Turkish Government. Dispatches from Washington on the following day stated that confidential advices had been received by the State Department that the German Government had officially made efforts to alieviate atrocities upon Armenians in Turkey, but without result.

The Week

The British censor may be stupid, but he has at least occasional gleams of sense. Thus it was sensible to let through a long series of quotations from the German press on the subject of a possible peace. They are not, perhaps, of great direct value, but they are of high interest as giving us an indirect light upon the state of mind of the German people. Take, first, the fact that a general order has gone forth from Berlin to the press and public not to discuss the terms of peace. This is vouched for by the *Frankfurter Zeitung*, which admits that it may rouse a certain degree of apprehension "among laymen and the less well informed," but adds that the reason for it will be understood by "anybody who contemplates the present politico-military situation, and the present state of feeling in the camps of our enemies." These words may be thought rather Orphic, but one thing is plain: the German newspapers and the German people would not be commanded to refrain from discussing peace unless they were thinking a vast deal about it. That they are, and that the desire for an end of the war has mounted in Germany, until it has become almost a passionate longing, there is plenty of evidence. The thing was explicitly testified to only a few days back by Maximilian Harden. Indeed, one would scarcely need testimony to make it certain. The minds of Germans are not so different from those of other races. The terrible losses which Germany has suffered in the war are known and felt throughout the Empire. The destruction of German foreign trade, the sterilization of her splendid mercantile marine, the dislocation of her industries, are no secrets. Upon the intellect and heart of Germans they cannot but make much the same impression that they would upon any other people.

Every American will read with disgust and a sense of injury the confessions of Robert Fay, the avowed German lieutenant who boasts of his efforts to blow up ships bound out of New York harbor with ammunition for the Allies. Even the *Staats-Zeitung* cannot commend this, and speaks feelingly about the "undesired adventurers" that follow in the train of a great war. But is an officer of the Kaiser's service to be dismissed as an adventurer? True, the *Staats-Zeitung* neither gives Fay a military title nor admits in its news account that he has any connection with the military service. Plainly, this question of Fay's identity is the very first thing to establish. Some of his story is obviously fishy. But if it really appears that he is a German officer sent over here to commit dastardly crimes with the knowledge and consent of his superiors, the State Department will doubtless lose no time in making a few remarks to Berlin by way of Ambassador Gerard. Coming on top of the indictments of Meloy and Rintelen, as to whose malign activities there is already plenty of evidence, besides proof of passport frauds, it is the sorriest kind of reading, and should make Germans everywhere hang their heads.

It is, of course, gratifying to know that Fay's confession frees the two much talked-of German Attachés from any complicity in his plans. He confided in them, he says, and they advised him that if he were going to do that sort of thing he should operate in Canada. That this is a true statement no one can, of course, contend in the absence of further proof. It would seem as if it were at least the duty of the Attachés in such an event to notify the Government and the police authorities of the proposed plan of campaign of Fay. Moreover, if he is an officer, he must have been under their control, and they could easily have ordered him to refrain from any such undertaking. The readiness of Fay to tell all is another suspicious circumstance in regard to his story, but wherever the truth lies, we repeat that the whole incident is gravely unfortunate. The attitude of Germans, and some German officials, in this country has been wrong from the very beginning. It makes no difference whether they believed that the United States was unfriendly to their country and working for the Allies, or not; that gave no one the right to violate our laws and to undertake to extend the warfare of Europe to our country, and that is just what has been done. We believe that when all the facts of which the Government is now in possession are laid before the American people, a great wave of indignation will sweep over the land. That there could be nothing more stupid and hurtful to the German cause than the activities of these conspirators is so obvious to any person of sense that the wonder of it increases day by day.

Great Britain's offer of Cyprus to Greece, as the price of joining the Allies in the war, was but one step more in the general process of carving up the earth's surface which has been going on tentatively ever since the war began. The bribe held up before the Greek Government was but one of many that have lately been dangled before it and all the Balkan kingdoms. If it be said that the offer betrayed great anxiety on the part of England, the reply is that this is undoubtedly true, but that equal anxiety has been shown by Germany and Austria in seeking to purchase the coöperation of Bulgaria. Exactly what they have promised her is not known; but we have the statement that a proclamation has been issued to the Bulgarian troops saying that the German Kaiser has guaranteed that Bulgaria is to be the dominating country in the Balkans. Such she undoubtedly would be if Servia and Greece were crushed, and Rumania stood off; and she might hope to remain dominant until it suited the Kaiser to bring her to his own heel. The British proposal to cede that island to Greece shows again what changes the whirligig of time brings round. When England got Cyprus, behind the back of the Congress of Berlin, by means of a secret treaty with Turkey, the English were, as they had been for years, the fast friends of the Turks and the enemies of Russia. To-day, England is at war with Turkey and fighting side by side with the Russians. At the time of the acquisition of Cyprus, Bulgaria was hailing Russia as her emancipator. Now she is at war with the Czar, although a statue to Alexander II, the Russian liberator of the Bulgarians, stands in Sofia. Such astonishing reversals of national attitude seem to furnish material for alienists. *Totus mundus insanit.*

Meanwhile, our former Minister to Argentina, Mr. Sherrill, conceives that this would be a favorable time for the United States and the other American republics to call upon the European nations to surrender all their possessions in this hemisphere. The demand would be made with great politeness, and in a spirit of the warmest friendship; and Mr. Sherrill seems to think that England and France and Holland would courteously grant our request. As a proof of magnanimity on the part of the United States, we would not ask for Canada, since that Dominion is self-governing, and could be independent if she willed it. All the outlying islands, however, and the Guianas, with every "key" and base or station that any European Power may possess in Western waters, are to be graciously delivered over. This project might perhaps be considered if all the Governments in the world had nothing else to think about. They are

not, however, at this hour so short of problems that they will be anxious to add to the number. Mr. Sherrill does not, so far as we can judge from the newspaper report of his address, allege the Monroe Doctrine as the all-sufficing argument for whatever we want to do. Whatever the Monroe Doctrine does or does not mean, every form of it has explicitly excepted the existing European possessions in this hemisphere. So that is left out. The suggestion is merely that this would be a happy conjuncture of which to take advantage in order to make the war cover literally the whole earth. But about the desirability of this, we fancy that Mr. Sherrill will find his countrymen—those of them, at least, who take the trouble to give any thought whatever to his proposal—decidedly not so light-hearted as he seems to be.

Sir Edward Carson's reasons for resigning from the Cabinet are merely excellent reasons why he never should have entered it. He had no personal disgusts to allege. He declares that party politics had not been so much as whispered about in the Cabinet. Nor was it on a question of principle that he broke with his colleagues. It was solely a difference of opinion regarding the policy to be pursued in the Near East. Even as to that, far be it from him to say that he was right and the rest of the Cabinet wrong. Only, he could not bring himself to stay. But, obviously, one of such temper is not a man for any Cabinet. If he is not ready, as Gladstone used to phrase it, to put his mind into the common pot, the Cabinet is no place for him. He may at any moment be outvoted, like other members, on one question or another, so that his resignation, on Sir Edward's theory, would be always pending. Of such timber no Cabinet can be built. Carson's resignation of office, on the grounds he alleges, only shows that he never should have accepted it.

Mr. Paderewski's eloquence as a speaker and his virtuosity as a pianist are reported to have netted $12,000 for the Polish Relief Fund. But this is only a trifle in view of the heartbreaking needs of the Poles in the entire section which they inhabit. For them hope deferred truly maketh the heart sick. There is no word out of Berlin or Vienna or Petrograd to say what their fate shall be. All talk of the early reëstablishment of the Polish kingdom under a Hapsburg Archduke has ceased. If for the moment the fighting has swept past—and over —the bulk of the Poles, there is no assurance that it will not return. Meanwhile, with winter approaching they must build upon the wreck of their homes and their farms as best they can. The world, for obvious reasons, has not found the Polish misfortunes so dramatically appealing as those of the Belgians; yet the need is if anything greater.

Immediate and earnest attention should be given by the Government to the grievance presented in the statement of Edgar F. Luckenbach, president of the Luckenbach Steamship Company. It certainly seems amazing that there should be an increase of freight rates on the Panama Railroad at the very time when the obstruction of the canal is upsetting all plans based upon its continuous operation. Mr. Luckenbach declares that the new rail rates at Panama will mean a loss of from $600,000 to $700,000 a year to his company if it continues in the coastwise traffic—traffic between our Atlantic and Pacific coasts—which has been its business. It would seem as though the La Follette act had done enough to disturb and displace American shipping business, without the addition of this fresh handicap. If the facts are as Mr. Luckenbach represents —and his statement looks very plain and straightforward—a very unjust and ill-considered policy has been adopted, and the whole question should be thoroughly looked into before serious and lasting mischief is done. Incidentally, the affair is a reminder of the kind of dangers that attend Government ownership and management of transportation facilities.

The first train over the Canadian Northern, to Vancouver, following so closely the opening of the Grand Trunk to Prince Rupert, is but one index of a change reported over all the Canadian West. The Pacific slope is made a front door, instead of a back door, in anticipation of the full utilization of the Panama Canal. Formerly, the biggest elevators were built east, the medium-sized ones in Alberta, Saskatchewan, and Manitoba. Now the largest are going up at points in the far West, the three transcontinental roads are building large repair shops at Coquitlam, Prince Rupert, and Port Mann, and the big traction and wire companies of Birmingham, Cleveland, and Pittsburgh are looking over the region for sites. From Fort William on Lake Superior to points in the Alberta wheat fields is from twelve hundred to fifteen hundred miles. From the Pacific ports to these points is less than half that distance. The Pacific ports are always open, while the Great Lakes close so early that most Alberta grain has to go on to St. John. With the rates by water one-tenth those by land, much even of Manitoba and Saskatchewan grain may be sent west.

This is a dizzy time for Republican Favorite Sons. After being frowned upon for a generation, they are suddenly seized by the hand and pushed into seats right next the fire. The more the merrier, exclaims Paterfamilias Hilles, while the flames brighten and each member of the cheerful circle sees "1916" glowing in the embers and twisting tantalizingly in the ascending smoke. How different from a short four years ago, when the space in front of the fire was kept cleared for a big arm-chair. How different from the time before that, when a new and powerful steam-roller puffed threateningly up and down before the door. What heart would not beat faster at the slogan, A fair field and no favors and may the best man win! Only, there must be a best man, of course, and suppose that by some mysterious casting of horoscopes the name of the best man was revealed to a select few before the race really started. Suppose that the select few could not keep the sacred knowledge to themselves, but went about whispering it in the ears of the judges. Suppose that the judges did not feel like flying in the face of destiny, and announced the name of the winner just as he and his competitors were about to start around the track. But this is to anticipate. For the moment, every Favorite Son has the happiness of picturing himself enjoying the fatted calf. It would be a pity to spoil the dream.

The Massachusetts German-American organizations in convention last Sunday showed great skill in avoiding action calculated to injure the chances of any aspirant to public honors. The resolution adopted completely allayed any fears that either the Republican or the Democratic candidate for Governor may have entertained that he might be made the recipient of an endorsement. "We do not desire," says the resolution, "as an organization to endorse any candidate for Governor." Having thus avoided giving anybody a grievance at home, the convention did even better by President Wilson. In his case the convention not only withheld endorsement, but put itself on record as "firmly opposed to the reëlection of Woodrow Wilson as President of the Unit-

ed States." This circumstance may not go very far towards helping to reëlect Mr. Wilson, but every little helps.

An interesting correspondence has been going on between the Governors of Pennsylvania and South Carolina. It concerns a negro accused of murder, whose extradition is asked by the Southern State. Gov. Brumbaugh has been courtesy itself, but has wanted to assure himself that the accused would have a fair trial. He does not forget that his own State has been disgraced by outbreaks of the mob, but he has felt a certain responsibility upon the point nevertheless. The Columbia *State*, in reviewing the correspondence, makes no attempt to palliate the lynchings that have occurred, but pleads that they have been exceptional. Judges and juries usually give full justice to a negro on trial. It is candid enough to admit, however, that justice is not quite evenhanded as between black and white, but holds that this is not because of over-strictness towards the negro, but because of over-leniency towards the white. Judges are pretty sure to see that the negro gets his legal rights, no more and no less, but are not so certain to see that the white man does not get more than his rights. It hardly need be said that the lynching of an extradited negro would make it embarrassing for the State in which the lynching occurred to ask for the extradition of another one.

To future generations it will make little difference just when wireless telephony began to give promise of realization, but ours may well have a thrill of gratification over the fact that the conversations between Arlington and Paris have taken place at just this time. Not all thought and all energy, in those awful years, history will record, were spent in devising or carrying out means of destruction and slaughter. There was a residuum of effort left for better things. While General Staffs were studying complicated problems and planning grand movements, other groups of men were working as hard upon problems no less baffling, but for results that would bring peoples closer together rather than drive them further apart. The wireless telephone, even in its present unfinished form, is the outcome of a ten years' war conducted in thoroughly organized fashion and won by the slow method of conquering one difficulty and then another. If its development has lacked the dash and romance which have made the story of some inventions so interesting, it is not wanting in other qualities which marked also the most notable American experiments of recent years, those of the Wright brothers. One of these qualities, persistence, is not usually placed so high as it deserves among our native traits.

The city of Montgomery, Ala., was managed by five commissioners. The administration of affairs being unsatisfactory to the people, the question arose of a reduction of the five commissioners to three. No referendum was had, but the question became an issue in the election of representatives to the Legislature, and in this indirect way Montgomery declared in favor of the smaller board. Her sister city of Birmingham meanwhile was managed by three commissioners. The administration of affairs being unsatisfactory to the people, the question arose of an increase of the three commissioners to five. The Birmingham delegation in the Legislature agreed to leave the decision of the question to a referendum, and last week the referendum was held. A "clear majority" was given to the proposal to change from three commissioners to five. Morals are drawn in Alabama from this tale of two cities. One of them is that Americans have a "restless feeling" towards their city government; another, that the commission form is not always a glittering success. But the great lesson is overlooked. Is not the ideal number of commissioners four?

Both in itself, and as encouraging the movement for supervision by the States of institutions granting degrees, a proposed bill creating a board in the Interior Department to set proper standards for the colleges and universities of the District of Columbia will deserve attention by the next Congress. The latest protest against low-grade institutions in Washington which abuse the title of "college" comes from the Washington Board of Trade. There have even been degree-granting or degree-selling colleges in Washington which have existed only on paper. Senator Gallinger has cooperated in drawing up the bill, which requires proof of both financial and scholarly standing. In the States, the tendency to supervision has become strong. In the last five years New Jersey, Arkansas, Michigan, Massachusetts, and Maryland have authorized bodies to exercise much the same general oversight which we have had for a longer period in New York and Pennsylvania. Collegiate Squeerses certainly ought not to be tolerated in the Federal District.

To the least vengeful, there is more than a suggestion of poetic justice in the welcome of Madero's widow in Mexico City. Thirty-two months cover the crowded time since the murder of the man who succeeded Diaz, a murder that determined nothing but the fate of the adventurer who decreed it. Amid all the kaleidoscopic changes of the past two years, with revolt within revolt, the First Chief has apparently been true to the memory of his First Chief. At last he is able, having put his enemies under his feet, to give in the blood-stained capital official welcome and more than official protection to the person who peculiarly embodies that memory. Yet not in the name of the victorious leader who has carried the banner of Madero to triumph, but on behalf of the Constitutionalist Government, did the Military Commander extend to Señora Madero greeting and the freedom of the city. Those who hope that the ascendency of Carranza will mean not only the restoration of order, but also the birth of political life, will be heartened by this emphasis upon law rather than leader. Anything else would be to kill the spirit of Madero as well as his body, and so to make a mocking of honors to his name.

Regarding the prospects of monarchy or republicanism in China, the dispatches vary from day to day. At the present moment the republicans seem to be having the better of the argument, but Yuan Shi-Kai is still described as wavering between the two, with the suspicion that it is a case of thrice refusing the proffered crown on the Lupercal. But as a matter of fact, Yuan Shi-Kai's stand has been more definite. It seems to have escaped general attention that, early in September, the President of the Republic came out firmly against monarchy. The Peking *Gazette* for September 6 gives in full the text of a message addressed the day before to the Council of State. In this statement Yuan Shi-Kai alludes to the petitions brought forward in favor of a change of government, admits that the purpose of the petitioners is patriotic and sincere, but speaks out directly:

> The duty being mine to maintain the general situation, I have to state that I regard the proposed change as unsuitable to the circumstances of the country. Furthermore, it is not uncertain that a suitable and practicable law will be devised if due consideration of the conditions of the country and ripe discussion enter into the preparation of the Constitution of the Republic which is now being drafted.

This shows the situation in a light not always reflected by the news that comes out of China.

THE CASE OF MISS CAVELL.

In the story of the trial, the sentence, the plea for mercy, and the execution of Miss Edith Cavell, as told by Hugh S. Gibson, secretary of the American Legation at Brussels, there is lacking no circumstance, save one, that might be calculated to arouse the indignation and scorn of mankind. It cannot be charged that the act of the German military governor was in violation of the German military law. It was doubtless wholly legal; Miss Cavell herself fully avowed her guilt, and indeed it appears that her noble candor furnished the military court with evidence that might otherwise have been lacking. But when this has been granted, all is granted that can be. In the straightforward, lucid, and comprehensive statement of Mr. Gibson—a statement in which no trace of passionate resentment appears except such as the simple facts inescapably infer—we read a story of brutal callousness, brought into higher relief by the mean and petty deception which was resorted to in order that there might be no possible chance for the messengers of mercy and humanity to defer, and thus possibly to balk, the fulfilment of the executioner's will. That the original blunder of invading Belgium should now have been capped with the huge mistake of putting to death an English nurse in Belgium shows how slow the German high command is to learn moral lessons. And the fact that the Kaiser has quickly pardoned other women convicted of the same offence as Miss Cavell, at once places in a ghastly light the haste and secrecy of her execution and puts the finishing touch to a deed which, in addition to being barbarous, was eminently stupid.

The English press is aflame with indignation over the deed. We may be sure that the German newspapers will reply with a chorus of invective directed against English cant, English hypocrisy. And we may be equally sure that no German newspaper—however learned its editorial staff, however familiar with English history and English literature—will quote what the great historian of England said in commenting upon a deed singularly similar to that done at Brussels last week. Alice Lisle was a woman whose life had been one of charity and good works; she had given shelter to a fugitive who had escaped from the destruction of Monmouth's rebel army in 1685. Macaulay points out "the absurdity and cruelty" of a law which makes such an act punishable by death, and proceeds:

> It is evident that nothing but a lenient administration could make such a state of the law endurable. And it is just to say that, during many generations, no English Government, save one, has treated with rigor persons guilty merely of harboring defeated and flying insurgents. To women especially has been granted, by a kind of tacit prescription, the right of indulging, in the midst of havoc and vengeance, that compassion which is the most endearing of all their charms. Since the beginning of the great Civil War, numerous rebels, some of them far more important than Hickes or Nelthorpe, have been protected from the severity of victorious governments by female adroitness and generosity. But no English ruler who has been thus baffled, the savage and implacable James alone excepted, has had the barbarity even to think of putting a lady to a cruel and shameful death for so venial and amiable a transgression.

In an age when burning alive was a legal punishment and executions for treason were the most familiar of phenomena, in a reign whose infamy stands out unique through the butcheries of Jeffreys, the execution of this pure and good woman still glares out of the pages of history after the lapse of centuries, still adds to the blackness of one of the blackest of records. In the eye of a Reventlow the killing of Edith Cavell may be a noble act; in the eyes of many of his countrymen it may appear justifiable, though abhorrent; but at least let them not charge Englishmen with hypocrisy when they give vent to fierce indignation over a deed done by their enemy to-day, the like of which, done by one of their own kings 230 years ago, they still hold in remembrance as a deep stain upon their history.

That this fresh reminder of what German militarism means—this latest term of the series which began not with the Lusitania, nor yet with Louvain, but with Zabern—will produce a profound impression upon American feeling there can be no doubt. But its effect ought not to stop there. We do not believe that many Americans take at their face value, or at one-tenth their face value, the rose-colored presentations of the blessings of German conquest to which we are occasionally treated, and of which Mr. McClellan's recent preposterous article in the New York *Times* is one of the latest examples. Yet there is among many, no doubt, a sneaking feeling that, after all, there may be something in such a view. How false the view is, even from the standpoint of the external facts, has fortunately been exposed, in the case of Mr. McClellan's article, by a number of writers. Professor Dupriez and Mr. James Gustavus Whiteley have ably shown up in the New York *Times* the ignorance and falsehood with which the article is permeated; Mrs. Harper's letter in the *Evening Post* was an effective protest. It cannot too plainly be said that, remarkable as is the thoroughness of German system, it does not by any means accomplish the miracles asserted of it, and that if the Belgians are not suffering more than they are, the chief credit is due to themselves. But that is not the main thing. The main thing is that all such defences of German conquest as that of Mr. McClellan leave out the heart of the matter.

What these apologists ask is that we shall stand agape, lost in admiration of a whited sepulchre. The trial and execution of Edith Cavell sends a flash of light into the interior, and we think no more of the whiteness of the outer walls or the smoothness of the adjacent roads or the trim perfection of the grass around the tomb. We think of the rotting bodies within, and we think of the mourning and embittered souls of those upon whom this awful cross has been laid. We think of that "slavery" of which King Albert has just spoken in his letter to the Pope, and to which he declares that his country will never consent to submit. And as we think of these things, our indignation may perhaps be permitted somewhat to overflow its narrower bounds, and include in its scope any American so forgetful of his country's ideals as to imagine that Americans can regard as compensation for the loss of all that a people hold dear the precious gift of machine-made efficiency bestowed, or imposed, by the German military hierarchy.

THE FALLIBLE EYEWITNESS.

The bitter business of war has its humorous aspects. The comic relief has been chiefly supplied by the "observer on the spot." Frequently he is a newspaper correspondent just back from a personally conducted tour along the front. Sometimes he is a professional novelist who has been driving ambulances for the Allies. Sometimes she is an American girl who studied music in Vienna and who recently spent two days in Berlin. If they would only be content to give us their personal experiences, they would be doing us a service. But they are satisfied with nothing less than the certain outcome of the war and the reconstruction of Europe. Our music student knows that von Mackensen has taken 600,000 men into Servia, and that Germany has food enough for two years. Our ambulance driver knows that the French nation has been re-born, though this is his first visit to Paris. As for our correspondents who have been all along the front, the tone is familiar. "I

have been in the trenches, I have eaten white bread and beef stew with the *pioupious*, I have seen the great gun pointing towards Metz, and I know that at Creusot there are two thousand such guns,"—note the ease with which he passes from the one gun he saw to the two thousand he did not see—"and can confidently say that the Germans will never get to Paris."

As a matter of fact, such an observer would not have known the difference if the big gun had been pointing to Verdun instead of Metz. He could not for the life of him have told whether there were two thousand men within a mile of him or two hundred and fifty thousand. A polite officer of the General Staff had to show him which end of the range-finder was the top. Nevertheless, with a Napoleonic sweep of the eye he knows that Paris is safe. It is precisely as if he said, "I have covered on foot every inch of the ground from the Aquarium to Fulton Street, I have seen the crowd on the Curb, I saw the men working on the twenty-second story of the Equitable Building, and I know that the Federal Reserve Bank has made financial panics impossible for all time."

Your eyewitness ceases to be amusing and becomes something of a nuisance when he starts to draw "lessons" from his experiences and begins to apply them at home. For instance, to have been caught by the war in one of the capitals of Europe immediately qualifies a man to write on Preparedness in America. Such an observer sounds a call to arms in the November *Century*. He is one of those who "know what invasion means," who saw "proud cities of yesterday, to-day smouldering in ashes," and "nations of happy artisans and farmers reduced in a twinkling to a starving mob," panic, destitution, insane fear. All this the writer may have seen, but it does not entitle him to draw a map of the Eastern United States and trace a line from the Canadian border to Newport News through the Adirondacks, the Catskills, and the Blue Ridge, and assert that "such a line, once occupied, could easily be held by 400,000 German, British, or French troops against any army in the world." The reason is obvious. In the first place, the transition from the horrors of invasion to the requirements of strategy is too sudden. In the second place, when our writer speaks of military affairs in Europe, he is a very poor observer indeed. As for example:

> The deadliness of modern weapons which makes it possible to defend a frontier with fewer than 2,000 men per mile.

The Russians had at least 5,000 men per mile in Galicia and could not hold.

> It is a well-known fact, for instance, that Germany has for more than eight months held the western battle line of nearly six hundred miles with fewer than 900,000 men.

The fact is that Germany has at least twice that number of men in the west.

> The territory of the United States lying east of the dead-line comprises only about 100,000 square miles, or less than half the total area of France.

This requires the services of an arithmetician. If Germany, with nearly two million men, holds less than 10,000 square miles in France, which lies just across the border from Germany, how many men would it require to hold ten times the amount, 4,500 miles from Germany across the Atlantic? But there is no need of harping on details. Our observer may have seen what he saw. As an advocate of preparedness he is no better than another.

Greater weight attaches to the observations of a writer in the New York *Times*, a former Socialist and believer in internationalism whose experiences in the war hospitals have taught him that the brotherhood of man is still far off. After carrying wounded soldiers under fire, "bandaging the stumps of arms and legs," eating and sleeping within the sound of shell fire, he became convinced that original sin is still in man. We have here an apparently sincere account of a kind of psychological conversion which the touch of actual experience often does work; the history of the Saints is replete with such spiritual changes. To the extent that the writer, moved by the horrors of invasion, is determined that his own nation shall be spared its horrors, the argument is sound. But here, too, the observer succumbs to the temptation of generalizing beyond his observations:

> For instance, I found that there is such a thing as a French national spirit.

We at a distance have always known that it was there, just as there is a British, German, Russian, Italian, Servian, and Bulgarian national spirit.

> I know that it has never once, through the victories and reverses, flagged or wavered for a second.

This is rhetoric, because every national spirit flags and wavers under disaster, and recovers with success. From the observers who reported the Kaiser's hair turning white after the battle of the Marne to the observers who describe the French national spirit, there is a great deal of "knowing" things that the observer really does not know. When he describes his personal relations to war, he is useful. When he begins to generalize about humanity, he creates confusion. When he begins to write about preparedness and the geography of the Appalachians, he gives one a headache.

"CHANCES" OF THE CONSTITUTION.

There is a great deal of speculation about the vote on the new Constitution for New York State, which will be taken next Tuesday. On Sunday the New York *Sun* had reports from various counties in the State, the net inference from which is that the outlook for the Constitution is, on the whole, favorable, though if adopted it will be by only a small majority. It is not pretended that a full canvass of public sentiment has been made. We have little but guesswork to go upon. Personal motives and politics have become mixed up with the fate of the new instrument of government at the polls. Many are confidently predicting that it will be overwhelmingly beaten. But we may remind them that similar and even more positive forecasts were made of the defeat of the Constitution of 1894. Boss Platt himself did not believe that it would be adopted. It was, however, easily. A similar surprise may be in store this year for the politicians who think that the new Constitution is already as good as defeated.

About this we make no prophecy. We refrain partly because we do not know, but more because the main thing to consider between now and November 2 is not the chances of the Constitution on election day, but its substantial merits, and the arguments used against it. Some of the latter are respectable and sincere, no doubt, but it cannot be denied that many of the attacks upon the Constitution grossly misrepresent its leading features, while an immense amount of sheer clap-trap and self-contradictory assertion has been put forth to confuse the minds of the voters. For example, the Socialist newspaper, the *Call*, has just become violently excited at the threat of establishing an "autocratic" government at Albany, with the accompanying destruction of "the freedom of the Legislature." Whether this be honest ignorance or not, we do not undertake to say; but no one can fail to be amused by it who recalls the consistent Socialist picture of the Legislature as made up of a set of manikins, owned body and soul by capital, or controlled absolutely by venal bosses. It is this kind of legislative dummy of which, we are now told, the freedom is endangered.

Those who cry out against the plan of a State budget take precious good care not to

cite the text of the amendment embodying it. That would be fatal to their imaginary fears. For the power of the purse is left with the Legislature, virtually as before. The spectacle of a usurping Executive deciding what money shall be appropriated is purely fanciful. Preparation of estimates; public defence of economies proposed; free debate of fiscal measures advocated—none of these things can interfere with the right of the Legislature to utter the final word, nor are they intended to. To introduce reason and business principles into the conduct of the State's finances is not to introduce tyranny; and no one knows this better than some of the men and the newspapers that are trying to make a fearsome bogey out of the budget system. Much the same is to be said of the efforts of Senator Brown and others to kick up a dust over the proposal to give the Governor power to make some of his own appointments. This is held up as if it were borrowed from Czardom; whereas it is simply a slight extension of the principle of centralized responsibility, which we have all been for a long time approving and acting upon in city, State, and nation.

It would be hardly worth while to refer to Judge Cullen's rejoinder to Mr. Root, in the matter of the ludicrous peril of military tribunals subverting the courts of this State, were it not to show to what straits the opponents of the new Constitution are driven. Judge Cullen does not at all question Senator Root's demonstration that the present Constitution—unchanged in this respect by the proposed amendments—affords the most ample protection against dragging citizens before military courts. All this he passes by, merely to reiterate the charge that a special addition to the Bill of Rights was voted down by the delegates. From that he makes a rapid but not very graceful transition to several other objections which he has to the new Constitution. The effect of this, we must say with all respect for Judge Cullen, is very much as if he had frankly admitted that his original and sole argument had been shown to be invalid, but then declared that he had several others just as good.

The real hope of the adoption of the Constitution lies in the belief that the mass of the voters are intelligent enough to discriminate between false assertion and the fact, between interested opposition and genuine public spirit. If they read the actual provisions which they are asked to approve or reject, they will know that a vast deal of lying about them is being done. If they stop to consider the whole trend of political discussion and reform, during the past few years, they will conclude that the Convention made a cautious beginning in meeting the demands of enlightened reformers and publicists in the matter of readjusting some of our forms of government. It is the merits of the scheme, not its "chances" at the polls, which the voters of New York should keep steadily in mind. If they do, there will be no doubt of the adoption of the Constitution.

FADS AND FANCIES THAT PAY.

Advocates of school reform, like pioneers in so many other fields, too often neglect to present their case in a form that will appeal to your average, practical citizen, whose opinions or prejudices must, after all, be recognized as a factor to be dealt with. Too many articles written in defence of the Gary system have laid stress on the spiritual values of Mr. Wirt's curriculum. It is extolled as a school of democracy and as an education to a broader life. In this, indeed, the principal merit of the Gary system may consist, and the cost it will involve may very well be worth while. But spiritual values, to find acceptance among the hard-headed people who manage to shape the forms of society, must take on a concrete value. It is doing better to point out that the child who has been educated into complete, intelligent manhood will be worth so many more concrete dollars to the community. But even that may seem a trifle indefinite and remote. New York would never have taken up the Gary plan so earnestly if the actual exigencies of the municipal budget had not brought economy to the front. The Gary scheme may or may not turn out to be cheaper than our present system; the fact is undeniable that it is receiving attention because the community hopes to get out of it more results for more of New York's school children than it can do under present conditions. Your practical citizen will not sneer at fads and fancies if he can see a profit in the tangible future.

An instance of the kind of innovation in schools that is plainly not a fad was supplied by the exhibition of the high-school art courses in relation to women's work recently held in the galleries of the Fine Arts Building. The work of pupils in eighteen schools, and in perhaps a score of various crafts, was on display. The first impulse of your practical citizen would be to reject these efforts in the industrial arts, and chiefly in the field of art design, as another instance of fad and fancy. Yet the mere mention that these classes are similar in scope to those which are to be found in every European city should be enough. It is not merely a question of developing a national fine taste to be satisfied by products from abroad, but of educating a trained class of workers in the finer crafts. One authority writes:

> What skilled designers we have are for the greater part men and women trained in foreign schools, while our country has for years paid immense sums for the privilege of purchasing abroad materials we ourselves possess, but have failed to utilize with the aid of good design into manufactured forms which can command our own markets.

To-day this nation is engaged in a breathless attempt to build up dyeing industries and other chemical industries, from which we have been cut off by the war. By this analogy we would wait for the siege and close investment of Paris before setting out on a frantic attempt to build up a fine industry in fabrics while the customer went unprovided.

Ignorance or lack of imagination will account for the average citizen who in one breath will condemn fads and fancies in the schools of America and humble himself before German efficiency. Our conception of efficiency is hazy with random ideas released by the much-discussed "scientific management." It is true that we speak of Preparedness, but efficiency and preparedness have become confused in a vague impression that the victories of the German armies have somehow been made possible by "scientific" systems which save half an hour and several hundred waste motions a day. The Kaiser's kind of efficiency consists much less in saving thirty minutes than in using intelligently the other eight hours and thirty minutes of the working day. It consists less in saving waste motions than in developing the several thousand motions in the factory or at the desk, with which no system of scientific management can dispense. The great secret of German efficiency is application and training. Preparedness means training; not magic formulas, but very hard work and foresight extended through the years. Germany's strength is in her schools, military or technical, and in the last analysis it is the technical schools that count. Schools of all kinds, schools in forestry, schools in textiles, schools in brewing, craft schools, and by no means least, schools of applied design. Germany takes fads and fancies and turns them into industries and arts.

All this is elementary, but it is our national habit to be blind to elementary things

until they are forced upon our attention by something of the dimensions of a catastrophe. It took us long to find out that for the public-school boy there was some other destiny than going to high school or going into the blind-alley of office-boy. We have learned and have gone in for vocational education. Must it take years before we have made a further step and learned that for the graduate of the girls' high school there is something between college and the stenographer's desk? Between the two lies a field of great possibilities, the entire range of the artistic crafts, for which the American woman would seem to be specially qualified, with her acknowledged *flair* for beauty in clothes and in the home. We have our spasmodic awakenings. We had recently a sudden patriotic movement for American fashions for American women, which has probably gone as quickly as it came. The assumption was, apparently, that out in Seattle or Detroit the native genius of America would assert itself by January 1, and put Paquin and Poiret out of business. That is not the way the Germans or the other Continentals go about it. They do not sit down and say, "By heaven, we will be efficient and prepared." Preparedness is training and schools.

THE THEATRE ADRIFT.

In ten years, if the moving pictures continue their triumphal progress, the spoken drama will be dead. When Mr. W. A. Brady made this gloomy prophecy the other night he used the word "spoken" in a very general sense, in contradistinction to the silent or screen drama. He was not thinking of the spoken drama as practiced, let us say, by Paul Hervieu, of the French Academy, who died on Monday in Paris; of the drama, that is, in which character and ideas, expressing themselves in words, are not sacrificed to "action," by which, in the native drama, is understood something "doing." The Hervieu play, the Continental play as a rule, is spoken drama to the point of frequently being talky, against which we justly protest. The ideal play undoubtedly is what the textbooks always call for: a forward sweeping action carried on in penetrating, vibrant dialogue. The ideal is not often realized. The Europeans have emphasized the talk. We have gone in for the action, with the result that there arose the distinction between the "literary" drama and the action play. The idea that there can be an action of the mind and the soul, that the subtleties of a Hervieu have a forward movement of their own, has not found acceptance here. And rightly enough. The enjoyment of brilliant analysis and talk in itself is not part of the national endowment. Our spoken drama, if we have one, must stand somewhere between the Hervieu or Shaw play and the "movies."

Can that middle ground be found? Is there a legitimate field for the spoken play in this country, which the movies can never occupy? Common-sense would argue that there is such a field. An art some twenty-five hundred years old cannot conceivably perish as suddenly as the managers predict. When a crisis in the spoken drama supervenes, the tendency of the business men of the theatre is to look for external causes. Some time ago it was the automobile. Then it was auction bridge and the tango. Now it is the motion pictures. It must be frail virtue that succumbs before every fad of the moment. It seldom occurs to these practical men to ask whether they themselves are not largely responsible; but to-day there is very evidently a busy searching of hearts along Broadway. All this pother about price-cutting, and ticket agencies, and alliances made and broken the same day, indicates both the existence of a crisis and its cause. Big Business in the theatre has struck a slump. The revelations in court about circuits and syndicates and territorial delimitations and booking privileges read very much like a proceeding under the Sherman Anti-Trust law. The same methods that have brought so many railways into the hands of a receiver have operated in the theatre.

Under the influence of Big Business, the spoken drama has undergone an evolution which did make it exceedingly vulnerable to the competition of the movies. Managers in buying a play wanted naturally the play that promised big profits, and such a play must be one of a very wide appeal. A long run in New York city, such as would satisfy the wildest dreams of the European playwright, was not enough. The play must run in the provinces, and employ several road companies. Point to charming plays that have been highly successful in New York, and your practical man of the theatre will say, "Yes, but it starved on the road." Writing, then, for a nation-wide audience, the dramatist has been compelled to go very thin on character, ideas, dialogue, to concentrate on action, and action reduced to its elementary forms. The spoken drama has been reduced to a minimum of speech. It became largely a matter of pistol-waving on the one hand and crude sex appeal on the other. And when it comes to pistol-waving, the photo-play can beat the living theatre at the game. If the spoken drama is to compete with the screen-play on the mere ground of action, then Mr. Brady is right, and there is no reason why the badly written, psychologically worthless spoken play should survive.

But once you give up your dreams of huge profits and agree to call a play successful which will appeal not to the millions, but only to the tens of thousands, the outlook for the spoken drama is far from hopeless. The drama, says Mr. Brady, is not sustained in New York as it is in London, Paris, Berlin. The answer is that in those cities people do not think in terms of enormous royalties. There are audiences in this country which should make the spoken drama quite profitable, not the spoken drama of Hervieu, but the drama as it seemed to promise when Clyde Fitch, Augustus Thomas, Langdon Mitchell, and Edward Sheldon at his best were at work. From that we might have gone on to still better things. The real play is impossible if you persist in thinking of indefinite runs and half a dozen road companies. How can even half a dozen road companies compare with the movie film which shows simultaneously in a hundred theatres? Mr. Brady saw no hope for the spoken drama, because men like Augustus Thomas may command $10,000 for a movie scenario written in a few minutes. If Mr. Thomas insists on making $10,000 every few minutes, he will, indeed, let the regular theatre go. But we imagine that for Mr. Thomas there is an appeal about the theatre which might counterbalance the call of enormous profits from the movies. Or Mr. Thomas might earn $50,000 by writing five scenarios in half an hour and then have plenty of time left for the drama.

At any rate, the film play in itself need not be an enemy of the true drama. The film play may yet turn out to be a blessing in disguise. If it weans away from the theatre the men who think of profits in war stocks, there might be a chance for the managers content with lesser profits to be made in furnishing real plays to the public. By satisfying the elementary appetite for "action," it may yet drive pistol-waving from the theatre and leave the stage clear for a real spoken drama. People will go to the movies for one thing and to the theatre for another. And the dramatist who is relieved from the demand for something "doing" every minute may give us plays that are spoken in a more real sense than the "spoken" drama of crooks and detectives.

Foreign Correspondence

FRANCE AND THE BALKANS—SMALL INVESTORS AND SECRET DIPLOMACY.

By STODDARD DEWEY.

PARIS, October 10.

By the time this leaves France in these days of uncertain though fairly regular mails, or at least by the time it is printed, it may be generally known whether the latest news is true. And then again it may be not. "Don't crawfish!" was the rule of some of our schoolboy matches, that ungeometrical animal being credited by us with the desire to prove that the shortest distance between two points is not a straight line, but round the corner. Such, after long wanderings, is the evolution of this war.

In the Balkans it had its beginnings; to the Balkans it is returning. And the news is that the French General Sarrail, who held back the army of the German Crown Prince during the battle of the Marne, is debarking at the head of an expeditionary force of the Allies at Saloniea or near abouts. Whether the news is "realized" or not, the French people have to take time from the rest of the war to think about the Balkan peoples. The devious ways of European diplomacy in their midst seem to verify the cross-road sign of our pioneers:

> This road is not passable,
> Not even jackassable.
> When this road you travel
> Pray take your own gravel!

Well, when diplomacy reaches the silence point, cannon must speak.

It is in France that nearly all these mixed and muddled peoples of the Balkans have found the money to set them on the way to law and order and what has hitherto been called civilization. Take Bulgaria, which, in Dr. Johnson's phrase, is now the peccant part. Since 1896, Bulgaria has negotiated officially four loans in France, to the amount of $75,000,000—still unredeemed.

The first of these loans is pathetic. It was for some $7,000,000 wherewith to feed the Rural Credit banks which were to make intensive agriculture possible in Bulgaria. The agriculture has been made real; and in 1911 Bulgaria was able, besides satisfying the wants of her own people, to export wheat and other cereals to the value of $27,000,000. This was very good for a rural population of about four millions. This particular debt does not appear in the list of Bulgarian consols, for it is the State's debt to the Agricultural Bank; but the money came from France, as did three-fifths of the national debt proper. And, of the rest, no one can say how much is held unofficially in France—by underground sale. Thus Germans set about building their far-famed Bagdad railway by first allowing French investors to buy half the stock and then borrowing money in France to keep the other half for themselves.

These small investors among the French are very curious and interesting. They will speak to you in one breath of Atchisons and Argentines, Brazilians and South African mines, Spanish Exterior—and Turks and Bulgarians. Between Turks and Bulgarians their confidence has been rudely tried of late. The general opinion is that Turks are pretty safe in the long run, since those debts are guaranteed internationally on the revenues of certain territories, under no matter what master. The Bulgarian debt has also been popular in the past, as there was a general notion that the Bulgarian people were essentially healthy like their Yoghourt—which Professor Metchnikoff defends himself from ever having called "Bulgarian sour milk," since if milk is sour, unhealthiness is likely to be the cause.

The far-flung money-lending line of the French in the Balkans does not end here. Rumania has had her share of French gold, and Servia's national life has been built up on it. Since war began, Greece has dipped her hands into French savings without grateful acknowledgment—unless this is to be made now. And so far the French small investor has not dumped his Balkan bonds on the market in a panic.

France has done scarcely less for the Balkan peoples along the intellectual line. Except for Servia, whose King is an old cadet of the French military school of Saint-Cyr, the military party in these new nations has been bred up mainly in Germany, as all can plainly see. Then of late years, the Swiss schools of applied sciences have had their share of Balkan students. But it is France that has had what is called their university education. In provincial faculties like Toulouse and Montpellier, Grenoble and Lyons, there would be now a dozen and now a score of Bulgarians. Rumanians have always vaunted their Latin origin and speech, and claimed relationship with Italy and France. It has been one of the worries of professions like medicine, in which university degrees give permission to practice in France, unlike Germany, that too many Balkanians and Russians (or Germans masquerading as Russians) took advantage of the law to remain in France and occupy the place of natives, without having their military obligations and the consequent loss of time on entering their career. Doubtless, there will be a sifting of all this—after the war.

In Rumania particularly, there has been an affectation of Parisianism, in spite of the German reigning house and the dowager Queen's idyls of Carmen Sylva. In Athens, too, the intellectual tide sets towards France, in spite of the influences of German sovereignty. The French theatre and French novels supply literary ideals; and revolution, as in Bohemia and Russia, finds inspiration in French Revolutionary annals. For essential revolution, there is in France a very general idea that even the Balkan peoples will not allow themselves to be pushed by their rulers beyond certain limits of race and nationality.

Said one Rumanian: "Our country is governed by great land-owners and petroleum companies." To which a Rumanian general responded: "There are fifty persons in our country and half of them are already bought!" To such pessimism, French good sense commonly answers: "We don't believe that the Rumanian people will finally abandon the 'redemption' of the millions of their race who live under Magyar rule in Austria-Hungary."

We expect soon to see whether German *Realpolitik* has succeeded essentially better than the ideal and too polite French method, or the drifting English, or bureaucratic Russian. The general verdict is that the Allies have not had a united diplomacy at all. Now they have to fire united guns instead. One of the results of the war should be a reform, if not a revolution, in this secret diplomacy with its methods of ancient days; and perhaps the German temporary success is due to their casting tradition to the winds just as they have kicked their feet through Hague conventions.

The world might well remember that it is France, after all, who has shown herself most consistently favorable to the principle of nationalities. The French Revolution made the working of such a principle practicable for the first time. The Second Empire came to its fall through the repeated application of the principle. If peace is ever to come to the Balkans—and to Europe—it must be through some livable settlement of these nascent nationalities. The hegemony of Germany alone or of the Central Empires together would not only do away with independence, but stop all national growth as well. It is difficult to see how the victory of the Allies, or even Russian predominance, would reach a like result.

All this is bound to react on the French people. They are being schooled in the Rights of Peoples. The annihilation of Servia, the crushing of Belgium and obliteration of Luxemburg, and the threatened fate of Bulgaria and Turkey have impressed on them as nothing else could have done the lesson.

> Think ye I made this ball
> A field of havoc and war,
> Where tyrants great and tyrants small
> Might harry the weak and poor?
> My angel—his name is Freedom!

THE BALKAN SITUATION—LORD DERBY'S RECRUITING SCHEME—A TORY LION AND LIBERAL LAMBS.

By JAMES F. MUIRHEAD.

LONDON, October 12.

German success in Russia, doubt in the Dardanelles, and the relative failure of the Allied diplomacy in the Balkans—a failure which it is easier (and perhaps juster) to deplore than to blame—have brought about a situation of which it would be hard to exaggerate the seriousness. The critical importance of Constantinople as one among the determining factors of the war has long been clear to the enlightened publicists, and it is evident that no efforts must be spared to prevent the linking up of the Central Powers with Turkey by way of Bulgaria. While, however, the seriousness of the menace to the cause of the Allies is recognized, it behooves us not to lose sight of the other side of the question. It is remembered that the grandiose vistas of conquest and revolution in the glowing Orient, with which apparently the eyes of Germany are now being dazzled, formed no part of the original schemes of the campaigns undertaken by Germany and Austria, fourteen months ago. Calais and Paris for certain, with London, Moscow, and St. Petersburg as possibilities, were then the objectives of the Teutonic hosts—not Constantinople, Cairo, and Calcutta. If the European part of the scheme had been successful, its expansion eastwards might have seemed neither unnatural nor chimerical. But the sudden orientation towards a new goal, while the original goals are still far from attainment, is as compatible with a feeling of weakness and desperation as with one of confidence and growing hope. The fact that this new movement to the southeast coincides with a very considerable victory of the Allies on the western front and with a very distinct check to the progress of the German invasion of Russia (not to speak of disquieting rumors as to

the position of the Turks in Gallipoli), makes it at least conceivable that the new venture has been to a large extent inspired by a sense that the attacks on France and Russia have been practically checkmated. With the acquisition of the Bulgarian army as an ally, the Servian front seemed an easier mark than that in either the east or the west of Europe; and if the neutrality of Greece and Rumania could be insured, the prospect of success would seem tempting to the Powers that had elsewhere been baffled. It is, moreover, in complete harmony with military philosophy of the "second best," as expounded by Clausewitz and Bernhardi, according to which a failure in one sphere of operations should be followed, when possible, by aggression in a new quarter. The fact that the movement is ultimately directed against the Oriental Empire of the arch-enemy, England, must lend it a peculiar zest.

The action of Greece has been a grave disappointment to the Allies, and the resignation of M. Venizelos must rank among the more pregnant events of the war. The end, however, is not yet. The rapid intervention of the Allies by way of Salonica is giving Greece and Rumania ample food for thought. If this is backed up by further marked success, either in France or in Russia, its political influence may be very potent indeed, to say nothing of the actual material value of the aid rendered to Servia by the Allied troops. Bulgaria's leaders have quite frankly announced their desire and intention to be on the side of the victor, but whether the true key to her present action is the ambition of a King who has set his eyes on a visionary imperial throne in Constantinople, or the fear of a people who remember the fate of Belgium, it is not beyond the bounds of possibility that a little success on the part of the Allies may make her swing round to the other side. This possibility is enhanced by the fact that there is an obvious cleavage between the Bulgars and their sovereign, and by the evidence that the people have no great enthusiasm for a third Balkan war. The feelings of the Greeks are also so much divided that democrats may be excused if they cherish the hope that one result of an Allied victory will be marching orders to at least two European sovereigns. Rumania at this moment occupies a very commanding position. Her army is much stronger than that of Bulgaria, perhaps as strong as that of Greece and Bulgaria combined. In conjunction with that of Servia, it would dominate the native forces of the Balkan peninsula. With the Bukovina in the hands of Austria, aggressive action on the part of Rumania would be difficult and isolated; but if Russia were able to regain ground on the extreme left of her line, the situation of Rumania would alter very considerably. And, to leave this subject for the moment, if the best should happen and the Germano-Bulgarian joint movement fail, the road to Constantinople would be open to the Allies. The risk of a large Salonica-Servia move is great; but it may be a case in which political ends justify the military danger.

An interesting article in the *New Statesman* for this week is entitled "The United States and the World." The question of the writer, who evidently knows his America well, is not whether the United States will enter the war, but whether she will enter the world. Hitherto, he thinks, the United States (in spite of the Spanish War, Platonic appearances at Hague Conferences, and the like) has been in the world but not of it. She has been a recluse among the nations; her policy has continued to be nearly as irresponsible towards the nations of Europe as when outlined by George Washington. He realizes that the fine ideal of America is to be a country devoted to liberty, justice, equal rights, and the arts of peace, free from the envy and jealousies of international policy, and far from the dust and din of war. He recognizes the generosity of its desire to act as mediator and healer at the close of the great European conflict; but he is doubtful whether America as a whole realizes the burdens and responsibilities that this rôle would involve. That there are some Americans who envisage these difficulties clearly enough is obvious. The names that immediately occur to me are ex-President Taft and President Lowell. A comparison of Mr. Lowell's essay in the September number of the *Atlantic Monthly* with the article of the English journalist is particularly interesting. The writer in the *New Statesman* is inclined to think that the floating in America of the Anglo-French war loan may be the first link in a chain that "will profoundly affect and may transform the position of the American nation in the general scheme of *Weltpolitik*."

All eyes are turned with considerable interest on the efforts of Lord Derby, the new Director of Recruiting, to show by practical results that the voluntary system has by no means shot its bolt. The exact method he means to adopt has not yet been made public, but from what has already leaked out, it seems as if his procedure might not be unlike the scheme suggested by Mr. Spencer Wilkinson—a scheme that has excited a good deal of favorable attention. Mr. Wilkinson's proposal is that the Government, acting on the information obtained from the famous "Pink Forms" of the National Registration act, should call upon every man of military age to state, before his local authorities, the reason why he has not enlisted. If these reasons were deemed satisfactory, he would receive a badge of exemption; and the presence or absence of this badge would henceforth be final and significant as to the position of every young man. In the meantime, the flow of recruits has by no means ceased, as is evinced by the success of Sergeant Niemeyer, of Canada, who has 7,000 recruits to his credit; 3,000 enlisted within the last five weeks.

A very significant sign of the present unity of England was the meeting held last night at the National Liberal Club, to hear Mr. J. L. Garvin, editor of the *Observer*, give an address on "The Greater Issue: a Reign of War or Peace?" If it had been suggested, eighteen months ago, that Mr. Garvin, the pace-maker of the Conservative party, should be received as an honored guest in the stronghold of the Liberal party the very stones of its famous marble staircase would have called out in protest. But last night the largest room in the club was packed far beyond the point of comfort by an audience that cheered Mr. Garvin to the echo. The chair was occupied by Mr. J. A. Spender, editor of the *Westminster Gazette*.

"Treating," so far as alcoholic liquor goes, is now forbidden in the London area. You may invite a friend to dinner *and* a glass of beer at your club, but you may not stand him the beer without the beefsteak. It is easy to imagine the infinity of "nice" points that will arise. Thus, I imagine you can provide a cocktail after your guests are seated at the dinner table, but not as they assemble in the anteroom. But the principle is excellent.

The Paterson Silk Exhibition

A NOTABLE DISPLAY OF REPRESENTATIVE EXAMPLES OF AN ANCIENT INDUSTRY.

To celebrate the First National Silk Convention the public-spirited citizens of Paterson, N. J., planned an exhibition of modern silk manufactures. The interest of such a display would have been largely local. Fortunately at this point the organizers took counsel with a visiting German specialist, Dr. R. Meyer-Riefstahl, an authority on the history of textiles. With him as director, the original plan was enlarged. Paterson proposed nothing less than a complete historic representation of the silk industry. Of evident utility to her own designers and manufacturers, such an exhibition is also a fine manifestation of civic pride. The exhibition is so full and select that no student of this branch of the history of art can afford to neglect it. In normal times there would be a rally of connoisseurs from distant points of America and Europe to profit by the brief opportunity offered in the Paterson City Hall. As it is, the exhibition closes on October 31. One could wish it prolonged.

To bring together nearly four hundred examples of the finest silks, ranging from the early years of our Christian era to the end of the eighteenth century, and to do this in haste, is no small task. Dr. Meyer-Reifstahl accomplished it only by obtaining the active good-will of the museums and of many private collectors. The Cooper Union contributed from its extraordinary series, also the Metropolitan Museum, the Art Museum of Boston, and the Providence Art Institute. Thus in fragments, for the earlier period, and in generous pieces, for the more modern examples, the whole history of design and weaving in silk may be covered in a short tour of the galleries.

It has ever been a cosmopolitan industry. Until the seventh century, when Chinese monopoly was at length evaded by smuggling the silk worm into Europe, the production of raw silk was exclusively a Chinese industry. The Greeks and Romans had silks, and probably wove them on some scale, but we have few remaining specimens of this art. The standard patterns were worked out in Persia under the Sassanid Kings.

The medallion is almost universal. It contains animal forms, frequently faced in heraldic fashion about the tree of life. Sometimes there are riders or charioteers. Owing to the wars in Persia, the centre of this industry passed early in the Christian era to Alexandria. But the Egyptian weavers generally adopted the already popular Oriental patterns. Alongside of the organized manufacture, the women of Egypt made on small tapestry looms the inset medallions and borders which are being recovered in quantities from the tombs of the Nile Valley. There are twenty-four splendid exam-

pics of this make in the Paterson exhibition. Many display a rude Hellenism in figure designs, others show the native geometrical interlaces which prelude the fully developed Saracenic style.

After the abasement of Alexandria, Byzantium set the fashions, and silk-making spread gradually to western Europe. Byzantium still preferred the medallion forms with animal or bird motives. But the stuffs made from the eighth century on have less of the Sassanian free-hand quality. They are more precise and heraldic. A magnificent specimen of this early mediæval art is No. 33, a brocade in green and salmon red, with imposing faced eagles. It was probably woven in Sicily in the eleventh century. It is interesting to compare it with the superb medallion No. 31, which, though of the same date, retains a distinctly Sassanian character.

The early fabrics woven at Lucca and elsewhere in Italy in the thirteenth and fourteenth centuries—there are ten of these extremely rare fabrics in the exhibition—remain true to the Levantine tradition. So do the velvets which were later made at Genoa and Venice. These are preserved in considerable numbers, and are splendidly represented at Paterson.

Early in the seventeenth century Lyons contested the supremacy of the Italian and Spanish looms. The severe, symmetrical Oriental designs give way to the informal, naturalistic designs derived from China of the late Ming dynasty. These generally floral motives, become staple, easily lent themselves to the playfulness of the rococo manner. In the rather decadent versions of the Third Empire, these Lyons patterns became the precedents for the American silk industry. After the Jacquard invention made its marvels of copyism possible, both Lyons and Paterson have eclectically followed for commercial purposes the free Franco-Chinese tradition, while occasionally imitating the severe Eastern-Mediterranean designs. Lyons has regarded this historical revival as very important, and has set up the finest textile museum in the world. It is to be hoped that this remarkable loan exhibition at Paterson may be the earnest of a permanent textile museum. A city could have no worthier ambition than to link its chief industry to the finest precedents, to hold before its manufacturers for encouragement and emulation the finest products of the past.

Besides a very full representation of the East-Mediterranean weavings and their derivatives, the later textiles of Persia, Turkey, Arabia, China, Japan, and India are exemplified. There is even a little group, from Providence, of very curious Inca tapestries from Peru. A magnificent hunting arras of late Gothic period is alone worth the trip to Paterson. The whole enterprise does credit to its organizers. One is glad to learn that an illustrated album of the exhibition, under Dr. Meyer-Riefstahl's care, will commemorate the effort long after these beautiful stuffs shall have gone back to their fortunate owners. The State of New Jersey has set an important example in these local and industrial exhibits. Last year, under the auspices of the Newark Public Library, the clay industries of the State were exhibited both in actuality and in historic retrospect. With a more generous public support, Paterson has achieved a still more imposing historic and artistic standard, setting an example which our other manufacturing centres will do well to emulate and will with difficulty excel.

F. J. M., JR.

Prussianism in the Colonial Field

By A. G. KELLER.

Under the assaults of the British and the Colonials, the French and the Japanese, the German colonial empire has steadily melted away. Considering the amount of money and of effort expended upon it by the Germans, and the pride which its possession seemed to inspire, it seems strange that the wonderful German preparation for the conflict did not include some provision for its protection.

Of course, if Germany was as confident a year ago last July as her subsequent expressions of angry and pained surprise would give us to understand, that England would remain neutral, then she needed not count into her calculations the danger to the *Kolonialreich;* the German fleet could then have afforded all the protection needed. And if, on the other hand, the chance of loss was incurred under the conviction that the war would be ended by a rapid campaign, before the colonies could suffer much or at all, there was no great call for preparation in their behalf. Certainly their neglect is explicable on the hypothesis that Germany was so sure of winning in any case, whatever should happen for the time being in the colonies, that she must acquire in the end a larger and better empire beyond the seas, composed in good part of eligible British holdings, than the one she possessed. The present result would, on such an hypothesis, seem to be yet another sequel either of blundering statesmanship that could not foresee the inevitable or of military overconfidence.

One of the most remarkable miscalculations of the Germans, as every one now knows, lay in the fact that they confidently expected widespread revolt in the British possessions. It is one of the most significant tributes to British colonial policy that not only the Colonials, but even the native races, have rallied to loyal support of the Empire; and it is no small tribute to the modern French system that the French colonial empire remains loyal, and that native races volunteer in defence. Nothing of this kind is reported of the German subjects. It has been a matter of perplexity to some and of confirmation in their anti-German views to others that the German colonial empire has fallen away, as if no vital connection with the metropolis ever existed. This aspect of affairs deserves some explanation, especially since a consideration of the facts about the acquisition and administration of the German *Schutzgebiete* helps to formulate an attitude towards what is coming to be seen as the basic issue of the war: Do we want the world to be run in the accepted way or in the German way?

Bismarck, who declared himself "von Haus aus kein Kolonialmensch," was driven into the colonial field largely as the result of agitation on the part of the *Kolonialmenschen.* The perusal of the latter's utterances discloses a mood to which we are not strangers in the present year of grace: "das kanonenfeste Deutschland," "Deutschland's Weltberuf," etc., are watchwords ever on their lips. "In der That," cries T. Fabri, "wer in aller Welt soll es denn wagen, ohne Scheu vor fremdem Neid Thaten zu thun wenn nicht der Sieger von Königgrätz und Sedan?" The wave of enthusiasm swelled, and in 1884 Bismarck prepared his way for yielding to public sentiment by publishing a White Book detailing with gross onesidedness his grievances and the maltreatment received from the English diplomatic office, in special connection with questions of trade interests and their protection in Southwest Africa. This document, at least by implication, recognized the region in question as under British influence.

But there followed shortly upon this utterance a peremptory declaration of a protectorate over what later came to be German Southwest Africa; and then, so to speak, the lid blew off. In the spring of 1884 Germany had no possessions beyond the seas; but by March, 1885, she held an external empire of a million square miles and was exercising dominion over more than ten million subjects. For the most part, this empire was rudely snatched from under the very paws of the British lion. It was perhaps the very suddenness and boundlessness of the effrontery which carried the thing off. Dr. Nachtigal beat the British commissioner to Togo and the Cameroons by a hair, and raised the German flag under his very eyes. Then, in October, Karl Peters and two other adventurers, under assumed names and disguised as laborers, undertook and carried out for the *Gesellschaft für deutsche Kolonisation* the seizure of what was later called German East Africa. No German interests worth mentioning existed in this region, nor yet in New Guinea and the rest of Melanesia, which was presently appropriated. Peters and his confederates were quick men, and soon had in hand a number of treaties with the East African princes, who were cajoled into agreements which they understood imperfectly, if at all, but who soon found that they had made wide concessions of land and administrative privileges. No apologies were made for the seizure of these East African districts, which Great Britain had long regarded as pros-

pectively her own. In fact, the attitude of Bismarck combined a solemn assurance with a truly Junker rudeness.

The most talked-of example of German "colonial" expansion was, however, the "lease," in 1898, of the Chinese port of Kiaochau, for ninety-nine years. This was in alleged consequence of the murder of two German missionaries, and called forth the historic soliloquy attributed to the Kaiser in a comic paper of the period: "If my missionaries only hold out, I shall soon own the earth."

Presumably, no more fault can be found with these proceedings than with the Bismarckian performances in the period around 1870.

Having acquired the colonial empire, and finding that England was not going to raise a row, but was, in fact, rather inclined to a certain rueful admiration, the Germans set about the creation of a colonial administration. It is needless to say that it had its admirable qualities of scientific treatment and of thoroughness; but it was not adaptable. The whole system was Prussianized; its inflexibility was that of a militarist and bureaucratic régime. It represented an attempt to carry over to the *Schutzgebiete* the complex military and administrative system of the home-land. Though not without their place in the management of dependencies, inflexibility and governmental rigor are about as ill-adapted in principle to young and chaotic societies as the frontier system would be to the Prussian state. Even the white settlers were always complaining of the delays and meddlings around the "green baize" in Berlin. German writers on the colonies were, fifteen years ago, almost unanimous in condemning the bureaucracy. They rebelled against the military caste-system, the imposition of petty regulations and fines, the direction of affairs from Berlin, the inexperience and self-confidence of colonial functionaries, and in general against the arbitrary conduct of a governing organization which did not know its ground, but could not conceive of that being the case.

And the social system showed the same stiffness and maladaptability. Rank and social position were upheld as at home. There were no informal clubs where colonel and corporal could associate man to man, play tennis, and even bruise each other's features in a friendly bout with the gloves. Each military circle of a few members herded by itself and gulped down its steins of heavy beer in lonely and dignified seclusion. It is generally admitted that a cheerful disposition and good-fellowship do much to ward off maladies in any part of the earth, and especially in the tropics, where home influences and the society of women and of friends are but rarely to be enjoyed.

This system, combined with the effects of climate, rendered the German testy and irritable, and predisposed to gusts of passion upon slight provocation—a state of mind to which the significant term *Tropenkoller* was applied. Hence the *Kolonialgreuel*, or atrocities, that marked the early years of the German administration in its contact with the natives. These seem to have been passing phenomena, as they were in the Belgian Congo, but they left a bad impression. And added to this was the effect of the whole maladaptable system upon the native susceptibilities.

We should pause here, for the moment, to note that the natives of the German colonies were not a very promising lot. Lord Salisbury is reported to have said, referring to the desert dunes of German Southwest Africa, that that colony was blessed with a "rather thin soil." No less exiguous is the cultural development of most of the German share of the "white man's burden." This is one of the explanations, be it said, and a very good one, why the natives of the *Schutzgebiete* have not rallied to the German cause as have the Indian races and the North Africans to that of the British and the French.

But here was, evidently, no theatre for the staging of the Prussian system and manner. A rigid system, administered with an ill grace of manner, is sure to awaken resentment in a native population, particularly if the latter is already restive under a brand-new harness of ill-fitting, cramping, even though generally trivial, restrictions. The contact of an uncompromising bureaucracy with a savage or almost semi-civilized population can easily be figured in the imagination; police regulations calculated for the latitude of Berlin, bundles of acts whose transgression is a matter of daily occurrence among unwary sojourners in Prussian towns—all these formed a system whose application to Bantus and Papuans was incongruous even to the local official.

When the natives rebelled in East Africa, von Wissmann set out first of all to teach them "eine gründliche Lehre," after which they were to be ruled with "Strenge mit Gerechtigkeit." That system has its advantages; it certainly shows up well on paper in comparison with, for example, the British system of "muddling through." But that latter system, or lack of system, has the quality of being an analogue of the nature-process—a series of small adaptations, made as discomfort appears—and almost automatically leads to shiftings, even contortions, and finally to wholesome readjustments. And it also has its astonishing results, by which, if a pragmatic judgment is to be formed, it is justified.

This brief set of considerations upon German colonization indicates certainly that the Germans did not act out of character in the acquisition and administration of their colonial empire. The leopard did not change his spots, in favor of better adapted coloration, in migrating from one hemisphere to the other. Some painful adaptations have been made in later years, but that the type is radically altered cannot be believed. It is but another instance of the German way of doing things that we have before us in this side-field of their activity. But the sketching in of the side-issue may serve to complete the picture of the issue as a whole.

Book Notes and Byways

SOME PARALLELS IN HENRY VAUGHAN.

It has long been known that Vaughan—as indeed he himself admits—borrowed largely from Herbert, but Mr. L. C. Martin, in his edition of Vaughan recently issued by the Clarendon Press, shows that this imitation was extended to other writers besides the Rector of Bemerton. There is something more than the mere curiosity of pedantry in exhibiting these parallels, for it is a step towards clearing up the community of ideas that runs through the lyric poets of that age, shown not only in their constant use of a few guiding themes, but in their frank appropriation back and forth of the very expression of these themes. One manifest bit of borrowing not noticed by Mr. Martin I have just happened to stumble on. In "The Shepherds" Vaughan has the pretty lines:

> Perhaps some harmless Cares for the next day
> Did in their bosomes play,
> As where to lead their sheep, what silent nook,
> What springs or shades to look,
> But that was all.

The whole poem is a kind of descant on the theme of one of the stanzas of Milton's "Hymn on the Nativity," and in the lines just quoted runs close to the original:

> Perhaps their loves, or els their sheep,
> Was all that did their silly thoughts so busie keep.

The Clarendon Press edition of Henry Tubbe, reviewed in the *Nation* of August 26, shows a parallel of another sort which was overlooked by the editor of that volume as well as by Mr. Martin. This Tubbe (born 1618, died 1655) was a Cambridge royalist who was prevented by ill health from becoming a clergyman, and so solaced himself in those troublous times, as did Vaughan, by composing verse. Only one of his poems appears to have been printed in his lifetime, but he left his verse and prose, including copies of his letters, in a couple of neat manuscript books, from one of which the recent volume is edited. Many of his lucubrations are said to be unblushing paraphrases from his contemporaries, particularly from Randolph, Suckling, and Crashaw. Such paraphrases are omitted from the selection of his poems now printed, but the editor has not observed that quite the best of the poems included, the one from which the *Nation's* reviewer of Tubbe quoted several lines, is a clear adaptation of the first piece in Vaughan's "Poems" (published 1646), that entitled "To my Ingenuous Friend, *R. W.*" As we hear so little of Vaughan from his contemporaries, and the borrowings hitherto noted have been all against him, it may be worth while to give his poem entire, and enough of the imitation to indicate Tubbe's method and ability. Vaughan wrote in trotting octosyllabics, thus:

> When we are dead, and now, no more
> Our harmles mirth, our wit, and score
> Distracts the Towne; when all is spent
> That the base niggard world hath lent
> Thy purse, or mine; when the loath'd noise
> Of Drawers, Prentises, and Boyes
> Hath left us, and the clam'rous barre
> Items no pints i'th' Moone, or Starre;
> When no calme whisp'rers wait the doores,
> To fright us with forgotten scores;
> And such aged, long bills carry,
> As might stirr an Antiquary;
> When the sad tumults of the Maze,
> Arrests, suites, and the dreadfull face

Of Scargeants are not seene, and wee
No Lawyers Ruffes, or Gownes must fee:
When all these Mulcts are paid, and I
From thee, deare wit, must part, and dye;
Wee'le beg the world would be so kinde,
To give's one grave, as wee'de one minde;
There (as the wiser few suspect,
That spirits after death affect)
Our soules shall meet, and thence will they
(Freed from the tyranny of clay)
With equall wings, and ancient love
Into the Elysian fields remove,
Where in those blessed walkes they'le find,
More of thy Genius, and my mind:
First, in the shade of his owne bayes,
Great *B E N* they'le see, whose sacred Layes,
The learned Ghosts admire, and throng,
To catch the subject of his Song.
Then *Randolph* in those holy Meades,
His Lovers, and *Amyntas* reads,
Whilst his Nightingall close by,
Sings his, and her owne Elegie;
From thence dismiss'd by subtill roades,
Through airie paths, and sad aboads;
They'le come into the drowsie fields
Of Lethe, which such vertue yeelds,
That (if what Poets sing be true)
The streames all sorrow can subdue.
Here on a silent, shady greene,
The soules of lovers oft are seene,
Who in their lifes unhappy space,
Were murther'd by some perjur'd face.
All these th' inchanted streames frequent,
To drowne their Cares, and discontent,
That th' inconstant, cruell sex
Might not in death their spirits vex:
And here our soules bigge with delight
Of their new state will cease their flight:
And now the last thoughts will appeare,
They'le have of us, or any here;
But on those flowry banks will stay,
And drinke all sense, and cares away.
So they that did of these discusse,
Shall find their fables true in us.

What a poet was lost to the good school of Ben when Vaughan forswore the jocund Muse for Herbert's solemn votaress! Were this an essay instead of a note I should love to expatiate on this poem of Vaughan's youth, and show how his theme had been employed by others of the mellow choir before him—and after him, too, even down to "The Blessed Damozel" of Rossettl; but I must do no more than copy some of the better parts of our ambitious Tubbe's paraphrase, as follows:

When wee have lost our Breath, & shall not vex
The Citty, nor the precise Holy Sects
Of our new Reformation, with Mirth,
Which though refin'd, yet they say smells of Earth:
When Wit and Innocence shall both expire,
And our Soules flourish with eternall Fire:
When all is gone that the false envious World
With much regret into our Pockets hurl'd:
When the harsh Thunder of a Drawer's Voice,
Hucsters Non-sense, mixt with a Medley-noise
Of Carmen, Prentises, & Boyes, no more
Shall trouble us: . . .
. . . . . .
There (as Wise Men
Beleeve, that Love lives after Death) agen
Our Spirits shall intermix, & weave their Knots;
Free from the Trouble of these earthly Grotts;
Thence winged flie to the Elysian Groves,
Where, whilst wee still renew our constant Loves,
A Thousand Troops of Learned Ghosts shall meet
Us, and our coming thither gladly greet.
First the Great Shadow of Renowned Ben
Shall give us hearty, joyfull Wellcome: then
Ingenious *Randolph* from his lovely Arms
Shall entertaine us with such mighty charms
Of strict embraces, that wee cannot wish
For any comforts greater than this Blisse:
From hence dismiss'd through many winding Wayes
And subtle turnings, where each Spirit playes,
Delighting to be lost in such a Maze
Of Joyes & Pleasure, our just, even Pace
Shall bring us to that sweet Forgetfull Lake,
Which (if brave Pöets sing the Truth) will make
All sorrow flie away from them that bath
Their thirsty Pallates in the liquid Path.
Here on a shadie Plot of pleasant Ground
Those scorned Lovers mingle in a Round,
Who in their Life time were unhappily
Blasted & torne by cruell Perjurie.
. . . . . .

Now the odd question is: What was this fellow Tubbe about? Were these paraphrases merely exercises by which he was training himself in the art of poetry, as Stevenson, for instance, copied the style of great prose writers in his 'prentice years? But Tubbe was twenty-eight when Vaughan's "Poems" were printed. Did he think he was improving Vaughan? That seems too great a self-delusion even for an unrecognized versifier. It is observable, however, that Tubbe turns Vaughan's octosyllabics into heroic couplets, and as this measure was gaining in favor, it is just possible he thought he was doing a fine thing by putting Vaughan's rather loosely clad Muse into a more fashionable bodice. Almost all of his original verse (if any of it is really original) is in heroic couplets, and I should like to know whether in those unedited adaptations of Suckling and other poets he made the same transfer as in the case of Vaughan. But the thing is still a mystery. I don't see what the fellow was about. Certainly he could not have expected to pass these stolen goods off as his own, even after carefully obliterating all marks of the king's ownership. Mr. Henry Tubbe has suddenly grown interesting to me, since I have found that he admired my much-loved swan of the Usk enough to steal his plumage.

Notes from the Capital

EDISON.

The choice of Thomas Alvah Edison to head the new Naval Advisory Board was the natural thing under existing conditions, the navy being in particular need of new inventions, and Edison being to-day the foremost American inventor. A casual glance at the man would give you but a slight suggestion of a genius; for, if we except a certain carelessness of attire, he bears no mark we usually associate with that dreamy sort of person. When you meet him, however, and he takes your hand and looks into your eyes, you begin to compass him mentally. The large, somewhat heavy face acquires a cheerful life you had not seen in its set lines before, and the stocky frame beneath seems to relax as he talks to you. Conversation, by the way, has been more a duty than a pleasure to him of late years, as his deafness has been steadily on the increase. The infirmity has been with him since boyhood. When he was employed as a "train-butcher" on a railway, he was forever experimenting with chemicals in the baggage car, between his trips through the train to sell candy and newspapers; and one day some phosphorus which he dropped on the floor set fire to a bit of woodwork just as the conductor entered. That functionary, in a rage, boxed the boy's ears so severely as to damage his hearing; but what seemed at the time a misfortune had its happy side, for as a telegraph operator, having to read his messages by sound, he was obliged to concentrate his attention on the ticking of the instrument on his own table, which meant indifference to the noise of the others surrounding him. His deafness has also saved him the wear and tear of hearing all the din of the city streets, or the rattle of the machinery in a busy workshop, while he was trying to think. Indeed, it has aided him in perfecting sundry products of his inventive faculty. The telephone and the phonograph might have been dropped by him as finished some time before they were, but for the fact that, in order to be sure of their powers, he must hear distinctly himself the sounds they transmitted; with the phonograph, for instance, he worked steadily for more than a year to compel it to convey the word "species" as it ought.

One of Edison's hobbies in which he will strive to interest you before you have been with him long is the nearest approach to a perpetual-motion fad that ever commanded his attention—a theory that the human brain and body need practically never give out. To eat sparingly, sleep no more than one is obliged to, and work persistently through whatever time may be left, has been his own practice, and any thought of superannuation is the last that enters his mind. He used to startle people who asked him how old he was by naming some age which ranked him alongside of the ancient patriarchs. Then he would whimsically explain that a man's life was best measured by his efficient expenditure of energy, that the universal ideal of a working day was eight hours; and hence that, since he put in on his work from sixteen to twenty hours of every twenty-four, he was an octogenarian in truth before he had attained his fiftieth birthday by the almanac.

Most inventors are prophets, and Edison is no exception to the rule. Just about twenty years ago he expressed his belief that the next epoch-making invention in the electric field would be a means of increasing the speed of railway trains, upon which he set no limit short of the point where locomotive and cars would break up or fly to pieces; and all that that was waiting for, he thought, was the discovery of some method of converting coal directly into electricity. As to flying machines, he felt perfectly satisfied then that the end sought would soon be reached, but his experiments had led him to conclude that electricity would not furnish the motor desired. Nor could he at that time look hopefully upon the idea of telephoning across the ocean, his skepticism being based on the assumption that submarine cables would continue to be the only medium of transmittal. This does not mean that wireless communication was quite outside of the plane of his prophetic vision, for he was at that very hour trying to work out a scheme for signalling between ships at sea, too far apart to see each other—in fact, anywhere within a radius of thirty miles.

As to all such prognostications, he has always been careful to say that, so far as he could judge, nothing that mankind wished, however remote its achievement might appear, could be dismissed off-hand as impossible. That one man cannot find any way of bringing it about is a sign merely that his individual powers are exhausted, but neither that man nor any one else is competent to fix bounds on the ingenuity of the whole human race, in his own generation and in those that are to follow. The great point is that the world's desire for the object shall be strong enough. Things which the public do not care for, it would, in Edison's opinion, be a waste of time for the cleverest of inventors to tinker with. His own maiden invention was an apparatus for recording votes in de-

liberative assemblies. It did its work with the utmost nicety; but when he brought it to the notice of a number of political bosses at a party convention, every mother's son of them waved it aside as an undesired piece of machinery. In vain he argued that he had witnessed disputes over the votes cast in their political gatherings, which his device would settle accurately; that plea, so far from winning them to his support, seemed only to inflame their prejudice against the recording instrument, and he had to remove his model in chagrin. The experience taught him a lesson which he has never forgotten, and many observations in his later life have deepened the impression it made. It is possible that, in his new advisory capacity, he will thus be the better qualified to aid Secretary Daniels in settling the fundamental question, whether or no the American people do want a big navy. TATTLER.

Correspondence.

WHAT MAKES RIGHT?

TO THE EDITOR OF THE NATION:

SIR: One hears, these days, not a little vociferous condemnation of the principle that "might makes right." There is a brutality about it that seems to cancel, without mitigation, every gain that civilization has made, every refinement with which it has succeeded in covering man's native savagery. But there is at least this consideration to be urged in its favor—that, other things being equal, it *is* better to have strength than weakness survive. In a civilized state, to be sure, there is a tendency to add gradually to the survival value of every one concerned. But if a choice must be made, then society must prefer health to disease, strength to weakness, intellect to dulness, skill to failure, in its elimination of the unfit. Perhaps we should not all care to live in a Nietzschean world, but there could be worse ones.

Among these worse ones would be a world in which weakness made right. Who does not know families in which the most extravagant selfishness is fostered in the person of a child who happens not to have a robust constitution? He learns to base his claims to preference on the very fact of his comparative incapacity. But while the abstract principle that weakness makes right would be ridiculed alike by the biologist and the philosopher—and even, no doubt, by the indulgent parents just referred to—it may well be heralded as the surprise of the hour to hear that very doctrine urged by the high diplomats of the land of Nietzsche and Schopenhauer! No one asserts, of course, that Germany is weak; far from it. But even the strongest nation might quake before a world in arms, and be tempted into the use of unwonted logic. And such has been the case. German diplomacy has long consisted in the opportune rattling of the sabre; but when her might seems more than matched, her Treitschkean logic weakens into a plea of extenuating circumstances.

This anomalous doctrine first came to light at the time of the invasion of Belgium. From the standpoint of the proud and heroic little nation invaded it must have seemed the very apogee of irresponsible power. It must have looked as if the big nation broke its promises towards the little one solely because it had the necessary men and cannon to enforce its will. But it is well to remember that the reason given for tearing up the scrap of paper was not based upon the consciousness of power at all. On the contrary, it was a confession of weakness. The Germans went through Belgium, not simply and solely because they were able to resist all opposition there, but explicitly because they were *not* then able to cross the French frontier farther south. It was "military necessity" that led to the breaking of the treaty, and that necessity consisted of a range of powerful fortifications along the German frontier of France. The invaders therefore felt justified in repudiating their moral obligation towards neutral Belgium, because they were not powerful enough to live up to their promises and still win. There is no talk here of superman, no "'Wille zu Macht"; it is the crude excuse of mere advantage.

The same strange plea is made for the illegal and murderous use of the submarine. According to the treaties still in force among the great nations, a man-of-war may stop and search a merchantman of the enemy, and, if it be found to carry contraband, either tow it into port or, when all on board are transferred to a place of safety, send it to the bottom. Germany's conduct in this matter has, by common consent, been in open and ruthless contravention of her solemn promises as recorded in the accepted treaties. And what apologies were offered? They may be boiled down in principle to three. Of these the first two are so absurd they can scarcely be meant seriously; and the third is, in a veiled form, only the astonishing plea of weakness above referred to. (1) It is said the treaty fixing the rule of search and capture is so old as to be obsolete. This involves the novel idea that treaties fade like cheap photographs in the light. Our treaty with France ceding us the Territory of Louisiana is more than twenty years older than the treaty in question. What should we think of the claim that France was now at liberty to repudiate it? On this principle the Declaration of Independence and the Magna Charta are automatically nullified beyond redemption! (2) It is said the invention of the submarine has modified the conditions of naval warfare. Doubtless. But it is unprecedented in the history of ethics or jurisprudence that the invention of a machine by which one could break the law with ease and convenience should be urged as a justification for so breaking it. The invention of revolvers greatly facilitated the project of murder, but the plea that that invention had "profoundly modified the conditions" of social intercourse would not accomplish much before a judge and jury.

There remains, therefore, only the third ground of justification, which ran as follows: The treaty demands that the unarmed ship be halled and asked to surrender. The submarine is necessarily a slow boat, and if it stops to parley the prey escapes. But suppose the German submarine should succeed in stopping and searching the merchantman, and find contraband. It cannot tow the capture into port because Germany has no open port to receive it. On the other hand, the submarine is so small it cannot possibly take on the passengers and crew of the captured ship. The only alternative is to sink it at once with all on board. In other words, again, Germany is not powerful enough to get her large and swift naval units past the British blockade, and this was to exempt her from the promise to give due warning, or to rescue passengers and crew; she is not strong enough on the sea to keep her ports open, and this excused her from adopting the alternative of capture. This is a direct appeal for special dispensation on the ground of her insufficient strength. It is as if a man should claim the right to use a revolver in a boxing match because, forsooth, he could not defeat his opponent any other way! The idea that might makes right may be a brutal one, but this alternative is worse.

It is obvious that the Teutonic demand upon our country to discontinue shipments of arms and ammunition rests, at bottom, on the same form of logic. Indeed, it is so obviously a plea of weakness that Germany seems to have been too proud to take formal diplomatic responsibility for any representations on this point. She wisely let Austria do it. The whole point of the case is that our shipments benefit only one side. Why? Simply because the Teutons have not sufficient naval power to protect such commerce with them. As Austria has made no pretensions in naval armament, the plea does not sound quite so abject in coming from her. But the principle of it is unaltered by the change of signature.

Thus in a third instance a moral exception, a special dispensation of rights, a readjustment of universal obligation, has been invoked by a great nation on the ground of weakness—of its unfitness to survive in the established order of duty. Can that be the voice of the "War Lord" of Europe? Are all his conquests, glories, triumphs, spoils, sunk to this petty measure? The prerogative of power has given place to an inverted doctrine of survival—the defiant dignity of the superman to the quibbling desperation of moral weakness.

BENJAMIN W. VAN RIPER.

State College, Pa., October 13.

AMERICA FIRST IN 1783.

TO THE EDITOR OF THE NATION:

SIR: There is a striking clause in the charter of a college in Virginia, the wording being due somewhat perhaps to the facts that the institution began business in 1776 and was chartered in 1783—under the very British name of Hampden-Sidney College, where the father of President Wilson was professor for a few years many years after. The words sound well, and the tradition is that Patrick Henry put them together: "That in order to preserve in the minds of the students that sacred love and attachment which they should ever bear to the principles of the present glorious Revolution, the greatest care and caution shall be used in electing such professors and masters, to the end that no person shall be so elected unless the uniform tenor of his conduct manifest to the world his sincere affection for the liberty and independence of the United States of America."

Prince Edward Co., Va., October 15.

THE CHIEF CAUSE OF THE EASTLAND CALAMITY.

TO THE EDITOR OF THE NATION:

SIR:

What we do assert is that if the officials who passed upon the subject had taken their stand sternly upon the principle that the lives of passengers must not be exposed to danger—that the margin of safety must be far greater than that afforded by the supposition of no lapse ever occurring in the care with which the ship was managed—the disaster never could have happened. And the reason that this was not sternly insisted on was that to do so would mean a heavy loss to certain

particular persons who had invested their money in the ship, etc., etc.

In a recent number of the *Nation* I find a most timely and ably written article, entitled "The Chief Lesson of the Eastland Calamity," from which I extract the above quotation, which appears to have been provoked mainly by the general horror of the disaster attending the accident to the ill-fated steamer, and partly by the entangled statement of Capt. Eames, a former master of the vessel, in which he is represented as saying, that although "the ship itself was thoroughly seaworthy . . . she was cranky, like all lean-hull vessels, and required constant watching," etc.

The grave and important lesson the *Nation* appears to gather from the lamentable event, and the chief cause of the deplorable disaster, is attributable to what the writer finds to be a characteristic fault of the American people, in their "unwillingness to enforce strictly and unbendingly any general rule or principle, when such enforcement inflicts immediate pain or loss which it is disagreeable to contemplate, while the consequences of non-enforcement are remote and indefinite and may seem in the particular instance to be improbable."

The *Nation* declares that "the whole story of the Eastland's past indicates that the thought of danger was present, again and again, to the inspectors that allowed her to continue in that line of business," and significantly inquires: "Why did they dismiss this thought?" The pertinent and truthful conclusion is then reached, that the officials who passed upon the matter failed to take their stand sternly upon "the principle that the lives of passengers must not be exposed to danger, and the reason they did not do so was, because such a course would mean, *a heavy loss to certain particular persons, who had invested their money in the ship,*" etc., etc. And this faulty tendency in the American mind is illustrated by reference to the case of the murderer Holt, and to the atrocious conditions that led to the sinking of the Slocum.

The excellent editorial in the *Nation* suggests the opportunity to emphasize what the present writer considers the chief cause of the sad experience which befell the unfortunate Eastland, and which has directly, so the writer believes, contributed to many of the most appalling calamities occurring in navigation during recent years, particularly in American waters.

In this scientific and practical age the doctrine is no longer held by thoughtful people, that the evils inflicted on mankind are the result of any kind of providential dispensation, but they are regarded as largely attributable to personal carelessness, negligence, lack of foresight, or downright wilfulness. In the wisdom and experience of the ages, in order to provide remedies to correct such dispositions, and compensate those who are injured by them, certain rules of conduct have been evolved and formulated the principles of which are familiarly known as common law. These constitute the supreme social code governing all English-speaking people, and their wise and beneficent operation is everywhere acknowledged. Through prudent legislation these principles of the common law have been gradually modified in their governing power and tendency to correspond with the changes wrought by the growing wants of society, having always in view the greatest good to the greatest number. Along with these principles of the common law have appeared numberless forms of corporate enterprise, some of which have grown to such colossal proportions, they have succeeded in subordinating the general welfare to the dictates of their special interests and have secured the enactment of laws providing for their especial profit or advantage, at the expense of the general mass of mankind.

One of the wisest and most beneficial doctrines of the common law is that a ship-owner is liable, *in full,* for all damages caused by the negligence of his employees. And such is the general maritime law, as declared in Foster's Federal Practice, Vol. 2, p. 593. Yet the application of this profoundly wholesome doctrine has been entirely frustrated by the mal-legislation of the Congress of the United States and the Parliament of Great Britain, in which is illustrated, not merely the "unwillingness to enforce strictly and unbendingly" the general rule of the common law by the people of the United States and Great Britain, because such a course would mean a "heavy loss to certain particular persons, who have invested their money in ships," but from the confessedly deliberate design to favor ship-owners, to the detriment of all the rest of the world who become the victims of the negligence of such owners and those "who have invested their money in ships." The rule of the common law, relative to the negligence of ship-owners, was observed as the governing principle in all cases of navigation, up to March 3, 1854, when the Congress of the United States passed an act, avowedly designed to encourage shipping, by extending all possible protection to vessel-owners, entitled "An Act to limit the liability of ship-owners, and for other purposes." And the limitations of liability and exemptions contained in said act were enlarged by additional legislation by Congress, through the acts of June 26, 1884, and June 19, 1886, now embodied in sections 4282 to 4289 of the Revised Statutes of the United States. Similar provisions are contained in the English Merchants' Shipping act of 1894, 57 and 58 Victoria, chapter 60, in which ship-owners are limited in their liability to an amount calculated at a specified number of pounds per ton of the vessel, and considered in its entirety the English law is less favorable to the ship-owner and more disposed to the rights of shippers than the acts of Congress.

The origin and policy of this vicious legislation, which the *Nation* appropriately designates as a characteristic fault of the American mind, and which appears as a like affliction in the British disposition, is naïvely declared and explained by the late Mr. Justice Bradley, in the leading case of Norwich & N. Y. Transportation Company vs. Wright, 13 Wallace, U. S., 104, in which he says:

> The great object of the law was to encourage shipbuilding, and to induce capitalists to invest money in this branch of industry. Unless they can be induced to do so, the shipping interests of the country must flag and decline. Those who are willing to manage and work ships are generally unable to build and fit them. They have plenty of hardihood and personal daring and enterprise, but they have little capital. On the other hand, those who have capital, and invest it in ships, incur a very large risk in exposing their property to the hazards of the sea, and to the management of seafaring men, without making them liable for additional losses and damage to an indefinite amount, etc., etc.

The extreme wickedness of this iniquitous legislation, which the learned jurist laboriously endeavors to palliate by inept and honeyed sentiment, is not disclosed by the casual reading of the insidiously worded sentences, in which the draftsmen have striven in vain to clothe it. The following is a type of the general tenor and substance of the several enactments referred to:

> The liability of the owner of any vessel, for any embezzlement, loss, or destruction by any person, of any property, goods, or merchandise, shipped or put on board such vessel, or for any loss, damage, or injury by collision, or for any act, matter, or thing, loss, damage, or forfeiture done, occasioned, or incurred, *without the privity or knowledge* of such owner or owners, shall in no case exceed the *amount or value of the interest of such owners in such vessel, and her freight then pending.*

One would suppose, from the general reading of the act, that on the familiar principle of "respondeat superior" which runs through the common law of master and servant, or principal and agent, the negligence of the master and other officers of the vessel, whose negligence may be the proximate cause of loss of the vessel, or of loss of life or property occurring therefrom, would be attributed to the owners of the vessel. Now it is to protect the owners of the vessel from this beneficent provision of the common law that the atrocious Congressional legislation mentioned above was designed. The glaring evils resulting from such legislative enactments are not fully manifest, except when the courts attempt to apply their maleficent features to cases as they arise.

Upwards of one thousand persons, whose brief obituaries filled five pages of the Chicago *Tribune,* lost their lives through the evident criminal carelessness of somebody. That being the case, each personal representative of the several unfortunate victims of the accident would doubtless obtain a judgment for several thousand dollars against the owners of the vessel, and all the property of such owners be subjected to the payment thereof, but for the exemptions afforded the owners by the provisions of the act of Congress limiting the liability of the owners to the present value of the Eastland, which is comparatively worthless. In the proceedings to ascertain the causes leading to the dreadful destruction of life on the vessel, the general trend of the testimony shows that *knowledge* of the criminal negligence from which the accident is believed to have happened is not attributable to the *owners* of the vessel. Should this be the conclusion at the final hearing, then the damages accruing to the representatives of the thousand or more of unfortunate sufferers from the disaster can never be recovered from the owners of the Eastland, even in the face of the confessed negligence on part of the officers that caused the accident, although the possessions of the owners of the Eastland be reckoned in millions, except to the extent of the present value of the vessel, unless it can be shown that the owners had knowledge of its unseaworthy condition or knew of the negligence that caused its misfortune. These conclusions are deduced from the decision of the Supreme Court of the United States, in the trials of all the actions for damages resulting from the loss of lives in the destruction of the Titanic. And such has been the uniform judgment of the highest courts of the country, ever since the enactment of the unwise laws passed by Congress for the protection of ship-owners from the just and reasonable principles of the common law.

The unwarranted character of such legislative principles is further apparent when you undertake to apply them to other

forms of business in which common carriers are engaged. For instance, in the case of a railway company, if loss of life or property occurred on one of its trains through the negligence of its employees operating the same, and the liability of the company should be limited by law to the value of the car on which the accident occurred, unless the company had knowledge of the negligence that caused the accident, would not such a law deserve and receive the fierce denunciation of every lover of justice? Would it not be universally recognized as an obvious discrimination in favor of the property rights of railway companies as against the lives and property of those entrusted to their care and custody? Does not such legislation esteem the property rights of the common carriers above the lives and property of those committed to their safe-keeping and transportation? Is not such legislation a direct encouragement to the carelessness of ship-owners, and does it not operate as a premium on their negligence?

There never was a more opportune time for the repeal of such obnoxious laws than that offered to the next Congress, by an amendment to La Follette's Seamen's act, which the shipping interests of the country are threatening to denude of its many chief merits.

Paducah, Ky., September 10.

"WHILST."

TO THE EDITOR OF THE NATION:

SIR: Mr. William Lyon Phelps informs readers of the *Nation* for October 14 that "Englishmen almost invariably write 'whilst' and Americans 'while.'" To find out what evidence is at hand for this surprising statement, I turned to nine English books and two English magazines. I discovered an example of "while" in each, examples of "whilst" in only one.* My brief investigation did not convince me that "whilst" is as nearly dead in England as it is in America, but it did make me sure that "whilst" is not "all but universal in contemporary English books." The examples I happened upon are the following:

"While the gruel was arriving at maturity, she wrapped the covering," De Morgan, "When Ghost Meets Ghost," London, Heinemann, 1914, p. 523; "He was to go there at once, while the fine weather lasted," Trevena, "Arminel of the West," London, Alston Rivers, 1909, p. 206; "While he was at school he worked hard," introduction by "H. S." to "Lapsus Calami and Other Verses" of J. K. Stephen, Cambridge, Bowes & Bowes, 1912, p.v; "While companionably, all the way run the grass-grown cuttings," C. G. Harper, "Summer Days in Shakespeare Land," London, Chapman & Hall, 1912, p. 186; "While we discussed the thickening traffic—we heard," Kipling, "Actions and Reactions," New York, Doubleday, Page & Co., 1909, p. 149; "While carefully dropping some dilute carbolic acid . . . he found," Masefield, "Multitude and Solitude," New York, Mitchell Kennerley, 1911, p. 264; "The light had been turned out while Buggins was reading," Wells, "Klpps," New York, Charles Scribner's Sons, 1905, p. 140; "While one they eye," Hardy, "The Dynasts," New York and London, Macmillan, 1904, p. 7; "While waiting for that answer, it had become Mr. Pendyce's habit," Galsworthy, "The Country House," New York and London, Putnam, 1910, p. 162; "That beech is 'the beech where we saw the squirrel,' while yonder larch is the one we sheltered under,'" the *Spectator*, September 25, 1915, p. 394; "Mr. Harcourt remained an enemy of the British Navy . . . while he publicly gloried in his hostility to the Army," the *National Review*, October, 1915, p. 237.

Literature

THE NEW EFFICIENCY.

Scientific Management: A History and Criticism. By Horace Bookwalter Drury. New York: Longmans, Green & Co. $1.75.

Scientific management became a current term in 1910, when Louis D. Brandeis made his arguments before the Interstate Commerce Commission against an advance in freight rates proposed by the Western railways. By means of scientific management, he asserted, certain manufacturers had been able to combine high payments with a low cost of labor; he urged the railways to adopt similar methods and to refrain from seeking public support in their emergencies. The origin of the system of scientific management is commonly ascribed to the late F. W. Taylor, who, after preparing for college, went to work instead, and who in 1882 was made machine-shop foreman of the Midvale Steel Company of Philadelphia. The author of the present book traces the history of the movement from its inception in the mind of Taylor, as applied by different men in various industries, analyzes its distinctive features, and attempts an appreciation of its importance and probable future.

Taylor, like thousands of other men in a like position, was an energetic foreman, eager to get from his men the best work that they could render, and, like other foremen, wanting a greater output in a day's work than the workman was ready to give. Taylor was unlike other foremen in that he believed that it was possible to determine accurately, by research and experiment, the amount of work of which a man was capable, and proposed to obtain this amount and no less by suitable methods of payment. With the support of the corporation by which he was employed he was enabled to begin a series of extraordinarily elaborate investigations. The particular field in which he was most interested was that of metal-cutting by machine tools, such work as the turning of car axles in engine lathes. In this one branch of factory work he is said to have spent altogether twenty-six years of research and nearly $200,000 of money. In 1895 he read before the American Society of Mechanical Engineers a paper, "A Piece-Rate System," which embodied the results of his experience, and which marks an epoch in the development over a larger field of the practice of scientific management. The movement grew steadily from that time. Some of its exponents, notably Harrington Emerson, have declared their independence of Taylor's influence, but in general he was the source from which others (Gantt, Barth, Hathaway, Cooke, Thompson, Gilbreth) drew their inspiration and authority. Early in the present year it was estimated that the system of scientific management had been applied in some form to about eighty different industries and to hundreds of different plants.

Taylor's paper of 1895, as suggested by its title, made the wage system the crux of factory management. Men had no inclination to do their best when they were paid by the time. The system of payment by the piece, which appears to offer sufficient stimulus, had also failed in practice because piece rates were so generally cut when the daily output increased that the men had only their labor for their pains if they raised the speed of their work and the amount of their product. Devices such as profit-sharing and gain-sharing, intended to reconcile employers and laborers by an indefinite solution of the wage problem, had had but a slight success. Taylor followed a new course. He asserted boldly that it was possible by scientific methods to determine the work which a good man could do in a day. For this amount of work he proposed a generous wage. The danger of rate-cutting was obviated by the fact that the standard wage assumed a fair maximum of exertion; while the differential rate proposed by Taylor punished so severely the man who did not reach the standard that he would be eliminated and his place would be taken by a better worker. Taylor assured his hearers that the men who had been working under this system for the past ten years maintained an output far above that of the average wage-worker, and did so gladly because of the increased return which the system assured them.

The plan of the differential rate, which was accepted at the time as the most important contribution that Taylor had to make to the practice of shop management, fell into the background as the experience of succeeding years showed that other devices could be employed to stimulate workmen to do their best, and that under certain conditions even the old systems of day work or piece work, when they were handled by trained and far-sighted employers, met all needs. The tendency has been to emphasize not so much the demands of the employer as the aid which the employer could contribute to the effective performance of tasks. Taylor's idea that a task should be scientifically determined has remained fundamental. Motion study, involving the analysis by skilled observers of manual operations, has been so far refined that for some purposes even a stop-watch will not measure the small fractions of a second in which elements of the motion are distinguished. The object of such study has become, however, more consciously constructive. Workmen are carefully taught how they may accomplish most, in the shortest time and with the least fatigue. Pauses for

rest are in some cases not only permitted, but enjoined. The greatest pains are taken to provide workers with effective tools and needed supplies. Every attempt is made to apportion tasks according to the inborn qualities of the laborers, so that each may apply his natural gifts to advantage. Finally, employers have been forced by the "efficiency experts" to examine critically not only their workmen, but also themselves, and to adopt far-reaching reforms in the ranks of controlling officials and the clerical force. The new type of factory, with its planning department, its careful routing of work in progress, its elaborate system of records and accounts, its standardization, and its "functional" or "line and staff" or "departmental" organization, is as different from the old as is the great army of to-day from the armies that antedated Frederick the Great and Napoleon.

The successes of scientific management were widely advertised at the time of the railway rate hearings. Some of its achievements appear astounding:

The Tabor Manufacturing Company's product is now said to be worth two and a half times as much, and to be in quantity three times as great, as before the introduction of scientific management—this in spite of a reduction in the number of employees. The productive efficiency of the Link-Belt plant has been doubled. The Watertown Arsenal estimates were reduced by $240,000. In the cotton industry, productivity was increased enough to cover an advance of wages amounting to about 30 per cent. For the Ferracute Machine Company, the expense of doing a large number of jobs was reduced to 47 per cent. of what it had been, which equals a new productivity amounting to 213 per cent. of the old. Under scientific management the average individual handles quantities of pig iron equal to 380 per cent. of his former task. Yard laborers at Bethlehem (shovelling) increased their output to 368 per cent. Bricklayers perform tasks enlarged to 270 per cent. As many bicycle balls were inspected by 35 girls as had been handled formerly by 120. On the Santa Fé it was estimated that $1,250,000 was saved in one year.

Yet the system is only one factor out of many that influence the course of any business; and it is almost impossible to apportion exactly the credit that is due to it. The system appears in some cases to have worn out, to have lost the efficiency which was first ascribed to it. Factories in which the system was first applied present it no longer in its model form. The gains resulting from the effective application of scientific management in specific instances appear to be differentials, owing their existence to the relative inefficiency of competing plants, and lacking the promise of permanence; while there are obvious limitations to its introduction in many lines of work. It is commonly estimated that even now only 50,000 workers are subject to the system of scientific management; bolder estimates, ranging up to 200,000, leave still the great body of laborers unaffected. Some features of scientific management will certainly persist, but the system as a whole is still in the experimental stage, and the future before it is uncertain.

Some of the charges commonly made against the system of scientific management can readily be shown to be unfounded, or at least exaggerated. Men are not reduced to automatons because their movements are measured by the stop-watch; nor do they need to strain themselves to perform the tasks imposed upon them, when the system is intelligently applied. It is not impossible, though it is difficult, to reconcile the new system with the prevailing methods and objects of labor organization. Some benefits of the system, on the other hand, cannot be contested. It makes new openings in the higher grades of labor, both in the factory and in the office; it raises the wage of the workman. It has succeeded, up to the present, because it has won the approval not only of the capitalist employer, but also of the working class.

A number of books and a great many articles in periodical journals have been written on this topic of scientific management. Most of these have been technical; many have been decidedly partial. Nowhere else can the reader find what the author of the present volume gives him: a comprehensive history and appreciation of the movement, both scholarly and interesting, sympathetic yet also critical. The author treats the topic, as he says, from the "broadly-social" point of view. He lacks the authority of a technical expert in expressing judgments on matters which contain an important technical element, but he wins the confidence of the reader by his caution, by the industry which he has shown in the collection of facts, and by his evident desire to reach the truth. Economists and sociologists will be grateful to him for his contribution, and thoughtful readers, even though they have no professional interest in the subject, will still find the book well worth reading.

CURRENT FICTION.

The Way of These Women. By E. Phillips Oppenheim. Boston: Little, Brown & Co.

Mr. Oppenheim turns here from international intrigue, somewhat staled now by actual use, to his earlier manner, and gives us a very readable detective story. Some of the details of the mystery will not perhaps bear severe analytic investigation, but the main point is that the full explanation of the mystery is kept concealed until the very end. It may be easy, by a simple process of exhaustion, for the astute reader to guess at the start who was the actual murderer of the Marquis of Lakenham—we note with delight that the blood spilled is of the bluest of the blue and not that of any plain John Smith or Harry Brown—and the emphasis that is laid on the noble marquis's reputation among the ladies may supply a hint for the motive of the crime; but the dénouement, when we find that each of two perfectly innocent people has thought all along that the other was the guilty person and that each has been heroically shielding the other—this, we confess, escaped our own eagle eye and we hasten to give credit to Mr. Oppenheim for his *tour de force.* He is ingenious, too, in fastening responsibility for the deception on a jealous woman, and to reward him for his ingenuity we consent to swallow without excessive gulping all the coincidence it must be admitted he sometimes administers in rather large doses. This volume is not representative of the author's best work, but it is a good story of its type, and we commend Mr. Oppenheim's perception of his public's appetite in realizing just now that it has all it wants of German diplomacy.

Straight Down the Crooked Lane. By Bertha Runkle. New York: The Century Co.

"The Helmet of Navarre" appeared in 1901, and at once swashbuckled its way to popular favor. (That was a great moment for the feminine practitioner of costume romance: Miss Johnston's "To Have and to Hold" had just scored an immense hit.) After her marriage three years later to Capt. L. H. Bash, of the United States army, the romancer wrote two stories of similar mould. She here casts aside her buckram and writes out of a considerable experience of social and garrison life in America and the Philippines. The product is a nondescript compound of social satire, mystery, and sentiment. A famous and fateful jewel, known as the Plassy diamond, is the pivot of the action. It has been looted from India by an Englishman, and whenever it passes out of the family keeping it carries a curse. At the time when the story opens it is in possession of a young Newport matron who has duly suffered on its acquisition, and is anxious to be rid of it. Consequently, old Nathan Thorpe is able to buy it to use as a bribe for the possession of his little daughter, who is in the custody of his divorced wife, now Mrs. Valentine. Mrs. Valentine refuses the bribe, and leaves him, on the verge of collapse, in her own library. There shortly afterward he is found dead. The box which has contained the jewel is in his pocket, but the diamond itself is gone. At the moment everything is as muddled as the best lover of detective fiction could desire. Anybody might have taken the gem, Mrs. Valentine, or her husband, or the little girl Loveday, or the dead man's brother, or some person unknown.

The weak thing about the rest of the story is that it goes on by fits and starts, now as a mystery yarn, now as a story of human life and character. The two things are almost irreconcilable; for though the writer of detective fiction professes to be studying human life, he is really concerned with a mechanism working independently of, and even in ways hostile to, real characterization. In order to carry on the present plot, the leading persons have to be false to the reasonable and attractive selves we are just getting acquainted with. Each of the

Valentines, who have appeared a devoted and likable pair, at once jumps to the conclusion that the other has stolen the Plassy diamond. Neither suspects the other's thought. Valentine, with the fatuity of your mere hero, runs away to draw the bloodhounds upon his own trail. Mrs. Valentine is convinced of his guilt, and appears to suffer very little from her conviction. Of course, the game is to bring everybody together again, after all these years, and to clear up the mystery when the author and the reader have had enough of it. To effect this, Loveday marries an army officer, and finds the blameless fugitive, "Val," in the Philippines, and, shortly after, the missing jewel in Japan. All is explained and all is forgiven—a little too much by rote. The style of the book is superior to its matter. Mrs. Bash is capable of an excellent novel of manners if she were able to apply herself to it.

The Trail of the Hawk. By Sinclair Lewis. New York: Harper & Bros.

The exuberance of this book is the exuberance of youthful energy, and it is felt from cover to cover. The kaleidoscopic shifting of scene and incident follows naturally from the buoyant and adventure-loving personality of the hero.

We see him first as "a man of eight," directing the destruction of reckless mercenaries. In course of time he emerges from his rural environment at a little Northwestern college of extreme sectarian type, whence he is expelled for taking too loyal an interest in a revolutionary young professor who lectures on Wells, Shaw, and Socialism; he goes to Chicago and serves as packing-hand in a large department store, as chauffeur, and what-not; and finally runs away with a circus. From this point his fortunes take a sharp rise upward, literally following his entrance into the field of professional aviation—whence his nickname, "Hawk"—and his invasion of the East. The inevitable heroine enters with a girlish freshness equal to his own boyish high spirits, and the narrative moves along to a species of sustained *gaudeamus igitur*. Nor do the shocks and adventurings that have marked his career so far end with his marriage. All is not happy ever after. The new love has to compete before long with the old love of flying, which he had exchanged for a more prosaic method of making a living, but they save the day by fleeing from "stuffy marriage" together to the Argentine, happy once more in the glow of feeling "How bully it is to be living, if you don't have to give up living in order to make a living."

Mr. Lewis knows the scenes of which he writes, from Minnesota to Colon, and, without any pretence of putting all America into a novel, has succeeded in giving a truer picture of our puzzling United States than has been the fortune of more ambitious tales. This sane-eyed realism, combined with the book's genuineness of tone and its sparkling rapidity of movement, should win for it a multitude of interested readers.

A Maid of Old Virginia. By William Sage. New York: Fleming H. Revell Co.

The episode of Bacon's Rebellion contains promising material for the historical romancer: it has been handled without inspiration in this book. The author has had some experience in turning out the kind of thing! Very likely, he has found a safe recipe. To others than habitual users of the compound, it will prove a trifle insipid. Bacon the rebel and Colonel Berkeley the corrupt are the chief historical figures: their make-up and costume are passable, but their parts are rather crudely acted. The necessary element of personal adventure, the invaluable tincture of heart-interest, is injected into the merely historical situation through the persons and exploits of Jasper Mason, handsome and gallant youth, and lovely though lowly Deborah Lane. In short, we are here presented with a familiar and evidently marketable article compact of truth, mush, and melodrama. The dialogue is less absurd than is common in books of the type.

A NEW COMPENDIUM OF MODERN EUROPEAN HISTORY.

A History of Mediæval and Modern Europe for Secondary Schools. By William Stearns Davis, assisted by Norman Shaw McKendriek. Boston: Houghton Mifflin Co. $1.50.

In a graceful dedication prefixed to the volume of his collected poems, Catullus compliments his friend Cornelius Nepos on the success of his endeavors to bring within small compass the history of all the ages (*omne ævum tribus explicare chartis*). This is what Mr. William Stearns Davis has attempted to do in the manual which lies before us, entitled "A History of Mediæval and Modern Europe." He does not take all the ages for his subject, for he begins in the fourth century A. D. But he has so much more ground to cover and so much a vaster mass of historical literature to abridge than Cornelius Nepos had, that his task of compression is incomparably more difficult. So difficult, indeed, is it to make interesting as literature a history which covers many centuries in few pages that a reviewer must not apply the usual standards of criticism. It would be absurd to complain that such a book contains no dramatic passages, no delineations of character, no train of philosophical reflections. For these things there is no room in 560 pages of small octavo. What is wanted is a clear, terse summary of the chief events; and the skill of the writer has to be directed towards selecting the events best worth emphasizing, and stating their connection in the fewest and simplest words. It is by these qualities, and, of course, also by accuracy, that the merit of such works as this is to be tried.

This book stands the test well. There are, however, several omissions, and here and there mistakes, a few of which we have noted. On an early page the Huns—Attila's Huns—seem to be described as "Tartars" (the word should be "Tatars"). There is very little to show what family of mankind the Huns belonged to, but the more general opinion is that they were probably Mongols, not members of the Tatar or Turkic stock. To say (p. 440) that the Code Napoléon "is still used to-day in many parts of Germany" is going too far. Is it used anywhere in that Empire except in the comparatively small area west of the Rhine? The praise bestowed (p. 443) on the University of Berlin as "the intellectual citadel of all the new nineteenth-century scientific and higher learning," even if intended to apply to German universities only, does some injustice to such other German seats of learning as Leipzig. The account (p. 470) of the war of Hungary against Austria in 1848-9 is hardly accurate, for it omits to inform the reader that Hungary had an ancient constitution of her own, and to speak of the "Germanized Vienna Government" seems to imply that the Vienna Government has been changed, whereas it had always been German. On p. 226 the reference to Vasco da Gama's voyage appears to ignore the earlier discovery of the passage round the Cape of Good Hope by Bartholomew Diaz. On p. 430 the mention of the dropping of his old imperial title by the Emperor Francis II in August, 1806, ought to have been explained by adding that some of the chief German states had already withdrawn from the Empire, and that Napoleon had already announced that he did not recognize its existence. At p. 540 a brief reference ought to be made to the great Bulgarian massacres by the Turks in 1876, as these were the real cause of the war which followed and in which the Russian arms liberated Bulgaria. A more serious omission is the absence of any reference to the annexation of Portugal by Philip II of Spain in 1580 A. D., and its liberation in 1640 by a revolt against Philip IV. Nor do we find any reference to the rise and growth of the Swiss Confederation, specially interesting as its history is to American students. The Swiss Cantons are first referred to in a note on p. 239.

These, however, are trivial matters in comparison with the general accuracy and completeness of the book. It purports to be intended as a textbook to be used along with oral teaching, and with a view to that aim suggestions to teachers are given, questions are placed at the end of each chapter to furnish a basis for the examination of the learner upon the points dealt with in the chapter, subjects are indicated on which exercises may be written, and a short list of books is appended to which both teachers and students may refer. All this is carried out in a workmanlike manner, and the author has wisely left himself space (gained by retrenchment upon topics of secondary interest) for dwelling pretty fully on matters of supreme importance, such as the career of Charlemagne, the struggle of the Investitures, and, above all, the French Revolution. These are treated with insight and judgment. In the last five chapters, which bring the story down to our own day, a

laudable and on the whole successful effort has been made to treat controversial questions and issues still undetermined with due impartiality.

The illustrations are as a rule very well selected. Those which present scenes of mediæval life and the portraits of famous men are particularly useful.

POLITICS OF THE PRESENT.

The Underlying Principles of Modern Legislation. By W. Jethro Brown. New York: E. P. Dutton & Co. $2.25 net.

Professor Brown has written an able, even a brilliant, book. In a simple and refreshingly untechnical manner he has tried to analyze the basic conceptions of modern politics. He has the advantage of being, as an Englishman, in touch with the conservative aspect of modern legislation, while as a professor in an Australian university he is able to understand and, what is more, to sympathize with, the radical experiments of that fascinating democracy. The result is a volume which no student of modern political thought should neglect to read.

It is of the deepest interest to place this book side by side with Professor Dicey's superb lectures on "Law and Public Opinion in England." The point of view is essentially antithetic. The temperament of the writers is singularly reverse. Professor Dicey, looking back on the nineteenth century, agrees with Professor Brown in thinking that its main motif has been the gradual triumph of collectivist principles. He is doubtful of the wisdom of their application. He urges that they have led, and are leading, to the gradual enervation of individual initiative, to the transference to the state of functions that it is unable adequately to perform, with the result that, in M. Faguet's illuminating, if lugubrious, phrase, modern democracy to him becomes "a cult of incompetence" against which it is essential to raise an arresting hand.

Professor Brown is troubled by no such doubts. To him the evolution is natural and good. It shows the gradual acceptance of a social will as intrinsically superior in moral worth to the will of any individual. The state to him is not a substitute for personal responsibility, but, on the contrary, something very like the armed conscience of the community, pricking it into activity when it seems most likely to lapse into forgetfulness. The dangers which oppress Professor Dicey he does not deny; but he argues that they are the natural errors of a novel method of action to be cured by experience. He does not shrink from admitting the bigness of the issues involved. He sees the complex nature of the social problem. He insists that it is not to be solved by the iteration of any panacea, whether of Karl Marx or of Henry George. What he does believe is that when a nation—it is impossible to doubt that he is analyzing his Australian experience—consciously sets itself to the study of its difficulties, we have every ground for hopefulness. The action of the state is not to be deprecated, for the simple reason that the state is expressing the outcome of such collective thought.

We have principles that are growing from our facts—that is Professor Brown's main contention. We want not "natural" rights, but those "rights" without which the foundation of the state cannot be secure. We do not, to take his own example, urge the rightness of woman's suffrage on the ground that every human being ought to vote, because he or she is a human being. We urge it on the ground that the results of women's exclusion from the franchise lead us to believe that their inclusion is necessary. We are not socialists, he says again, except in the sense of Disraeli. We apply a piecemeal system of experiment. We try municipal or state ownership in various branches of industry. Sometimes we succeed, sometimes we fail; but in either case we draw our principle from the facts.

It is interesting to note that Professor Brown, while accepting the Gierke-Maitland theory of the state's "real" personality, yet does not doubt that it is a single, unified thing, necessarily transcending the discords of its elements. He declaims, for example, against those sections of the Australian people who believe on the one hand in strikes, on the other in anti-social monopolies, because each endangers the well-being of the whole. But here, as a fact, we think that Professor Brown is over-simplifying his problem. A rough generalization about Australian democracy would undoubtedly admit the reality of its unity at the present time. But, surely, it would urge also that this unity is due to the newness of the Commonwealth. Differences have hardly had time to develop. The emigration to Australia has mainly been that of a type similar to the original colonists. The burden of economic pressure has as yet been but little felt. No acute religious problem has divided public opinion. The best of unity, surely, will only come when Australia, like the United States, confronts the problem of absorbing half a hundred different peoples, each with a distinct, often un-American, tradition of its own. That test Australia has yet to face; and until she does, declarations of an inherent unity seem a little premature.

Not less interesting is Professor Brown's view of the nature of a democracy. In equality of opportunity he believes most firmly. But he is not one of those who, neglecting the obvious biological fact of variation, seek to gloss over the fact that men actually are born with differing capacities; and he therefore urges that it is those with the superior ability who should be invested with the function of government. His democracy, in brief, is an aristocracy by delegation. He thinks that the referendum and the initiative are, in fact, but political crutches, of use only until the most satisfactory method of representative government is obtained. Counting heads seems to him about as bad a method of government as removing them; the lyrical enthusiasm of Mr. U'Ren represents no more real democracy than the sinister essays of Robespierre. That is a valuable comment on the direction of Australian political ideas.

We may offer one or two criticisms in conclusion. The book needs an index; its absence is not compensated for by the analytical contents at the beginning. The introductory analysis of Anarchism would be improved if Professor Brown gave his quotations at first-hand, and not as citations from the handbooks of Zenker and Eltzbacher. Moreover, it is incomplete in so far as it neglects the "polyarchism" which thinkers like Maitland and Figgis have derived from the work of Gierke. Anarchism, at bottom, is, as Professor Brown realizes, an attack on the Austinian idol, and this most important of its developments necessitates a fuller treatment. Lastly, Professor Brown must know that Maitland did not, as he states on page 237, write a book on "The Service of the State."

ORIGINS OF AMERICAN INSTITUTIONS.

Holland: An Historical Essay. By H. A. van C. Torchiana. San Francisco: Paul Elder & Co. $1.25 net.

In common with those who have acquaintance at first hand with the archives of Holland and Belgium, this author, a lawyer in San Francisco and Consul-General of the Netherlands, believes that in American historiography and in popular notions there is much confusion of thought as to the origin of American institutions. His general thesis is that the framework of our national system is derived from old Holland, a republic, rather than from England, a monarchy. In his view the territory occupied by the four Middle States was the only portion of what is now the American Union which in their early history were politically homogeneous, that is, under one social and governmental system. These States have formed the centrum from which the full body of the nation has developed.

Almost every one of the salient features of our national Government is borrowed from the republic of the United Netherlands, the less desirable ones of the original model being rejected. Even in American pre-national and colonial days, "we find a certain unity of political ideas"—freedom of religious belief, proclaimed by William the Silent in 1577; "no taxation without representation," enunciated by the Netherlands in 1477; a comprehensive school system supported by taxation, easily traced in Holland to the thirteenth century and made general after the Reformation; written Constitutions, of which the Union of Utrecht, made in 1579, was one; and the supremacy of the judiciary, which in the Low Countries was a fixed principle in the time of Charles V. The fathers of the Constitution, dropping most of the peculiar features of political England, the throne, the State Church, primogeniture, and the financial and educational systems, adopted the ideas which the founders of American commonwealths, Pilgrims,

Puritans, Anabaptists, Quakers, had brought from Holland. The common notion that our country is a New England instead of a New Europe, Mr. Torchiana ascribes to the tremendous influence of Diedrich Knickerbocker, the effect of whose "literary joke," as Washington Irving called it, surprised no one more than the genial humorist himself. Yet it is certain that this amusing caricature was taken seriously, not only by a learned German commentator on Thucydides, who quoted from Knickerbocker's "History of New York," adding Latin notes to prove his point, but even in America, as more than one history—made in New England—shows.

Mr. Torchiana devotes one chapter to Dutch Influence on Civilization, European and American, and another to The Direct Influence of the Netherlands on America. These show in detail the direct and vast importation from the Land of Grotius into the colonies of the little and great things which make up civilization. He has read other authors than Motley and Campbell, and gives an array of facts that are as a b c to those familiar with the Dutch language and documents, but are not yet considered as material for orthodoxy in American historiography. In the chapter on Holland's Attitude During the Birth of the American Republic, he recalls events that are strangely absent or absurdly subordinate in our school histories. In resistance to unlawful taxation, in organized revolt under the forms of law, in a declaration of independence, in abjuration of a prince considered a tyrant, in the experience of Federal Government—with the long conflict between State right and national supremacy—in ordaining a flag on which each stripe represented a State having, whether large or small, an equal vote in the national Senate, Holland furnished us vital precedents. These things, in Mr. Torchiana's view, were well known to our fathers, though now they are often forgotten. The historian who is critically familiar with the Dutch language and archives, and especially with the documents of the seventeenth century, has yet to appear in the United States.

The warp and woof of this Dutch lawyer's essay are not closely woven together, and the literary texture seems somewhat flimsy, but most of the facts cited are beyond question. Moreover, some of the most telling arguments for his thesis are not utilized. We may mention, for example, the constant supply, during our Revolutionary War, by the Dutch from St. Eustatius of most of the munitions used by the Continental army, including the very paper on which Thomas Paine wrote his soul-stirring appeals, and the loan of four millions of dollars which paid our army at Newburgh in 1782, and which, when repaid in 1808, amounting, then, with compound interest, to fourteen millions of dollars, was used to develop over four millions of acres in western New York and Pennsylvania.

In arguing on the question of American political and social origins, there is danger of a partisanship like that of the late Douglas Campbell, from which Mr. Torchiana is not wholly free. Yet it is certain that Hamilton Madison, John Adams, and Benjamin Franklin were more familiar with the workings and defects of the living model of the Dutch Republic then before their eyes than are the statesmen and scholars of to-day. Moreover, while there are Dutch writers, who in Holland have made merry over the undue praise of their country by J. Thorold Rogers and Douglas Campbell, the serious historians, like Groen van Prinsterer, Motley's severest critic, and Prof. P. J. Blok, of Leyden, have acknowledged the substantial justice of assertions like those of Mr. Torchiana, by pointing out in detail ideas and institutions that existed in Holland long before they were known in England. The conscious debt of our fathers to the Republic may be summed up in what John Adams, a student on Dutch ground, wrote in 1780: "The originals of the two republics [Dutch and American] are so much alike that a page from one seems but a transcript from the other."

Notes

Walter Lippman's "The Stakes of Diplomacy" will be published shortly by Henry Holt & Co.

Moffat, Yard & Co. announce the forthcoming publication of "The Issues of Life," by Elwood Worcester.

"The Rhythm of Life," by Charles Brodle Patterson, and a revised and enlarged edition of "Opera Synopses," by J. Walker McSpadden, will be published shortly by the Thomas Y. Crowell Co.

The following volumes will be issued shortly by E. P. Dutton & Co.: Camille des Moulins," by Violet Methley; "Some Elderley People and Their Young Friends," by S. MacNaughton; "Between the Lines," by Boyd Cable; "Attila and the Huns," by Edward Hutton, and an English translation of the history of Tacitus, by George Gilbery Ramsay.

Included in the autumn list of the Macmillan Company, in addition to the volumes announced last week, are the following: Biography—"Henry Codman Potter, Seventh Bishop of New York," by George Hodges; "The Life of Clara Barton," by Percy H. Epler; "A Reverie of Childhood and Youth," by William Butler Yeats, and the fourth volume of the "Life of Benjamin Disraeli." History—"The Story of the American Merchant Marine" (enlarged edition), by John R. Spears. Philosophy—"The Problem of Knowledge," by Douglas Clyde Macintosh. Religion—"What is a Christian?" by John W. Powell. Science—"Who Is Insane?" by Stephen Smith; "Man: An Adaptive Mechanism," by George W. Crile, and "A Handbook of Weaves," by G. H. Oelsner, translated and revised by Samuel S. Dale. Music and Art—"A History of American Music," by Louis C. Elson (new edition), and "A History of American Painting," by Samuel Isham (revised edition). Mathematics—Volume I of "The Mathematical Theory of Probabilities and Its Application to Frequency Curves and Statistical Methods," by Arne Fisher. Medicine—"Diseases of Nutrition and Infant Feeding," by John Lovett Morse and Fritz B. Talbot; "Treatment of Acute Infectious Diseases," by Frank Sherman Meara; "The Criminal Imbecile," by H. H. Goddard; "Diseases of the Arteries, Including Angina Pectoris," by Sir Clifford Allbutt.

In "Matrimony" (Kennerley), John Trevena, by means of a lightly sketched narrative, gives concrete form to the full ceremony of betrothal and marriage as practiced by the mediæval Church. For his setting he employs the Dartmoor of his familiar choice, or rather its ancient prototype, home of a rude peasant life which hardly touches beauty and dignity except at the hands of mother Church. Young Anthonie and his Petronel are simply embodiments of youth and pure mating love. In a series of scenes painted with skilful if conscious artifice, the course of that love as ratified and blessed by religion is set forth. No moral is drawn in stated terms, but the writer's motive has evidently been to bring home to an age to which marriage is for the most part an arrangement the solemn beauty with which men in more childlike phases have invested it.

Mr. James Huneker, the author of "Ivory, Apes, and Peacocks" (Scribner; $1.50 net), was a critic of music, plays, and "art" in New York at about the time when Mr. Bernard Shaw was performing similar duties in London. The experience left its mark upon both of them. That was the period in which everybody was scintillating, and the only way to score was to coruscate. Unluckily, a trick like that easily becomes habit; hence our *ante bellum* spectacle of a group of stout or gray gentlemen being consistently startling for the glory of English letters. More than any other American of the generation, Mr. Huneker resembles them in brilliancy and skittishness of manner. His weakness for epigram, always irritating, is sometimes fatuous. What meaning in such pronouncements as "It is a holy and unwholesome idea to purge the mind every now and then"? If there is any functionary who ought to eschew the sprightly jingle of words, it is surely the critic. Here, too, we find extreme instances of the practice of carrying over terms from one art to another. So, although he apologizes for mixing his metaphors in saying of Strauss's Salome: "Very intense, an apparition rather than a human, she sounds the violet rays of eroticism," he can go on in the next breath: "The *tempi* were different from Campanini's—*i. e.*, the plastic quality of the reading gave us new colours, new scents, new curves." Ideas, the best of them, must be driven home with a sledge-hammer. For example, to enforce his preference for "pure music above impure," he must cry: "I dislike grand opera as a miserable mishmash of styles, compromises, and arrant ugliness"—an extravagance of terms which at once demands the confession, "I say this, knowing in my heart that nothing is so thrilling as 'Tristan and Isolde.' . . . So I'm neither logical nor sincere." Not a dryasdust critic, that is, but a creature of spontaneity, nature's child, flinging himself upon our bosoms and our kind indulgence.

This is all playfulness, of course, since, if any modern commentator sets store by his sincerity and the value of his opinions, it is plainly Mr. Huneker. His, if a soul adventuring, is a soul well equipped with maps and guide-books and knowledge of the experiences

of other adventurers. As a critic of the contemporary, he is able to draw upon a surprising store of information. He writes of Dostoïevsky or Schoenberg, Lafcadio Hearn, or Puvis de Chavannes, as of persons with whose setting and atmosphere he has found time to become familiar. In papers of a more general nature, such as "Max Liebermann and Some Phases of Modern German Art," or "The Melancholy of Masterpieces," the range of his information is still more notable. But among all the varied treasures, the ivory, apes, and peacocks he has brought out of Tarshish, the most valuable are not the most dazzling. We get our utmost from Mr. Huneker, not when he is displaying his virtuosity and range, but when he is pinning himself down to the careful and serious study of a single writer, musician, or painter; or, it may be, of a single movement in art. Very characteristic, for example, is his swift and firm handling of the Futurists: "They emulate the innocence of the eye characteristic of the early painters, but, despite their strong will, they cannot recover the biltheness and sweetness, the native woodnote wild, nor recapture their many careless moods. They weave the pattern closer, seeking to express in paint a psychology that is only possible in literature. And they endeavor to imitate music with its haunting suggestiveness, its thematic vagueness, its rhythmic swiftness and splendor of tonalities. In vain. No picture can spell many moods simultaneously, nor paint soul-states successively within one frame. These painters have mistaken their vocation. They should have been musicians or writers, or handle the more satisfactory, if less subtle, cinematograph."

An Italian translation has appeared of the book on the war published under the direction of Baudillart, rector of the Catholic Institute of Paris, and under the patronage of the Catholic Committee of the French Propaganda. The title is "La guerra tedesca ed il cattolicismo." The introduction is by Cardinal Amiette, Archbishop of Paris. The chapters which follow were written by different authors who, according to the Cardinal, are men of sure doctrine, absolute fidelity to the Church, whose competence is indisputable and whose documentation is sound. Their object is to show how Germans have violated Christian law. The thesis is illustrated by reference to atrocities committed in Belgium and France, especially to the cruelties inflicted on Catholic priests. Cardinal Amiette quotes the words of the Cardinal Archbishop of Malines concerning France, which "remains faithful to her age-long part as the custodian of law and the protectrice of civilization."

A monument to Edouard Rod was unveiled at Nyon on the 8th of September. In the distinguished company present, besides Rod's widow and children, were representatives of the Swiss universities; Doumic and Faguet, of the French Academy; Dr. Hill, former American Ambassador at Berlin; the Russian Minister, and the principal newspaper editors of French Switzerland. The monument consists of a large bench of pink Baveno granite upon which, in relief, are a profile bust of the author, the titles of his best-known writings, and allegorical figures symbolizing the several periods which have been traced in Rod's literary evolution. This idea of development is expressed with poetic feeling, but it may be doubted whether it corresponds to the logical requirements of sound criticism. The memorial bench is placed against an old gray wall, and faces the blue lake, the jagged summits of the Alps, with Mont Blanc towering in the distance. It is a place in which Rod spent much of his boyhood. The principal address at the unveiling was by Professor Bouvier, Rod's successor in the chair of French literature at Geneva. It was very long, very diffuse, without a very successful analysis of Rod's moral and literary power. Lecomte, president of the "Société des gens de lettres," also spoke, and a letter from Paul Bourget was read which in a few words comprehended more than the speeches did. Possibly out of deference to the audience with its French sympathies, considering the state of feeling in Europe, hardly any reference was made to the deep impression made upon Rod by German authors, especially by Goethe and Schopenhauer. On the contrary, too much emphasis was laid on what Rod owed to Zola. Undoubtedly he admired Zola, and in his earlier years defended the realism of the French author, but the impression made was faint and fleeting. Rod's memory is greatly revered in Switzerland, and his refusal to be naturalized in France in order to become one of the Immortals is not forgotten: "J'aime tant la France, mais je suis né Suisse et je mourrai Suisse."

It rarely falls to the lot of an historian to revise and put forth an amplified edition of a work which he first published half a century before. This has been Mr. W. Carew Hazlitt's happy fortune, although he did not live to correct the final proofs of his latest *rifacimento* of "The Venetian Republic: Its Rise, Its Growth, and Its Fall, A. D. 409-1797" (Macmillan; 2 volumes, $12). It was in the late fifties that he issued, after hasty preparation and with no profound knowledge, his earliest book on the Venetian Republic. His third edition of this work, very liberally expanded, came out in two large volumes in 1900. Still not satisfied, Mr. Hazlitt kept on accumulating material and left at his death the manuscript for the present fourth edition. He has added about 350 pages to his volumes, making a total of over 2,000 pages. He finds the substance of his additions mainly in topics concerning the manners, customs, morals, and art of Venice. To these he devotes more than a third of his work. The result is that nowhere else in English is there so ample and comprehensive an account of Venetian civilization. Everything is included, from a description of the dower caskets of brides to that of the great pageants of state. Hazlitt's book may truly be regarded, in this respect, as an encyclopædia of Venetian life.

The publication of Pompeo Molmenti's expanded version of his "Venezia nella Vita Privata" furnished Hazlitt with much material; but he has also kept watch on the uninterrupted stream of articles and monographs on special points in the life of the republic. His general interpretation of Venetian history, modified somewhat between his first edition and his third, is well known. In the main, he seems to the present reviewer more valuable for his treatment of episodes than for his grasp on historical development. But Hazlitt's work will probably remain for a long time what it is now, a most comprehensive storehouse of information on all matters Venetian. His untiring industry, his zeal, unchilled at four-score years, his insatiable curiosity, the range of his interests, and the real worth of his criticism give him a permanent place among the few notable historians of Venice.

Mr. Albert Matthews, an indefatigable searcher for truth in the byways and hedges of New England history, has taken advantage of a blunder made by President Roosevelt in 1907, when the latter in delivering an oration on the soil of the Old Colony failed to mention the Pilgrim Fathers under that designation, but spoke of them always as Puritans, to investigate the history and usage of the term. The result of his inquiry occupies about one hundred pages of print, large and small, in the Publications of the Colonial Society of Massachusetts, and has been issued separately (Cambridge, Mass.: J. W. Wilson & Son). In tracing the history of the term, Mr. Matthews reviews in great detail the proceedings at the Plymouth and Boston celebrations of Forefathers' Day, from their beginnings in 1769 and 1772, and finds not only what he seeks, but also a great deal that is interesting to the student of New England politics. The net outcome of his investigation may be summed up as follows: The term Pilgrim did not first appear in the ode read by Judge John Davis at a Plymouth celebration in 1794, as is frequently stated, having been introduced into a revised version of that poem at some time between 1835 and 1846. It is found, however, specifically applied to a first settler, in "an elegant and patriotic ode" entitled "Heirs of the Pilgrims" read by Thomas Paine at a Boston celebration in 1798. From Heirs or Sons of the Pilgrims to Pilgrim Fathers is a short step, and was taken by Samuel Davis, when in 1799 he read to the gathering at Boston a poem containing the line, "Hail, Pilgrim Fathers of our race." At Plymouth the term was introduced by Judge Davis in an oration delivered at the celebration of 1800. A Pilgrim Society was proposed in 1807, changed to the Old Colony Pilgrim Society in 1819, but incorporated under the first title in 1820.

Having thus established the fact that the terms Pilgrims and Pilgrim Fathers, as used in American history, were unknown until the closing years of the eighteenth century, Mr. Matthews proceeds to trace the origin of the terms, and follows their pedigree back through the writings of Robbins, Hutchinson, Mather, Morton, and Bradford to the departure from Leyden in 1620. He shows that, though at first applied to the passengers on the Mayflower, they had come to signify by 1800 any early settler of Plymouth or Massachusetts Bay. A reaction, however, took place, and later an effort was made to restrict their use to the Plymouth colonists. "This restriction," says Mr. Matthews, "is recognized at the present time only in the Old Colony itself," a conclusion he seems to contradict two pages farther on, when he writes: "At the present time by the terms are generally meant the passengers who came in the first four ships," 1620-1623, a statement that represents more correctly than the first the present attitude of historical scholars. The remainder of Mr. Matthews's paper is devoted to a brief consideration of the distinction between Pilgrim and Puritan, a subject to which he proposes to return at another time, as he is not satisfied that such a distinction exists. His paper is interesting, though rendered confusing to the reader by elaborate footnotes and an excessive amount of quotation in fine print.

A new two-volume edition of the poems of Keats, with a preface by Sidney Colvin (Brentano's; $5 net), is designed for "lovers of beautiful poetry beautifully printed." The arrangement is chronological, except that twenty-four pieces are placed in an appendix under the heading, "Verses Jocular or Trivial." The printers have used an old-style antique type on a broad, very white page, without glaze, but have not in all cases succeeded in making the printed lines on opposite sides of the leaf coincide. Owing to the use of the Oxford Keats as source of the text, this edition once more makes nonsense of a metaphor in "Sleep and Poetry." After the passage rejoicing in the revival of the "sweet music" of English poetry, Keats continues, apparently thinking chiefly of Byron,

> These things are doubtless: yet in truth we've had
> Strange thunders from the potency of song;
> Mingled indeed with what is sweet and strong
> From majesty: but in clear truth the themes
> Are ugly clubs, the Poets Polyphemes
> Disturbing the grand sea.

So the passage was printed in the "Poems" of 1817. Keats had remembered the "huge club" which Polyphemus kept in his cave, and had substituted it for the rocks which he hurled at the ship of Ulysses. But Lord Houghton printed "cubs" instead of "clubs," and the error has received further currency by its appearance in the several editions of H. Buxton Forman, who indeed corrected it among his Errata in 1889, but has allowed it to reappear in his later one-volume editions. Professor de Selincourt is the only one of Keats's editors who has recorded both readings, with suitable comment. The point is a small one, but illustrates once more that misprints die hard. The present edition is in general worthy of the distinguished work of the Florence Press, by which it is issued.

Laymen as well as lawyers will find President Charles H. Stockton's "Outlines of International Law" (Scribner; $2.50 net) an interesting as well as an instructive handbook. The author is well qualified for his task. Not only has he published much upon the laws and usages of naval warfare, but he has had occasion, as an officer rising through successive grades to the rank of rear-admiral, to put his theory into practice. Moreover, he has represented the United States at various conferences and in important positions. President Stockton recognizes and attempts to meet the demand for a "treatise on international law that is abreast of the times," but he is fully aware of the novel questions which have been raised in the present war. Some of them he strives to answer, but others had not appeared when his book was published. For example, no allusion is made in these pages to the attacks of submarines on unarmed vessels, and no intimation is given of any legal right on the part of such warships to sink an enemy's merchantman and put non-combatant passengers and crews to the hazard of saving themselves as best they can. The rules of international law seem to require the seizure of merchant vessels, under normal circumstances, and the adequate safeguarding of their crews and passengers. Five appendixes add to the value of the text. The most important are those containing the "Convention for the Pacific Settlement of International Disputes" and the "Declaration of London concerning the Laws of Naval Warfare" with the report thereon to the International Naval Conference of 1909.

Drama

NEW PRODUCTIONS IN LONDON—GEORGE EDWARDES AND MUSICAL COMEDY.

By WILLIAM ARCHER.

London, October 7.

So far as the theatre is concerned, it may certainly be said that England's need is America's opportunity. Putting musical plays and mere transpontine melodrama aside, there are at present ten London theatres appealing to what may be called the reasonably intelligent public; and of these five are occupied by American plays. Beside two great English successes, "Quinneys'" and "The Man Who Stayed at Home," we may place two still greater American successes, "Potash & Perlmutter" and "Peg o' My Heart." The American detective play is represented, on its melodramatic side, by "Kick In"; on its humorous, not to say farcical, side by "The Dummy." "On Trial," after a good run, has recently disappeared from the bills; but last night witnessed a new importation in the shape of Mr. Edward Sheldon's "Romance." It is pleasant to record that Miss Doris Keane made a great and incontestable success, while the play was accepted as an adroit and intelligent piece of work, though one would be sorry to regard it as the best that can be looked for from the author of "Salvation Nell" and "The Nigger."

Apart from "The Big Drum," there has been only one English production this autumn of the slightest pretensions. The author of "The Ware Case," at Wyndham's Theatre, is announced on the playbill as "George Pleydell"; but there is no secret about the fact that he is really Mr. George Pleydell Bancroft, son of the manager and manageress, who were in many ways the true pioneers of the dramatic revival. At the old Prince of Wales's Theatre they produced in the sixties the comedies of T. W. Robertson, and after Robertson's death they fell back, in the seventies, upon elaborately mounted and admirably acted adaptations of Sardou. The family tradition is strong in Mr. "George Pleydell"; but, unfortunately, it is the Sardou, not the Robertson, strain that he has inherited. He has Sardou on the brain and in the blood; and in "The Ware Case" he has produced a reasonably interesting detective play, marred, on the side of character and emotion, by Sardouish superficiality and insincerity.

There is a certain originality in the conception of Sir Hubert Ware. He is a Wicked Baronet, indeed, but not quite of the ordinary type. Though absolutely devoid of moral scruples, he is superficially charming, amiable, and generous. Everybody likes him except those who know him well. He has made his wife miserable by his flagrant infidelities; he has gambled away all his fortune, and he tries to possess himself fraudulently of a few thousand pounds belonging to Lady Ware. Baffled in this by the intervention of a great lawyer who chivalrously adores the much-wronged lady, Sir Hubert sees only one means of escape from disaster. His wife has a younger brother, a contemptible worm of a boy, to whom their father has left almost all his huge fortune. If the boy were out of the way, the money would revert to Lady Ware; so Sir Hubert, watching his opportunity while Master Eustace is bathing, knocks him on the head with an oar, so that he sinks and is drowned. For some months the murder is undiscovered. Lady Ware pays her husband's debts, but, his conduct in nowise improving, she announces to him that she will no longer live in his house. Immediately on the heels of this final breach between them, the minions of the law arrive to arrest Sir Hubert on suspicion of having murdered his brother-in-law; and here, where the interest of plot begins, the interest of character unfortunately breaks down.

From the first, Lady Ware has not particularly cared for her husband, and she has long seen through his superficial amiability and realized his utter worthlessness. She cordially detests him, and has just told him so in the plainest terms. But the accusation of murder causes the most amazing revulsion in her feelings. Had Romeo been arrested for the slaying of Tybalt, at the moment of his descent from Juliet's chamber, the new-made bride could not have "taken on" more tragically than does Lady Ware. We cannot but ask ourselves: if she is so heartbroken over the arrest of a man she abhors, what would she do if a similar misfortune overtook a man she loved? The whole treatment of the situation is thoroughly false. That she should believe him innocent and try her best to save him is probable enough—not that she should throw herself into his defence with a frenzy of conviction that could not have been surpassed if he had been the most admirable man and adorable husband in the world. The position, in itself, is interesting enough. Many answers might be given to the question: what would a woman do under the circumstances? Mr. Pleydell, for the sake of giving his heroine some strongly emotional and "sympathetic" scenes, has picked out the one thing she certainly would not do; and this falsity vitiates all the latter half of his play.

The third act consists of the trial scene, fairly well staged, but not to be compared with the trial scene in Mr. Galsworthy's "Justice," as mounted by Granville Barker. Of course, Sir Hubert is defended by Lady Ware's chivalrous adorer: that is imperatively demanded by the Sardou tradition. It so happens that, immediately before the murder, a broken-down jockey called to beg Sir Hubert to assist him, and Sir Hubert, in his good-natured way, gave him the last five-pound note he had in the world. This man now comes forward and perjures himself gallantly in his benefactor's defence,

with the result that he is acquitted by the skin of his teeth. The jockey's examination and cross-examination are interesting enough, and the trial as a whole is not ineffective. But now it is Sir Hubert's turn to develop unexpected and bewildering traits of character. Hitherto we have taken him for a born criminal, brazen, insouciant, stoical, and without a nerve in his body. But behold! no sooner does he come home after his acquittal than his nerve utterly breaks down, he drinks too much champagne, and, becoming next door to a gibbering maniac, confesses his crime and takes a dose of prussic acid. Surely, the last act demanded both by logic and by human nature was utterly different from this, and immeasurably more effective. It might run somewhat as follows: Lady Ware and her Bayard barrister have done their best for Sir Hubert and got him off, thereby placing an insuperable obstacle in the way of their high-minded affections. Sir Hubert comes home, and his wife, in view of the ordeal he has gone through, feels that it is perhaps her duty to try to forget the past and begin a new life with him. The scene of quasi-reconciliation between them might be most interesting. Then some incautious word of Sir Hubert's should reveal to her his guilt; or, perhaps—though this would be more commonplace—the jockey should enlighten her by turning up to claim the reward of his hard swearing. What the actual end should be we need not speculate; but I am sure that even Sardou would not have been content with so simple a solution as making Sir Hubert break down, get drunk, and blab.

I do not know whether the name of the late George Edwardes was familiar to the American public, but many of his productions were as successful on your side as they were here. He used to say that he looked to the provinces and America to recoup him for the very heavy initial outlay involved in his system of management, which left him a very small margin of profit on the London run of his "shows." His career illustrates the obvious and yet often neglected fact that, when a form of art is at the same time an article of commerce, it must always tend to express the tastes and predilections of the man whose commercial ability gives him the control of the machine. In the theatrical trade there are fortunately a good many men who combine business aptitude with an honest preference for the better class of work, and an ambition to do the best of which circumstances will allow. If this were not so, the state of the theatre would be parlous indeed. The late Mr. Charles Frohman, though his tastes were not fastidious, was a "sportsman" after his fashion, willing and eager to experiment in every type and grade of play. But Mr. Edwardes confined himself to one type of play—the light musical production—and he impressed it with the stamp of his own personality and his own limitations. He approached the theatre entirely from the business—the box-office—side. He began as business manager for Mr. D'Oyly Carte in the early days of the Gilbert and Sullivan successes. Then he went over to Mr. John Hollingshead at the Gaiety, a cynical and rather futile impresario, who was fond of comparing his trade to that of the cheesemonger, and therein flattered it rather than otherwise. The "Gaiety burlesque" which Mr. Edwardes found in possession of the field was an appallingly inept form of entertainment, which subsisted entirely on the talents of a little group of comedians and on the pink silk fleshings which were then the statutory garb of the chorus. The dominance of this form of "art" had been seriously shaken by the vogue of Gilbert and Sullivan, and Mr. Edwardes, on coming into power, swept it away altogether. So much must be accounted unto him for righteousness, though he probably did nothing more than recognize, what was pretty patent to everybody, that the "leg show" had had its day. What share he took in the actual invention of the form of entertainment which superseded it, I do not know, and perhaps no one does. Certain it is that, in the early nineties, the so-called "musical comedies" took possession of the stage, and maintained their popularity for something like fifteen years. It is with this form of entertainment that the name of George Edwardes will always be associated in the footnotes to theatrical history.

Meilhac and Halévy had to some extent anticipated "musical comedy" in "La Vie Parisienne"; but it is not to be supposed that the librettists of the nineties went so far back for their inspiration. Indeed, when it was decided to put the chorus into skirts instead of tights, the idea of presenting them in gowns of modern cut, though of somewhat accentuated color, lay ready to hand. And that was the "differentia" of the type. It purported to present scenes of modern life—fast life for preference—with an intermixture of songs and dances, and with a "beauty chorus" always in evidence. Now, this was in itself a far from unpromising form. It might have been made the medium for a delightful intermixture of satire, fantasy, comedy, farce—nor need imagination and poetry have been entirely excluded. But nothing was further from the thoughts of Mr. George Edwardes and the band of librettists and song-writers whom he gathered round him. Most of the song-writers were clever versifiers—W. S. Gilbert had banished forever the unspeakable doggerel which too often did duty for verse before his appearance. But this was practically the only merit that musical comedy could claim. Its plots were inept, and usually dropped out of sight before the first act was half over. If there was any invention in the pieces, it was that of the individual comedians, each of whom worked up his little "stunt" with no thought of proportion or coherence. The form, in short, became the servile, if somewhat exaggerative, mirror of the higher vulgarity. The life it portrayed was that in which its purveyors delighted—how, then, should they dream of satirizing it?

And Mr. Edwardes is now being lauded by all his biographers for his incomparable instinct for "what the public wants"! A more fallacious eulogy it would be hard to imagine. He gave the public what *he* wanted, and never gave it a chance of seeing anything better. That his entertainments were excellent of their kind is not to be denied. What money and a certain order of taste could do for them, he did. He paid high salaries to clever comedians, and he crowded his stage with beautiful and graceful women, who were sometimes not without talent. When one compares the chorus of the modern musical play with the choruses of thirty years ago, one is inclined to wonder whether there has not been a marked improvement in the average physical type of the young Englishwoman. If I cannot quite join in the current panegyrics on Mr. Edwardes's genius, it is certainly not that I am a *laudator temporis acti*. All I say is that if Mr. Edwardes had been able to conceive and create a higher order of entertainment, there is nothing whatever to show that his public would not have accepted it with enthusiasm—as they did the Gilbert and Sullivan operettas. By wholly omitting the factor of intelligence and invention, he forced himself to maintain the popularity of his wares by an ever-increasing expenditure upon luxurious mounting, which ended by making "musical comedy" almost impossible. If his intelligence had equalled his business sense and his eye for spectacle, he would have been far more successful than he actually was.

"OUR MRS. McCHESNEY."

The dramatization of Edna Ferber's McChesney stories, made by the author and George Hobart, if it has not resulted in a very skilful play, has at least been so contrived as to furnish an evening's cheerful amusement (Lyceum Theatre). The managers must also be congratulated upon their choice of Miss Ethel Barrymore for the principal part—that of a travelling saleswoman who, because of her skill in disposing of petticoats made by a New York firm, eventually becomes a partner, and then a partner for life, of her former employer. Seldom has she been seen to better advantage. In her acting there has always been a certain colloquial quality, sprung of American soil, and here it is entirely in keeping with the rôle she has to fill. She is called upon to enact a pretty, girlish widow in the late thirties possessed of what, in the hands of a less qualified actress, might easily degenerate into bluffness. For she must meet buyers on their own grounds, charm them and convince them. This she does, and yet by her prettiness and grace succeeds in lifting the part into a most winning atmosphere.

The story itself is not particularly new on the American stage. It suggests at a distance "Get Rich Quick Wallingford" and "Potash & Perlmutter." The usual lingo and appurtenances of salesmanship are present, also the severe crisis before the final triumph. The humor is, too, very often of the sort which has found a growing place in American plays, and merely follows the formula represented in such a remark as, "The way she gets around makes the hustle of

Chicago seem like a prayer-meeting." Only occasionally do comparisons of this exaggerated type bring a laugh, probably because it is recognized that they are exceedingly easy to contrive, once one abandons one's mind to it. But when so much reservation is made, the play may be commended for its wholesome lightheartedness and entertaining situations.

Miss Barrymore was ably assisted by William Boyd, Donald Gallaher, Lola Fisher, Gwendolyn Piers, and W. H. St. James.

F.

"QUINNEYS'."

With this entertaining comedy, which was produced in London last spring and has met there with conspicuous success, Horace Annesley Vachell, already well and favorably known as a writer of fiction, made his first appearance as a dramatist. The change of métier is unusually successful. Mr. Archer, writing from London of the piece in the *Nation* of May 20, said: "'Quinneys'' is easily the best play of a bad season, and even in a good season would take more than respectable rank." Subsequent success in London and the warm welcome accorded to the play last week on its first production in New York at Maxine Elliott's Theatre amply confirm Mr. Archer's opinion.

The chief merit of the play is as a study of the principal character, Joseph Quinney, a Yorkshireman wholly without education, but become through sheer force of native talent a leading authority on antique furniture. The interest is, however, by no means confined to character. The plot is slight and exceedingly ancient—the love affair of an employee with his master's daughter—but by means of a technical skill which is remarkable in an author's first play the interest is sustained undiminished through all four acts, while every character, with perhaps one exception, is clearly delineated and presents a definite personality. The plot turns on the discovery, announced by James Quinney's foreman, that some Chippendale chairs, which Quinney has bought and resold as genuine, are clever imitations, and the old Yorkshireman immediately suspects his employee of a design to blackmail him. The secondary plot, provided by the faked chairs, is dovetailed into the main love story with uncommon skill, the only weak feature being the character alluded to, Quinney's typist, a jealous woman, who contributes, indeed, both to the development of the plot and to the exposition of Quinney's character, but is herself a somewhat nebulous creation. It is possible that an actress of uncommon talent might raise this part in point of interest to a position corresponding with that held by the other rôles, but it must be conceded that the author has set the interpreter a difficult task.

The play on the whole is excellently acted. Frederick Ross, using a broad Yorkshire accent, brings out well the essentials of Quinney's character—his naïve vanity in his success and confidence in his own infallibility, his devotion to his antiques to the partial exclusion of more human affections. Susan, Quinney's wife, whose meek subjection of a lifetime to her blustering lord and master is suddenly changed, when the question of her daughter's happiness is involved, to timid but determined revolt, is cleverly interpreted by Miss Margaret Watson. Miss Peggy Rush is altogether charming as the daughter, Posy, and Cecil Fletcher, as James, is a personable lover. Arthur Grenville is amusing in the character part of Sam Tomlin, an unscrupulous dealer in antiques and a good foil to the honorable Quinney, and minor rôles are adequately played. The essentially English atmosphere of the piece may possibly prevent it from equalling in New York the success which it has enjoyed in London, but the genuine interest of the character drawing and the broad humanity of Mr. Vachell's play should insure an appreciative reception. "Quinneys'" is the pleasantest importation from London which we have seen for some time.

S. W.

"ALONE AT LAST."

There is certainly hope for the future of light opera when the same early month of a theatrical season sees the production of two operettas of the calibre of "The Princess Pat" and "Alone at Last," the latter produced last week at the Shubert Theatre. The music is by Franz Lehar, of "Merry Widow" fame, and the book is "freely adapted" from the German "Endlich Allein" by Edgar Smith and Joseph Herbert. It is improbable that any particular virtue has gone out of the piece in the process of adaptation, and it is safe to assume that for the hackneyed plot and the not very inspiring dialogue the original authors must assume equal responsibility with the adapters. The plot for itself is hardly worth recording—an American heiress falls in love with an Alpine guide, who is really an Austrian baron in disguise—but the point to notice is that the plot, whatever it may be worth, is made to shoulder the burden of carrying the piece through to a successful conclusion. If our librettists and producers can be brought to an understanding of the importance of this matter, it is probable that in time, deprived of the aid of adventitious "stunts," they will be driven to the composition of plots and dialogue that amount to something.

Franz Lehar's music, always tuneful and at times rising almost to the heights of grand opera, is a pleasant relief from the reminiscent insipidity of most musical comedy. It has, furthermore, the advantage of being rendered by an exceptionally capable orchestra, under the direction of Gaetano Merola, while the two principal rôles are interpreted by singers of unusual musical ability, Madame Namara, who sings the principal soprano part of Dolly Cloverdale, and John Charles Thomas, who not only has a well-trained and sympathetic high baritone voice, but reveals considerable talent as an actor. On the histrionic side it cannot be said that Madame Namara is particularly successful, but failure in this respect is compensated for by vocal excellence. Humor is supplied by Harry Conor and Roy Atwell. To the credit of the latter, as part author and recitationist, must be accorded the most genuinely amusing number that we have heard in recent light opera. It bears the pleasing title "Some Little Bug Will Find You Some Day."

S. W.

In spite of the excellent acting of George Nash and Lenore Ulrich, who are the protagonists in "The Mark of the Beast," written by Georgia Earle and Fanny Cannon, and presented at the Princess Theatre, the performance may be dismissed in a few words. It is one of those dramas of sex in which the parade of the unpleasant finds no compensation in a vital representation of life. The situations grow out of highly special circumstances, with the result that the dramatic atmosphere is anything but purged at the end; and, besides, the construction of the play is markedly amateurish.

In the same class, though of less merit, belongs "Mrs. Boltay's Daughters," a drama in three acts, adapted from the Hungarian of Eugen Heltai, which had its opening performance on Saturday at the Comedy Theatre. The daughters are four in number, ranging in age from sixteen to the late twenties, and the oldest, with the approval of her mother and two of her sisters, has supported the family since the father's death by being the mistress of a rich diplomat in Washington. The plot need not be indicated further, for the play, at least in its new American setting, seems wholly unreal and preposterous. The acting of Mr. Hunter and Miss Walker was much above the ordinary.

Music

GODOWSKI, PADEREWSKI, AND OTHERS

Leopold Godowski was the first of the famous musicians now assembled in this country to give a recital this season. Born in Russia, he made the United States his home for some years, but finally went to Berlin because so many American students of music preferred seeking lessons of him there to taking them in New York or Chicago. He is in some ways the most astonishing of pianists; his digital dexterity is so bewildering that one who should happen to hear but not see him might fancy he must have at least three hands. Glorying in this extraordinary deftness, he played on this occasion one of Chopin's études (op. 10, No. 6), which most pianists find difficult enough for two hands, in his own version for left hand alone. Heaping Pelion on Ossa, he has made a practice of combining two of Chopin's études, weaving them together cleverly—yet one cannot but wish he had not done this. In his "Symphonic Metamorphoses" of a Strauss waltz he plays the most amazing contrapuntal tricks. When he performs a Beethoven or a Chopin sonata one misses the emotional element. Were this as strongly developed in him as the intellectual and technical sides, he would indeed be a giant of the keyboard.

What places Paderewski so far above pianists of the class of which Godowski is so brilliant an exemplar is that in him the emotional element is paramount. It is needless to say that this element was particularly in evidence at the recital he gave in Carnegie Hall last Sunday for the benefit of the Polish Victims' Relief Fund. Before playing, he spoke nearly an hour on the tragic fate which has overtaken his native land, Poles being obliged to kill Poles, because they belong to different empires; and a territory, some thousand miles long and 600 miles wide, being now "a vast desert, an immense ruin, a colossal cemetery." He

spoke briefly of Chopin, Sembrich, Modjeska, Sienkiewicz, and great artists and workers in other fields that Poland has given the world; his remarks, which were eloquently delivered in idiomatic English, being frequently interrupted by applause. Then he played a group of Chopin pieces, three of which—two polonaises and the sonata with the funeral march—were specially appropriate to the occasion. His delivery of the sonata was one of the most overwhelming performances he has given in New York (where he was first heard twenty-four years ago). By doubling the bass on the return of the first part of the dirge he gives it the weird clang of an Oriental gong, dismal and thrilling. Thrilling, also, was the final presto, which to Paderewski evidently symbolized—as it did to Rubinstein—the sighing of the night wind over the graves.

It is to be hoped that these appealing lecture-recitals of Paderewski, apart from the sale of tickets (which amounted in San Francisco to $9,000 and in New York to nearly $10,000), will induce Americans to open wider their purses for the benefit of Poland, where, according to the report of the investigators of the Rockefeller Foundation, conditions are "much worse than the worst in Belgium."

It is not the intention of the present writer in these weekly reviews of music in New York to comment on all the minor concerts and recitals, or even to mention them—a procedure which, in this year's plethora of entertainments, might result in as dry a record as Homer's catalogue of ships in the "Iliad." Some mention is due to David Bispham for the unique entertainment which he is now presenting to the American public. In it he appears as the poor deaf Beethoven, in an adaptation of a lachrymose little play by Hugo Müller, woven around the sentimental song, "Adelaide" (which, by the way, Beethoven, in his maturity, would have been glad to destroy). Mr. Bispham still sings well, and in his acting he recalled the days when he so admirably impersonated Kurwenal and other parts at the Metropolitan Opera House. His "Adelaide" will doubtless appeal to a large public all over the country.

Of orchestral concerts there will be more than ever throughout the land; the Philharmonic alone will have more than ninety, besides a seven weeks' tour at the close of its New York season. The first concert was given last Friday at Aeolian Hall by the New York Symphony Orchestra, which played Beethoven's fifth symphony and some fragments from Ravel's "Daphnis and Chloe." These would be more effective if used in connection with the ballet for which they were written. The soloist was Mischa Elman, who, though in America last season, did not then play in public. The year's rest has evidently been of benefit to him; his interpretation of Goldmark's violin concerto made him appear more of a musician, and less of a mere virtuoso, than he had seemed to be on some previous occasions.

HENRY T. FINCK.

Finance

COURSE OF EXCHANGE ON LONDON.

When the $500,000,000 Anglo-French loan was first formally announced, in the last week of September, exchange on London rose to 4.73, as against the low price of 4.50, touched momentarily in the great decline which culminated at the opening of that month. There was some uncertainty in Wall Street's mind as to how the immense new credit fund would be employed. If it were to be used for aggressive support of the exchange market, a further sharp recovery in rates might follow. The rate of 4.73 was still fully 10 cents in the pound sterling below what in normal times would be the minimum; it was at least conceivable that the new resources would be used to restore something like a normal level.

But the sterling market did not indicate any such purposes. In the week after the announcement of the loan, the rate got down nearly to 4.69; in the next, it almost touched 4.67; this week it fell to 4.61⅝, the lowest figure touched in eight weeks, and marking the loss of more than half the recovery from the low level of the year. What made this movement, under all the circumstances, much more impressive was the fact that it occurred in the face of sales by London, at New York, of $1,000,000 per day in American securities, and of delivery to our banks on account of England, since October 1, of $40,000,000 gold. It was natural that Wall Street should have asked, where was the $500,000,000 credit fund making its influence felt?

It is probable that the proceeds of that loan had as yet been used only sparingly; the machinery for disbursing them was hardly yet in thorough working order. But a more obvious answer seemed to be, that Europe's purchases of our goods were now running so high as to create a balance of payment in this country's favor which could be only partly and gradually met, even by the large new credit. October, even in normal times, is the month in which export of our agricultural staples reaches the high mark of the year, and, in fact, the shipment last week of 11,000,000 bushels of wheat from both coasts of America broke all weekly records in our history. But the present month also happens to be the time when the war material ordered by Europe, long delayed by the necessary preparations of our factories, is moving out in full quantity, and when, moreover, exports of steel and iron of every sort have probably reached their maximum.

Some very remarkable reports on current trade have shown what these simultaneous influences were producing. Last Monday, $21,635,000 worth of merchandise was exported from New York alone. This was not only by far the largest one day's shipment in the history of the port, but was actually greater by one-half than went out in the whole of this present week in 1913 or 1912. The Government's summary of last week's exports from the larger ports of the United States showed, next, that the total, $98,700,000, fixed an absolutely new weekly record for the country's trade. At the same time came the Washington figures of the whole country's foreign trade last month. The exports, $297,700,000, surpassed those of any other month except last February; so did the $146,300,000 excess of exports over imports—which was actually more than double the largest September export surplus of the past.

This remarkable result brought the excess of exports, for the nine completed months of 1915, to no less a total than $1,227,200,000, as compared with $57,900,000 in the same period last year. The previous high-water mark for the nine months' period (that of 1908) was $432,200,000. The preliminary weekly figures for October prove that the present month's figures will be much larger. It is easily possible that the export surplus for the calendar year as a whole will reach $1,800,000,000. Never before, under the most favoring influences, has it touched $700,000,000.

The case of sterling exchange would thus on the surface seem to be clear enough, even with a $500,000,000 credit through which the strain of drafts direct on London might be averted. That would pay only half of the "export excess" as stated above. Yet the matter is not quite so simple as such a comparison would seem to indicate. Europe has not been leaving everything to the balance of trade in merchandise. To begin with, we have received from abroad this year nearly $300,000,000 more gold than we have exported, and the figure may be $350,000,000 by the end of December. We have never before, in the full twelve months of any other calendar year, gained as much as $150,000,000 gold on balance from the outside world.

Nor is this all the offset. Quite aside from the $500,000,000 Anglo-French loan, we have advanced some $350,000,000 to foreign countries during 1915. Even when the proceeds of such borrowings were left here, to be spent for American commodities, the result, in relieving the market for international exchange would be the same. And our markets have also bought back from Europe, during 1915, something like $600,000,000 of our own securities.

The sum total of all these offsets will be found pretty nearly to balance the estimated excess of merchandise exports for 1915. Yet exchange rates continue to move heavily against the outside world. What is the explanation? In at least some degree, as an economic phenomenon, doubt as to Europe's maintenance of gold payments, if the war is much longer continued. But the far larger influence, reflected with increasing force in the day-to-day transactions of the New York market with the outside money markets, especially of the neutral nations, is the movement to this city of the working capital and international deposit funds,

which have heretofore regularly gone to London and which this year have largely been transferred from London to New York. Such transfer of capital not only deprives London of the supply of drafts on other markets which it usually handles, but to a large extent creates a new supply of drafts direct on England, which are sold in the sterling market. It is this heavy make-weight in the balance which it remains for sterling rates to measure, and which leaves the future course of international exchange a problem of great obscurity.

HOUGHTON MIFFLIN CO., BOSTON.

Memories and Anecdotes
By Kate Sanborn
8°. *Illustrated.* $1.75.
A gossipy, informing, waggish, and altogether delightful volume,—the retrospect of a woman who is interesting in herself and who attracted other interesting people. Among those who appear in the lively pages of the volume are—to mention only a few—President Barnard, Henry Ward Beecher, Mrs. Anne C. L. Botta, William Cullen Bryant, Hezekiah Butterworth, Mark Twain, Ralph Waldo Emerson, Edward Everett, James T. Fields, Horace Greeley, John Hay, Thomas Wentworth Higginson, Wendell Phillips, and Verestchagin.

Historic Sketch of the Jews in Russia and in Poland
By Israel Friedlaender
12°. $1.25.
A popular account of the Polish and Russian Jews whose Pale of Settlement is the battleground of Teuton and Slav. It elucidates the problem of Russian Jewry which, at the termination of the world struggle, will claim alike the attention of statesman and humanitarian. It interprets the complex psychology of the Russian Jew who is becoming an important factor in the life of America.

The Nation

NEW YORK, THURSDAY, NOVEMBER 4, 1915.

Summary of the News

In the House of Commons on Tuesday Mr. Asquith made his eagerly awaited statement on the war. It was less comprehensive perhaps than one could have wished, but more comprehensive than previous experience of official reticence had led us to expect. Concerning the Balkan situation, Mr. Asquith added only some details to what we learned last week from Lord Lansdowne's speech. Of most interest were his statements that the war would henceforth be conducted by a Cabinet committee of from three to five members, which would consult with the full Cabinet on matters of most serious import; that there would be coordination among the staffs of the Allied Powers, an earnest of which was afforded by Gen. Joffre's recent visit to London, and that in his (the Premier's) belief Lord Derby's new recruiting plan would prove successful; if it were not, however, he would submit proposals to the House "involving some form of legal obligation." Another item of information was that in the recent offensive in Flanders Sir John French had under his command nearly 1,000,000 soldiers. Concerning the future of the campaign in Gallipoli, for the inception of which the Premier took full responsibility, he could give no definte information. Mr. Asquith concluded with an expression of determination to stick to his post. Sir Edward Carson criticised the Balkan policy of the Cabinet without contributing materially to our knowledge of his reasons for his recent resignation.

From Lord Lansdowne's speech in the House of Lords on October 26 we learn that the British force originally landed at Salonica numbered about 13,000, and that was sent at the request of Servia and at the instance of M. Venizelos for the purpose of enabling Greece to fulfil her treaty obligations to Servia. Rumors of possible hostility on the part of the Greek Government to the Entente Powers were answered last week by Sir Edward Grey, who declared that Greece's espousal of the cause of the Central Powers was an impossibility, and by an explicit denial issued from the Greek Legation in London. M. Venizelos, according to an interview with him cabled to the Chicago *Tribune* on Tuesday, appears not to have abandoned the hope of bringing Greece into the war on the side of the Allies. His reason for not overthrowing the present Government, he is reported to have said, is that that would necessitate a general election, and to hold an election it would be necessary to demobilize.

Regarding Rumania, rumor, impressive by its very volume, is all of entry in the war on the side of the Allies. King Ferdinand was reported last week to have stated that he placed himself in the hands of Parliament and the Government. A dispatch from Bucharest to the *Corriere della Sera*, of Milan, asserted that at a meeting of the Rumanian General Staff two-thirds of the generals expressed themselves as in favor of entering the war against the Central Powers. The same dispatch states that semi-official Rumanian newspapers deny a report that King Ferdinand had assured the Bulgarian Minister that Rumania would remain neutral unless her interests were affected. This may possibly refer to a report cabled from Madrid, under date of October 28, in which a similar assurance of continued neutrality was attributed to the Rumanian Minister for Foreign Affairs. Reports, still unconfirmed, came from German sources at the end of last week that Rumania had come to an agreement with the Allies to allow the passage of half a million Russian troops through her territory, receiving in return Bessarabia.

The position of the Servian army is, as we write, extremely precarious. In the northeast the Teutonic invaders on Wednesday of last week effected a junction with the Bulgarian forces. Veles, recovered by the Servians early last week, was again retaken by Bulgarian forces two days later, and the capture by the Austro-Germans of Kraguyevatz, the principal arsenal of Servia, against which the former Austrian invasion vainly dashed itself to pieces, was announced on Monday. Southwards from Uskub the Bulgarians are reported to have been checked by the French and British, who also threaten Strumitsa. The port of Varna on the Black Sea has been heavily bombarded by Russian warships. There were reports from German sources on Saturday of the sailing of Russian forces from Odessa on transports convoyed by a strong squadron, and a dispatch from Bucharest on Tuesday stated that rumors were current there that these troops had been landed at Varna. British transports were reported off Kavala on Tuesday.

Submarines of the various Powers have displayed considerable activity. On Wednesday of last week the British Press Bureau admitted the loss in the Ægean by a torpedo of the British transport Marquette. All but about ninety of the ship's company were saved. On the same day the sinking in the Sea of Marmora of a Turkish transport by a British submarine was reported. Dispatches to Sunday's papers stated that in the previous twelve days twenty German vessels had been torpedoed by British submarines in the Baltic. The capture of a German ship by a Russian submarine was announced from Petrograd on October 28. In the North Sea one British and two Norwegian vessels have been reported torpedoed during the past week.

Echoes of the submarine controversy with Germany, generally supposed to have been virtually settled by the disposition of the Arabic question, have been heard during the past week. A second instalment of the United States "White Book," giving the important diplomatic correspondence with belligerent Powers since the first instalment appeared last May, was published on October 28. The most interesting feature of this correspondence is that relating to Germany's admission of the legality of the American trade in munitions. On the following day was made public a memorandum from the German Government in regard to the attempt to torpedo the Cunard liner Orduna, which reveals the fact that as early as July 9, more than a month before the attack on the Arabic, German commanders had instructions not to sink large passenger steamers without warning. On October 30 announcement was made by the State Department that the naval experts who had examined the piece of metal picked up on the deck of the Allan liner Hesperian had found that it was a part of a torpedo.

Ambassador Page has been instructed to make inquiries of the British Government in regard to the seizure on Sunday by a British cruiser of the American steamer Hocking. This vessel belongs to the American Transatlantic Steamship Company and was transferred on August 10 from Danish to American registry.

Another arrest has been made in connection with the plot, supposed to be headed by a German called Fay, to blow up ships carrying ammunition to the Allies.

The American note in regard to British interference with neutral commerce was dispatched to London by special messenger on October 27.

Announcement was made on October 29 that Japan had given her adherence to the agreement among the Allies that none should conclude a separate peace without the sanction of all.

In Mexico Villa has been defeated at Agua Prieta, where he attacked the Carranzista garrison. Shells came over the border, wounding American citizens. Six thousand American troops have been concentrated on the border.

Representations were made on October 28 by the Japanese Chargé d'Affaires in Peking, on behalf of Japan, Great Britain, and Russia, advising the Chinese Government to suspend till the end of the war the contemplated change from a republican to a monarchical Constitution, in view of the danger that might arise to the peace of the Orient. The proposals were rejected by the Chinese Government on Monday, the Vice-Minister of Foreign Affairs stating that he had been advised by provincial officials that they would be able to maintain order in the event of the proposed referendum resulting in a decision favorable to the restoration of a monarchy.

The French Cabinet of M. Viviani resigned on October 28. M. Viviani is succeeded by M. Briand, who, on the following day, was able to announce the formation of a strong coalition Ministry, representative of all parties and factions. M. Briand becomes his own Minister for Foreign Affairs, but included in the Cabinet is M. Jules Cambon, formerly Ambassador at Washington, Madrid, and Berlin, as General Secretary of the Ministry of Foreign Affairs. Gen. Gallieni succeeds M. Millerand as Minister of War, and M. Viviani becomes Minister of Justice. M. Briand's policy is announced to be the vigorous prosecution of the war until a "just peace" shall be obtained, and the new Ministry, although vigorously criticised by M. Clemenceau in an article summarized in the New York *Times* on Tuesday, appears to meet with general approval.

The Week

Election returns from various States have come in too late to permit of extended comment this week. One obvious moral is to be drawn from the result of the election in New York, where Tammany has triumphed, and that may be applied also to Philadelphia, where the Republican organization has swept the reform Administration of Mayor Blankenburg out of existence. It is of the shortness of voters' memories. A few years is sufficient time to bring forgetfulness of the evil that Tammany does. Tammany out of office has but the more leisure to organize for victory. The method of procedure is familiar. After a wave of civic righteousness has put in office a decent administration, Tammany comes forward, mealy-mouthed, with presentable candidates against whose personal character nothing can be said. The voters have forgotten experiences of the past, and the result is that Judge Swann, an estimable person, but the candidate of Tammany, is elected by a large plurality to the important office of District Attorney, and ex-Speaker Alfred E. Smith, also irreproachable of character, but again fettered to Tammany, becomes Sheriff by an even greater plurality. The Board of Aldermen is also brought under the control of Murphy, and that worthy will have the designation of Mr. McAneny's successor as President of the Board.

For the defeat of the proposed new Constitution by an overwhelming majority of some 375,000 Tammany only shares the responsibility. The opposition to this measure, to which men of high integrity and intelligence had devoted months of earnest endeavor, was so widespread as to make the result almost a foregone conclusion. The objection of counties up-State to share with New York city an equitable burden of taxation, the opposition of Socialists and organizations of labor, the consternation of the noble army of martyrs who were threatened with displacement from the 135 boards and departments which the new Constitution would have abolished—these forces were almost sufficient, without the eleventh-hour fiat of Murphy, to defeat what was on the whole a wise and statesmanlike measure of reform. As for the issue of woman suffrage, the voting in New York, Pennsylvania, and Massachusetts, in which States the amendment was defeated by a plurality estimated, as we write, at, respectively, 200,000, 125,000, and 120,000, leaves no doubt as to the present attitude towards this question in the more conservative States of the East. In Ohio prohibition was defeated by the substantial (estimated) majority of 70,000. The "drys" will take what comfort they may from the fact that this plurality is some 14,000 less than that of last year, but after that decisive defeat it is probable that the result indicates only less determined effort on the part of the anti-prohibitionists. On the basis of the returns available, it would not appear that the Republican gains in Massachusetts and other States are greater than was to be expected in an off-year or than can be accounted for by the inevitable phenomenon of the pendulum.

The apparently official plea of justification for Germany's Zeppelin policy, contained in a note appearing in all the Berlin newspapers, places Zeppelin and submarine on the same plane as primarily instruments of retaliation. The starvation of the German people once more comes to the front. When the Berlin War Office reports an airship raid it carefully speaks of bombs being dropped on the fortified city of London or on docks and arsenals, describing it, in other words, as a military undertaking. But in the note of justification the military phase of the Zeppelin activity is plainly subordinated to the retaliatory phase. The Zeppelin note shows firmer logical consistency than the familiar argument for the submarine, which almost in the same breath justified activity of U-boats because England was trying to starve Germany, and asserted that Germany had all the food she wanted. Today there is the admission that "not hundreds of thousands but millions of human beings in Germany must limit their consumption of food and make not inconsiderable sacrifices" because of the British blockade. The note thus admits a state of things which was implied in the recent action of the central authorities at Berlin in taking over the control of the food supply of the Empire, and in what has filtered out through the newspapers regarding food riots in German cities.

As is well known, Germany has at no time officially contended that the shipment of munitions of war from this country to the Allies was violative of our duties as a neutral. But it is interesting to note that, in an elaborate memorandum from the German Government, included in the "White Book" just issued at Washington, the admission that these shipments are permissible is not only made with great distinctness, but occurs in connection with a reference to the great scale on which our exports of munitions are being made. The point is mentioned in connection with a protest against our hindering the sending of supplies of German warships. The memorandum says:

> Our enemies draw from the United States contraband of war, especially arms, worth several billions of marks. This in itself they are authorized to do, but if the United States would prevent our warships occasionally drawing supplies from its ports a great injustice grows out of the authorization, for it would amount to an unneutral treatment of the belligerents and constitute a breach of the generally accepted rules of neutrality to Germany's detriment.

To this protest, our Secretary of State replied that what our Government regarded as use of neutral territory as a base for naval operations by a belligerent was "repeated departure from such territory of merchant vessels laden with fuel or other supplies for belligerent warships at sea"; and this alone is what has been guarded against. But the completeness with which the German admission is made in regard to export of munitions is striking, and well worth bearing in memory.

Gen. Joffre's visit to London has given rise in the Liberal press to very definite predictions regarding the reorganization of the British General Staff, with the possibility of an international staff for bringing the operations of the Allies into perfect accord. Before the war the German military writers, in discussing the probability of a general alliance against the Central Powers, laid stress on the disadvantage of divided councils from which Germany's opponents were bound to suffer. This is a handicap which every league of nations must reckon with. For that matter, the Teutonic alliance had the same problem to deal with during the first nine months of the war, and solved it by the drastic method of placing the Austrian armies virtually under German orders. It is a German general who is now leading the Teutonic armies hundreds of miles from the German frontier and south of the Danube against an enemy that is peculiarly Austria's enemy. No such arrangement is, on the face of it, possible among the Allies. Geography forbids it in the case of Russia and the Western Powers. As between England and France on the one hand and Italy on the other, Italy may feel that there is no desperate need to justify

her in sacrificing national pride and taking orders from the outside. On the other hand, as between the English and French, such an arrangement is possible; and months ago English newspapers were of the opinion that when the army had been brought up to its full strength and was ready for sustained operations, there ought to be only one commander-in-chief in the west, and he Joffre.

It may not be altogether an accident that it should be the Liberal *Daily News* and *Chronicle* that speak of the reorganization of the war staff and a possible union of leadership with the French. Such an arrangement might be taken as a reflection upon the British commander-in-chief, Sir John French, but not upon Kitchener. It is pretty well understood that Kitchener has concerned himself less with strategy than with home organization—enlistment, training, supply. Northcliffe's famous campaign against Kitchener was conducted on the issue of munitions. Sir John French could not win battles because Kitchener had failed as an organizer. Now comes something of a counter-offensive by the Liberal newspapers to the *Daily Mail's* drive against Kitchener. The deficiency in munitions has been rectified, and it is for Sir John French as actual leader in the field to show cause why his operations should not be put under the supreme direction of the more highly trained staffs and leaders of the French army.

French protests against the French censorship as an infringement of the liberties of the press are but an echo of similar complaints from Great Britain. There, however, the encroachments upon the liberties of the citizens have gone much further. Thus the military authorities have called upon the officials of the Manchester branch of the No-Conscription Fellowship to desist from holding *private* meetings of its members, on the ground that such meetings were "antagonistic to the national spirit." It was carefully explained that the Fellowship was not organized to convert others to its views; that its members were expressly forbidden to proselyte, and that the meetings, restricted to members only, were held in private dwellings. But this did not help the situation. "Competent Military Authority" did not like such meetings, and ordered them stopped. Thereupon officials of the branch met, decided that they were violating no known law, and voted to continue as before. What the outcome will be, no one knows, but that there should be such a happening in England, in which every man's home has been considered his castle, in the absence of martial law, shows pretty clearly the drift of any form of acute militarism. As for the French censorship, the Paris *Temps* declares that it now "attributes to itself the rights and prerogatives of a King," and that the censor has now been "placed above the law."

Announcement by Mr. Tumulty that the President is keeping an open mind on the whole question of "dumping" after the war, and has committed himself to no plan. of preventing it, is taken by some as a pretty severe reflection upon Secretary Redfield. That gentleman is prolific in universal solvents, and appears to have incautiously confided one of them to the Washington correspondents, who proceeded to put it forth as if it had the name of the Administration blown in the glass. It is reassuring to learn that President Wilson is going to take no nostrum on sight. As for the effect of the implied rebuke upon the Secretary of Commerce, that is his own affair. There are reports that he takes the matter much to heart, and thinks of resigning. That is scarcely to be credited. Still, as regards some members of the Cabinet, it might not be a bad thing if Mr. Wilson would do what Mr. Asquith was said virtually to have done a couple of weeks ago—that is, post a notice reading: "All resignations thankfully received."

Dickens remarked that America protected her citizens in foreign lands, but that the same citizens showed anything but equivalent zeal in protecting the good name of their mother country abroad. Yet Dickens could point to no such alliance of ingratitude and want of patriotism as is exhibited in the failure of the travellers whom the Treasury rescued from Europe last year to repay the loans made them. Two thousand of these Giles Overreaches are included in a preliminary list, with more to follow. It is possible that carelessness or an inept failure to comprehend that payment should be immediate palliates the fault of some. Others may have suffered a considerable financial loss, and have regarded the advance as a sort of generous indemnity. But the fact remains that a large number gave fictitious addresses or fictitious names in asking for funds, with the plain design of "beating" the Government. The impulse behind this is much the impulse that prompts spectators at a fire or like excitement to appropriate loose valuables; it may interest the psychologist, but it must be a shock to those who think that the scenes of devotion witnessed in Europe, and the Government's response to its obligations, might have made even adventurers responsible for their debts.

The price paid by England for the recent gains in Flanders is indicated in the latest casualty lists. Since the beginning of the war the losses have been 493,294, of whom the killed were 101,652, or very nearly true to the constant ratio of 1 to 4. But whereas the average daily loss since the beginning of the war would thus be about 1,150, the casualties between August 21 and October 9 average 2,271, or almost double. The losses would naturally increase with the lengthening of the British line and the spread of the war to new theatres. Significant is the number of missing or prisoners, which is given at 21,193. This is only a few thousands more than the corresponding figures of nearly a year ago. The great majority of English prisoners were made in the first bag around Mons and the pursuit to the Marne. Since then the English apparently yield very few prisoners. The drain upon the nation may be compared with German losses. Up to July 11 the Prussian lists total one and a half million men. The latest lists, presumably reaching to the middle of October at the latest, show 2,026,000 men. In the course of less than a hundred days the Prussian losses were 526,000, or more than England's total casualties for the whole war. If to the Prussian casualties we add 30 per cent. for the South Germans, the average daily loss for the German Empire since midsummer has been about 7,000 men.

A most interesting decision was that rendered by the United States Supreme Court on Monday of last week in the case of eighteen immigrants who, having arrived at New York in good health and with funds amply sufficient to take them to their destination—Portland, Oregon—were denied the right to proceed on the ground that they were "likely to become a public charge." This ruling of the examining board was based on the fact that labor conditions at Portland were reported to be bad; so that, in the judgment of the board, the immigrants were unlikely to find employment, and therefore were likely to become a public charge. The decision of the Supreme Court is, of course, based on the view that the excluding phrase in the law was meant to define a class of persons and not to place upon the immigration officials either the duty or the power of judging of the actual prospects of

success or failure of any individual immigrant in his undertaking. It is clear that the opposite view, if logically applied, would give to the administrative officers almost unlimited powers of exclusion. The exclusion of the classes covered by the law is designed to prevent not only immediate but future risk of the new arrival becoming a public charge; accordingly, if the law is to be so interpreted as to cover not only intrinsic deficiencies on the part of the immigrant, but failure of the expectation of employment on account of economic conditions, hard times that are believed to be impending would be almost as valid a reason for rejection as hard times actually here. But the most important reason, from the human standpoint, for the rule embodied in the Supreme Court's decision is that the cruel hardship of deportation ought not to be imposed for a cause of which it is evidently absurd to assume that the intending immigrant should have had knowledge.

All who are interested in the fair treatment of the alien will regard the Supreme Court's decision on the Arizona alien-labor law as a hopeful omen of the fate of a whole class of discriminatory legislation. It is based upon grounds so broad that there is at once apparent an increased possibility that New York's Employment law, already before the Supreme Court, will similarly be adjudged unconstitutional. The Arizona law applies to all employees of labor, that of New York State only to public works. What difference, if any, this may make in the Supreme Court's view remains to be seen. But New York does not stand alone. Seven States expressly prohibit the employment of immigrants upon public works—Pennsylvania, Massachusetts, New Jersey, Arizona, Wyoming, and Idaho—and California has a law only slightly less sweeping. Many municipalities supplement these laws by discriminatory regulations of their own, and any declaration against the constitutionality of the State enactments would operate to repress a mass of such local legislation. The law of California restricting the rights of aliens ineligible to citizenship to lease or purchase agricultural lands is also of doubtful constitutionality. Here it may be contended that there is a difference between aliens eligible and those ineligible to naturalization, but the contention would hardly hold water; and it seems a reasonable position that there is as great a denial of "the ordinary means of earning a livelihood," to use Justice Hughes's words, in restrictions upon the right to till the land as upon the right to perform other manual labor.

What are you to do with a people that is determined not to rule? This is the solemn issue confronting Gov. Johnson in the otherwise Golden State. All that was necessary to complete popular rule in California, as he has been explaining, was to adopt the amendment making all State offices nonpartisan. Yet the people did not even take the trouble to vote upon the proposal, most of them, and the majority of those who did voted against it. By so doing they created a pretty puzzle for the Legislature or the courts or somebody, since they had registered under a non-partisan registration act and must now continue to vote in primaries as partisans. Under the circumstances, we do not see much hope in Gov. Johnson's brave declaration that the non-partisan amendment "is as certain to be adopted as that the people themselves will rule." With the non-partisan amendment went ten others, one or two of which deserved a better fate. The one extending the term of Superior Judges from six to twelve years was handicapped—it is to be hoped that even in the farthest western State the provision was a handicap—by a section bringing these judges under the menace of the recall. But against the amendment conferring upon the State, a county, or a municipality the power of excess condemnation, the arguments were fantastic.

Prof. Paul Sabatier, well known as the biographer of St. Francis, has recently published in Paris three letters of his to the Italian president of the International Society of Franciscan Studies. This Society, by the way, was founded in Assisi by Sabatier himself, a dozen years ago. In the letters referred to he gives his ideas about the war, and about the only way in which peace can be made. He neatly appeals to the example of St. Francis himself, who "did not implore the people of Perugia to make war no longer on the people of Assisi. He began by taking part in the fighting; and, later, warned them that their offences against justice would not go unavenged." Turning to the war of to-day, Professor Sabatier declares that the nature of the struggle forced upon the Allies makes it in reality "a great moral effort." For they are fighting to withstand mere brute force, and defend right, justice, and liberty. It is the clash of two orders of ideas which has turned Europe into a battlefield. And it is, affirms Sabatier, to the breaking down of the false idea after the war, as well as to the defeat of those who uphold it in arms, that the Allies must address themselves. We cite a few of his suggestive words:

> To overcome our enemies on the field of battle, to reduce them to pleading for mercy, is not the only task that is imposed upon us. When that has been crowned with success, another, no less necessary and no less difficult, will present itself; and for this we must make provision at once. I speak of the war that will develop in our several countries and in our own hearts against German methods and ideas. Neither churchmen nor scientists among our enemies have realized to what moral and political monstrousness a false conception of the love of country was leading them. It has taken only a few generations for the voices of art, of religion, and of science to teach that, to distort the ideas and deform the heart of that country, and to make it not only a veritable danger to its neighbors in Europe, but a moral peril for civilization as a whole.

Among the subject populations of Europe in whom the war has stirred old national ambitions are the Ukrainian people, whose representatives met in congress on Saturday at Cooper Union. The name is unfamiliar. They are better known as Little Russians, the name they bear in the Czar's empire, and as Ruthenians in Galicia. Of a total estimated population of 30,000,000, about four millions are under Hapsburg rule. The rest form a solid ethnic block in southwestern Russia, stretching from the River Bug to the shores of the Black Sea and across the Dnieper River to the region of the Don. The heaviest concentration is in the four Russian provinces of Kiev, Tchernigov, Poltava, and Kharkov, but they are present in large numbers further to the west in the provinces of Volhynia, Lublin, Siedlce, and Grodno, and so have felt the pressure of the present Teutonic invasion. This is the famous Black Earth of Russia, noted for its fertility. After the Great Russians, or Muscovites, the Little Russians constitute by far the most important numerical element among the races of the Russian Empire. To Russian literature they have given one of its greatest names, Gogol, the father of the Russian novel, probably its greatest satirist in that extraordinary book, "Dead Souls," and certainly its greatest humorist in the "Revisor" or "Inspector," one of the finest comedies of all time. The melodies in minor key which we take as characteristic of Russian music are predominantly Little Russian. Upon this people the centralizing policies of the Russian autocracy have weighed down as upon other subject races. Their national aspirations have now reasserted themselves.

THE PRESS AND POLITICAL CORRUPTION.

As pretty a bit of evidence of the way a crooked railway used a crooked Boss to control legislation in a crooked State as any one could desire was brought out in the suit against the New Haven Railroad directors on Thursday of last week. It was the testimony as to the relationship between the previous management of the company and the blind Boss of Rhode Island, Charles R. Brayton. A letter showing that a check for $10,000 was paid to the Boss, as his compensation for "assisting in legislative matters," was excluded from the evidence, but will hereafter be a convincing part of the indictment against the man before whom Rhode Island for years bowed down. That little State this rascal held for years in the hollow of his hand, putting it up for sale to the corporations as he saw fit, and no efforts availed to shake his grip upon it. The capitalistic interests upheld him, even as they paid blackmail to him, and men in all walks of life cringed to him because of his power to injure them if they should dare to protest against the mischief which he wrought.

Why was it that he held his sway undisturbed until his death? Possibly because of the lack of just such a specific bit of proof as has now come to the surface. It is true that he did not deny that he was a paid lobbyist. As far back as 1903, he frankly said: "I am attorney for certain clients, and look out for their interests before the Legislature." He admitted, too, that he was retained by the New Haven. But never until last week had we so complete a picture of his underhand activities. Here was the railway actually berating the Boss because the Legislature had granted a charter for a trolley line from Pawtucket to Attleboro with privileges for express matter: "Please do not let any more of that kind go through, and if possible would like to get that express clause struck out, whether by general law or in some other way, as it seriously interferes with our revenue from the Adams Express Company." When a freight road was proposed, the New Haven wrote: "We want this scheme blocked and killed. . . . Please kill this matter in some way." The Boss, needless to say, earned his fee, but the New Haven was too stupid, apparently, to suspect that he might have been accepting fees from the other side, or originating the very legislation it sought to oppose. Surely, such detailed revelations would have shaken the Boss, could they have been made when one of the occasional reform movements was under way in Rhode Island, such as that under the late Bishop William N. McVickar, in 1903.

This whole incident well illustrates the difficulty which confronts the reformer in and out of the press. Constantly people speak of a well-known abuse and denounce the newspapers as in league with the corruptionists, because they do not "let the daylight in." "Everybody knows that it is so and, of course, the newspapers could take the lid right off if they wished to"—so runs the complaint; and thereupon another indictment against the press is framed. The newspapers can find out everything if they want to; they have expert reporters, and they have the means to hire detectives if they choose. If they do not uncover all the crookedness in the body politic, it is their own fault and no one else's. Surely, they must be in league with the evildoers? But this Brayton case shows the difficulties in the way. It was current knowledge that Brayton was becoming rich by his sale of the Legislature, and yet the facts to establish so grave a charge, in a way to put him out of business, were never before available. He was ready to boast that he was a lobbyist, but to have proved such activities to the satisfaction of a judge and jury would have taken ever so much more than mere hearsay or gossip. Even the strongest kind of moral conviction as to the existence of wrongdoing does not by itself send any one to jail.

The plight of the newspaper which desires to bring evildoers to book is also clearly illustrated by the Allds case. For decades every intelligent man had been certain that legislation was bought and sold at Albany, and with the utmost brazenness. Political campaigners spoke of it as a matter of course; the "Black Horse Cavalry" figured in every news story that came out of Albany in connection with the Legislature. But not until the charges made by Conger became public to illumine as by a flashlight the disgraceful debauching of the Legislature was it possible to focus public indignation and to compel the Legislature to drive this particular bribe-giver and the bribe-taker out of public life, and generally to improve conditions at the Capitol. Yet the unthinking would say that the press should have been able to accomplish this years before. They do not realize, of course, the hampering effects of the libel law which makes it impossible for a journal to circulate a specific charge of this kind until its attorneys are satisfied that it has sufficient corroborative evidence to convince both judge and jury.

At the same time that one hears this complaint of the press because it does not bring evildoers to book often enough, the welkin also rings with criticisms of the wild and reckless charges and insinuations made by newspapers against great and good men who are giving their lives to the public service or to the development of its public service corporations. Who does not recall the impassioned defence of Mellen's management of the New Haven Railroad by so good a man as Major Henry L. Higginson? He, being ignorant, of course, of the sordid doings that have now come to light, flamed out against those who would muckrake a venerable institution which was the vital artery of New England. Others, too, felt aggrieved that this irresponsible abuse of a great railway should go on unchecked when there were no specific facts as to wrongdoing available anywhere. Well, the specific facts became available quickly enough, and then all the talk about the irresponsible clamor of the press faded away, and the old management was removed to make room for a new and honorable one. Perhaps, as a result, a few more people realized that so long as the press is merely morally convinced that there is wrongdoing at a given place, it can indulge only in generalities. Some day the public may understand how eager the press is to use such specific proof of corruption as came out last week in the New Haven case.

POST-BELLUM DUMPING.

Washington dispatches have been for some time reporting that the Administration is considering what to do to prevent the "dumping" of cheap foreign goods on our shores after the war is over. At length the accounts are more precise. Secretary Redfield and Chairman Davies, of the Federal Trade Commission, are said to have worked out a plan which has the approval of the President and is to be submitted to Congress. As outlined, it rejects the proposal to erect new tariff barriers, and seeks to bring into play existing provisions of law respecting "unfair competition," "exclusive" selling, and trade arrangements designed to obtain a monopoly of any branch of commerce. We shall have to wait for the actual details of such a measure before forming an opinion of its justice or practical working. But are there not preliminary questions that ought to be answered? Should not the Gov-

ernment and American business men seek to ascertain just how much post-bellum dumping will be possible or attempted?

In certain lines of specialized manufacture and export, it is reasonable to expect that the coming of peace will be like the breaking of a dam to release stored articles. German dyestuffs and chemical goods are familiar examples. We suppose it not doubtful that large amounts of such products will be ready to ship the moment the war ends. It is possible that some other foreign industries are similarly waiting to get back their former market in this country, or to enlarge it. And whether any special steps ought to be taken by our Government to prevent or lessen the incidental evils which might follow such dumping is, we admit, a matter seriously to be studied. This would be particularly the case with any American manufactures which have been established to meet the scarcity caused by the war, and which may require more time to get squarely on their own feet.

Aside from these exceptional instances, however, it seems to us that an unnecessary amount of horrible imagining is being done on this subject. It is well to stop and coolly ask what is likely to be the effect of the war upon manufactures and the export trade of our chief European competitors. When peace is made, will they quickly be in a position to set all their tall chimneys smoking, their machines whirring, and at once raise all their industries to the highest pitch of efficiency? It must be doubted. The immense dislocations caused by the war cannot be repaired in a day. To shift factories back from the making of shells and explosives to the manufacture of motors and agricultural chemicals, will require time. Then there will be the whole question of supply of labor. With hundreds of thousands of skilled artisans lying in their graves, or disabled for life, this will be a serious matter for employers. Their first thoughts will be of restoring their equipment and working slowly back to their former level of production, instead of outstripping immediately the home consumption and rushing their goods abroad.

Suppose all these difficulties surmounted, and the productive capacity of England and France and Germany put back to what it was before the war, it still would be under a new and severe handicap. The point is raised by a letter. It relates to the enormous load of debt under which the war-smitten countries will have to stagger for the next few years. What will this mean as affecting the competing ability of manufacturers and exporters in those lands? It is plain, for one thing, that new and onerous taxes will have to be laid. For England it has been estimated that, if the war went on a year and a half more, the charges for interest on the new debt piled up would be nearly as large as the entire peace budget. A similar calculation for Germany has been bitterly made by *Vorwärts*, speaking for the Social-Democratic party. There may well be some exaggeration in these forecasts. Certain adjustments of debt may be made to ease off somewhat the immediate strain. But it will be very great, in any case. If taxation was high before—and it was much higher in all the countries named than in the United States—it will be pushed up several notches higher. And its general effect must certainly be to raise the cost of production. The new taxes will be diffused through all classes of society. They will impel the capitalist to ask higher interest, the workingman to demand higher wages. Prices will tend to be marked up in order that, out of the resultant profits, the higher taxes may be paid. Let no one imagine that the workmen in any of the belligerent countries are going easily to surrender the higher wages that they have been getting in war time. Whatever else may happen after the fighting is over, close observers agree that there will be a great assertion of the rights and demands of the laboring classes. There will not be a docile and unlimited supply of "pauper" labor. The cost of production will almost infallibly rise abroad. If it does, the peril of dumping may never be so acute as some Americans fear.

The whole question is confessedly speculative. But if we cannot be sure of the outcome, one way or the other, this fact ought to be an argument against hastily conceived legislation that may be both needless and mischievous.

SOULS IN THE TRENCHES.

And the way it keeps on—the killing. Over a year now. When will it end? It gets worse. The whole world is catching fire. The Balkans, too, now—Bulgaria and Greece. I tell you, people won't stand it much longer. All these men being killed—fine young men. If there has to be murder like that, why don't they send women to be killed? Why just young men? . . .

Everybody is discouraged. Men of peaceful nature are crushed. The passionate desire for peace amounting to physical pain. Always the same longing for peace, and before my eyes the spectre of the French front close at hand with the horrors of its artillery fire. . . .

We need not insist that all German mothers suffer like this one mother in a little town of the Harz, though probably the vast majority do. The Latin professor, now a private in the Landsturm, who sets down his doubts and weariness and longing for peace is probably not typical, in his high-strung nerves, of the great mass of Germany's peasant and artisan soldiers. Certainly we cannot believe that this state of weariness and longing is true only of Germany. Mothers in France, Russia, England, and Servia are passing through the same agony; and the finer natures on every battle-line are breaking under the prolonged process of apparently futile slaughter. What we must perceive, however, is that a new meaning must now be read into von Hindenburg's famous phrase of a year ago that this war will be a test of nerves, and that the stronger German nerves will win. Von Hindenburg was thinking of the nervous system of commanding generals and officers, of the Will to Conquer which persists in the face of delay and defeat, and which shrinks from no price for victory. To-day it is not a question of the nerves of the general staffs and the corps commanders, but of the psychology of entire nations, of the capacity of whole peoples to go without enough food, of mothers to continue sending their sons to sacrifice, of the men themselves to lie for months in the trenches without asking why and how and when.

But if the war is more than ever a test of spiritual endurance, we cannot help asking ourselves on which side of the battle line is moral exhaustion making itself felt most strongly. Are Germans or Allies the more intensely weary of the slaughter? The question is not one merely of speculative psychology. It has a real bearing on the factor to which Germany has been looking for victory, the exhaustion of any one of her opponents, a break in the ranks of the Allies, a separate peace. The arguments in favor of Germany are familiar. The German people have the stimulus of fairly continuous victory on land. The German armies are fighting on foreign soil. Except for portions of East Prussia and a thin strip in Alsace, the German people have been spared the calamities of war and invasion. The German mother, whose pathetic outcry against the horror of it all we have quoted, goes on to speak of how things are worse for the French. If it is a question of discouragement and crying quits, it would seem that the break must come in France, with millions of her people ruined and her economic life crippled, or in Rus-

sia, with 100,000 square miles of her territory in the enemy's hands. From the very first months of the war this factor of fighting on the enemy's soil has been put forth for the encouragement of the German people. The Kaiser's armies have battled on the Meuse and the Aisne, on the Vistula and the Dvina. They are now beyond the Danube, they are pressing forward to Constantinople, they may yet be fighting on the Nile and the Euphrates.

There is another side to the picture. Precisely because the German armies are pushing out far beyond the national frontier, the mothers of Germany must be asking themselves why, and how long. The War Office may speak proudly of the nation's banner floating on the Morawa and the Nile. The Imperialist imagination may take fire at the thought of the Euphrates and the Ganges. But the peasant mother in the Harz Mountains, the workingman's wife in Berlin—what to her are Gallipoli, Suez, India? At the beginning she may have found it more difficult than von Hindenburg to understand that the only defensive for the Fatherland was a strong offensive; yet she may have learned in time. But her imagination cannot carry her along on a defensive of the Fatherland which is conducted in the Lithuanian marshes, in the Balkan mountains, in the Arabian deserts. Where will it end? All that the mothers in the Harz and in Berlin feel is that their sons have died in Belgium, they have died in France and Russia, they are now dying in Servia, they will be dying in Egypt and around Bagdad, if all goes well. As the German armies push victoriously south and east, the German General Staff cannot content itself with citing victories. It is under the growing necessity of explaining the casualty lists.

To the mothers of the invaded lands, in Belgium, France, Russia, and Servia, the agonizing doubt cannot present itself in such form. Because the native land is invaded, because the enemy is at the door, the necessity of sacrifice presents itself as immediate. It must be the same with the men in the trenches. We call up a picture of four hundred miles of ditchwork from the North Sea to the Swiss borders, two million Germans facing two and a half million Frenchmen, and we ask ourselves whether it is in the German burrows or in the French rabbit warrens that the greater weariness of war prevails. Berlin asserts that it is the enemy who is weakening. The German troops are dug in on the enemy's soil, they can play the waiting game best. But from what we know of the nature of men, spiritual forces must be working the other way. The French soldier is planted in his own soil, he is guarding his home. He may be weary, but he can have no doubts as to the bitter need of it all. To the German invader, the need is more remote. Fighting on the enemy's soil is a stimulus when the battle moves forward swiftly, when victory is in sight. But to be stuck in a ditch on foreign soil, with no end in sight? It does not need men of special susceptibilities to feel the demoralization of doubt under such conditions. To the simplest mind, after more than a year of deadlock, the question must occur, What am I doing here? For the invaded nations there is the spur of necessity. For the invader there is the natural human revolt against a tedium of slaughter and suffering without the solace of victory.

AUSTRIA AND GERMANY.

The interview with Count Tisza of Hungary, which Karl H. von Wiegand obtained for the New York *World*, is more notable indirectly than for what it immediately contains. In what the Hungarian Premier said, there was nothing new. He held the familiar tone about Austria and Germany having been wickedly attacked, about their war being purely defensive, and about peace coming as soon as the Allies realized their defeat and gave the Central Powers guarantees of "security" for the future. In asserting that during the whole term of the Triple Alliance, neither Germany nor Austria had sought an "opening" for a world-war, Count Tisza must have forgotten the cool proposal of the Austrian Government to Italy that Servia be attacked. This was a year before the assassination at Sarajevo, which finally served as a pretext. The fact was not known until it was revealed by the Italian Government. But in all this there is no novelty. It seems hardly worth the journey to Budapest to get only such information as Mr. von Wiegand reports.

In the very act of seeking Austro-Hungarian opinion, however, there is something like a curiosity. Vienna has, since the war began, been steadily in the shadow of Berlin. For diplomatic views or news of importance, correspondents have not thought it necessary to go further than the capital of Germany. And this has been only one indication among many that Austria has been playing second fiddle during the war. Indeed, this has been so markedly the case as to cause disquietude to Austrians themselves. They are troubled not only by their present diplomatic and military subordination to Germany, but by what the future may hold in store. In case the Central Powers win the war, the Germans will inevitably lay claim to the hegemony. With whatever politely disguised phrases, they will let it be known that, in the great readjustment of Southern Europe, Austrian ambitions must be kept strictly subordinate to German. In matters relating to both the distribution of territory and the making ready of an army to defend the new-won acquisitions, Berlin would be certain to dictate to Vienna. This is a reflection which can scarcely be pleasing to Austrian pride. But all this is merely to anticipate future events which may never occur.

Yet actual events within the past few months are sufficient to show that Germany has been the predominant partner in the alliance with Austria. To realize this, one has but to turn over the "Diplomatic Documents" recently published by the Austrian Government affecting its relations with Italy. They cover the whole negotiation with the Italian Government, after the outbreak of the war, in the endeavor to obtain Italy's neutrality, when it early became evident that her active support as a member of the Triple Alliance was not to be had. The correspondence was ostensibly between the Foreign Offices in Vienna and in Rome; yet Berlin was all the time standing close by, and again virtually overruled Vienna and compelled the Austrian Government to offer the Italians better terms. The entire exchange of dispatches is one long record of Austria's receding from position after position, and agreeing finally to do what at first she said was out of the question—each time under a concealed pressure from Germany that amounted to compulsion.

One point in the correspondence is worth remark. Count Berchtold, the Austrian Foreign Minister, consistently represented to Italy that the ultimatum to Servia, which precipitated the war, was Austria's own affair. The Italians complained that they had not been notified in advance, as they should have been by the terms of the Triple Alliance. But Count Berchtold assured them that not even Germany had been notified. And we have in the correspondence repetition, in another form, of the denial of the German Foreign Minister, von Jagow, that he was aware of the nature of the Austrian ultimatum to Servia. This, it is clear, must be merely a formal and technical denial.

The German authorities must have known. In fact, it was inadvertently admitted by Count Berchtold that they did know. For in a telegram under date of August 12, 1914, after saying that "it had always been our intention to settle the difference with Servia by ourselves," he added: "We had, it is true, *received the assurance from Germany that she would stand by our side* if Russia should intervene." There never was real doubt of this. Without this advance assurance from Germany, the Austrian Government could not have ventured, as it did through Count Berchtold, to challenge Russia to "the great reckoning" with the Central Powers. All this speaks of carefully prepared plans, to which Germany was privy, if she did not take the lead in devising them

Whatever other result may follow the war, it is impossible that there will be any real aggrandizement of Austria. In case even of victory, she would reap the harvest that she has sown; for while the German Government might assign Austria new territories, it would see to it that they and the Austrian army and Austrian diplomacy were kept severely under German tutelage.

REVIVING OLD POLITICAL TEACHERS.

The attempt of the *Forum* to revive interest in the governmental teachings of Herbert Spencer is a bold one. For many years Spencer's vogue has been declining. He has been attacked on one side by the philosopher and on the other by the scientist. There are frequent laments over current ignorance of foregoing political thinkers, Burke and Mill, Webster and Lieber. Yet Spencer illustrates the palliation for such neglect—the fact that changing conditions seem to rob the writings of such men of instant application. Spencer's political individualism was once a powerful force, but it has been largely overthrown by the growing power of the state. The *Forum*, in reprinting Spencer's essays with comment by men like Root, Lodge, Charles W. Eliot, and ex-President Taft, perforce adopts almost an apologetic note.

Yet Spencer is also an illustration of the applicable truths to be discovered by those who turn to the governmental classics, and of the antidotes given by their doctrine for extreme or half-baked tendencies. A time in which state Socialism has gone so fast, and in which the war is hurrying it faster still, is certainly a good time to turn back occasionally to the older authorities. Complaints against over-administration like "The Coming Slavery," against rash governmental interference like "The New Toryism," definitions of the point at which governmental activity ceases to stimulate and begins to impede like the "Essay on Liberty," may well have a modern application. Spencer himself modified his early antagonism to state poor relief, education, colonization, care of the public health, and even industrial regulation. But he never surrendered two positions: that the essential test for all laws limiting the freedom of the individual is whether those laws are necessary to maintain the equal freedom of others; and that society must not be over-paternal, since a society in which the strongest has no advantage is a society in which progress is impossible, and deterioration certain. His application of these principles has a very modern ring. When he wrote of politicians who introduced humanitarian measures with an eye only to the proximate effect, he went back to Pitt's free dispensation of the poor rates for an example. Illustrations of the same short-sightedness could now be supplied from the legislative grist of any State.

The good that would come from more study of such writers would be in relating political action to general principles. There are "principles," of course, which will justify the wildest Socialism or the most hidebound spirit of reaction. But even for them to search out such principles would be better than to take each case "on its merits." They would be more likely to act in moderation. Only forgetfulness of the fact that Spencer and such as he tried to reach political fundamentals, brushes them aside as "antiquated." Some writers always seem up to date—witness Aristotle's "Politics." Yet our legislators bring forward their bills as if the present had no past. "Our social organization," writes Root, apropos of one of Spencer's essays, "has been passing from the régime of contract into the régime of status," and he goes on to denounce the multitude of laws enacted without regard to their ultimate consequences. As for our rough-and-ready writers of to-day, they are like the radical essayist who confessed recently to being tormented into sleeplessness by an orthodox book upon "governmental authority," "class power," "social legislation," and "parliamentary machinery." He prayed for treatises written crisply upon "bosses," "machines," "political deals," and other substantials of the actual modern political game. He would treat of government and all it represents as if the earth were new-born every twenty years.

All told, the spirit which would tie up even detailed lawmaking and administration to fundamental theories—both the caution and broadmindedness implicit in it—might profit greatly by the attention to old philosophers. We are especially prone to neglect the writers of the generations immediately preceding our own, from a sense of how far, socially and politically, we have left behind the sneered-at Victorian era. It is forgotten that the last century brought forth some of the very ablest political teachers. Possibly the neglect rises from our attitude towards politics as a field for the inexpert; even while we insist on the highest training in other lines. This too amiable democracy is exposed to rebuke at many points; and a pleasing reaction from it would be in a heightened respect for the prophets of an elder day.

Foreign Correspondence

NEUTRAL TRADE—THE ZEPPELINS—ELDERLY PATRIOTS.

By JAMES F. MUIRHEAD.

London, October 19.

Reports now reaching England indicate that many Americans are inclined to believe that British interference with American trade and shipping has not been wholly and solely due to military necessity. The notion has evidently been sedulously disseminated in America that the British Government has been using such interruptions as have occurred to further British at the expense of American trade. To accuse our Government of so extraordinary and penny-wise-and-pound-foolish a policy seems a greater insult to its intelligence than its worst lapses and mistakes would warrant; and to enlightened observers the charge must almost carry its own refutation. But the rumor recurs; and therefore I am glad to be in a position to assert that there is no foundation whatever for this idea. I say this on the strength of what has reached me from a source on the good faith and authoritative information of which I can absolutely rely. The sole object of the interruptions in question has been to cut off the supplies of England's enemies; and the British Government has taken the greatest pains to avoid giving offence to American merchants. This does not mean a blank denial that individual and accidental cases occur in which the American shipper's loss has inured to the gain of some British competitor. Our export trade is in such a state of dislocation that a man may sometimes seize a chance of getting cheap goods without too scrupulous an investigation into their source. But such cases are rare and arise out of the abnormal conditions. If an American exporter hears that his goods have been stopped or sold, and at the same time learns that some British trader has sold abroad a cargo at a higher price than that obtained by him, it is only natural that he should connect the two things. He would, however, make a great mistake if he were to

suspect that the incident had arisen through any set purpose of the British Government. The wish and interest of our Government would rather lead it to minimize and discourage enterprises of this kind; and so far as I can make out, the country in general would not tolerate any deliberate fanning of a policy which seems to it as unwise as it is mean. The regret at our enforced interference with neutral, and especially with American, trade seems practically universal, and I see no reason to judge that it is either feigned or hypocritical.

My first intimation that London was under bombardment from the clouds, last Wednesday evening, was the momentary hesitation of a taxi-driver to accept a fare for a large railway terminal, which he evidently looked upon (quite erroneously) as well within the danger zone. When he found that our party included a young soldier under orders for the front, he made no further demur, and we reached the station in ample time for the train due to pull out at 10:30 P. M. No bombs were heard or Zeppelins seen on the way, but constables were posted at intervals to steer vehicles clear of the broken glass visible in several streets, and we passed close to a small bomb-crater made half an hour before. At the station all the lights were out; and it was a task of some time and difficulty to find the gate leading to departure-platform No. 7. If the New Yorker will imagine himself deposited in front of a Grand Central Depot almost absolutely dark and crowded with hundreds of soldiers and their friends, he will have some idea of the scene. The difficulties of groping in the dark were considerably aggravated by the kit-bags and other pieces of baggage scattered throughout the waiting-halls and platforms, and by the fact that many of the Tommies found a recumbent posture with their bags as pillows, the most convenient method of waiting for their entrainment. Groups of them whiled away the time by singing "Tipperary" and other battle chants; and the lighted ends of their "Woodbines" were almost the only luminous points in the enveloping gloom. Perfect order, however, prevailed, and the inevitable jostlings were all received with unfailing good temper. The night was, of course, moonless; and the acres of the station's glazed roof—a splendid mark for bombs—were barely visible from below. After about two hours of this somewhat eerie waiting, the lights were suddenly turned on. The process of entraining began at a dozen different platforms, and the station soon resumed its normal appearance, though (I understand) none of the trains were allowed to start for another hour or two.

On our way home we visited the nearest of the five centres which had received the chief attention of the German airships. The amount of visible damage was unexpectedly small, except in the matter of window-glass. Most of this had already been swept off the roadways and sidewalks, but there were still places where it crunched under one's feet like January snow. The streets were fairly full (between 1 and 2 A. M.) of an interested and inquisitive crowd, searching for souvenirs with lanterns and flashlights, and trying to extract something more than "pass along, please," from the imperturbable policemen stationed round any structure where danger was still feared from falling stones or broken glass. No fire was visible except in one spot, where the bomb had penetrated to a subterranean gas-main; but this was under complete control, though not extinguished for several hours. The great centres of interest were spots where bombs had fallen in open spaces; and it gave one a curious thrill to see, in a London thoroughfare, shell-craters such as we had been reading about for months as among the characteristic features of the front.

It is marvellous how quickly we have become accustomed to the Zeppelin peril. When we were expecting the first raid, we were all more or less nervous about it; we filled the baths with water at night, provided fire-extinguishers, and quite intended to take refuge in the cellars. As time went on, however, and it was seen how *relatively* insignificant was the damage done by the raids, we began to forget the bath-tubs and to mislay the extinguishers. When the firing of the anti-aircraft guns was heard, the natural impulse was to hurry out and see what was going on. This may not have been the "efficient" thing to do, in the German sense of the word, and it may have led to some preventable mishaps. But it is not without its value as an evidence that the moral effect of panic has not been accomplished; and it is, at any rate, better than the confusion and terror which (we are assured) prevailed in certain German towns when the signals announcing an air-raid were given for the sake of rehearsal. The individual danger seems as remote as that from a bolt in a thunderstorm. Now, for the first time, we can understand the spirit in which men live calmly on the slopes of Vesuvius. All the same, we are beginning to feel a little restive at the contrast between Paris's immunity and London's visitations from Zeppelins; though, of course, we realize how much easier it is for our assailants to drop on us suddenly from the trackless wastes of air above the North Sea than to surprise a Paris guarded by scores of miles of war-clad territory.

No one who has recently walked abroad in any of the open spaces near London can have failed to notice the bands of mature citizens in gray-green uniforms, busy in drilling, digging trenches, or practicing at miniature rifle-ranges. A red brassard on their left arms, bearing the letters G. R. (and refusing, with a curious obstinacy, to look military—perhaps on account of the unusual width of its five inches), proclaims them members of the Volunteer Training Corps, a body now numbering between 300,000 and 400,000 men, distributed among forty-five County Regiments. The initiation of this movement may be dated from a letter sent to the *Times* by Mr. Percy A. Harris, on August 6, 1914; and its success has been largely due to the exertions of men like Lord Desborough, president of the Central Association of Volunteer Training Corps, and General Sir O'Moore Creagh, its military adviser, formerly Commander-in-Chief in India. Its object is to enroll citizens above the military age or having other adequate reason for not enlisting in the regular army, in order to train them in various ways for home defence. Among the duties which they hope to qualify themselves to face are assisting in repelling an invasion or raid, garrison duty in towns and villages, guarding railways and other vulnerable points, supervising removal of the civil population, keeping order and allaying panic in case of emergency, and guarding communications, etc. Their "Official Regulations" contain a statement of their duties (probably by General Creagh), the spirited nature of which may be gathered from the following phrases: "It is obvious that on the first landing of an enemy, if his attempt cannot be frustrated, not a moment should be lost in assembling troops and attacking him with the most advanced, however few in number, till more can be assembled. The object will be to constantly harass, annoy, and tire out the enemy, and to impede his progress, till a sufficient force can be assembled to smash him." "It must never be forgotten to inculcate into our Volunteer Corps the great advantages they possess by their knowledge of the country in attacking the enemy." "It must be impressed on every man that although retiring gradually before the enemy may be at first necessary to allow the regular troops to collect, yet the great object of irregular corps is to attack on every favorable opportunity, and as much by the bayonet as by fire; and such attack must be bold and vigorous as becomes men defending their hearths and homes." "We must raise the indignation of the country to the highest pitch, and cause to react on our enemy that terror which he has used in Belgium."

If the first impulse of any beholder is to smile at the perspiring efforts of these elderly citizens, it is only necessary to gain a little acquaintance with their actual achievements to turn amusement into a very genuine respect. A glance at the admirable trenches they have constructed for the defence of London is alone enough to accomplish this transformation. Their standard of drill is very high, and has elicited encomiums from inspecting generals. They have fulfilled disagreeable patrol duties in a most efficient manner; and their disciplined services have been found of notable aid in such matters as furnishing emergency squads for munition work, for coastguard work, or as adjuncts to the Fire Brigade during Zeppelin raids. The amount of sound military training acquired in a very brief period in the Volunteer Officers' Instructional Classes is almost incredible. All this is done at their own expense, the red brassard being the only article of their equipment that is furnished by Government. They have received a considerable amount of official recognition and have fulfilled the conditions entitling them to the rights of combatants under Article 1 of the Hague Convention. The object of a bill just brought before Parliament by the Marquis of Lincolnshire is to obtain a still more defined status and greater power to apply military discipline. The officers of the V. T. C. do not use the ordinary military titles, but are known as Commandant, Company Commander, and so on. A retired officer of the regular army, militia, or territorial forces, having the right to retain his rank, may be addressed on parade as (*e. g.*) "Company Commander Colonel Smith."

The success last month of the British troops at La Bassée Canal, if not so far-reaching as we could wish, gives us (I think) some excuse for a modest amount of self-congratulation and new hope. It cannot be denied that our soldiers captured German trenches, redoubts, guns, and men, and forced back the German lines for an appreciable distance. The important fact is that this success was obtained by an army created within the last twelve months, undoubtedly containing many men who, a year ago, had never fired a gun or formed fours. Many of the officers had never even dreamed that leading a charge would figure among the experiences of their lives. I know a score of such myself, to some of whom their present task is so temperamentally repugnant that my admiration for their resolution and sense of duty is unbounded. A brigadier of whom I know said

that one of his colonels was a dentist when the war broke out, and one of his majors a hide merchant, and that he could want no better officers. Yet, so far as the evidence before us warrants, these untried men seem to have been as steady as veterans. There is no allegation that *any* troops could have done better in the circumstances.

THE IMPRACTICABILITY OF SENDING A JAPANESE ARMY TO EUROPE.

By YONE NOGUCHI.

TOKIO, October 2.

When we heard some time ago a French voice inviting the Japanese troops to take part in the present European war, we took it as a mere suggestion; but it is becoming, as it seems, to be an interesting, even a serious, question, to be opposed or endorsed frankly, now in Japan. An article on the subject in the *Fortnightly Review* of some six or seven months ago had all the language of persuasion; when the writer said: "They [Japanese] are moved by sentiments of honor and chivalry, and not by calculations of greed. Their friend, their ally, their sworn brother, England, asks them to come, and they will come at once without counting the cost or waiting to reckon whether it will be loss or gain," he departed from the so-called English commonsense of his race. If it were fifteen or twenty years ago, when what we wanted was universal recognition as a "first-class nation," and if there were no better way to accomplish our object than by taking a "glorious part in the tremendous European struggle," such language might have been greeted enthusiastically; but the writer in the *Fortnightly Review* does not grasp the real condition of present Japan or the Japanese mind sadly disillusioned from her cherished dream of being a "first-class nation." What blood we spilled and what a national debt we earned merely hunting after that spectre or ghost! We are in truth like a man who has shaken off the romanticism of youth, arriving at the age of reaction where our only wisdom is seen to lie in persistence in insularity. It is now realized that for attaining our object we should rearrange the general condition of the country (the general conditions of Japanese life, too) with the strength of consciousness and, above all, with a real economy of force. We have arrived now at this wisdom in which the seeming negativism, spiritual as well as physical, turns at once to the truest positivism by the magic of its intensity or its own distillation of force.

Indeed, the question of "first-class nation" is not a matter of width of domain or size of population; we solve it according to a standard more sensible and real. To hold ourselves more compact, we should declare, is the very way to contribute to the world's civilization and humanity; if we ever attain to the rank of "first-class nation," it will not be by the mere capital-lettered Militarism. Here right before our faces we have an exact example in Germany. Suppose we accept the Western invitation and send a fully trained army of 250,000 men, as some English writer suggested, and drive away the enemy from the fields of Flanders and across the Rhine and even demolish Berlin. What shall we gain if in the near future we may happen to be looked upon as another Germany by the whole world? Japan has an important problem in her relation with America; the latter's suspicion always fancies in us a military monster, like José Maria de Heredia's Daimio, dressed in lacquer, crépon, and brass, eying from bearded mask Nippon's dawn smile in the roseate sky upon the far volcano's snow-crowned mass. And on the other hand we have many chauvinists or military dreamers still left in present Japan, who might become wild and reckless if we happened to be crowned in Europe as the greatest power of swords of the whole world and put Europe under our obligation. The Japanese militarism is past history; we hope at least it is so, and if we are still a military power, it must be in the meaning of self-protection. When we fought with Russia in Manchuria ten years ago, we said it was not merely a war between Japan and Russia, but between civilization and barbarism; I wrote then: "Is it a reason Russia's misdeeds should be overlooked, because she is a white nation? Is it a reason why our Japanese civilization cannot be acknowledged, because we are brown people? We have been suffering under many an injury arising from such a prejudice." Did we ever expect then we should become a co-belligerent of Russia to-day, "barbarous Russia" of ten years ago, and that "Kimigayo," our national Japanese anthem, would be sung in her capital? The brightest mind might find it difficult to answer a question what country we have to fight against next or with what nation we are to join our hands; the recent development of the world, we confess, has made us rather pessimistic. I am not ready to proclaim Japan's honesty as a nation; but we beg to say that each country has her own right to think herself first in a sensible proportion from the point of view of her own existence. And at such a time as to-day, when we cannot help suspecting international friendship, my mind recalls an old Chinese poem saying:

> There is a cloud when one turns his hand;
> At another turn, lo, it becomes rain.
> Oh, humanity is so thin, thin like paper.

There is no country that admires and respects England more than Japan, even making a student's obeisance to her; and there is no Japanese in Japan who loves England like myself, who saluted her in the following lines:

> There is no other land like thy home,
> Where, like mountains, heaves thy soul divine,
> Up to the Heavens of blue-deep rest;
> Like the river boundless and fresh, thy heart overflows
> In search of Truth toward the sea unfathomable, free,
> O England vast as are the suns vast,
> O England with the widest breath of widest love!

Let the friendship between our countries (between myself and my English friends, too) stand on candid ground. I sang once: "Thou scornest luxury, thou scornest sham and cheat, thou art the true friend of humanity deathless and plain." From my candid mind I should say that for Japan to send her army of considerable merit (perhaps 250,000) to Europe is impossible practically; a certain English writer dwelt on the matter, saying: "Japan by the Pacific-Canadian route is only a few days further away from the English Channel than India. Within a month of the Emperor of Japan issuing his orders, the Japanese army would be in Flanders or Normandy." But to carry some 250,000 men across the Pacific Ocean there should be some few hundred transports; from our experiences in the last two wars we learn that our power of transportation for one time is not adequate for more than forty or fifty thousand men. For argument's sake, let us say that, since one soldier needs some six tons (the measure of capacity) for his transportation, you must have 1,200,000 tons for 200,000 men and 1,800,000 tons for 300,000 men. And the ships should be, each of them, of more than three or four thousand tonnage. Where shall we get such a number of available ships? Suppose we succeed in crossing the Pacific Ocean, and also Canada by train. You must consider first of all the matter of communication (*étapes*), depots, which, as I am assured by an army expert, is more important than a non-professional ever thinks of; and it will be seen that the completion of the journey would not be a matter of "only a few days farther away from the English Channel than India." If we send the army to France by sea, we shall need some one year and a half before completing the transportation of two or three hundred thousand soldiers (supposing we send forty or fifty thousand at one time); and to make the army effective we must have these 200,000 or 300,000 men all at once. Then there is a serious question of food; and we must be prepared to see many soldiers die from the difference of climate and water, or from their own pride of bravery as Japanese soldiers; my friend in the Japanese General Staff Office said that we should prepare another two or three thousand soldiers to put these 200,000 or 300,000 in perfect working order. After all, this sending of the Japanese army to Europe is a mere talk on the table or a dream.

There might be some one who suggests the Siberian route; but we are told that nearly all the locomotive engines of Russia are absorbed in the fields, and Siberia is suffering as a consequence. Even if we reached Moscow or its vicinity after several months, it is quite doubtful if we could get the communication railways in our hands to make the Japanese operation free and positive. Although some writer wrote that the possibility of military action in Europe had been carefully studied by the Headquarters Staff at Tokio, and that doubtless all was ready for the execution of a clear and well-conceived plan, we Japanese people think about the matter otherwise. How many Japanese officers have ever travelled in the places where the present conflict is going on? And besides, we must take the question of language into account; only a few officers speak any foreign language.

And suppose some one wishes to discuss the question of "armies for hire"; I hate to think even a moment of bartering the living human blood for money or rewards in any shape. It should be understood that, by the decree of the Emperor, our Japanese soldiers are in military service for defending the country and her honor, but not as merchandise or fighters for sale. There is a great possibility, however, of raising an army of volunteers in Japan of men who, like myself, love and admire England—as I once wrote, the "builder of Truth upon the peaks of stars and song, the builder of song amid liberty's pines of echoing heart"; they will, I am sure, be glad to fight in Europe as people belonging to her ally in the Far East and to pay their duty individually. But when some English writer assures us of the German East Africa for our colonial vent as a scene of activity far removed from Australian and American susceptibilities, we have at present to thank him for his kind suggestion.

What Is Wrong with the Army?

By OSWALD GARRISON VILLARD.

If the advocates of peace were to run down the regular army as the advocates of greater preparedness have been decrying it during the last year, they would undoubtedly find themselves charged with being unpatriotic, if not traitorous, and certainly guilty of malicious hostility to our forces for land defence. The advocates of larger appropriations do not hesitate to denounce the army as being mismanaged and not up to its task, but they usually lay the blame upon Congress, which they say has "starved" the army, has insisted on the maintenance of forts of no earthly military value, built, like those at Helena, Mont., Cheyenne, Wyo., and Des Moines, Ia., for political purposes in order to placate certain powerful politicians, and perhaps thereby to purchase certain army reforms which could not otherwise have been attained. Senator Carter, of Montana; Congressman Hull, of Iowa, and Senator Warren, of Wyoming, were, in their persons, the "military necessity" for the construction of those three forts, which, like the one near Denver, ought long since to have been turned into civilian colleges and abandoned by the military.

But while politics has been the bane of the army, and Congress can be justly indicted for its treatment of the service, the faults in the army are by no means due to Congress alone. As any one who criticises the service and points out its shortcomings, except in order to ask that the taxpayers pour out more money for its aggrandizement, is sure to be denounced, let me say at once that the statements in the present article are obtained chiefly from army officers, and from twenty-five years of personal observation and study; that they are actuated by no spirit of hostility towards any individuals, though frankly written from the point of view of one who does not believe in a large army, yet has for a quarter of a century labored diligently to bring about the wise expenditure of 100 cents for every dollar appropriated by Congress, and has invariably defended the army against the politicians. It was an able Secretary of War who remarked to the writer that the trouble with the army was that its "survey boards did not survey, its courts-martial did not court-martial, its retirement boards did not retire, and its promotion boards did not properly promote"—a condition of affairs that cannot be attributed to Congress, though its causes hark back to politics.

Indeed, this very Secretary of War consented to the setting aside of sentences of courts-martial and actions of other military tribunals for personal or political reasons. During his incumbency we had some of the worst cases ever known of officers being jumped, through Presidential favoritism, over the heads of hundreds of others. Under this Secretary that order was first issued which Secretary Garrison is the first head of the War Department to enforce—that any officer using political influence should have it entered on his record against him.

But the politicians did not then stop going to the War Department; it was even carefully explained by officials to some of them that the order was issued merely to head off those who were not the Administration's favorites, or whose favor was not necessary to the Administration's success in Congress. Naturally, army officers stuck their tongues in their cheeks when this order was talked of, and the old game of pull and politics went on as blithely as ever until the army discovered that Lindley M. Garrison meant business, and that the use of influence was being entered upon officers' records of efficiency against them.

Now the corridors of the War Department are not visited by Congressmen and Senators, and there is at this writing but one case on record where Presidential favoritism has been used to the detriment of the army under Mr. Wilson—a rather flagrant case, too. How can one expect army retiring boards to retire adequately if the War Department sets aside their findings to oblige a Senator? The reason is known instantly, by the army grapevine telegraph, from Panama to Alaska and the Philippines, and the army guides itself accordingly.

It is only rarely that an officer is able to rise by merit. As soon as he enters the army, therefore, the young officer, if he is wise, marries the daughter of a Senator, or of a powerful newspaper owner, or of a millionaire contributor to campaign funds, and seeks to get ahead of his fellows not by superior diligence or ability, but by the free use of influence. It has been "the devil take the hindmost." When Congressman Hull, by reason of his being chairman of the House Military Affairs Committee, was able to land his son, a man of only mediocre ability, in a position as major, from which he rose in ten years to be a colonel and judge-advocate at the age of only thirty-seven, what incentive is there to qualify for such a position by legal study and practice? Again, when the war broke out in 1898, a lot of men, some good and some bad, were ordered to Fort Monroe to take the physical examination for commissions. A number of them failed, but they were all appointed just the same. President McKinley saw nothing out of keeping with his oath of office in appointing them, although they might break down at once in the war when capable officers were needed, or, if not, were certain to load up the retired list at an early age. But how could any Secretary of War expect that particular examining board to take its work seriously or to "find" candidates when it knew that its reports were utterly ignored?

Is it any wonder, in view of this régime of politics, that the soldierly spirit in the army is at a low ebb? Take the list of our present generals, and run over the reasons for their appointment to high positions. Gen. Wood was promoted to the rank of a regular brigadier because he was credited with having cleaned up Cuba—an excellent achievement, but not a military one, he being, moreover, a doctor without military training. Gen. Tasker H. Bliss earned the same rank by being an admirable collector of customs at Havana, jumping up from the rank of major for this worthy but non-military service. Gen. Frederick Funston won the same position because of excellent work as a volunteer colonel, for which a captaincy would have sufficed had not the Kansas delegation achieved more; Gen. J. J. Pershing jumped from captain to brigadier avowedly because of a raiding expedition in the Philippines, but really because he was a son-in-law of the all-powerful Wyoming Senator. Gen. Albert Mills rose in a bound from captain to brigadier, thanks to Roosevelt's favor, because he had the good luck to be wounded, in the first skirmish in 1898, near the Rough Rider Colonel.

Two of the present brigadiers won their rank by act of Congress for excellent service on the Panama Canal; they merited reward, of course, but why should they, trained and practiced chiefly as engineers, be put into a position to command troops when one had never drilled more than a company in his life and the other commanded a volunteer regiment for four days only?

The rewards given by Congress for work at Panama have been utterly disproportionate on the military side and merely drive home to the service the lesson that the way to jump from colonel to major-general of the line, as Col. Goethals did against his wish, is by *brilliant work along non-military lines.* Naturally, Major-Gen. Goethals is not interested in holding that rank or commanding troops when he is an engineer, and so he proposes to retire as soon as his work on the Canal is done. The late Major-Gen. Frederick Grant was, of course, a purely political appointment; and so it goes.

Only recently have there been appointed generals who really merited the rank in the eyes of the service, and there again the credit lies with the Wilson Administration. That several of the others, like Bliss, Wood, Mills, and Funston, have made good as generals in the opinion of the service, does not, of course, weaken the fact that their original appointments were subversive of the interests of the army. Even the present Chief of Staff, Gen. Scott, an excellent man, of particular usefulness in Indian and Mexican negotiations, won his rapid rise under Mr. Wilson, not by military exploits, but by non-military traits, his knowledge of Indians and their sign-language, his skill as a plenipotentiary, etc.

This lack of the real soldierly spirit is the great weakness of the service to-day. By that is not meant that the army should acquire Prussian arrogance or embrace the spirit of Prussian militarism—though there are some officers quite ready to go the whole hog—but it ought to acquire German industry, German application, and German thoroughness. Judged by those standards, the American army is still lazy. Suppose every regiment of regulars were ordered to

march out of its barracks and drill every day from 5 A. M. until eleven o'clock, as the German regiments do for months at a time—what would happen? There would all but be mutiny. The regiments would be depleted by desertions and most of the officers would think of resigning or would run to their Congressmen for help. Yet it is just such hard work that makes a fine army. It is, of course, true that the service works infinitely harder than prior to 1898, but there is still much to be done to bring it up to approximately European efficiency.

Foreign officers admire our West Point without exception; but there is no reason on earth, they say, why the excellence of drill attained there should not be the standard of the army. If it can be achieved in one place, it can in another. But the regular regiments that have passed through New York recently, notably the Thirtieth Infantry, have marched so badly and generally appeared so slack that in most foreign armies the colonel commanding would have been instantly cashiered or retired. Yet the physical material in that regiment was superb and the men looked wonderfully fit.

Good marching on parade is not everything, and neither is soldierly appearance; but if they are worth the time and labor spent on them at West Point they are worth it in the service. Good shooting is worth far more, and so is the knowledge of how to care for oneself in the field, how to intrench, etc., etc. But, as a matter of fact, every real soldier knows that drill is at the foundation of discipline as the alphabet and reading are at the bottom of mental discipline. The great trouble is that the newly graduated cadet finds the service slack, many poor colonels, and latterly far more interest in athletics than in purely military functions. There is no incentive to soldierliness, and no chance to advance oneself by rigid application to routine drills.

For this Congress is not responsible. Nor is it accountable for the gross extravagance in the service, and the constant lack of soldierly honor in dealing with the money Congress votes. If there ever was a wasteful branch of the Government, it is the army. I have myself seen it march away from manœuvre grounds and leave behind shower-baths and other facilities erected at a cost of thousands—for the near-by farmers to profit by.

A post surgeon recently requested, and his request was approved by the post commander, a $30,000 isolation hospital. The Secretary of War ascertained that there had been not one or two contagious cases in a year there; but that did not interest the surgeon. Another wanted a costly flight of stairs because the old one was worn out. A high official and three or four generals tested the stairs; they were perfectly sound, but being slightly worn, were offensive to the surgeon. Was not Uncle Sam's Treasury full? Why not turn to it?

But the classic example is West Point. If there ever was a colossal blunder, it was the reconstruction of West Point. It is architecturally beautiful; every conceivable comfort is provided. There is a power station there that is wonderful, and as spick and span as a cadet on full-dress parade. The gymnasium is superb, and, that the sons of Mars may know something about the Prince of Peace, there is a $450,000 Protestant chapel, the product of the genius of Bertram Goodhue, which is one of the most beautiful church edifices extant, and, of course, it quite o'ertops the modest Catholic chapel. The post is lined with splendid officers' quarters, costing from $20,000 up, and the Superintendent has just asked for thirty or forty more, at $20,000 apiece. The administration offices are magnificent Gothic, and the whole Academy is quite luxurious compared to the humble one that Sherman, Sheridan, Lee, and Grant attended. What a lesson for the humble farmers' sons, the offspring of the plain American people! What a contrast to the real democracy from which the student body is recruited! What a complete reversal of the lessons of simple, hard living that a soldier ought to be taught!

But the officers who have controlled West Point care nothing for the example set by Kaiser Wilhelm I of Germany, who slept in his palace on his soldier's iron cot until the end of his life.

It actually costs $20,000, I have been informed in military circles, to educate a boy at West Point, as against $12,000 at Annapolis. The Military Academy bill contains a provision of $17,700 in extra pay for officers, in addition to their regular salaries. Why? Is the service there as arduous as in the Philippines or Alaska? And the Superintendent is asking $125,000 for a laundry which will wash several times as many clothes for the women and children of the Academy as for its cadets. What ideas as to what army posts ought to be will these cadets carry away with them? What are they to think when they see women living in costly quarters obtained from Congress on the plea that they were to be used only as bachelor quarters? What are they to think of the use of Cullum Memorial Hall for teas and social events of all kinds, as to which there is no reference in Gen. Cullum's will? Or of officers' families boarding in a part of the costly bachelor officers' mess? Or of the fact that there are four and a half persons, chiefly women and children, at West Point to each cadet? That there are already 110 detailed officers in addition to civilian teachers to an average of 620 cadets, and many more are asked for? That the officers' quarters contain fine mahogany furniture, costing between $400 and $500 of the taxpayers' money? Can they take away any other idea than that an army post or school is erected primarily for the purpose of promoting the personal welfare and comfort of officers and their families, particularly their families?

The truth is that West Point is, because of its physical formation, not at all adapted for its purposes; but the fact that there is not enough drill ground now for 600 men in open-order tactics does not prevent the present Superintendent from asking that the corps be increased to 1,400 men.

Of course, West Point is not the only place where one finds this waste of the public funds on the recommendation of army officers. What could be more useless than Governor's Island, the chief purpose of which is to provide a pleasant home for thirty or forty officers? Its garrison is needless, and no other army in the world would put a battalion of infantry on a little island where it could not march to save its soul. Hundreds of thousands of dollars would be saved if the place were closed up, the officers made to live on their allowances for commutation of quarters in the city of New York or Newark or New Rochelle, or wherever they pleased, just as the officers of German and French regiments find their own family quarters; no one cares where they live so long as they are on hand for duty. Surely, Gen. Barry, a real soldier among our generals, is entitled to great credit for holding down some of the extravagances at West Point, and particularly for preventing the waste of $25,000 for quarters there for the Secretary of War and the President of the United States (to be used once a year perhaps), for he was going directly against the popular current in the army.

Truly, if West Point is to be regarded as setting the tone of the army, then the tone of the services is one of unmilitary living and needless extravagance, with the emphasis on anything but those ascetic and virile qualities and rigid, plain standards of living that go so far to make the true soldier. The cadets even go into camp in tents with permanent wood floors, electric lights, etc., and only once in a year do they leave the Point for a long march! Is it any wonder that a Bavarian general once said to me after seeing West Point:

"Your academy is splendid, your Corps of Cadets is magnificent, but, if I were the Superintendent, I would march them away from the academy and put them into camp in the hills beyond the Point"?

Is it surprising to learn that the large maps of the seats of war placed in the officers' mess at West Point at the outbreak of the war have been taken down because the fifty officers who resort to that mess are no longer sufficiently interested in the war to make it worth while to retain them?

I asked particularly the other day whether there were not weekly quizzes on the progress of the war; whether the senior officers were not lecturing weekly on the strategy of the campaign as it was unfolded; whether they were not playing the war-game as it was presented in each one of the fields of operation, but I was assured that, except for one little group of young officers, nothing of the kind had happened—incredible as it may seem, since the cadets, to say nothing of the officers, are supposed to be learning the art of war. That in itself is the most striking proof of the lack of the military spirit which is the chief evil in the army, and for which Congress is not responsible.

And what are cadets and what is the pub-

lic to think of the grave scandal which has just been developed at the trial of Lieut.-Col. Goodier, now going on in San Francisco, at which officers have sworn that certain of their brother-officers of the Aviation Section have been drawing the 35 per cent. increase of regular pay, which is by law awarded to officers who are risking their lives by actually making ascensions, when they could not even handle an acroplane? It was charged, under oath, that Capt. Cowan, commanding the Aviation School at San Diego, had been drawing $113 a month extra pay since July, 1913, although not capable of taking a machine into the air alone, and Capt. Cowan has admitted that he drew this unearned pay for twenty-five months!

The truth is that in many directions resources available are knowingly diverted from military to non-military purposes, as, for instance, in the matter of transportation; we have not modern military transportation, but plenty of money for buses and ambulances and non-military vehicles. They even run a bus line from one end of West Point to the other. Into the effect of all this upon the enlisted men of the army and into the free use of these men for non-military purposes, such as officers' servants, caretakers, etc., there is not space to go in this article; but every one who knows the army, knows what an abuse it is, and how it reduces the number of men available for military drills. It verges dangerously near the line of "honest graft," which reminds me that when the camp at Texas City of a whole division of our troops was broken up by the cyclone in August last, there were downright charges by a service journal that no worse place for military purposes could have been selected than the site of this camp, as to which this defender of preparedness declared there were grave rumors of real graft.

It is interesting to note, too, that the storm nipped in the bud, as it were, the erection of several large dancing-pavilions and club-houses that were being built by the troops—military duty again—for the use of themselves some nights in the week, and of their officers the others. I have been trying my best to recall if I ever heard of dance-halls being erected by French or German regiments, and I cannot remember that I ever did.

Now, the maddening thing about all this is that we can do a great deal better if we wish to, for we have the best material on earth out of which to build armies. No one surpasses the American in natural adaptability and the ability to think for himself. Take the story of Funston's Kansas regiment. It is exactly like that of hundreds of volunteer regiments in the Civil War, but it is an amazing tale of resourcefulness, of daring, dash, and Yankee ingenuity, and natural born soldiering, without much drill and next to no discipline. These fine qualities are there, and available. Why do we not get them in times of peace? Moreover, there are a number of able officers in our service who see the needs and deplore the whole present situation, and who do not believe in the Government's buying polo ponies and fox-hounds or conducting a lot of costly suburban communities, but would like to train real soldiers. Why is it that for an expenditure far out of proportion to what the German army costs—we have put, according to Congressman Hay, chairman of the House Committee on Military Affairs, $1,007,410,270.48 into the army in the last ten fiscal years, 1905 to 1915, which is not so bad for a "niggardly" Congress—we do not get a regular army as good, man for man, as the German and the French?

Incidentally, the taxpayer should ask himself whether he ought to heed the advocates of preparedness in adding more sums to the frightful waste that is going on, without the slightest assurance that he will have a bit more efficient army than he has to-day.

Notes from the Capital

JOHN BARRETT.

A thing of beauty and a joy forever is Mr. John Barrett, of Pan-American fame. A fair, smooth, oval face, eyes so soulful that they seem almost to plead with you as you look into them, cupid-bow lips, and a figure that time has refused to inflate, make a combination the attractive force of which is ably supported by a costume invariably the perfection of style and fit, and a manner assuring you more plainly than words that you are of the elect. How much of Mr. Barrett's success in life is due to this ingratiating exterior we can only guess; but certain it is that he has made his way by always knowing what he wished, never hesitating to ask for it, but accepting with charming grace whatever came to him as a result.

New Englander by birth and Dartmouth graduate by education, he transplanted himself early to the Pacific coast, where, as a newspaper editor, he told his new neighbors how things ought to be done in a cultured community. With the opening of the Presidential year 1892 he felt a yearning for another look at the East, so he procured an election as alternate in the Oregon delegation to the Democratic National Convention in Chicago, where, his principal suddenly becoming incapacitated, he was promoted to the responsibilities of a full delegate, and worked and voted for Grover Cleveland as the party candidate. When it came, later, to dispensing the usual patronage, Mr. Cleveland was much annoyed at a factional war which so split the Democrats of Oregon that the Senators could not unite in recommending persons for appointment. Barrett, who had rather carefully kept out of the fight, had made known his aspirations for a modest post in our foreign service; and Mr. Cleveland, losing patience with the quarrellers, said to them one day: "I have the Siamese mission to dispose of, but you can't agree on any one to fill it. Here's this young man Barrett—will he do for a compromise?" As it was not very much of a place, but seemed likely to be the best they could get, the Senators consented; and, with the signing of the commission of this unknown lad of twenty-eight as Minister Plenipotentiary to a country that few politicians could find on the map, was launched a career which has received more generous advertisement than that of many a star actor on the stage of history.

Since leaving Siam, Barrett has never allowed himself to be lost to sight for ten minutes consecutively. When he has not been a war correspondent in the Philippines or a commercial investigator in the Far East, he has been representing the United States in some South or Central American state, or travelling around the earth in the interest of a world's fair; if you don't believe it, he can show you his assortment of diplomas, honorary memberships, and similar evidences of appreciation, including a fine decoration presented by Venezuela. After all these wanderings, he condescended to come back and settle down, several years ago, as Director-General of the Pan-American Union in Washington, with a marble palace to transact his business in.

It must not be supposed that his career has been one of uninterrupted success: he has made a blunder now and then, usually through letting his enthusiasm run away with his tongue or his pen. For example, when he was about to visit Japan in 1902, he sent advance notices to all the leading newspapers of that country, saturated with autobiographical details designed to prevent their making any mistakes as to who and what he was, and what he had accomplished. The editors were ungrateful enough to quote liberally from the material thus furnished, including his explanation that he was selected for his tour of the Orient "because of his familiarity with Asiatic peoples and politics." One remarked with ribald irony that doubtless he had been sent to take a hasty glance at Japan and go home and tell the Americans all about it. The circumstance seems to have irritated the local dignitaries a good deal, and this feeling was not assuaged when some one raked out of the musty files of three years before a report of a speech in which he had said that Aguinaldo's Filipino Cabinet and Congress "in appearance and manners would compare favorably with Japanese statesmen." The ruling class in Japan, though gentle in bearing, are by no means "'umble," and, when Barrett was about to be made Minister to Japan, a polite hint was conveyed from Tokio to Washington that the appointment of another person would be more acceptable.

During Mr. Taft's Administration he evolved the idea of settling the Mexican troubles by calling in the Central and South American republics to assist us in a campaign of peaceful mediation. This aroused the ire of the American colony in Mexico so that they appealed to Secretary Knox to "restrain Mr. John Barrett's mischievous activity"; and the Secretary tried to by issuing an official statement containing some pungent reflections on "sentimentality" and "amateur politics." But was Barrett suppressed? No, indeed. This sort of treatment merely stirred him to fresh endeavors, and he addressed to his supporters in the Pan-American movement a "confidential" note, which was, as usual, promptly published, with special stress laid on this passage: "When some day I may enter the Senate, or later, if my ambition is realized, become possibly Secretary of State, I hope that I will be able to aid you and your country to a greater degree than I can now."

Barrett still sits in the high seat from which he has so long radiated beauty and dispensed new ideas, waiting for that day of broader usefulness to dawn. TATTLER.

Poetry of the *Poilus*

By STODDARD DEWEY.

The *poilus* are the French soldiers in the trenches. The name is new and has grown up spontaneously, unanimously, with the new being it represents. It has a certain adequacy applied to these temporarily, compulsorily "hairy men," unkempt and particularly unshaved. One of their poets—for they are all sorts and conditions of men—describes their type in winter. To his verses, translineated literally, I prefix the little erudition needed for easy understanding.

From the start, Paris autobuses were drafted to the ridge of war for the locomotion of soldiers. *Pithecanthropus* is the scientific name of the missing link unearthed in the island of Java; whether man or monkey or half and half, it certainly can be made to rhyme with "autobus"—in French. Napoleon's veterans of the Old Guard were known affectionately as *grognards* ("growlers"); and a cadet of these centenary years of the military school of Saint-Cyr is a "Marie Louise." Bara is the half-legendary drummer-boy of the Revolution, killed in La Vendée and immortalized often in art since David and in patriotic song since the *Chant du Départ:*

A "Poilu"? He's a heap of ice and sleet,
Decked with a sack and aggravated with a gun.
He has a pipe for ever between his jaws,
He's whiskered like a bear—and not mealy-mouthed.
Yet so delicate he is, this pithecanthropus,
He has himself carried to the ball in autobus.
"Is he a Grognard?"—No—"Then a Marie Louise"?
Better, he's one and the other in the same shirt.
He's just as much a Bara as a Lannes or Messéna;
He's the archer of Bouvines, the dragoon of Jena.
He's a world and an epoch, a symbol, an aurora,
Radiant prodigy and star, and a meteor,
A fine dream casketed in leather and iron.
Sometimes he's a smile, sometimes he is hell;
He's always a hero, too often anonymous;
Of the old grenadier, to life he's synonymous,
An Artagnan in Brutus, a Kleber in Cyrano.
A "Poilu"? Why, he's a soul with a number to ticket him.
He eats—when? he knows not—lives an ant in a hill,
And he's proud as a knight and pure as a hermit:
Shapeless, beyond naming, and covered with vermin.
Madame, he's your *fiancé*—or else he's your husband.

These *poilus* have men of letters among them, besides poets. At Rheims, the Eleventh and Twelfth Companies of the Twenty-third Infantry Regiment of the Territorial army—the most mature reservists—have printed the little book of their *fête*. It opens with a Latin epigraph which some college men, and some who are not, will gladly read:

Non longe ab antiqua glorioseque
afflicta
Remorum civitate,
Ducibus tam benevolentibus quam
benemerentibus,
metu non spe earentes,
in conspectu hostis
ob vanam kulturam stupidi,
ob superbiam eoeei,
Pilosi milites
xxiii leg. xi et xii coh.
Diem carpentes
more majorum,
fortes et ideo jucundi
gaudere voluerunt

("Not far from the ancient and gloriously afflicted city of Rheims, with leaders wishing well and deserving well, wanting fear not hope, in sight of an enemy stupid from vain Kultur, blind from pride, the *poilus* of the Twenty-third Legion, Eleventh and Twelfth cohorts, taking a day off as did their ancestors, and being gallant and therefore merry fellows, wished to rejoice.")

In the book, there is the speech of the chief of the feast; twenty-eight numbers of a concert; and a topical song on anti-typhoid vaccine. The chief was a university professor serving in the ranks, as might be gathered from his Latin for *poilus*—"Pilosi milites."

So far we have the life of these *poilus*. Saint-Georges de Bouhélier—he was a young poet before the war, and had his own particular "Naturist" school—has seen the *poilu* in death. It is an incident frequent enough in his career—and the poet chants him as "The Poor Man in Paradise."

Here, too, a little erudition is needed. The orthodox may smile superior at the French general who assured his soldiers that every man of them who died for his country would go to Heaven straight. Dr. Samuel Johnson—no smiling matter—wrote once to Bennet Langton: "Your mind is now full of the fate of Dury (a major-general, who fell in the gallant discharge of his duty, in the well-known unfortunate expedition against France, in 1758). . . . If a man can be supposed to make no provision for death in war, what can be the state that would have awakened him to the care of futurity? When would that man have prepared himself to die, who went to seek death without preparation?"

The Doctor would have been confirmed in his manner of consolation for slain soldiers' friends if he had seen the sight in the great cathedral church of Rheims before the French army retreated and the German guns demolished it. Seated in the vast nave wherever they could find a place, fifty priests in uniform like their comrades heard all night long what might be the last confessions of soldiers kneeling before them in the open, without ceremony, one following the other. Perhaps the poet had not this in mind, but it fits in with his verse:

I.

For whom waitest thou in the forest,
Death? Whom art thou now to distress?
Whom deliver from evil?
Whence art thou coming, Lady Death,
With casque of black and gold?
With thy cuirass of steel,
Astride the cannon that shines,
Whom seekest thou, Hell's daughter?
From the farthest deep of Northern plains.
From beyond the Rhine, lo, thou goest forth.

"O Death, what art thou come to hunt?"
Cries a soldier, seeing pass
Her who leads on the dead.
See, he has leapt up and out
From his trench's bitter stage,
Saying: "I fear thee not,
Lady Death ('tis a madman cries)
Nor fear I if one more fall at thy knees.
Lady Death, Lady Death,
Lift at me thy golden sickle,
At me—I mock thee! And, verily,
If I needs must suffer Germans
On this land full of the bones
Of my brothers—weak or strong,
Of my brothers—Lady Death,
Hear me well, I'd then as lief
Be no more!" And the combatant
Pierced with prompt wounds lay out his length.

Death is there, within his body,
Working it and biting it.

"Lady Death, look here to me:
A poor man, with only a gun
For his sole good, follows me uncaring!"

Thus the man lay him down to sleep,
Green his skin and crossed his eyes.

II.

"Lady Death," said then the Christ,
"He who uttereth not a cry,
He deserveth Paradise."

Lo, while Death goes on her way,
Comes the Angel on two wings of gold.

"What wilt thou with me, fine Seraph?"
—"Take thee up from earth and so
Open Heaven to thee, world without end!"

And the Angel hath drawn out the man
From the hole where Death buried him.

"Isn't it God I see up there?"
Said the soldier of calamity.
And the Angel answered—"This is He."
And all around rise thrilling chords
Crystalline, and the sound of horns.

"On my lip was bitter gall,
And behold, 'tis honey now!
What did I to be in Heaven?"
—"Nought didst thou but to be strong,
Facing Death, without remorse."
—"Ah! what had I to lose by leaving
A world where Dame Poverty
Tortured me with no charity?"
—"Yet, what mattered thee the lot
Of the rich whom they were wronging?"
—"True, I often wanted bread,
And I had not any measure
Of earth for me, nor any good!"
—"Then, why didst thou give up thy body,
Thy sole fortune, unto Death?"
—"For my brothers!"—"But who are they?"
—"All who belong to my fine country,
All those of my France in danger!
All those who toil in pain and stress
To drive out the German,
All whom my land has nourished,
All those who have suffered sore
In this war, O Lord Christ!"

"Blest be that man!" spoke up then
The Father Eternal, good and strong.

III.

And while He was speaking so,
Down below, without truce or mercy,
Death was chilling soldiers' lives.
And through all the cities, Death
Ceaseless passed from South to North,
And under tents, amid the wheat,
In the forest's depth, pierced with wounds,
Fell the men that gathered there.

But above their grievous bodies
Also came the wings of gold!

That the Belgian soldiers, fleeing their homes, may not be forgotten, we have "Exile's Offering," by Robert de Montesquiou, who is known in America:

We are harassed by march and fatigue,
We foot it from far in the country of hops;
We have lifted the dams of our dykes,
And left nor looked back to our golden-haired babes.
We would not serve with the foe
Whose horde ran after our maddened steps,
And we marched in full gloom and in want,
Toward the welcome of those who called on before.
You offer us food and a bed and the hearth;
But look at our fingers—they wear wedding rings!
Has no one seen pass, O shepherd or lord,
Our wives and our little ones, kids and the lambs?

Correspondence.

AMERICAN POSITION AND RESPONSIBILITY WITH REGARD TO THE WAR.

To the Editor of The Nation:

Sir: There is no doubt that Germany made this war. We in this country have had ample opportunity to know the main facts. Bernhardi and other German writers have given us Germany's attitude, and the diplomatic correspondence of the various countries and numerous trustworthy articles and foreign excerpts in our magazines have been widely available. Yet there is an element in our midst, largely of German extraction, which has allowed its opinions to be formed by the feeble propaganda of conscienceless, paid German "educators." With the thinking world, however, it is safe to say that none of the so-called "lies," of which Germany has so bitterly complained since the beginning of the war, have damaged her cause and her reputation as have the things that she herself has written and circulated. An unbelievable puerility has marked the utterances of her great men, and moral cowardice her unceasing attempts to justify her every action, while an utter lack of conscience and moral sense has marked both actions and utterances.

Too long have we allowed the various Dernburgs, Münsterbergs, Ridders, and Vierecks in our country (not to mention the members of a scheming and untrustworthy Embassy) to carry on practically unhindered and unnoticed a deliberate campaign against the spirit and laws of the country. German-American citizens have been led to believe that they are German subjects still, and that anything, no matter how illegal, treacherous, or evil, which they may do for the "Fatherland," for their Kaiser, and incidentally in this fanatical connection, for God, is righteous. Germans and Austrians have organized in *our* country for the stated purpose of controlling *our* Government. Bernhardi, in his "Germany and the Next War," calculated definitely upon this factor, and Germany is at this moment calculating upon it. How long would such a campaign have been tolerated in Germany? What would have happened to the leaders? Such interpretation of the freedom of our republic proves these foreigners incapable of understanding and unfit to enjoy its privileges.

It is a striking fact that it was nine months after the outbreak of war before we heard protestations of loyalty to the United States on the part of German-Americans. Up to this time they had been swayed *en masse* by characteristic narrowness and emotionalism to the blind approval of German methods. With all the world aghast over the crimes against Belgium, the sinking of the Lusitania was, as far as we know, the first outrage to call forth the slightest repudiation of Germany's lawlessness and brutality, and then the German-American conscience was quickly and piously lulled by the little catch-phrase, "Germany warned Americans." Protestations of loyalty and good citizenship were made by German citizens in Antwerp before the war, doubtless in many other places as well, yet when the German army marched upon Belgium, it was found that munitions had been stored and that other definite schemes and preparations of long standing had been made by these very citizens to help Germany carry out her purpose. It may seem ungenerous for us to receive these expressions of loyalty to the adopted country, doubtless sincere on the part of many, with such a reminder, but it is quite time for us to consider facts, and those Germans and Austrians who are sincere in their American citizenship will be the last to make an outcry against a distrust which is all too well grounded and logical.

Germany, although openly at war with only certain countries, is and long has been striking secretly at the roots of government in all others. The infinite plans and schemes of Pan-Germanism have spread through unsuspected channels to the ends of the earth, like the subtle fibres of a cancerous growth. Can we in America refute with certainty this contention of Germany that we are already in her grip? Let every State and every individual look to this matter sharply at all future elections.

The American people, from the beginning of the war, have made sincere effort to hold a neutral attitude in so far and so long as it was morally possible. Germany has only herself to thank for the fact that now every protestation from her, every message, and her every action, can be looked upon only with suspicion. We have learned to trust not the Germans "even bearing gifts." The killing of hundreds of innocent people on the Lusitania, among them many Americans, is a blow that has struck home, but it is no more horrible and revolting than the agonizing death by poisonous gases which is being inflicted upon thousands on the battlefield, nor than the poisoning of springs in a desert country, and is, indeed, merely a climax to a long series of barbarous outrages against which all the forces of civilization must rise.

It is high time that every American citizen (the real citizen) should rouse himself to his individual responsibility in this war. It is time to throw off indifference and sentimentality and to make at once a definite stand for justice, decency, and humanity; for each loyal American to do all in his power, no matter how little that may be, to put down these sinister influences in this country, and, by the constant and open expression of his abhorrence of German principles and tactics, to help swell the power of world-wide public opinion to their peaceful but effectual overthrow.

It is time that we should all be fully aware of the meaning and menace of this "National Alliance" of Germans and Austrians in our midst, nor should we longer feel any hesitation in admitting and taking account of the persistence, subtlety, and craftiness of German methods. We must not apply to the German people—saturated as they are with their own peculiar mediæval ideas and decadent philosophy—our human, moral, or spiritual standards. They have lost the ability to understand these standards, and merely think us weak and foolishly sentimental. We must speak a language that they can understand nor let the desire to avoid unpleasantness (a characteristic American weakness) overshadow our sense of justice and right and our moral obligation to the rest of the world. Germany has said, and repeatedly proved her statement, that she recognizes no law, except that of her own will at a given moment—a very confession of barbarism. Let us remember that every official or representative of Germany is of necessity an exponent of the same elastic creed and is constantly working on the peculiar unmoral principles involved therein. Let American citizens who are loyal to their country organize without delay a National American Alliance to defeat this plan of faithless foreigners to control our Government. Let them see to it that no Germans or Austrians fill our public offices, or places in our army or navy, or have any connections with our fortifications, lighthouses, wireless stations, or government shops. Let them cease all dealings, however small, with those foreigners who in the past months have flaunted their allegiance to Germany or upheld her dishonorable and inhuman policies. Let them see to it that no opportunity is given to German professors in our colleges to instil into the minds of our young people the teachings of those narrow, unbalanced, diseased minds that are the progenitors of this inhuman war.

Finally, we call earnestly upon all the countries of the world to unite now in determined and effectual protest; to form a federation to put an end to this fiendish war, to Germany's high-handedness, her mad self-glorification, her fanaticism, and her murderous barbarism. Let them agree not to recognize Germany or Austria, the deliberate perpetrators of the war, as part of the civilized world; let them agree to cut off all diplomatic and commercial relations with these two countries, not only now, but indefinitely after the war, until militarism and Prussianism are safely crushed and a regeneration on civilized ideals plainly visible; until Bosnia and Herzegovina have been restored, ample indemnities paid to the countries who have suffered at Germany's hands, and every inch of Belgium given back to her people with sufficient funds for the re-establishment of the life of the country and the rebuilding of her ruined towns.

Germany's commerce is her pride, and an important source of her income. What more powerful blow could be struck by the neutral countries of the world, now openly and frankly at war with German and Austrian barbarity, than the long, steady refusal of recogni-

tion and trade? If the horror that the world has professed is sincere, it is strange that Norway, Sweden, the United States, and other countries can go on feeding Germany and making her enormous loans, and that any small faction of private citizens in a Christian country can, through greed of money and gain, continue to make an opportunity out of the war. While the countries of Europe are sacrificing their life-blood, suffering wholesale and indiscriminate murder and untold miseries and misfortunes as a result of Prussian vanity and megalomania, is it possible that the rest of the world, which has thus far been spared, cannot afford to sacrifice a little trade?

Neutral countries have their share of responsibility in the terrible slaughter now going on, and it is to their disgrace that it can still go on. If any country has any doubt as to her moral obligation to help put an end to this war and forever stamp out the principles and ideals which produced it, she has only to make herself familiar with a few modern German doctrines and tenets, the German War Book, and the report of the Bryce Committee.

All true Americans and every good world-citizen in any country is pro-decency and pro-humanity. If Germany feels herself compelled to interpret this position as pro-Allies or pro-British, the responsibility rests with her. Our duty is plain. F. W. Harman.

San Francisco, Cal., October 5.

WILL ARMENIA SUBSIST AS A NATION?

To the Editor of The Nation:

Sir: Will Armenia continue to exist as a nation? is a question ever occurring to the mind at this moment when one is allowed to consider other matters than shells, bombs, submarines, and the high price of exchange. If the Armenian people were succumbing under the attacks of open war, their fortune would be simply that of the many, too many, alas! who are gallantly falling on the battlefields of the old world, without any precursory sign of peace so far showing itself. But such is not their case. They die as a ransom paid for the decay of the Ottoman domination in Europe. The lower it falls, the fiercer is the revenge taken upon them, as if they were accountable for the fall. And what is worse, *one* European Power has been found acute and unscrupulous enough at the same time to traffic with the lives of these unfortunate victims for the advantage of its own selfish purposes. Ever since a German Empire was revived, and, through its representative at the Sublime Porte, began to manifest its views concerning the development of German influence in Asia, the Armenian nation has been condemned to the rôle of a martyr.

Already, in 1872, Ambassador Eichmann bartered with the Grand Vizier, Avni Pacha, and instigated him to exile the Armenian patriarch Hassoun, who had been the protector of the heroic Zeituniots. (Perhaps I ought to explain that Zeitun and some parts of Silicia form the so-called Armenia Minor which was the last Armenian kingdom under the Lusignan dynasty, whereas Armenia Major, near Ararat, lost its independence as far back as the eleventh century.) And when came the massacres of Sassun in the month of August, 1894, and of Constantinople in the same month two years later, followed by the murder of about a hundred thousand Armenians in the country districts, Germany's silence in the presence of Abdul Hamid cannot be specially blamed, for the shame was common to all the Christian Powers. However, it is to be noted that while public meetings in Paris, London, and other capitals gave vent to protestations, at Berlin only one voice was raised in the name of outraged humanity, that of Dr. Lepsius, the court preacher, who was immediately discharged from his post by the Kaiser. In this connection, we should record the fact of the laudable initiative taken by Denmark in calling the pro-Armenian congress at Brussels in 1902, which was followed by several others, all in vain, however, because they were not supported by the respective governments of the nations which brought them together.

In the meantime, the persecution of the Armenians continued to rage all over Turkey until it reached its climax of violence and hypocrisy at Adana in 1907, when the guilty Young Turks, who had succeeded to the Red Sultan as the masters of the Ottoman Empire, received only praise instead of reproach for their crimes. No wonder, therefore, that they are able at the present moment to carry on their work of destruction with more systematic hatred than ever. The news is distressing. The official organ of the Young Turks, the *Tanine*, has not hesitated to print that this time will see the end of Armenia, for the young men are forced to serve in the army, the old men sent off into the desert to die of hunger, all women imprisoned in the harems and islamized, while children of both sexes are sold at auction at Constantinople under the very eyes of the Germans who rule there. Only a few thousand people have been able to reach Beirut, where they were saved by a French man-of-war and the American cruisers, the Chester and Des Moines, which conveyed them to Egypt. It is even declared by the fugitives that the German Consul at Alep, a certain Rossier, went to Aintab to preside at the massacres. But whether this be true or not, my own conclusion, based on a full knowledge of Armenia and Armenian affairs, is to the effect that if Germany wins in the present war, Armenia is doomed; but if she is beaten, there still remains hope that so long as the old Haikan Bible is read in the churches of California, Rome, and Etchmiradzin, Armenia will survive as a nation.

Henry Doulcet,
Archbishop of Dioclea.

Paris, October 10.

THE ASSETS OF THE ALLIES.

To the Editor of The Nation:

Sir: In your article, "A Gamble on Indemnities," you referred to what, at the time of writing, may be described as the assets of Germany in relation to negotiations for peace, namely, the territories occupied by the German armies. But you omitted to refer to an immensely important asset of the Allies, namely, their command of the sea. Almost the whole commercial expansion of Germany, the most striking reason of her increasing prosperity and wealth in the last half-century, is at an end, and will remain at an end until the Allies, at their own time, make peace with Germany. Unquestionably, for example, but for the war Germany would now be establishing new lines through the Panama Canal and new centres of commercial expansion in South America. Instead, her business men have to stand by and see other nations getting in before Germany. The more the point is considered the less valuable does the forcible occupation of territory appear when compared to the disastrous and equally forcible cessation of the external commerce of Germany. It is academical to write about terms of peace until Germany has been ejected from Belgium, France, and Russia, because if there is one thing more certain than another, it is that the Allies will never consider terms of peace until this has been effected. But, at the same time, it is well that neutrals should appreciate that the Allies have assets on their side more important to Germany than the occupation of territory. E. S. Roscoe.

London, September 18.

A POINT FOR ASTRONOMERS.

To the Editor of The Nation:

Sir: In the *Nation* of September 16, p. 358, Miss Guiney sets for us an unkind trap. She first prints a charming lyric, "To a Lady Who Ask'd What He Chiefly Admir'd in Her," asserts briskly that "no student whose ear is sensitive to the undertones of English letters would hesitate" to date the poem between 1630 and 1650, and then exults over us with the demonstration that the poem is by Wycherley; date of composition unknown, probably about 1700. So far so good. Every guesser in poetry ought to relish a joke, even when it is against himself.

In the poem quoted are, however, two lines which give me pause:

> Thus unseen Stars i' th' Element
> United, make the Milky Way.

This comparison of general attractiveness made up of numerous single qualities with the Milky Way made up of countless single stars, though somewhat of a "conceit," is pleasing. Yet would a poet of the early Stuarts, 1630-1650, have known that the Milky Way is composed of single stars and assumed that the knowledge was current with his readers? I propound the question with diffidence, for my knowledge of astronomy is painfully scant. I have usually supposed that popular knowledge of the heavens—and poetry must always be popular in its knowledge—began towards the end of the seventeenth century. The point is one upon which we ought to get the opinion of our astronomers. J. M. Hart.

Bronxville, N. Y., October 14.

"WHILST."

To the Editor of The Nation:

Sir: I am grateful to Mr. H. Carrington Lancaster for correcting my statement, "Englishmen almost invariably write 'whilst.'" He has proved me to be wrong. What I ought to have said was that "whilst" is very common in English books and very uncommon in American ones. I have found it so constantly in my reading of contemporary English writers that I supposed it was even more general than it is. With reference to its spoken use, a former Rhodes scholar writes me that a certain tutor at Magdalen invariably said "whilst," "amongst," "betwixt"—rather to the amusement of his listeners. Yesterday I heard "amongst"—spoken by a German-American. William Lyon Phelps.

OUR FOREIGN TRADE.

Economic Aspects of the War: Neutral Rights, Belligerent Claims, and American Commerce in the Years 1914-1915. By Edwin J. Clapp. New Haven: Yale University Press. $1.50.

"How the war comes out is none of a neutral's affairs. Our business as a nation is to look after our own interests." That is the text of the author's discourse. Our interests, in his view, are comprised entirely within the field of moneymaking. We cannot, perhaps, during the continuance of the war, do as good a business as we used to do in times of peace, but we may at least hope to improve upon the present situation. The cotton trade languishes, for the planters of our Southern States find the markets of central Europe closed to them by British restrictions. The copper industry for months was depressed. It has recovered, but copper interests can find but little comfort in good prices on an increasing output when they realize that a reopening of trade with Germany and her allies would bring them still better prices on even larger sales. Northern farmers and ranchers have gained, it is true, by the active demand for their food products, and the many producers who contribute to the supply of military equipment and munitions are enjoying unexampled prosperity. Yet, though the value of our exports has actually increased in the course of the war, the situation in general is "spotty" and unwholesome. Producers of cotton, lumber, tobacco, phosphate rock, mineral oil, agricultural implements, and naval stores find their accustomed foreign markets closed to them. American wheat growers are threatened with a disastrous drop in prices when (or if) the Allies force the Dardanelles; and the eventual conclusion of peace must force a most trying readjustment in many industries, if they remain long subject to the present abnormal conditions.

The situation of our import trade is even less satisfactory. Great Britain has taken command of the high seas. Imports from the Central Powers reach us only by her sufferance. The supply of products of the first importance to our interests, such as potash in agriculture or dyestuffs in industry, has dwindled to almost nothing. Great Britain doles out to us the needed supplies of rubber, wool, and tin only on condition that our manufacturers refrain from shipping to Germany either these materials or products made from them, and has such complete control over the movement of these wares that we may not even export the clip of a Montana wool ranch.

The author is a master of the difficult subjects of commercial geography and commercial organization. He describes the flow of wares in trade with a concreteness of detail that fixes the attention, and yet he keeps always before the reader the broader aspects of the trade in its relations to the whole business structure. As an illustration of his ability may be cited the two paragraphs in which he sketches the technical and economic character of the dyestuff industry:

> The manufacture of coal-tar dyes is complex. By distilling coal-tar ten products called *crudes* are produced. By treating these crudes with non-coal-tar products, like acid and gases, 300 *intermediates* are produced. These intermediates are assembled or combined to form, all told, some 900 *finished dyes*, of which a considerable proportion are in use in the United States. It is as if ten fibres were used to make 300 yarns, these in turn being woven into 900 patterns.
>
> There are several reasons why no dyestuff industry has developed in America. One difficulty is in the production of intermediates. The making of some of these is a process kept secret or patented by the Germans. In the case of others, by-products are developed for which the Germans alone have found a use and a market. The German industry is largely in the hands of four great concerns, which produce all of the intermediates and finished dyes, and use all of the by-products. To compete with such industries it would be necessary to operate on the same scale. Some of the intermediates and finished dyes could not be made in this country until secret processes were discovered or until the expiration of German patents. We could not operate with efficiency until we had trained the thousands of chemists who watch over every division and subdivision of the dye-making process in Germany.

It is a pity that Professor Clapp did not write the whole book on the subject defined in its title; it is still more unfortunate that he has not given us a study of economic life in time of peace. He shows here, as in his earlier studies on the trade of the Rhine and on the port of Hamburg, an unusual talent for the analysis and description of commercial organization. He is qualified to do what has never yet been done, to describe the commercial relations of the United States with an intimate understanding of their significance in the economic life of the nation and of the outside world. The book as it stands, however, is one more example of the evil that the war has worked on scholarship. It has not merely tempted the author to desert the field of normal commerce for that of abnormal; it has lured him out of his field altogether, into another in which his view is clouded and his opinions are of little value.

The larger part of the book is taken up with questions of international law, the "Neutral Rights and Belligerent Claims" of the sub-title. The author follows, step by step, the growing interference of belligerents with American trade; he analyzes proclamations and diplomatic notes; he compares conventions and precedents; he passes judgment. He finds it easy to convict Great Britain of grave infractions of accepted principles of international law. He notes in passing similar offences on the part of Germany. His main concern being, however, with the fortunes of American commerce, he finds that Great Britain is the chief sinner. This conclusion is natural, and, to a certain extent, it is true. Great Britain, holding command of the sea, has taken the aggressive in naval matters, both military and commercial, from the beginning of the war. Yet the author misleads when he says that "this book, dealing with the effect of belligerent violations of neutral trade rights upon the agriculture, industries, and commerce of the United States, could be written about any nation now at peace." The Scandinavian countries, trading through Baltic waters where Germany has held command, could draw a similar indictment against Germany as the arch-oppressor.

The author's critical weakness, however, lies in the fact that, as an economist, he sees only one aspect of international law: its bearing on business affairs. He has not caught enough of the spirit of politics to realize that international law is a whole of many parts, that it would be disastrous if it were possible to single out any part, such as neutral rights of maritime trade, to be secured at the sacrifice of other parts of the law. He remains economist from first to last. Such matters as the violation of territorial neutrality, or the treatment of civilian population in alien territory, on the high seas or in conquered districts, have little interest for him. The "Lusitania horror" receives an incidental reference, in the term quoted, but it is not a topic on which an economist would be expected to have much to say.

The book gives the hateful impression that the first duty of the American people, to themselves and their posterity, is to make money. Its natural conclusion is that, in the present juncture, their duty is to make more money, by forcing open the channels of trade with the Central Powers. The means recommended to attain this end are simple, and not entirely unfamiliar.

> The Allies have placed with us somewhere between $500,000,000 and $1,000,000,000 of arms and equipment orders. That is the precise measure of the power that we have over them. . . . There need be no formal session of Congress to declare an arms embargo. The State Department need only intimate that the Administration is prepared to call such a session, and the result will be attained. A word to the wise, from the wise and the powerful, is sufficient.
>
> Should the impossible happen and should it be necessary to declare an arms embargo, the country would by no means be plunged in ruin. England could not fight us; that would mean to starve herself. In bringing our own armament up to date, our Government coud afford to employ the country's arms capacity whose contracts with the Allies would be broken.
>
> That is more than impossible. England would know that an arms embargo might be followed by a food embargo, if necessary to attain our rights. These rights are so incontestable, and this means of attaining them is so in accord with even the letter of international law, that a country which has

pawned with us its military future would not think of losing so precious a pledge.

CURRENT FICTION.

The Star Rover. By Jack London. New York: The Macmillan Co.

Jack London is the professional strong man of American fiction. What he adores and strives to exemplify is raw vitality working its will among a race of weaklings. Strength, brute strength, plus human will—whether to conquer or to endure—is his favorite theme. He has theories besides, to be laboriously enforced; principal among them, by a not unfamiliar paradox, the theory of human brotherhood. But it is to be noted that his socialistic novels are chiefly occupied with those acts of violence by which downtrodden man is to assert his birthright. What he is really convinced of is that the men of our so-called civilization, stripped of their hypocrisies and their parlor tricks, are much like those creatures of the prime and slime whom he loves to picture—naked, on all fours, rending, conquering, obscene. The truth is, this writer's imagination, with all its affectation of breadth, is singularly narrow and vulgar. His hero, however dressed, is always the same navvy, primarily a champion of himself, good-natured unless opposed—when he "sees red" and performs sanguinary prodigies with his fists.

The Darrell Standing of this book may seem an exception. He is not a big man or a fighting man, but a college professor who has murdered an associate and been sent to the prison of San Quentin as a "lifer." But the deed has been done in a moment of that "red wrath" which has persisted in him from the prime and slime. After long imprisonment it seizes him again, he bloodies the nose of a prison guard, and is condemned to be hanged therefor. For the most part, though, as we see him in his own person, he represents his brute ancestors negatively, through his stupendous powers of endurance. Here is an excellent opportunity to paint the horrors of prison life. Darrell Standing is shown as the victim of deliberate and long-standing cruelty. He is falsely accused by a "stool" of complicity in a plot to blow up the prison. To extort confession, he is subjected periodically to the torture of the "jacket," in which he is confined from a day to ten days at a time. A fellow "solitary" has, by knuckle-rapping, taught him how to induce the "little death," a suspension of animation while in the jacket. During these periods his spirit learns to detach itself from the body and to travel back through the ages, reliving many of its former incarnations. Here is plenty of chance for the positive propaganda of the gospel of strength. If Darrell Standing is not now a six-footer or a bully, he has been both many times under other names. We hear his adventures as a seacuny (whatever that is) marrying a Korean princess; a captain under Pilate; a castaway, and so on—of these in detail, a handful chosen out of his thousands of embodied experiences. All well enough as a not too fresh flight of fancy—if it were not so hopelessly vulgarized in the handling, did not so patently call for some such title as "The Immortality of a Bounder."

Lawrence Clavering. By A. E. W. Mason. New York: Dodd, Mead & Co.

This is another instance of machine-made historical romance. It is impossible to think that the author, who has had some experience at this kind of thing, can have believed heartily in what he was doing, unless as a commodity which might be sold to a certain class of customers. Nor can we think that he has much respect for that class. He chooses as historical material the Jacobite phase which culminated at Preston. Figures like Bolingbroke and the exiled King himself are propped up in corners of the scene. It is all very perfunctory, this part of it. The real thing is the personal-adventure-and-heart-interest element, which concerns the gentleman whose name gives a title to the book, and a maiden hight Dorothy Curwen. He does a good deal of moving about with swords, letters, and things; narrowly escapes disaster by way of intrigue with a married woman; is pursued by the villain as actively and ruthlessly as that gentleman's rag-and-straw constitution permits; and in the end, after the failure of the Cause, escapes to France with his lady, and there lives out his years as contentedly as an exile may. It is the kind of story which flourishes upon our boasted high level of workmanship.

The Crown of Life. By Gordon Arthur Smith. New York: Charles Scribner's Sons.

Why is it that there seems to be something quaintly amateurish about the choice of Beacon Street and the Frog Pond as a setting for fiction? Is it because no novel of the first order has ever had that setting? The same thing might be said of Fifth Avenue and Washington Square. Is it that current fashion prescribes the metropolitan scene? Chicago and Philadelphia and Indianapolis and Pittsburgh are all natural enough settings nowadays. Only Boston fails to make itself credible as a place where real people live, where real action comes off. Judge Grant's "The Chippendales" made something like a sensation as a book which assiduously attempted to novelize the Hub. But he did not really succeed in vitalizing it either there or in his later story, "The High Priestess." In the present novel a similar attempt is made by a relatively fresh hand. Much of the action, to be sure, takes place in and about Paris. But the chief persons, with the exception of the French playwright, Dartex, belong to the Bostonian environment. None of them is of the strict Brahmin type, which is a relief; but the hero, Jerome Defoe, is a Harvard professor, and the heroine, Ruth Hollworthy, of the bluest blood in the distinguished old village of "East Westley." The girl, like Judge Grant's "high priestess," is extremely and consciously modern. At a very early age she learns to be impudent and condescending towards all seniors and persons in supposed authority. At seventeen she insists on leaving East Westley and her guardian aunts for Boston and a good-natured but inefficient chaperon. Here, in a semi-Bohemian circle, she cuts her little dash, flirts with all male things available, and is presently rescued from eloping with a Harvard freshman by Professor Jerome, who, for no discoverable reason, has already half fallen in love with her. She then takes her chaperon to Paris, is saved from giving herself to the fascinating Dartex by the chance discovery that he is *not* married, and, after a penitential return to East Westley, is in due time appropriated by the didactic but reasonably complaisant professor. The truth is, she is, with all her boasted knowledge of Verlaine, Shaw, Strindberg, and Ibsen, simply a minx. Professor Jerome's first impression of her, that what she needs is spanking, is more correct than conclusive. In a way, she gets that much from fate; but whatever this excellent process may be capable of doing for a minx, we doubt its power to convert her into "a really great woman." And Professor Jerome is rather an ass.

The Extra Day. By Algernon Blackwood. New York: The Macmillan Co.

The cult of child-fiction, fiction about the child for grown-ups, is still followed by many English writers. From the American point of view, the odd thing is that so many of them are men. It again points the fact that British reticence and unemotionalism, if they still belong to England's manners as a nation, do not belong to her current writers. In exuberance, whether of wit, sentiment, or fancy, the Briton now beats the Yankee hollow. This is a book of fancy and sentiment spun about three English children named Judy, Tim, and Maria; their country home and pets; a retired colonel, who is all that his rôle requires; an Uncle Felix, who is said to be a novelist, but who seems to have nothing to do but play elaborate games of make-believe with the infants; a tramp, who has some such symbolic part (as far as we make it out) as Ibsen's Button-moulder; and various personified aspects of nature, such as the Night-wind, the Wood without a Centre, and so on. They are all upon the quest of a mysterious Stranger, who, we suppose, stands for Happiness or Truth. In the end, after many pages of being childlike in an elaborate way, and after a vast deal of wandering (not to say maundering) about, quite without warning they all fall into a species of trance, during which something or other is revealed to them, if not to us. "Their hearts opened curiously, they saw wonder growing like a flower inside—the exquisite wonder of common things. There was something they were looking for, but they had found it. The flower of wonder

blossomed there before their eyes, explaining the world, but not explaining it away, explaining simply that it was wonderful beyond all telling. They all knew suddenly what they didn't know they knew; they understood what nobody understands." So there we are, or thereabouts. Is it all very deep or very trite? That is a question we do not ask of "Water-Babies" or "Alice in Wonderland." They, too, are full of quaint fancies, but there is something bigger than fancy at the back of them.

IN REVOLUTIONARY TIMES.

The Life of Henry Laurens. With a Sketch of the Life of Lieut.-Col. John Laurens. By David Duncan Wallace. New York: G. P. Putnam's Sons. $3.50 net.

Of the men of character and ability who figured prominently in the American Revolution, there are few whom historians have neglected more than Henry Laurens. Professor Wallace, undertaking some years ago to prepare a sketch for the Library of Southern Literature, found in the MSS. of Laurens in the South Carolina Historical Society "an unworked treasure field." He was soon aware, as he says in the preface, that "here was a great and good man who had lain for a century in an unjust neglect. My quickened interest . . . was equalled by my affectionate esteem for the man. I determined to write his life. I hope I have succeeded in bringing from neglect . . . a man whom Professor Tyler calls 'the noblest Roman of them all—the unsurpassed embodiment of the proudest, finest, wittiest, most efficient, and most chivalrous Americanism of his time.'"

To admire his subject is a great advantage for a biographer who is also a thorough and conscientious scholar. A good scholar Professor Wallace certainly is. He has searched all the unprinted material, and has spared no pains to attain accuracy in every detail. There are a few misprints, and in at least one material point the author has not made use of the latest research. Following Professor Turner, he says that after 1763 France "adopted as her American policy enlarging her West Indian possessions and recovering Louisiana" (p. 279). It has recently been pretty well demonstrated that this was not the case, and in particular that the Memoir attributed to Vergennes and printed in 1802, upon which Professor Turner relied, is spurious. (Phillips, "The West in the American Revolution," 31; Corwin, "American Historical Review," XXI, 38.)

This is a small matter, however, and it is quite true that Professor Wallace's admiration for Laurens has proved entirely compatible with excellent scholarship. Nevertheless, the author has been led, perhaps through the laudable desire to rescue his subject from neglect, to view his task in a way which we are bound to think unfortunate. Professor Wallace brings Laurens, as it were, before the bar of history, examines his conduct, impartially no doubt, and on the basis of the fullest evidence, and then renders a decision. The result, after laying down the book, is that one thinks of Laurens not so much as a certain type of man who in a given environment very naturally pursued a certain line of conduct, but rather as a man who met this situation in the right way and that situation in the wrong way; a man, in fact, whom Posterity should commend for supporting Washington against the Conway cabal, but should condemn for supporting Lee against Deane. No doubt in the world, the verdict is ordinarily equitable; but it is an unpleasant experience being brought into court, even if you are cleared. For writing a substantial life of Laurens no excuse is needed; and we wish it had never occurred to the author to ask whether his subject had been neglected by most historians and traduced by a few, or whether he was to be found on the right side or the wrong side of any question. If the material is skilfully managed, and the story well told, the reader may be left to make his own judgments.

It is perhaps true that Professor Wallace often fails to command his material, pushes into prominence minor details which should be strictly subordinated, and in general is no great master of the biographical art. Nevertheless, from his too detailed story the man Laurens does emerge pretty clearly, after all. If he was not quite all that Professor Tyler pictured him, he was at least an upright and a downright man, of immense practical sense, frugal and laborious, and eminently successful in business, a democrat by inheritance and temperament whose wealth placed him with the aristocrats; possessed of initiative, independent and self-reliant in a high degree, yet always acting with great caution and deliberation; an eminently just man, who never "kicked a man when he was down," as our author well says, but who "was accustomed very plainly to make him understand how he came to be down and just how badly down he was"; a "tough-minded" conservative enlisted in spite of himself in a progressive and revolutionary cause.

For the student of the Revolution the life of Laurens is of first-rate importance in revealing those influences which drove so many naturally conservative men into open revolt. His position on the Stamp Act was much the same as that of Hutchinson; without denying the legality of the act, he opposed it as impolitic and unnecessary. Yet he was strongly opposed to all forms of popular violence, and very apprehensive of the growing influence of the unfranchised classes. Laurens was no doctrinaire, contending for liberty in the abstract, or humanitarian sentimentalist yearning for the golden age of fraternity and equality. With the world as he found it about 1765 he was quite content. What was it that drove this hard-headed business man into rebellion? Not any burden on his pocket, certainly, nor any devotion to formal doctrines of political liberty, but rather the growing conviction that Americans were a superior people, capable of managing their own affairs better than any other country could do it for them.

One of the determining influences in giving Laurens this conviction was his contact with the corrupt and incompetent customs and Admiralty officials sent out from England. From 1769, when he compiled a pamphlet on "some general observations on American Customs-House Officers and Courts of Admiralty," Laurens "thought and said such things as he had never said before. It was for him the birth of a new Americanism." This new Americanism was profoundly strengthened during the years (1771-1774) of his residence in England, where he had taken his two boys to be educated. Laurens, like so many of the later Loyalist exiles, was shocked and disgusted at the frivolity and immorality of high-class English society. Here in England itself he discovered "how unworthy of ruling over any upright and moral people were the English governing classes." It is significant that he could not find a satisfactory school in London, and ended by taking his boys to Geneva. Among the causes of the American Revolution none is indeed more important, and few have been more neglected by historians, than the rapid growth of this conviction that it was an absurdity for an industrious, moral, and intelligent people to be longer governed by men whom they could not respect, and by methods which they held in profound contempt.

THE CANADIAN CONSTITUTION.

Canada's Federal System. By A. H. F. Lefroy. Toronto: Carswell Co.

This treatise on Canadian Constitutional law under the British North American Act is intended primarily for the lawyer. It deals with questions which have given rise to actual litigation, and answers them in the terms of judicial decisions. It subordinates theory to experience, and cites in support of every proposition concrete cases which have been disposed of by the courts. Yet the book is intelligible, instructive, interesting to every student of political institutions, whether lawyer or layman.

Its introductory chapter contains seventy "leading Constitutional propositions," presenting an excellent syllabus of the work. From this we learn that one of the most important doctrines in Canadian Constitutional law is that the entire fabric rests upon a statute—the British North American Act of 1867. The Canadian Federation was not formed by the voluntary act of independent and sovereign states, but resulted from an Act of the British Parliament. It is true, this statute was not imposed by the arbitrary will of Parliament, but was asked for by the confederated provinces. Still, Canada's federal system is created and controlled by this statute. It follows that "the state of legislation and the legislative powers exercised in the various provinces prior to confederation" possess little value in determining what powers may be exercised now by

the National Legislature of the Dominion or by the local Legislatures of the provinces. Questions of that sort are to be determined by the language of the British North American Act. That language is to be construed and expounded in accordance with the rules applicable to other statutes.

Thus construed, the Act is seen to secure to the national Government of the Dominion much greater power than our national Government possesses. In the language of its preamble, its purpose is to create a "Constitution similar in principle to that of the United Kingdom." The Dominion Government is not one of enumerated powers, with a reservation of all other governmental authority to the provinces or to the people. It is sovereign and unlimited as to matters pertaining to the "peace, order, and good government of Canada." It is not hampered by prohibitions upon the taking of private property without due process of law, or upon the enactment of *ex post facto* laws, or laws impairing the obligation of contracts. Nor does it secure to courts the rights of nullifying legislative acts. In the language of our author—

It is not competent for any court, when once an act is passed by either the Dominion Parliament or by a Provincial Legislature in respect to any matter over which it has jurisdiction to legislate, to pronounce the act invalid because it may affect injuriously private rights, any more than it would be competent for the courts in England, for the like reason, to refuse to give effect to a like act of the Parliament of the United Kingdom.

Again, the North American Act goes much farther than does our Constitution in centralizing power in the national Government. This is the result of deliberate planning, because the framers of that act believed that our Civil War had shown grievous defects in our Federal system. Accordingly, they secured to the central Government exclusive control over all commerce, whether interprovincial or intra-provincial. Like legislative authority was given to the central government over bills of exchange and promissory notes, over banking and paper money, over corporations, except those "with provincial objects," over marriage and divorce, and various other topics which, with us, are regulated by State legislation.

Perhaps the most important respect in which the Canadian federal system differs from ours is its subordination to the British Crown. Here is a device which serves a two-fold purpose: it prevents the Dominion or a province from trenching upon the legal rights of the other, and it guards against legislation by either which is seriously hostile to imperial interests. The imperial connection is preserved, so that Canada feels itself a vital part of the great British Empire, while it is free to manage its domestic affairs in its own way. Under its present Constitution, Canada is realizing Lord Elgin's dream in becoming "such a country as might so fill the imagination and satisfy the aspiration of its sons, that the danger of absorption with its great neighbor might be forever set to rest."

ESSAYS OF A. C. BENSON.

Escape, and Other Essays. By A. C. Benson. New York: The Century Co. $1.50 net.

It is now customary for English writers to apologize for offering the public anything but the war-talk which is human nature's daily food, and at which, to tell the truth, the author does not commonly disconcert us by inhuman display of skill. We gather that most of the essays here collected were written before the war began; there are but few incidental allusions to it in their course. They essay rather to divert the mind from present horrors to larger and more permanent aspects of human life. "I regard war," says Mr. Benson in his Introduction, "as I regard an outbreak of pestilence; the best way to resist it is not to brood over it, but to practice joy and health. . . . To brood over the war, to spend our time in disentangling its intricate causes, seems to me a task for future historians. But a lover of peace, confronted by the hideousness of war, does best to try, if he can, to make plain what he means by peace and why he desires it."

Something of the kind Mr. Benson tries to do here, less by argument than by suggestion. His themes are flotsam upon the still deep current of life which war can soil or even dam for the moment, but which is bound to assert and purify itself as it flows on. Several of the papers, such as "Escape," "Sunset," "Herb Moly and Heartsease," give expression to the writer's gentle and reflective, and, according to one's mood, mildly bracing or mildly enervating philosophy. It is blamelessly narcotic: one takes a Benson essay as one takes a cup of tea, without quite knowing whether one is in for a stimulant or a sedative. Another group of essays is of the "literary" sort ("The New Poets," "Walt Whitman," "Authorship," "Literature and Life"). Still others display the touch of superstition, or, if you will, interest in the supernatural, which belongs to Mr. Benson almost as markedly as it belonged to Monsignor Benson, his brother. "Dreams," "The Visitant," and "That Other One" record inner experiences beyond the Horatian philosophy. As in all this writer's work, there is much that is freely personal and autobiographical. If we do not know Benson the schoolmaster, the mystic, the writer, it is not his fault. In the present essay on "Authorship" he frankly owns himself an *improvisatore*. He knows nothing of the labor of writing, since with him it is a perfectly spontaneous and almost automatic process. "I do not recollect having ever forced myself to write," he declares, "except under stress of illness; nor do I ever recollect its being anything but the purest pleasure from beginning to end. . . . I owe to it the happiest and brightest experiences of life, to which no other pleasure is even dimly comparable." The method, he admits, has its perils, but he does not admit that hard writing makes easy reading.

Certainly, the charm and merit of Mr. Benson's writing is in its quality as prose rather than in its content. His style has the gracious and elusive quality of eloquence, the rapid and effortless and faultless flow, which is so rare a thing in English —Hazlitt, Ruskin, to whom else among moderns does one's mind turn in this connection? Such a style is itself substance: we shall remember Mr. Benson less for his dreams and fancies than for the clear beauty of such passages as this from "Sunset": "The dawn has its own splendors, but it brightens out of secret mists and folded clouds into the common light of day, when the burden must be resumed and the common business of the world renewed again. But the sunset wanes from glory and majesty into the stillness of the star-hung night, when tired eyes may close in sleep, and rehearse the mystery of death; and so the dying down of light, with the suspension of daily activities, is of the nature of a benediction."

Notes

Clifton Johnson's "Highways and Byways of New England" will be published by the Macmillan Co. on November 10.

"Contemporary Belgian Literature," by Jethro Bithell, has been published by T. Fisher Unwin, of London.

Harper & Bros. announce the forthcoming publication of "Acres of Diamonds," by Russell H. Conwell; "Treasure Island" (Louis Rhead edition), and "The American Claimant" and "Roughing It," by Mark Twain, in the Limp-Leather.

Frederick A. Stokes Co. announces for publication this month "Voice Culture and Nerve Respiration," by Jutta Bell-Ranske, and the following volumes by Gabriele d'Annunzio: "The Triumph of Death," "The Virgin of the Rocks," "The Victim," "The Flame of Life," "The Child of Pleasure."

The following books are announced for publication this month by George H. Doran Co.: "These Twain," the completion of Arnold Bennett's "Clayhanger" trilogy; "The World's Highway," by Norman Angell; "The Bronze Eagle," by Baroness Orczy; "Old Judge Priest," by Irvin S. Cobb; "Through Terror to Triumph," by David Lloyd George; "The Dreamer of Dreams," by "Carmen Sylva"; "Kings, Queens, and Pawns," by Mary Roberts Rinehart; "Over There," by Arnold Bennett, with etchings by Walter Hale; "Between St. Dennis and St. George," by Ford Madox Hueffer; "Mr. Doctor-Man," by Helen S. Woodruff.

"Through a Dartmoor Window" (Longmans, Green; $1.50 net) is the second moor book of the author, Miss Beatrice Chase. Her first, "The Heart of the Moor," would seem to have pleased a considerable audience. The present volume is, she says, an answer to the prayer of her admirers for something more of the same kind. We wonder whether they had never heard of the moor country till she told them about it, or were simply taken with her ingenuous enthusiasm. One might think, from

the evidence of these pages, that she had discovered Dartmoor and its folk. Nowhere is there allusion to any of the writers, even Phillpotts or Trevena, who have made Dartmoor, one would think, as familiar to the general reader as any place in England. Coming to the moor at first as a visitor and later as a resident, Miss Chase prides herself upon having gone "moor-mad" and, by virtue thereof, qualified herself to expound the district to all comers. The most irritating thing about the book to an old moor-lover, we should think, would be its air of kindly patronage. The writer, indeed, is a female egoist, who thinks it greatly to Dartmoor's credit that it has inspired her with a grand passion. Worthy in itself, it is admirable as an occasion for her sprightly wit and somewhat conscious charm. In short, the book displays that peculiar sort of sentimental-humorous writing which so evidently appeals to a vast number of feminine readers. It is true that even a man may, if he has patience, find it amusing in spots.

Paul Delannoy's "L'Université de Louvain" (Paris: Picard; 3 fr. 50) bears welcome testimony, in a time of passionate manifestoes and professorial rage, to the survival of the academic tradition of dignity and calm. The tempestuous history of the institution, outlined by its librarian in a series of six lectures delivered before the College of France in February last, muffles the note of indignation without hesitating to name barbarism as a phenomenon. The losses in the recent burning of the library are for the most part referred to by some such phrase as "we used to possess." A detailed description is reserved until such time as the town shall be liberated. Several unfinished catalogues must be regretted; that of the 800 incunabula, for instance, the notes for which were burned in the librarian's house, and that of the old theological collection with its unnumbered letters and pamphlets published in the height of the Jansenist and other agitations. Fortunately a small part only of the archives were destroyed. The rest owe their preservation to their removal during the invasion of the French in 1794; they remain scattered at Brussels, Altona, Haaren, Beveren-Waes, and Ghent. Some collections, apparently, survived the fire of 1914; for example, the inedited letters of Sir Thomas More received from the Schollaert estate, publication of which we are told to expect soon. But the losses were inestimable. The ashes of the fourteenth century building (the old Cloth Workers' Hall), of the 300,000 volumes and manuscripts, of the portraits and the various accumulation of five centuries were enriched, grimly enough, by a valuable library of Germanic philology.

Louvain has been celebrated from the first for its theological teaching and especially for its persistently orthodox Roman Catholicism. It admitted Jansen to the doctorate, made him professor, and in his later years rector, without permanently sharing the reproof which overtook his doctrine. To Erasmus it was a preferred asylum, which yet failed to shield his studies from polemic challenge. In Adrian VI, the "Dutch Pope," it supplied a reforming pontiff. It played an important part at the Council of Trent. Mr. Delannoy draws genial portraits of its distinguished scholars. The long story of the moral lesson Justus Lipsius, editor of Tacitus, read in his class room to his visitors, Albert and Isabel, the "archdukes," was worth reviving. But a word more of the less known men would have pointed the text. Adriaan van Roomen, the mathematician, had some lively encounters with his adversary and host, Vieta. Gemma-Frisius, who is also named, made his ingenuity in cosmography of great use to navigators on the long voyage to the newly-discovered Americas. What was the new method, anticipating or analogous to that of Alciati in Italy and Cujas in France, which Mudaeus de Brecht brought to the study of the civil law? The reader is left to infer that he expounded the law itself in the light of its contemporary civilization rather than its commentators in the light of one another. The statement that Jean Minckelers, professor of physics, succeeded in 1783 in obtaining illuminating gas from coal before similar successes in London and Paris, neglects by implication though not literally the British claims of Stephen Hales in 1726 and Dr. John Clayton in 1691. Vesalius is usually regarded as of the Italian school of anatomists. It is well to be reminded of his Flemish birth and early schooling. Brussels had planned last year to celebrate his 400th anniversary. It is well, while we are so much obsessed by the power of shrapnel, to be reminded of the power and spiritual momentum of the university, to note in the honorable example of Louvain how freely our own ideals of patriotism and national self-respect flourish in the discipline of learned studies.

"The Voyages of Captain Scott" (Dodd, Mead; $2 net) is a volume of four hundred pages, retold by Charles Turley from "The Voyage of the Discovery" and "Scott's Last Expedition." Sir J. M. Barrie contributes an introduction, giving an account of Scott's early life and bringing out effectively his transition from a boy of delicate health, dreamy mind, indolent habits, and uncertain temper into a young naval officer with a soundness of physique, an alertness of mind, an energy, and a power of self-control exceptional even in the British navy. The story of his Antarctic work, with its absorbing adventures, its large achievements, and its tragic ending, is virtually all here, and it is to be hoped that its healthful mental and moral tonic will find its way to a wide circle of readers. Of course, the magnificent photographic illustration that marked the original volumes has had to be largely sacrificed to the laudable purpose of putting the story before the people at a popular price, but about a score of full-page photographic plates have been retained, with several of the colored plates.

Mrs. T. P. O'Connor's "Dog Stars" (Doran; $1.50), as she calls her stories of "three luminaries in the dog world," purports to be true biography, and no doubt these canine characters are as near to the truth as is that of many human beings who walk with impeccable saintliness through the pages written by surviving wife or daughter. We have known dogs who were wise and brave and gentle, perfect in all those qualities that go to the making of the καλὸς καὶ ἀγαθός; but they were still dogs, as a gentleman is still a man, and we no more believe in the hypercynic virtues of Mrs. O'Connor's Max than we believe in the veracity of George Washington. However, that is neither here nor there. Max is still very much a dog beneath his miraculous attributes, and he had many notable experiences which deserved high chronicling. A good part of London knew and loved him, and with serene impartiality his paw scratched at all doors:

> . . . aequo pulsat pede pauperum tabernas
> Regumque turres.

For instance:

One evening Monsieur Wolff was playing at Buckingham Palace for Queen Victoria, and Max slipped by the sentry, met his friend at the palace entrance, and the lackeys laughed to see him enter the hall and seat himself in a chair of great antiquity.

"There is one member of your family who is a Tory and a loyal subject of the Queen," said a Cabinet Minister to me. "I met him the other evening at Buckingham Palace. Did the Lord Chamberlain send Max a card?"

"No," I said, "his invitation miscarried; but being recognized as a gentleman of charming manners, he was, I hear, made entirely welcome."

"When I saw him he was receiving at the door, and shaking hands with everybody who stopped to speak to him," said the first Lord of the Admiralty. "He'll bring T. P. into the right fold yet."

Mrs. O'Connor has written a charming book. A child who reads it will ask his father with wide-open eyes whether it is all true; and, being told that it is true enough, will go back to the pages in delight. But it was not written for children alone.

Volume V of the "Writings of John Quincy Adams," edited by Worthington C. Ford (Macmillan; $3.50), covers the calendar years 1814-15 and the first three months of 1816. The correspondence opens with Adams still at St. Petersburg, impatiently awaiting, as were his colleagues, Gallatin and Bayard, official confirmation of their appointments as commissioners to negotiate a treaty of peace. The peace proposals of Russia had been rejected by Great Britain, and Adams had small hope of an early settlement. The tone of the English press, and both the tone and the substance of the English military dispatches from America, evoked his vigorous condemnation. Moreover, he was passing his fifth winter at St. Petersburg, where he found the climate very trying, and was anxious to return home. His salary was too small to allow him to employ a confidential clerk, and he was forced to do much writing and copying with his own hand. The tedious course of the peace negotiations, finally begun at Ghent in August, 1814, is fully treated in the correspondence; and the editor has been able to include the early drafts of a number of papers whose final forms only were previously available in print. Adams was pessimistic almost to the last; at the end of September he expected indefinite delay, and a month later, with the Congress of Vienna in session, could see "no prospect whatever" of peace. On November 10, however, a draft treaty was submitted to the British commissioners, and on December 24 the definitive treaty was signed. At the end of January he started for Paris, where his old friends gave him a cordial, though unofficial, welcome, and where he later witnessed some of the stirring events of the Hundred Days. On February 28 he was appointed Minister to Great Britain, but he did not learn of the appointment until April 5, and did not reach London until May 25. His letters from London throw important light upon the history of the commercial convention of 1815 with Great Britain, and upon the unsuccessful efforts to open the West Indian trade. Scattered through the preponderating mass of political correspondence are a number of letters in which he gives entertaining descriptions of his daily routine, and others in which he pays his respects to the Unitarian movement then mak-

ing itself felt in Massachusetts. Priestley's "Socrates and Jesus Compared," printed at Philadelphia in 1803, he voted "a wretched performance. Socrates and Jesus! a farthing candle and the Sun! I pray you to read Masillon's sermon upon the divinity of Christ, and then the whole New Testament; after which be a Socinian if you can" (p. 362).

In the fifth edition of the late Charles A. Conant's standard work on the "History of Modern Banks of Issue" (Putnam; $3.50 net), the author treats of the new conditions in American banking as created by the enactment of the Federal Reserve act of December 23, 1913. The explanation is so lucid as to give the average reader easy command of the general principles of a highly technical subject. This style is well illustrated by the references to the Federal Reserve Board and the summary of its "sweeping powers" which made it possible for the group of seven men to exercise the extraordinary influence that they exerted in the trying days which followed the outbreak of the European war. The description of the discount market, which is stated to be the "overshadowing feature" of the plan, and the explanation of the note-issuing powers of the Federal Reserve Banks, together with the provisions for the government bonds owned by the national banks, is admirable. The reference to the possibilities, under the new law, of extending American banking facilities in foreign fields will appeal with force to the heads of banks in the large reserve cities. The last chapter is devoted to the European crisis and the part played by the great banks of Europe in quelling the disturbance. The author goes sufficiently into detail to quote what the banks did to allay panic and to meet the complications incident to the temporary deadlock in the markets for foreign exchange. He shows complete grasp of the problems which confronted the banks at that time, and concisely states the measures of relief undertaken by each bank to protect its home market. Mr. Conant is no less happy in stating what was done by bankers of this country to avert panic and protect their gold reserves. The excellence of the other twenty-five chapters is too well known to require extended comment. This new edition notes the changes that have been made in the charters of the banks of France, Germany, and Austria-Hungary. It also brings up to date the statistics relating to those countries. The work as a whole is unique, and with the added matter, the revised edition will be of increasing value to students and others interested in banking conditions throughout the world.

What promises to be a series of Elizabethan Club Reprints, issued by the Yale University Press, begins auspiciously with an edition of "Common Conditions" ($2.50), by Prof. Tucker Brooke. A "lamentable comedy," published in 1576 and presumably written not long before, "Common Conditions" sets forth in carefully rimed fourteeners the adventures by land and sea of an exiled prince and of two pairs of lovers; and if in the wake of some lost romance it comes to no very satisfactory conclusion, it is for no lack of activity on the part of the wily "Vice," Common Conditions. The basis of the present text is the quarto which recently made its way from Lord Mostyn's ancestral library into the possession of the Elizabethan Club at Yale. This copy has nearly five hundred lines at the beginning and end which do not appear in the fragmentary Chatsworth-Huntington copy, belonging really to another edition, which was reprinted, with some imperfections, by Brandl. This play, by reason of its resemblances to "Sir Clyamon and Sir Clamydes" and to Preston's "Cambises," raises some interesting questions of authorship which Professor Brooke discusses without dogmatizing. The black-letter page is, on the whole, fairly readable. The notes run a little into diffuseness.

Music and Drama.

BOSTON OPERA AND PAVLOWA BALLET.

Home-made opera in Boston came to an end because the men of wealth who for several years made up the inevitable deficits refused to do so any longer. That the organization contained enough good material to deserve a longer life has been made evident in New York by the performances given last week at the Manhattan Opera House by a company consisting largely of artists who had been heard in the Boston Opera House. To strengthen them, the manager, Max Rabinoff, procured the coöperation of Anna Pavlowa and her Russian Ballet—that, at any rate, was what the public came to believe; but it is rumored that Mme. Pavlowa is in reality the backer of the enterprise, and that the plan of a "merger" originated with her, she being anxious to show what can be done with the ballets which occur in "Carmen," "Faust" and other operas. So far as "Carmen" is concerned, she did so; yet one suspects that her chief ambition was not to dance in grand operas so much as to appear as a dumb actress in Auber's opera, "The Dumb Girl of Portici," in which the part of Fenella, the dumb sister of a Neapolitan fisherman, is assigned to a dancer who, to atone for the absence of song and speech, has to express her thoughts and feelings by eloquent gestures and facial expression.

It cannot be said that the great Russian dancer added to her stature by this particular experiment. There was too much exaggeration in her gestures and movements, and her make-up and appearance as Fenella were not such as would make a prince seek her favors. But it was interesting to hear this opera again, after an interval of two decades, for it is brimful of bright French melodies, and its orchestral score is of historic importance as the first specimen of pantomimic music. Auber, having to do without song and speech when Fenella acts, was obliged to make the orchestra attempt to speak a definite language for her; and he succeeded so well that Richard Wagner not only referred to his opera in terms of superlative praise, but adopted the method for many details in his musical dramas.

Of the other operas performed by Mr. Rabinoff's organization the one most worthy of note was "Madama Butterfly," because the heroine of it was a genuine Japanese prima donna, Tamaki Miura, who proved to be, like Sada Yacco, not only an actress of great ability—she made the story of the child-wife, deserted by her American lover, very pathetic—but a singer with a voice (except in the middle register) of unusual beauty, volume, and fervor. She was enthusiastically applauded, as was her companion, Riccardo Martin, the American Caruso, who is, of course, still a member of the Metropolitan Company, but has for the present joined hands with Mr. Rabinoff's forces. It should be added that in the matter of ensemble these performances left little to be desired, and that the scenic backgrounds of Mr. Urban deserved all the praise they got in Boston.

America's oldest orchestral association, the Philharmonic, rejuvenated, improved, and now unsurpassed by any orchestra in America—or Europe, where the war has made sad havoc in the ranks of the players—opened its seventy-fourth season with a concert which followed the motto "America First," the opening piece being Edward MacDowell's symphonic poem, "Launcelot and Elaine." It is an early work, in which our foremost composer had not yet quite found himself, yet there are enchanting details. The Philharmonic had never before played it. Another novelty, and a recent one, was Max Reger's set of Variations on a Theme by Mozart (from his sonata in A major for harpsichord). This, like MacDowell's piece and the fourth symphony of Tchaikovsky, was applauded most cordially, as it ends brilliantly with a fugue culminating in a stirring climax; but the variations are tedious. One suspects sometimes that this most prolific of German composers must have a machine for turning out variations and other music, somewhat like a Tibetan prayer-wheel.

German composers, old and new, had a monopoly of the programme interpreted in Aeolian Hall last week by Johanna Gadski. This dramatic soprano, now unexcelled as interpreter of Brünnhilde, Isolde, and other Wagnerian parts, is one of the few famous opera singers who hold their own in the concert hall equally well. On this occasion nervousness marred her first number, an aria from "Don Giovanni"; but with the second song, Schumann's dramatic "Woldesgespräch," she began to recover, and soon revealed the rare beauty of her voice in well-chosen favorites by Franz, Liszt, Schubert, Brahms, Wolf, and others. Another opera singer who is heard to advantage in concert halls is Nellie Melba, who sang in Carnegie Hall on Sunday afternoon. Her voice, which has in recent months earned tens of thousands in behalf of war victims, retains its bloom to an astonishing degree. Like Adelina Patti, she was blessed with a voice naturally so beautiful that even injudicious teaching could not mar it, and she bids fair to remain a source of pleasure to concert-goers for as many years as Lilli Lehmann.

Of the pianists heard, the two greatest were Percy Grainger and Harold Bauer. Mr.

Bauer held a recital at which he gave prominence to the intellectual type of music as illustrated by the works of Brahms and César Franck; yet he also revealed the romantic charms of Schumann's "Scenes of Childhood," a group of short pieces which has lately come again into favor, and he played Debussy's "Estampes" with the requisite delicacy. Mr. Grainger as a pianist of the impetuous kind, revelled in the bold, virile rhythms of the first of Tchaikovsky's concertos, which he played with the Damrosch Orchestra. It was, in its way, as remarkable a performance as his playing, last season, of Grieg's concerto, which led an eminent patron of music to declare: "He is the greatest of them all."

HENRY T. FINCK.

Lewis Waller, whose death was announced on Monday, occupied a prominent place among English actors for a good many years, and for a long term was a reigning matinée favorite. A good face and figure, spirited and graceful action, and an excellent voice were valuable qualifications in modern comedy and romantic or heroic parts. In early youth he was selected to play Orlando to the Rosalind of Modjeska in the English provinces, and created a favorable impression. In 1887, when only twenty-seven, he was playing Ernest Vane in "Masks and Faces," in London, with Kate Vaughan. He was associated with John Hare and W. H. Kendal at the London St. James's Theatre, and later supported Julia Neilson in "Pygmalion and Galatea." After a season with Wilson Barrett and another with Mrs. Langtry, he was engaged by Beerbohm Tree to play Orestes in "Hypatia," after which he appeared, under his own direction, in several of Wilde's comedies. With Mr. Morell, at the London Shaftesbury, he produced "The Manxman," which had a great run. Next he won critical praise and public favor as Hotspur at the Haymarket, and made a hit as D'Artagnan in "The Three Musketeers." He succeeded also as Brutus and Falconbridge. It was as Henry V, however, that he came prominently into public notice. He gave the play a notably fine pictorial production, and won high praise for his picturesque, spirited, and eloquent portrayal of the King. His performance was also the subject of warm critical commendation. He was also exceedingly successful as the hero of "Beaucaire," in which he played many hundreds of times. After appearing in a variety of modern plays, he created a favorable impression as Romeo, and he revived "Othello," playing the Moor himself, with H. B. Irving as his Iago. He won success, also, in "Robin Hood" and as Lagardère in "The Duke's Motto." Mr. Waller was well known and admired in this country, but for some reason did not obtain here the full measure of popular approval extended to him in England. A certain hardness in his mechanism and a lack of eloquence—though not of strength—in emotional passages may have been obstacles to his full success. He won respect and admiration, but did not excite enthusiasm. In none of his work did he reveal any of that subtlety of interpretation or eloquence of expression by which genius is distinguished from ordinary capacity. He was a good, sound actor, who occupied a high place in the list of his contemporaries, but he did not belong in the first rank.

Art

Marius Pictor

THE MODERN SPIRIT IN ITALIAN PAINTING.

By ARTHUR LIVINGSTON.

On the face of Marius Pictor one sees nowadays an expression of bewilderment. As he dines at the Café Montin, or sips his coffee at the Florian or at Lavena's, we wonder whether the strain of Venetian life in war-time is too violent for his advancing years, whether his physical strength is adequate to the great sacrifices he is making for Italy's redemption. I came finally to believe that the current experiences of this dean of Italian painters are but those of most Italian men of letters and men of art; save that probably no one more than he has experienced that disorientation of spirit, that disarrangement of intellectual and ethical values, that sense of partial detachment from the past, which the world war has in a measure produced in every one.

It is a bewilderment that promises as much as it pains. And the proof is to see Marius Pictor in the presence of D'Annunzio. They both have so much in common. It is not only the charm of a long and tender friendship that has lasted now for thirty years—years that for De Maria have brought the completion of his lifework, and for D'Annunzio the growth of full maturity. It is also the identity of their artistic principles, nourished in union through their constant and intimate relation, and applied in works of art mutually appreciated and sustained. It is their love of Venice, the Venice which De Maria sees in the pallor of moonlight, and which D'Annunzio loves in the splendor of the sun. Above all, it is their common pursuit of the new sensation, their common outreaching for the ever fuller exploitation of every faculty of intelligence, of emotion, of imagination, of feeling. The spirit that was imprisoned in the painting of Marius Pictor seems now to move unshackled in the D'Annunzio of the war. It is energy, it is enthusiasm, it is courage, it is emotion that soars, it is thought that penetrates. For D'Annunzio is not bewildered. He knows. He is as certain of the destiny of Italy as he is of the reality of his own existence. He is the Italy of transition, but with far more of the future than of the past. To De Maria, who is as much of the past as of the present, we would wish, as a consolation for these days of anguish, a realization that in a sense D'Annunzio is the goal of his groping, just as D'Annunzio's energy is the solution of his bewilderment.

Is there any friend of Italy who has not felt that for a century past Italian culture has been lolling in a slough of romantic despond? The formal epigones of Jacopo Ortis may have been few, but its ineffective and self-conscious pessimism, its mawkish sensitiveness that patently gloats over the tears it sheds, is as much the artistic motive of Salvatore di Giacomo in 1915 as of the Leopardi of 1840. I recall an Italian epigraph of 1912 which committed to fame an artist whose chief distinction was to have sensed "the immense sorrow of life." The immense sorrow of life is all very real. But one might suggest that Italian literature and Italian art have traded on it long enough. Perhaps the Prussian menace will have proved a blessing if it creates a prospective "sorrow of life" great enough to stir the Italian middle classes to do something about this and other sores afflicting the European social body. Then perchance there will be more D'Annunzios that spring powerful from the joy of living, and the painting of future De Marias will be less trammelled by their origins.

For the painting of Mario de Maria, of Marius Pictor, as he signs his work, is inspired, at least in its most noteworthy examples, by this romantic sentimentality so fundamental in the Italian character. How his titles run! The Monks of the Rotted Eyes, A Palace in the World of Weariness, The Story of a Skeleton Merchant, The Hospital of Contagious Diseases, The Crucifixions of Tripoli, Hunger and Plague in Venice, 1848, Moonshadow, The Serenade of Death, The Decaying Walls of Venice. Wherever we look, the shadow of pathos is thrown across his most personal, his most effective creations. And even in his intuitions of lighter spirit, when there comes from his landscapes or his figures some philosophical suggestion, some allegory of human existence, it is more specifically by life's delusions that his emotion is stirred.

Certainly one of the most beautiful in this latter class is Moonlight on the Tables of an Inn in Rome. This picture has almost the luminousness of daytime. Yet it is one of the secrets of De Maria's art which has brought forth from this scene so dramatic an expression of the glory of night. Seven empty tables with their benches, the tops shining against the garden trees. Beneath them a suggestion, but only a suggestion, of shadow. Nothing more. One bench and one table are slightly out of line, and in this simple detail lies the immense suggestiveness of the picture. For the diners have gone, and with them has forever departed the particular moment, of joy, of comradeship, of beauty, which they enjoyed there. The artist seems to have felt and to have fixed in objective form an emotion that springs from the immenseness of eternity in contrast with the fleeting reality of one moment of human life.

In Umbrian Moonlight there is also no human figure, but the vanity of human pleasure strikes one from the elegant cane and top hat on the ground beside the carriage, that stands in the white and black of a tremendous Roman gateway. Why should Marius Pictor in the full glory of Evening Red project that splendor on the

mourning women who troop with burning candles in the religious procession? Because the power of his spirit shrinks from the banality of the oleograph. A sunset is no sunset till seen by the human eye and assimilated by the human soul in relation to human experience. And is it not the traditional impulse of romanticism that indicates always to De Maria the sadness of that experience?

But there is something paradoxical about the expression of the romantic mood in the works of Marius Pictor. Their tremendous strength invites at once to the philosophical interpretation; and the notion that a work of art must say something seems to have induced an habitual, even if unconscious, intellectual process in the method by which De Maria clarifies and expresses within himself his most powerful intuitions. But when, in response to this invitation, we isolate his sadness of spirit, we seem to feel nevertheless that we have not fully understood, and that what holds us is something deeper and richer than what we gain by inference from his suggestions. One of his pictures which no one can forget, after having seen it once, is The Moon Returning to the Bosom of Its Ancient Mother. Before the moon advancing towards the earth and by its increasing vastness hurling upon humanity a light intenser than the sun's, two torrents are rushing madly into a bottomless abyss, the one a stream of human figures, the other of tumbling water. The parallelism between the two streams is too violently obvious to escape notice, and the fantastic wildness of the whole conception compels the intellect to struggle to an understanding of the artist's thought. There is nothing apocalyptic about this mood: for the terror of this moment is for all, and it matters little whether we belong to the sheep or to the goats. It is all much more pagan. It is the hallucination that destroys. It is the deep, resistless impulses of human nature that hold humanity in the grip of a fearful destiny. It is the serenity of the material world, obedient to the dictates of a love that unites it, before which the turmoil of human passion appears so weak, so inefficient, so small. And then, when we have reached this point in our musings, or indeed some other—for the pictorial symbol is the least certain of guides to logical analysis—we must return with De Maria to sense over again with him the enormous beauty of moonlight, which is never more beautiful than when it is most fraught with loneliness and terror.

Romantic sentimentality is thus only an intellectual, and to this extent a suppositious, element in the painting of Marius Pictor, of which the enduring vitality resides in his direct vision of beauty unphilosophized and felt only as beauty. In his macabraic fancies there figure, we are told, a deep personal sorrow and a temperamental fondness for Edgar Allan Poe. But the genius of De Maria has survived both these influences. Surely, I should feel uncomfortable were I to pass a night in the house of Usher. But I feel also a definite comradeship with those tiny skeletons of Marius Pictor that dance and play about the infected pool of the Palace of Weariness or that gloat over the fallen body of the Merchant of Skeletons. If I should shrink from the handclasp of the Monks of the Rotted Eyes, it would be because I dislike monks with any kind of eyes. And of that girl who lies dying in the pest-house, I can say only that her hair is beautiful, as also are beautiful those bodies that fall from the plague-stricken palaces of Venice. No, it is the virility, the aggressive, active force of De Maria's spirit that gives his paintings an ever fresh modernity, in spite of the sombre romanticism which links them with the past.

And his mythology also, and his architecture, all that magnificence of history which towers before the modern Italian consciousness and too often weighs it down with a sense of its own weakness or inflates it with a futile pride! I remember a painting of a ruined colonnade, brilliant in the sun of afternoon, vanishing in a luxuriance of vines and flowers, among which, in the foreground, red pomegranates shine. Is it a memory of Amalfi, of the Bay of Naples, of some nook of the Sicilian coast? A grinning faun is peering eagerly through the leaves, in pursuit of a snake, perhaps, that moves lightly over the stones. And I remember another picture of a similar classic landscape, but with broader vistas through cypress trees and over the crumbling wall of a Grecian garden. Here, straining in a gigantic leap, a centaur is hurdling in pursuit of a boar, that darts low through the tall grass towards a brook with lilies. These figures of genial fancy have a reality all their own. They are the animation of the landscape, the quivering life and the exultant joy that Marius Pictor sees in the offerings of nature. There is something here more placid than the sensuous reactions of D'Annunzio to light, to sound, to fragrance. It is, however, equally serious, equally vital.

If antiquity likewise is for De Maria as free from pedantry as it is full of life, it is because he approaches it again as ornament pure and simple, or rather as an integral element in landscape, not more impressive than the trees, the fields, the hills themselves. The classic reliefs that nestle by the roadside among the flocks in an Eclogue of the End of a Summer Day, his many temples and colonnades, are filled with all the freshness of new discovery. Above all, they have no cant. And this is true especially of De Maria's Venice. One can understand how a contemporary extremist might find his numerous Venetian subjects offensively photographic. For the lovers of Venice that is precisely their charm. His canals, his palaces, his towers are distorted by no theory of art, nor dimly visioned through some sentimental prejudice. With him the Fondaco de' Turchi returns in Nudentur Mimæ to its grace of line, to the splendor of its crumbling dignity. His many Byzantine arches are frankly clean cut, with the same jewel-like hardness of texture that adds such solidity of effect to the older architecture of the city. This native beauty of Venice De Maria cannot touch. What he contributes is here and there a human figure, imaginary lovers perhaps, as in May Moon, jolly figures of the 1840's, as in Santa Maria Mater Domini, dreamy personages of the Settecento, as in Moon Shadow or in the Decaying Walls of Venice.

But more than this, Venice is always for De Maria, as for D'Annunzio, the city of light, light that burns with fury in the mists of the sunset, or breaks into a thousand streams in the glory of afternoon, light that bathes the city in azure radiance under the full moon, or oozes from every marble projection with a death-like phosphorescence when the waning moon hangs low. This luminousness of Venice was elevated in the "Fuoco" of D'Annunzio to a blazing symbol of the eternity of Venetian beauty and Venetian power. And the poet's imagination paralleled the ancient wedding of Venice with the sea, with a new wedding of Venice with the sun. Was there in this bold conception an apotheosis of modern Italian responsiveness to sensation, a new expression of the yearning of "Roman Elegies" for "a mightier heartbeat, an intenser life"? De Maria with no less cogent genius has brought upon the canvas the wedding of Venice with the moon. It is a less exultant union, surely, more tinged with sorrow, more reserved in tone. But the throb of a mighty life is there, of that new life to which the militant Italy of the present time is more or less consciously aspiring.

Shall we call it a struggle towards freedom from the oppressive memory of a great history, from the inactive contemplation of past delusions? At any rate, there is volition there, a will to confront reality as something forever changing and forever new, to see in life the occasion for action and not simply for brooding. This modern spirit is as definitely foreshadowed in the painting of Marius Pictor as it is triumphantly expressed in D'Annunzio's poetry.

To-day these two poets of modern Italy are together again in Venice, and under conditions so different from the old days in Rome! From the gatherings in the Café Greco of 1885 a new impulse went forth upon Italian art and Italian literature. In the evenings now at Casa Frollo, when the east wind blows, there comes across the water the low rumble of battle on the heights of the Isonzo. Over the face of Marius Pictor floats an expression of bewilderment; over the face of D'Annunzio a flash of joy. And the poet of Pescara has the juster intuition of the two. For he alone, with his more youthful enthusiasm, hears in that sound of conflict the exultant cry of the same spirit which Marius Pictor imprisoned in the canvas, and to which he himself gave freedom in his golden verse!

Finance

THE RAILWAYS AND TRADE REVIVAL.

When the industrial shares were making their perpendicular descent in price, this past week, the railway shares hardly moved. Few of them went below the previous week's figures; some of them stood higher. At the culmination on Thursday of the crash in the "war munition shares," the railway stocks began to move. On Friday their upward movement dominated the market; advances of 3 to 5 per cent., under heavy trading, were numerous.

This rise was a matter of more interest than the frantic speculation in the "war shares" for three reasons—first, because the action of such well-known investment stocks usually reflects the real conditions of prosperity or adversity; then, because their occasional demonstrations of strength have been repeatedly checked by increased selling of Europe's holdings; but next, because a great part of the community has been taught to believe that the railway industry was in desperate straits, and could not share even in a general movement of prosperity.

In this last respect, the case is interesting. Exactly one year ago, the president of the Lackawanna, discussing the railway outlook, said: "Our passenger business has fallen off, which is largely accounted for by stoppage of ocean passenger travel. General merchandise, moreover, is gradually becoming less and less." That very same week the president of the New Haven, explaining the statement of decreased gross earnings given out for the month of September, said that "this decrease is beyond the power of the directors, as it largely reflects depressed business conditions throughout the country." Dividends had already been passed or reduced by old seasoned dividend-paying companies, such as Louisville & Nashville, Atlantic Coast Line, St. Paul, Baltimore & Ohio, Chesapeake & Ohio, and many others. The Southern Railway had gone further. In addition to announcing the passing of dividends, the president of that company stated, during the second week of last October, that all wages and salaries would be reduced, his own by 20 per cent.

A general impression existed that these conditions had continued; therefore, even Wall Street started in some surprise when informed this week that the railways which a couple of months ago had reported the largest number of sidetracked cars since 1907 were finding themselves unable to get cars for their shipping customers. That this was a real situation was shown by the instructions, promptly sent out by the Interstate Commerce Commission, showing railways as well as shippers how the more rapid loading, unloading, and moving of the available equipment might remove the freight embargo. Examination of the facts then showed that, while gross earnings of the railways continued to decrease from the previous year in each month until May, a series of monthly gains then began. It has culminated in this week's statement of net earnings for the Pennsylvania Railway's Eastern system in September, which broke all monthly records. The New York Central system not only reported large increase in net as compared with a year ago, but an increase of $3,500,000 as compared even with 1913. All Eastern roads reporting made a similar showing, and from Chicago came statements that the loadings of railway freight the past week were close to high record for the season.

The question next arises, whether the railways will respond in full to the great improvement in the general trade situation, supplemented on this occasion by the higher passenger and freight rates. This will undoubtedly depend on the nature and scope of the business recovery itself. But it is at least significant that in the great rush this week of export merchandise from ports such as New York, Philadelphia, Boston, and Baltimore, the trunk-line railways have been confronted with the worst congestion of freight that has existed since the tie-up which occurred in the yards of the Pittsburgh district in the autumn of 1906. One Eastern company actually refused this week to handle any more export business until that on hand had been cleaned up. The dispatches this week from Chicago, the country's transportation centre, reported that, because of the steadily increasing volume of merchandise and miscellaneous freight, as well as grain, all the lines in the West and Southwest were beginning to complain of acute shortage in cars.

There was then, at least, a reasonable prima facie ground of argument for the strength in the railway shares this week—especially when those stocks, although mostly selling well above the year's earlier low prices, have not had a hand in the violent speculation for the rise which converged on the "war industrials." Yet the test of this part of the market will be interesting. If we suppose the trade revival to continue and extend, the railway stocks would be confronted, on the one hand, by the tradition whereby they always reflect increasing business activity and prosperity, but on the other hand, by the overhanging mass of investment holdings which hard-pressed Europe still has on hand to sell. How much is still left in England is difficult to say; but the Stock Exchange testifies that, with every forward movement of prices such as that of the present week, not less than $1,000,000 a day in American investment shares are sold for London in our market.

Perhaps the question of the movement of railway shares will in the long run be determined by the question, whether anything happens to stimulate the imagination of the public. A "car shortage" is something. Increase of weekly or monthly earnings, large enough to attract general attention, would be something more. Resumption or increase of dividends would make the most immediate difference; but the other developments must come first.

TWO NEW TEXTBOOKS

Townsend's Functions of a Complex Variable

By E. J. TOWNSEND, Professor and Head of the Department of Mathematics in the University of Illinois. (*American Mathematical Series.*) 384 pp. 8vo. $4.00.

This book is based upon a course of lectures given by the author for a number of years at the University of Illinois. It is intended as an introduction to the subject, suitable for seniors and first-year graduate students. It presupposes a knowledge of calculus such as is usually given in the undergraduate course.

Bôcher's Plane Analytic Geometry

By MAXIME BÔCHER, Professor of Mathematics in Harvard University. xiii+235 pp. 12mo. $1.60.

This volume follows the Harvard traditional course in analytic geometry, which assumes that its one aim is to put the student into possession of an instrument which he himself can use in proving new geometrical theorems or solving new problems. The book concentrates on a few of the most important principles. The last two chapters are devoted to calculus.

HENRY HOLT AND COMPANY 34 W. 33d St. NEW YORK

The Ethics of Confucius

The Sayings of the Master and His Disciples upon the Conduct of

"The Superior Man"

By Miles Menander Dawson

With a Foreword by Wu Ting Fang.

12°. $1.50 net.

The aim in preparing this book has been to put before Occidental readers in the words of the Chinese sage and his followers, as translated, everything concerning ethics and statecraft contained in the Confucian classics which is likely to interest such readers, omitting nothing of importance.

The passages quoted, arranged by topics, in accordance with a scheme laid down as that of Confucius himself in *The Great Learning*, are connected by a running narrative, showing briefly the relationship of one passage with the other, stating from what book taken and by whom enunciated, and most sparingly accompanied by quotations from other moralists, ancient or modern.

The Survey

National Journal of Social, Civic and Industrial Advance

It is an original source of facts for students of present day problems—a handbook for leaders in civic progress.

The Survey is recognized as valuable collateral reading in courses in sociology, economics and social service and all classes where the news of the day is discussed. It is being used in 40 college class rooms this fall. During both semesters last year it was used by 2,000 students.

A prominent professor said of The Survey, "I should not think of teaching practical sociology without its aid."

Special prices are granted on student subscriptions. Regular price $3 a year, six months' trial to a reader of The Nation, $1.

Summary of the News

The text of the note to Great Britain regarding interference with neutral commerce was published in Monday's papers. The note, a lengthy document of some 7,000 words, exclusive of various papers incorporated in it, takes up the entire question of the British blockade as operated under the Order in Council, disputing its legality and its effectiveness. Comment on the matter will be found in our editorial columns. Public opinion, as reflected in editorials in the daily press, seems to approve the main contentions of the note, but recognizes the probability that full settlement of the differences between the Governments of the United States and of Great Britain will be postponed until after the war shall be over, when they may conveniently be referred to a court of arbitration.

The sensation of the week in the war was the report, circulated in London on November 5, that Lord Kitchener had resigned his office as Secretary of State for War. The report received prompt and forcible official denial, and the London *Globe*, which, despite the denial, reiterated the statement that Lord Kitchener's resignation had been offered, was suppressed by the police. Lord Kitchener, it was announced on Saturday, has gone to the eastern theatre of war. For the present, at any rate, it is stated that he will retain his office of Secretary for War, the duties of it being administered during his absence by Mr. Asquith and Mr. Lloyd George.

The result of a Cabinet crisis in Greece has been to leave the situation virtually unchanged. Following a stormy debate in the Chamber that lasted through the night of November 3 until five o'clock the following morning M. Venizelos refused longer to support the Government of M. Zaimis. On a vote of confidence the Ministry was defeated by 147 to 114. In the course of the debate M. Venizelos severely criticised the King on account of his unconstitutional attitude. The situation was patched up on Sunday, when M. Skouloudis accepted the Premiership, retaining in his Cabinet all the members of the Ministry of M. Zaimis except the ex-Premier himself. M. Skouloudis, going a step further than his predecessor, has declared his intention of maintaining an attitude of "very benevolent neutrality" towards the Allied Powers. His Government, however, is still at the mercy of M. Venizelos and the situation remains as critical as ever.

The retreat of the Servian army has continued. Nish, the temporary capital, was occupied by Bulgar forces on Saturday of last week, and the Austro-Germans, having crossed the western Morava River, have occupied Krusevac. Nevertheless, the primary object of the invaders will not have been attained until they have obtained control of the railway from Belgrade to Nish and Sofia and uninterrupted passage is established for munitions to the Bulgars and Turks. Movements of the Allied troops are hidden in an almost complete censorship, but there have been reports from Athens that larger numbers than were thought to be near the scene of operations have been landed at Salonica. The campaign of the Allies in the Balkans will have been assisted by the Russian offensive. Determined attacks have been reported at many points, and substantial successes in Galicia and near Dvinsk.

Submarines of the Teutonic allies have displayed great activity in the Mediterranean during the past week. Since November 4, so far as can be ascertained from available reports, seven ships of various nationalities have been sunk in this sea. The last was the Italian liner Ancona, just out from Naples, westward bound, with some 500 persons on board, which was sunk on Tuesday. Full reports are not available as we write. It cannot, for instance, be definitely ascertained as yet whether the liner resisted capture, but the report that nearly half of the total complement of passengers and crew was lost would seem to furnish a strong presumption that the liner was torpedoed without warning. Dispatches state that the Ancona was sunk by a "large submarine flying the Austrian colors." If this is correct, it will be immediately apparent that the legal position of Germany in the matter is as unassailable as was her legal position in the case of Miss Cavell. Germany has broken no pledge. It is her ally that has sunk an unarmed, passenger-carrying liner, and we know from the matter of the Armenian atrocities that Germany can assume no responsibility for the conduct of her allies.

Rumors that Germany has been throwing out tentative feelers for peace have been prevalent during the past ten days, encouraged principally by Prince von Bülow's visit to Switzerland. Prince von Bülow and the Sayville wireless have united in vigorous denial which is doubtless technically correct. Some color, however, is lent to the rumors by the fact, becoming increasingly apparent, that the British blockade is causing serious inconvenience in Germany. Extracts from a remarkable article in *Vorwärts*, calling on the German Government to declare its ultimate intentions in regard to the war, were cabled to the New York *Times* of November 6; in the same paper we read a dispatch of the Associated Press concerning new regulation of prices for hogs and pork in Berlin; on the following day were cabled extracts from another article in *Vorwärts* attacking the Government for incompetence in the measures taken for the regulation of the food supply and of prices.

The Federal grand jury on Monday found indictments against the six Germans who are alleged to have conspired to destroy at sea vessels carrying munitions to the Allies. The names of the six men are: "Lieutenant" Robert Fay, Max Breitung, Walter Scholz, Paul Daeche, Dr. Herbert Kienzle, and Engelbert Bronkhorst. A seventh man is under arrest.

The State Department announced on November 3 that Brand Whitlock, American Minister to Belgium, had received leave of absence for two months and would at once return to the United States. Secretary Lansing particularly emphasized the fact that Mr. Whitlock's leave of absence was due solely to reasons of health and had no connection with the case of Miss Cavell.

In a speech at a dinner of the Manhattan Club on November 4 President Wilson announced his programme of national defence. Comment on the President's speech will be found in our editorial columns. Mr. Bryan lost no time in reaffirming his views on the question. His formal statement replying to the President was published on Saturday. On the same day Secretary Garrison made public an official outline of his plans for the army.

The new Seaman's Act went into effect at midnight on November 3.

Estimated returns of the elections held on November 2, which we summarized editorially last week, were published in the daily papers of November 4.

The verdict of the court-martial which has tried Rear-Admiral William M. Little, jr., retired, on charges of carelessness and neglect of duty in "passing" the storage batteries on the submarine K-2, was reached on November 6. The verdict has not, as we write, been published, but has been referred to Secretary Daniels.

From Mexico there is little to record since the defeat of Villa at Agua Prieta. Gen. Carranza is apparently making preparations to press the military campaigns against Villa in Sonora and Zapata in Morelos. Villa, it is thought, is likely to be driven into a corner at Naco by the forces of Gen. Obregon.

M. Briand's new Ministry, on facing the Chamber of Deputies on November 3, received an impressive vote of confidence, the figures being 515 to 1. In his speech the Premier defined his policy as one that looked solely to the vigorous and efficient prosecution of the war to a successful issue.

Announcement was made last week by Premier Asquith that another vote of credit would be introduced in the House of Commons this week. The amount was not stated, but it is supposed that it will be for £250,000,000. In that case the total of British credits since the war began will be $7,559,000,000.

Celebrations have commenced in connection with the coronation of Emperor Yoshihito of Japan at Kioto on November 16.

Some anxiety was caused by dispatches from Peking of November 4 stating that the Secretary of the Japanese Legation had called at the Foreign Office and asked the meaning of China's reply to the recent Japanese note regarding the proposed change of China to a monarchical form of government. Dispatches from Kioto on Tuesday, however, stated that Japan had assured the Powers that she has no intention of coercing China.

The Week

Whatever else the British Government may have to say in reply to the contentions of our note on the rights of neutral shipping, it is to be hoped that it will place as little emphasis as possible on the plea which, in the English newspapers, seems to receive the greatest prominence of all. That England is "fighting for her life" is no better justification for violations of international law than is the like plea in Germany's case, which has been the tap-root of the monstrous deeds that have brought upon her overwhelming odium. There is a vast difference, of course, between a stretching of the accredited usages of war in matters which are essentially questions of degree, and a ruthless disregard of them in matters which admit of no qualification and no compromise; but it is none the less true that any resort on the part of England to the excuse that this war is peculiarly a war of self-preservation must infallibly weaken her moral position both absolutely and in relation to Germany. What this country stands for in the controversy over blockade and seizure is the rights of neutrals, now and hereafter, as against the limitless claims of "military necessity"; and it is for England to reconcile her position, as best she can, with a reasonable view of those rights.

Secretary Lansing is said to have used pretty sharp language in his dispatch to Ambassador Page, requesting him to demand an explanation from the British Government of the recent seizure of American ships. They were taken before a prize court at Halifax, not because they were alleged to have a contraband cargo, but solely on the question of their having a valid American registry. Transfers from one flag to another in war time raise several difficult points in international law. Some of them the Declaration of London sought to clear up, but that Declaration was not ratified and is not binding. Some parts of it the British Government announced that it would abide by, but only last month served notice that it would no longer agree to take the flag as proof of ownership. It is, therefore, this question that is to be laid before the Halifax prize court. It is purely a matter of interpreting international law, in the light of all the facts, and to this our State Department has no reason to object. Appeal will lie, if the decision is adverse to the American claim; and Sir Edward Grey lately conceded that the decision of British prize courts would not necessarily be binding upon the United States. Accordingly, it is to be supposed that what has vexed Secretary Lansing is not the fact that the British have chosen to press this litigation, but the manner of their doing it. This certainly appears to have been both ill-timed and offensive. Already our Government has had an apology for the hauling down of the American flag on the Hocking. It may be that the captain of the English cruiser erred from excess of zeal, or lack of any Germans to fight. In any case, the Department of State will properly stand up for American rights.

On the specific question of England's delay in coming to the aid of Servia, as charged by Sir Edward Carson, Mr. Asquith's statement asserted that the Allied forces acted as promptly as could be; but the impression is strong that the Allied diplomacy with respect to Greece was by no means alert. On September 21, according to Mr. Asquith, Premier Venizelos asked for 150,000 Allied troops to help Greece fulfil her treaty obligations to Servia. Greece at the same time mobilized, and this apparently gave breathing time for the bringing up of Allied forces. But while Venizelos was strong enough to mobilize the army, he could not carry the country into war, "and not until October 6 did he find himself able to agree to the formal landing of British and French troops under formal protest." But had the Allied diplomats sufficient reason for thinking that Venizelos could swing Greece without question? Did not the Parliamentary elections which brought back Venizelos to power reveal a very sizable opposition, which, reinforced by the royal authority, might be enough to frustrate Venizelos a second time within six months?

The make-up of the new Greek Cabinet shows the monarch adopting the prudent course of holding fast to his own will while maintaining constitutional forms. There is nominally a new Premier; therefore the will of the Parliamentary majority has been formally recognized. But it is to all purposes as anti-Venizelos a Cabinet as its predecessor. The Minister of War is the same as in the Zaimis Ministry, the very man who precipitated the fight with the Venizelos majority. The Minister of the Interior is Gounaris, who was Premier after the first fall of Venizelos early this year, and the man whom Venizelos has accused of having entered into secret relations with Bulgaria which enabled the latter to attack Servia without fear of Greek interference. If it comes to extremes, and King Constantine has shown that he is prepared to go far, there is no reason why new Cabinets could not go on being organized until every anti-Venizelos man in Parliament has had a chance to be Premier. Such gain as Venizelos has scored consists in the fact that the Allies have been assured that there will be no sudden attack upon them from behind. As a matter of fact, such a move is virtually impossible, but public opinion in Allied countries needed some such reassurance. The new Premier has gone so far as to change his policy from benevolent neutrality to "very benevolent" neutrality.

Political and social upheavals in the belligerent nations, after the war, have been freely predicted. Something of that sort may easily occur. One thing seems certain, that the higher cost of living, and the increased taxes sure to follow for a long time, will lead to a resolute demand by the working classes that the increased wages which they have been getting in war-time be continued, or even be made larger still. We in this country shall doubtless face that, as well as Germany and England. Already it is a sense of the rôle which the laboring men are going to play which lends importance to what their spokesmen are saying now. In the German press, for example, official and semi-official newspapers do not count for so much, in showing what the masses are thinking, as the chief organ of the Social-Democratic party, the *Vorwärts*. From it we had last Saturday a cabled extract of much significance. It did not question the fact that Germany would fight on to the bitter end, but expressed great impatience with the Government—as also with the Governments of the Allies—for not letting the people know for what precisely they were fighting. It called for an explicit statement of the objects of the war, from which alone, it argued, a clear idea could be got of the way to secure peace. But in asking that mere "rhetoric" and patriotic flourishes be abandoned, *Vorwärts* forgets that the war began with that sort of thing. The Berlin military authorities had nothing at the beginning but vague talk about *Einkreisung* and a "place in the sun," and so on, all rhetorical. If from the first they had been actuated by a clear sense of realities, the war never would have been started. And we fear that the time has not yet come for them to abandon phrases.

Ever since Mr. Bryan left the Cabinet last June, it has been believed that it was only a question of time when he would openly break with the President. He has now done so; and the issue which he has chosen does more credit to his consistency than to his political sagacity. For no one can be better aware than Mr. Bryan that, on the general question, he can get but a corporal's guard in Congress to go with him and against the President. The ground has been mined beneath him in advance. We have seen good Bryan men like Senator Kern, of Indiana, going to the White House and coming away converted to Mr. Wilson's plans. There has been shrewd politics in the affair from the beginning; and the ex-Secretary ought to understand by this time that the ex-professor is a very skilful politician. Whether the President takes any public notice of Mr. Bryan's attack or not, it is certain that he has foreseen it and has not omitted "preparedness" against it. If it comes to a definite fight between the two, there can hardly be doubt which one will win. Indeed, there are some who see in the President's speech a deliberate attempt to force Bryan into the open and to complete his political discomfiture.

The collection printed by the New York *Sun* of German-American views on the part played by the German-American vote in the recent election makes interesting reading. The piece that has the pleasantest sound to our ears is this, from the Cleveland *Anzeiger:* "The German-American vote cut no figure in Tuesday's election, as far as Ohio is concerned." In contrast with this is the view of the New York *Staats-Zeitung*, which, speaking of the results in the country generally, says: "This has been the first opportunity offered the 'hyphenated Americans' to express their opinion of the President's course at the ballot box, and they did not hesitate to make the proper use of it." But for cleverness commend us to the interpretation, which comes from Baltimore, of the result in Maryland, where the Democratic candidate for Governor was elected. It may seem difficult to wring from this a proof of the power of the German-American vote, when we consider that "the alleged leading Democratic organ tried to make the foreign policy of President Wilson an issue in the campaign." But in fact it is very easy; as easy as—well, as anything you please:

> In Baltimore the Americans of German origin affiliated with the Democratic party and saved the day for Emerson C. Harrington, the Democratic candidate for Governor. . . . They looked upon the attempt to introduce national questions into the campaign as the height of folly. They resented the attempt. Their natural independence of thought enables the Americans of German origin to divorce national from State questions and State questions from municipal questions.

Heads I win, tails you lose. If a Democrat is defeated, it is because the German-Americans resent Wilson's foreign policy; if he is elected, it is because they resent the attempt to make that policy an issue.

In his essay on political lying, Swift remarks that a short memory is essential to the interpretation of political events, or the interpreter will find himself repeatedly "swearing to both sides of a contradiction." In Massachusetts the anunal elections require an abnormal brevity of recollection. The Republicans are pointing to McCall's vote of 235,918, with its marked increase over the 198,600 votes he received in 1914, as evidence of the sweeping nature of the Republican triumph. But they forget entirely to look at the figures of Gov. Walsh's increase. In 1913 he received over 183,000 votes; in 1914, over 210,000; and this year, though defeated, he polled over 229,000. An extraordinarily large vote was brought out on all sides this year in Massachusetts, and into the result it is easy to read too much by simply looking at one side. As it is, it could be contended with force that the Democrats received a share of the returned Progressive vote. Similarly, examination of the facts makes it impossible for the Republicans to speak of the election as a high-tariff victory. Salem, with its cotton mills, was a Walsh city; so was Gloucester; so were Chicopee, Holyoke, Lynn, Brockton, Woburn, Lowell, and Fitchburg. Eleven of fourteen of the larger manufacturing cities were carried by Walsh. It was obviously an election with an unusual number of cross-currents.

Senator William Alden Smith's comment upon his Presidential boom contains a broad hint for other Favorite Sons. His endorsement by Michigan, mere compliment though he calls it, followed a vigorous campaign which had all the appearance of a determination to make that State the mother of a President. The moral should be plain to Republicans who expect to have the endorsement of their States without making such a fight for it, but, as if to leave them no excuse for the disappointment that he foresees for them at the Convention, Mr. Smith quietly remarks to a reporter that in his opinion "our candidate has not yet developed." This will be momentarily saddening to Senator Sherman of Illinois, for instance, who has given no sign that he regards himself as a mere temporary embodiment of the sentiment of a State that has given one or two great Presidents to the country and is now ready with another. Nevertheless, the remark of the Michigan Senator shows a revival of that ancient get-together spirit which has—almost—always made his party dangerous to its opponent. His acumen is further displayed in his naming of a man whom he would regard as an eminently suitable candidate. Reversing the procedure of the Athenian generals who voted each for himself as first choice, but for Themistocles as second, Senator Smith and most of his rivals give the impression of taking their candidate seriously only if there is no possibility of lassoing one C——— E——— H———.

For a seemingly complicated method of balloting, Cleveland's election machinery seems to have worked to the satisfaction of the city. By the new charter the nominations for city office are to be by petition only, the ballot is non-partisan, and each voter is to indicate a first, second, and third choice. A mere plurality will not decide the contest; and in case no candidate receives a majority of the first-choice vote, the second-choice and, if necessary, the third-choice ballots are added in to determine the election. With five candidates in the field this year, the non-partisan requirement was in effect ignored, it being understood that the bulk of the Democratic vote would go for Witt, the Republican for Davis and Norton. The fact that the Republican voters very largely voted first choice for Davis, second for Norton, gave the former a first-choice plurality, and a count of second and third choices gave him the office. The intent of the preferential ballot is to strengthen non-partisan and reform movements by making it harder for special interests to concentrate on a single candidate, while many votes are divided among better nominees. It would seem to be likely to work as well as Wisconsin's plan for cumulative voting in the Senatorial primaries.

"The dear old city of Newark," in ex-Gov. Franklin Murphy's words, thinks itself entitled to a birthday party next spring, when it is 250 years old; and last week it voted bonds to erect a $1,500,000 memorial building. This is to be used for the celebration, and is then to stand as an auditorium-hall for exhibitions, conventions, and musical festivals. But of broader significance is the

plan of John C. Dana, Newark's librarian, for an exhibit of the textile industries of New Jersey next February and March. It will follow the lines of the exhibition last year of clay products, which was of State-wide scope and value, and which attracted national attention; but New Jersey's 3,000 textile manufacturers are expected to make it much larger. Mr. Dana plans to continue annually these industrial displays, which shall be not only commercial, but scientific and artistic in character. Thus he hopes to show "how inexpensively museums, localities, or groups of manufacturers can arrange a dignified and attractive exhibition which shall give rational and helpful publicity to the manufactures," and at the same time educate the public. These efforts to exhibit the products of a whole State in a single field seem to be without precedent, and in view of the expected decay of our large expositions, there would seem to be a place for them. In time we might progress to the unpretentious but effective exhibitions of related industries and arts which are so common abroad.

Not fear, but bewilderment, must be the feeling of intelligent South Americans towards us. Take the incident of the statue of Bolivar. Thirty years ago, Venezuela, thinking that a memorial of Bolivar in the principal city of this country would be an appropriate recognition of that hero's relation to the United States, where he had visited and whence he had derived inspiration for his fight for liberty in his own land, decided to present New York with a statue of him. The Venezuelans in charge of the matter had a statue made and sent to us. Imagine their surprise and embarrassment when we condemned the object as unsightly! Perhaps they had not succeeded in imitating as they had hoped the masterpieces that adorn Statuary Hall at Washington and other places, but they might have been pardoned for falling a bit short of our ideals. Ultimately, however, horse and rider went to the scrap-heap. Venezuela, however, is to give us another Bolivar—but she will have the statue designed by an American. That the American is Gutzon Borglum, who makes no pretence of admiring Statuary Hall, is the neatest part of the manœuvre.

The annual reports issued by the Bureau of Health for the Philippine Islands furnish statistical information with remarkable detail. The tabular statements are such as to convey at a glance a greater amount of specific knowledge—relating to causes of death, age at death, death-rates in specified classes of the population, frequency of various diseases, etc—than is usually accessible in so convenient shape in similar reports in our home States. A curious instance of special classification is the table of births in Manila, classed "according to number of children borne by mother." In the report just come to hand, the table includes entries up to the twenty-second child, and we have noticed about the same limit in previous years. Only one infant was born in the year who had thus been preceded by twenty-one fellow-children of the same mother; but of twentieth and nineteenth children there were two each, of sixteenth children ten, and of fourteenth children no less than twenty-three. This, in a population only one-twentieth that of New York city, is doing pretty well from Col. Roosevelt's standpoint.

That the efforts of the Bureau are by no means confined to statistics, however, is apparent from a glance at the other contents. The spirit of a modern department of health is evidenced in the great variety of activities which the Bureau has been carrying on. Soil pollution, water supply, sanitary markets, mosquito destruction—in these and other directions the Bureau has been going good work. In the present report, the subject to which greatest prominence is given is that of infant mortality. A vigorous summary of conclusions concerning this, prepared by a committee of physicians appointed under authority of a law enacted by the Philippine Legislature, is given in the Bureau's report. That "less than one-third of the children conceived live to be one year of age" the committee declares to be "a criticism of our Government, a shame to our Christianity, and a sociologic crime." Such a rate is certainly appalling, and justifies the strong language that is used throughout the document. Practical recommendations are made the adoption of which would mean a speedy reduction of the infantile death-rate to a far less terrible figure; and it is declared that the cry of insufficient funds is utterly inadmissible in the face of such a need and of the demonstrated feasibility of improvement. "An additional 1-centavo stamp placed upon every letter mailed in the Philippines would furnish money enough to save the lives of 25,000 babies a year."

When it is remembered that leprosy hospitals were known in Europe in the time of William the Conqueror, and that the specific microbe of the disease was discovered nearly fifty years ago, it must appear remarkable that progress in discovering a cure has been so slow. An achievement of the United States Medical Service, perhaps comparable with the discovery of the means of stamping out yellow fever, appears in the report of lepers cured by Dr. Victor G. Heiser and his assistants in the Philippines. Dr. Heiser's treatment consists in the hypodermic injection of chaulmoogra oil in special preparations. It was begun in 1911; in the autumn of 1913 were reported four cures; and in 1914, out of twelve cases under treatment, half were reported as showing "apparent recovery" and one-third marked improvement. Recent advices from Manila tell of twenty-three cured patients discharged from the leper hospitals. Meanwhile, the treatment has been adopted in foreign countries, and with results that thus far are promising. It would be wrong to place too much confidence in the method; it may be remembered that the X-ray was thought for a time to have effected cures, but that they proved only temporary. But the International Health Commission of the Rockefeller Foundation announces that it is already circulating details of this treatment.

Unlike Topsy, Canada is not to be contented with simply having "growed." A commission has been appointed by the Government to consider all questions of agriculture, industry, transportation, marketing, and immigration connected with national expansion—an evidence of Canada's concern, even in war-time, for her domestic future. Whether the commission is not facing too unwieldy and grandiose a task may be asked; but it is equipped with specific instructions from Premier Borden, and it includes, besides the Senate leader and other statesmen, representatives of labor, the trades, farming, and the railways. It is also to be remembered that Canada, with her enterprises in railway construction, in the subsidizing of ships, and in direct assistance to Western farmers, has always given a large degree of central direction to the Dominion's growth. After the war there will be pressing questions connected with the return of the Canadian contingents, with immigration from Europe, and with the continuation of the policy of borrowing from abroad. Already the completion of the two new transcontinental lines has inspired proposals for the attraction of immigrants, and the opening of the Panama Canal is quickening the West.

THE NOTE TO ENGLAND.

There have long been two conflicting theories of the rights of neutrals. One is that they are merely a gracious—or grudging—concession by belligerents. Originally, of course, the nation at war did whatever it pleased, or had the power to do. Neither non-combatants nor neutrals could appeal against the supremacy of the sword. But little by little, during the course of hundreds of years, a body of custom, gradually taking the form of what we call international law, became recognized. It put certain limits upon belligerents. It accorded to neutrals certain rights. But even so a dispute has remained as regards the underlying theory. Belligerents often maintain, in effect, that they are acting simply out of magnanimity, or a neighborly spirit, when they consult the desires, or demands, of neutrals. The latter, on the contrary, base their claims on a positive legal basis, independent of the will, or whim, of a country at war. The difference is plain. It is very like the difference between a benevolent tyranny and a guaranteed bill of rights.

As a matter of fact, in all wars belligerents seek to exalt their powers, and to win every advantage they can at the expense of neutrals, while the latter protest or threaten. During our Civil War, the United States carried belligerent rights with as high a hand as we could. In the matter of the Trent, we went too far, and had to recede. But in the blockade, and in the cases arising out of it, we successfully maintained new positions, despite British remonstrances. In the war between England and the Boers, it was our turn to protest. When Russia and Japan were fighting, Great Britain objected strongly to certain acts and procedures of the Russian Government. The whole process looks sometimes like an eternal see-saw. But there is more in it than that. What is being driven at all the time, and what, in fact, slowly emerges as the result of this conflict between opposing theories, is a definitely ascertained set of rules by which nations shall be guided.

It is to this end, we take it, that the note of the American Government to England is chiefly directed. A long time in preparation, and frequently delayed beyond the date when it was to have been sent, Secretary Lansing's carefully studied communication sets out our case with precision and force. In denying the validity of British practices, above all in stating clearly that our Government will not be bound by the decisions of British prize courts, Mr. Lansing distinctly looks ahead. He must be contemplating not only continued diplomatic effort to maintain our point of view, and to protect the interests of American citizens, but the establishment, after the war, of the principles for which we contend. This might come about either by submitting the questions at issue to arbitration, or by the calling of an international congress to legislate, as it were, on the whole subject. Either way, the steady assertion of American rights will have been of great value in reaching the final decision. As we said of the notes to Germany, so it may now be said of the note to England, that our Government will thereby have furnished leading cases in international law.

Passing to details, Mr. Lansing's note is a strong arraignment of the British blockade of Germany. He argues that it was wrong in its original theory, and has been ineffective in its application—if so, it is not a blockade which neutrals are bound to recognize. Moreover, under it practices have grown up which have no warrant in international law, as previously understood. Indeed, the British Government has virtually conceded this, pleading the fact that "modern conditions" have made the old rule of search at sea impracticable. This is not wholly denied by Secretary Lansing; but he protests stoutly against taking American ships into port, and bringing them before prize courts, merely "on suspicion." If the boarding officer finds contraband, well and good. But it is another matter to seize a vessel and take her into harbor simply because he believes that if her cargo is entirely unloaded a few packages of goods with enemy destination may be discovered. That is a process not only most vexing and dilatory, but unwarranted; and against it our Department of State lodges a vigorous protest.

One effect of the keeping back of the note all these months is to give it the appearance of not being, in all respects, abreast of the facts. No notice is taken, for example, of the activity of British submarines in the Baltic. They seem to have driven German ships from those waters. The British Government may contend that they have, in fact, completed the blockade of Germany, so as to take away its "partial" character, and make it conform to the Declaration of Paris. No official notice to this effect has, however, yet been given. Furthermore, Mr. Lansing does not refer to the recent statement of Sir Edward Grey that British prize courts were not to proceed merely under British law; and that, in any event, neutral nations would not necessarily be bound by their decisions. This again opens the way for a final settlement of all the matters in controversy between the two Governments, whether by diplomatic adjustment, by reference to the Hague Tribunal, or by a congress of the nations.

The net impression of the note is that our Government has been impartial in watching for the infringement of American rights from any quarter, and means as zealously to maintain them against England as against Germany. Inevitably, the nature of the German outrage made it necessary to deal with it first and with a firm assertion of our national determination. But with that apparently removed from tense controversy, through Germany's backdown and apology and offer to make indemnity, the road was clear for this notably vigorous representation to the British Government. Its force and directness have not been impaired by its having been long discounted; and the whole note stands as an expression not only of American impartiality, as between the belligerents, but of the American purpose to uphold the rights of all neutrals as based more securely than upon the good will, or convenience, of the nations at war.

THE PRESIDENT'S SPEECH.

President Wilson's address last week before the Manhattan Club of New York was carefully prepared. Departing from his usual habit, he wrote it out in advance, and read it from a printed copy. This was a sign at once of the importance which he attributed to this utterance, and of his feeling that he was beginning a political campaign, to be carried on in Congress and throughout the country. The whole represents not only a new step on the President's part, but a new attitude. Between this speech and his message to Congress last December, there are noticeable differences. Then he referred to "some among us who are nervous and excited" about national defence, and declared that the American policy ought not to be determined by them, since "the question has not changed its aspects because the times are not normal." But now it is the "world ablaze with a terrible war," and the fact that "from one end of our own dear country to another men are asking what our own force is"—men who have, we suppose, got over being nervous and excited—which so impress the President that he comes out for a policy which in December he distinctly deprecated, and

which, by his authority and influence, he squelched in Congress last winter.

It would be unfair to charge the President with advocating ambitious plans of militarism. He would doubtless still assert, as he did in his message to Congress, that he is against turning this country into "a military camp." Then he was opposed to "compulsory military service in times of peace," and we do not question that he would be to-day. The programme which he outlines is tentative. It is, indeed, already denounced by militarists as a wretched makeshift. But the significant thing is not the details but the spirit of the President's announcement. Details can be modified, but a policy, once fixed upon, mortgages the future. And many of the military-minded who to-day are privately laughing at President Wilson's schemes as ludicrously inadequate, will doubtless parade their support of him in the thought that, little by little, he will be inexorably pushed all the way along the military road.

That Mr. Wilson has the faintest idea of allowing himself thus to be captured by the military party, we do not for a moment believe. In fact, he utters plain warnings against the extremists. Our new forces are never to be used for "aggression of any kind," and not "for the satisfaction of any political or international ambition." Yes, so long as Mr. Wilson is President. But can he guarantee or bind his successors? Can he not think of a man who has been President, and who may be again, into whose hands it would be dangerous to put a giant's strength? And we fear that President Wilson has never measured the possibilities of the words "for defence." Purely for defence, we are to arm, he affirms, and he speaks of consulting our most skilled military experts. But to a really agile military expert, "defence" is a juggler's hat out of which can be drawn whatever he pleases. He will prove to you that there is really no defence so good as a violent offensive. Why, Germany is to-day waging a purely defensive war. She was "attacked," and, in order to defend her soil from invasion, was compelled herself to invade Belgium and France and Poland and Servia. Her sons are fighting "defensive" battles on far-flung lines. They may soon be defending Germany in Egypt and Persia. The truth is that when you once pledge yourself to do everything which the military experts say is necessary for defence, you are surrounding yourself with pitfalls, and exposing yourself to a thousand perils. Even if a President like Wilson could withstand them all, it would be easy to conceive of another rushing into them.

Mr. Wilson took occasion again to affirm the unselfish ideals of the United States. For this we must all thank him. He repeated his belief that this country will "never again take another foot of territory by conquest." We make no question that he holds to this with the firmest conviction. But he cannot be ignorant that other Presidents have similarly professed disinterested national motives, only to disown them later. On this point, a reading of the messages of President Polk relating to the Mexican War is instructive. That war, too, was "defensive." The Mexicans "attacked" us, and in order to defend ourselves we had to penetrate their territory a thousand miles and capture their capital. But the particular thing to notice is that Polk also repudiated "conquest." "A just and honorable peace, and not conquest," he told the Senate on August 4, 1846, was "our purpose in the prosecution of the war." But only a little more than a year later, he was blandly informing Congress: "It is well known that the only indemnity which it is in the power of Mexico to make . . . and the only means by which she can reimburse the United States for the expense of the war, is a cession to the United States of a portion of her territory." So much for starting out with the announcement of no "conquest"! President Wilson now says that such things were "the fruit of our thoughtless youth as a nation, and we have put them aside." He has, but have others?

The big questions in all this are whether the President can tie up the country; whether he can give any guarantee that the letting out of the waters may be checked at will; whether he will be able to insist upon his particular plan or be compelled to see it made the basis of an immense militarist agitation and propaganda; whether one Congress can bind another to carry out a scheme of continuous military appropriations; whether log-rolling politicians and army and navy contractors will not so fasten themselves upon the whole project, and muddle it, that the people will be disgusted. There is no disguising the great public and political significance of the President's speech. He is clearly making a hazard of new fortunes. For the moment, we doubt not, he will get an applauding response from all parts of the country. But the real difficulties, the deeper perils, will have to be confronted later.

WHERE THE WAR WILL BE DECIDED.

Kitchener's departure for the Near East has undoubtedly intensified popular opinion regarding the significance of the Balkan campaign as the "beginning of the end." There are anxieties in England concerning Egypt, and possibly India. The German press speaks jubilantly of a victorious thrust at the heart of the British Empire, and foresees Kitchener at the task of defending the Egypt which he consolidated. It was inevitable that from the beginning of the Teutonic invasion of Servia, and Bulgaria's entrance into the conflict, the attention of the world should be directed towards Suez. In part, this is due to the magic of vast possibilities. Unquestionably, the approach of German armies closer to that vital link in England's colonial possessions does raise all sorts of speculations.

No one will venture to say that an extension of the war to Egypt is altogether impossible. But sober and expert critics in England and Germany do not regard such an event as probable. If the war is to be decided on the field of battle, instead of by exhaustion, the decision must fall in what still remains the crucial point of contact, France and Belgium. A recent dispatch quotes from an address of the Kaiser to his troops in Belgium: "Important results are pending in the Balkans, where our troops and those of our courageous allies are bringing glory upon themselves. It is on the western front, however, that all eyes are turned, and the necessity of success here is paramount." Of English students of the war, the best-known, Hilaire Belloc, has declared that the attack on Servia is intended as a political diversion, with the object of creating discord and chaos among the Allies and affecting popular opinion among Germany's enemies. And the able Major Moraht, the most thoughtful of German military commentators, makes very much the same point. He describes the attack on Servia as primarily a strategic operation, of service "to the policies of the Central Powers and the Will to Conquer (*Siegesidee*) which animates us." This is as much as to say that the Balkan campaign is aiming primarily at a moral effect. Moraht insists that the belief in victory among the Allies is thoroughly shattered, that doubts and suspicions have arisen among Germany's opponents, that Italy, for example, has refused to place herself at the orders of Great Britain and France, and is determined to wage her own war.

The Balkan campaign is thus a continuation of German policy as it was determined long before the outbreak of the war, but adapted to present circumstances. The iron ring around Germany had to be broken. It was to be done by victory on the field of battle, first France, then Russia, then England. Later the plan changed. It was to be first Russia and then France. But Russia, though defeated, did not acknowledge herself beaten. Neither was she tired out, and the plan of breaking up the iron ring, not through crushing victory, but through the seductions of a separate peace, fell through. The war became more than ever a war of attrition. In this contest the Allies were bound to win, if it was only a case of matching physical loss against physical loss. So the war, if won, must be won, from the German point of view, by moral attrition. How long would the Allies hold out if Germany held her own in the conquered lands of east and west and at the same time continued to keep up popular spirits at home by physical victories where they were still to be had, namely, in Servia? Observe how Major Moraht describes it. On the one hand, the will to conquer is to be nurtured at home; on the other hand, the belief in victory is to be shattered among the Allies. With German bulletins still recording victories, if only over the Servians, with Allied bulletins recording only deadlock, this war of endurance and "nerves" is bound to turn out as favorable for Germany as the actual test of armies has proved, when measured by the visible fruits of victory.

The vision of England with her back against the wall somewhere around Suez and the Pyramids is just the sort of thing to keep up flagging spirits at home and to accentuate depression among the Allies. And this is why the German press to-day concentrates on Egypt with much of that same finality of tone with which it spoke of the end of the war around Calais and in Russia. Press opinion in Germany, more than in any other country, has a way of dealing with universal and perpetual certainties. And to-morrow, when another opinion rules, that also is universally and perpetually certain. Even observers of the more cautious type cannot escape this tone of finality. Moraht spoke half a year ago of the Russians in retreat as a disorganized and discouraged "soldatesko." To-day he speaks of Germany in the west and in Russia as standing on the defensive. Moraht spoke contemptuously of Kitchener's gathering battalions, and was convinced that Germany's leaders would see to it that Kitchener had no leisure for building up a real army. To-day there are a million English soldiers in the west, and the German effort has turned in altogether a different direction.

If we study the progress of the German campaign in Servia, impressive though it has been, the heralded attack on Egypt is only a remote possibility. The Teutonic armies have been moving forward in Servia with the same machine-like precision which marked their advance into Russia. But that very precision is dependent upon long preparation and the proximity of sources of supply. Operating through the Sinai desert is by no means the same thing as operating close to the Danube.

ENDURANCE AND EFFICIENCY.

The Germans are not alone in their anxieties over the national food supply. High prices obtain in England and France. One of the problems which the Paris press has been discussing is the same that now confronts the German Government, namely, the prevention of speculation in food. This is the plain meaning of Berlin's official announcement that there is enough food for the people, but that prices must be regulated so as to ameliorate the hardships of the poor. Speculation in food is openly charged in the Paris newspapers. We are witnessing one of the inevitable effects of a long war in the wearing down of the first fine instincts of patriotism, and the reassertion of selfish interests. The tone of the German press is bitter in its implication that because of private selfishness and governmental incapacity the burdens of the war have fallen with special weight on the lower classes. The Government is apparently on the defensive when it goes to the pains of declaring in an official note that a large portion of the Socialist party agrees that the new food regulations are sufficient for the needs of "the whole nation." It may be that the problem is just as acute in France, and that our impressions of German conditions are partly shaped by the very foresightedness of the Berlin authorities. Germany is in the habit of taking drastic measures for the purpose of warding off a situation which other nations deal with thoroughly only when it arises.

There is, however, significance in the fact that the problem of a food supply manipulated to the disadvantage of the poor should ever arise in Germany. It compels people to revise fairly established notions about the extraordinary discipline, resourcefulness, patriotism, and unity of the German people. We now begin to discern the same limitations of humanity under which the less efficient and disciplined nations labor. The man who would make an extra profit out of the starvation of the poor is apparently not unknown in Germany. The selfish rich who find ways of evading the regulations for bread cards and meatless days have to be dealt with. The control of the food supply has been taken over from the provincial authorities by the Federal Government, which argues that not every German official, wherever found, is by definition a model of the highest conceivable efficiency. But above all the fact stands out that, while Germany may not be threatened with famine, she is plainly facing a shortage of food. It is all very well to throw the blame on the speculator, but food is usually not cornered when it exists in abundance. The *Frankfurter Zeitung* speaks of sinister conditions brought on by the blockade. Maximilian Harden says the German people are in distress. A South German paper whispers the dread word "famine." Official Berlin, in defending Zeppelin raids, speaks of "millions who are suffering not inconsiderable sacrifices."

This is a situation which will come as a surprise to those who have been persuaded of Germany's limitless capacities in rallying to the needs of a crisis. Last winter Germany's anxieties concerning food were to terminate automatically with the harvest of 1915. It was assumed that this harvest would be sufficient for a year, because it simply had to suffice, because Germany willed it so. The mere fact that four million men were away from the farms was no handicap. German ingenuity would utilize woman's labor, would utilize the Russian prisoners, would devise magic fertilizers by which the earth would give forth in increased abundance. That was nonsense, of course. For one thing, the rains could not be mobilized at the behest of the General Staff, and the crop of 1915 has suffered from drought. The story of extraordinary substitutes devised under pressure of war—substitutes for nitrate, for copper, for cotton, for wool, for foods—has been accepted seriously by a good many people because the story came from Germany. The legend of a Germany that has replaced everything with something just as good has been incorporated into serious economic studies of the war. But now we are beginning to see that there are limits even to what Germany and her people can do. We are brought back

to the thought that perhaps democracy and individual liberty are not always synonymous with muddle, but, as President Eliot implied, in an address last week, may give rise to an efficiency of their own which we have been too ready to discard without waiting for definite results of the war and for knowledge of the price that the different nations are paying for the results so far obtained.

And these doubts of the perfect German efficiency are not confined to the outside world. The German press, in commenting on the Government's handling of the food problem, speaks of "abuses," "insufficient measures," and "dismal and unholy" policies. It is the inevitable outcome of fifteen months of war carried on with prodigious efforts and cost, and no end in sight. The *Frankfurter Zeitung* can only recommend drawing one's belt tighter and hacking a way through. But hacking through to what? The West is out of the question. The hacking process in Russia has come to an end, and the conquest of the Czar's grain lands has not relieved the situation. There is only Servia now to hack through. When Gen. Mackensen opens the way to Constantinople he has come no nearer to a source of food supply for the beleaguered German people. Asiatic Turkey is hardly in a position to feed the German Empire. Hence that very grim jest by the *Frankfurter Zeitung*, when it foresees the necessity of the German people "nourishing" itself on hate.

THE SUPREME COURT AND HUMAN RIGHTS.

The Fourteenth Amendment to the Constitution of the United States owed its origin to the desire to protect the negro freedmen in their newly acquired rights as human beings and as citizens of the United States. In the course of its application to the vast multitude of questions that have arisen under it, its effects have ranged into domains that have little or no connection with the great purpose that was in the minds of its framers. Our system of government, with the Supreme Court as final arbiter of the validity of all laws, has often been subjected to severe criticism on this account. Most persons who have studied the subject would agree that there is serious basis for the charge that the Fourteenth Amendment has, in important instances, been made, by judicial interpretation, to serve property interests, as distinguished from "human" interests, in a degree beyond that which its terms necessarily infer; and there are many who have the impression that, in point of fact, this has been substantially the only effect of the enactment, its primary purpose having practically played no part at all. That this last is a superficial and mistaken view will be apparent to any one who reflects that in relation to that primary purpose, in cases of unmistakable character, the Amendment operates automatically; as a general rule, it is only in questions that are more or less doubtful that it has been necessary to invoke the interposition of the courts.

The decision of the Supreme Court in the matter of the Arizona Anti-Alien Labor law, apart from its intrinsic importance, has a special interest as bearing not on some indirect or collateral effect of the Fourteenth Amendment, but on the very object that was in the minds of its framers. For while it is true that their primary motive was to protect the freedmen against oppression, it was not by inadvertence that they made the language of the Amendment broad enough to cover every case of such oppression that might arise in the future. Whether or not the thought of corporations as persons was in their mind, it is quite certain that every individual human being in every State of the Union was designedly covered by the language they deliberately chose, when they declared that no State shall "deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws." In protecting alien residents of Arizona against a law which it regards as an abridgment of their right to work for a living, the Supreme Court not only acts upon both the letter and the spirit of the Fourteenth Amendment, but is protecting these aliens from precisely the kind of oppression which must have been specifically in the minds of its framers as regards the negroes, and against which, in the case of all persons, it was set up as a permanent and impregnable defence.

So much for the subject-matter of the case; there still remained, of course, the question whether the legislation at issue really came under the prohibition of the Amendment. There is ground for keen satisfaction in the circumstance that the Court, in its opinion handed down by Mr. Justice Hughes, goes to the fundamentals of this question. There is in this respect a great contrast between the action of the Court in this matter and the course which it so long followed concerning the disfranchising provisions of Southern State Constitutions. As to these, the Court pursued, year after year, a policy of staving off decision, while in this matter of anti-alien labor laws it has seized the first opportunity to make a thoroughgoing decision upon fundamental grounds; and, from the point of view of that statesmanship which is an essential element in the Supreme Court's conduct, the reasons for the difference are obvious. How trenchant is the language of Justice Hughes's opinion may be seen from a single extract:

> It requires no argument to show that the right to work for a living in the common occupations of the community is of the very essence of the personal freedom and opportunity that it was the purpose of the Fourteenth Amendment to secure. If this could be refused solely upon the ground of race or nationality, the prohibition of the denial to any person of the equal protection of the laws would be a barren form of words.

And he held that the Arizona law was invalid because the prohibition it laid upon private employers against having among their employees more than 20 per cent. of persons not citizens was "the assertion of an authority to deny to aliens the opportunity of earning a living." That the Court was unanimous except for one dissent based not upon the merits, but upon a question of form, will give to the decision and the opinion the highest possible authority.

It is well to remind ourselves, upon the occasion of such a decision, of the mighty, though unseen, part which our great court of last resort is playing all the time in the shaping of the nation's life. The Arizona Anti-Alien law, even the group of laws of similar character in other States, may not be of enormous import; and there are innumerable cases in which the immediate matter at issue in a decision of the Court is vastly less important than this. But, whether it be a question of keen human interest like this, or a trivial matter like that of the right of a sleeping-car company to put down an unused upper berth, the Supreme Court is ever on guard, protecting not meaningless technicalities, but the broadest and deepest principles of government and of human right. Decision after decision is rendered which makes more secure against invasion the very fundamentals of liberty and order; and there is no telling at what time of real crisis the bulwarks thus built up may prove a priceless protection against some obsession of the moment. This could not be if they were bulwarks of a stodgy standpatism; but, as abundantly shown in the record of recent years, and as especially exemplified in such a man as Justice Hughes, the spirit of the Court is not at all this, but a spirit of mellow conservatism, informed with a full sympathy for rational progress.

Foreign Correspondence

FRANCE, THE VATICAN, AND PEACE.

By STODDARD DEWEY.

PARIS, October 23.

An instance of patriotic discretion in speech should be counted to the credit of the French press, and it exists. From the beginning, the utterances—or rather the lack of utterance—of the present Pope with regard to certain flagrant acts of war saddened the hearts of the faithful in Belgium and France. The stand, ambiguous to say the least, which was taken by certain church organs in Rome, the distinctly pro-German attitude of the higher Spanish clergy, and certain incidents in the United States added to the general uneasiness. The official toning down of the sensational interview which the Pope granted to a reputable correspondent of the Paris *Liberté* did little more than encourage French and Belgian Catholics to bear patiently the silence of the Head of the Church in circumstances where any utterance was sure to be misinterpreted by one side or the other.

When Italy finally entered the international conflict, the hearty benediction of her troops by Italian Cardinals and Bishops did more than anything else which has happened to allay the growing religious discomfort. Even the Pope's nephew marched off to the war with his uncle's blessing, which was surely not *ex-officio*. Exaggerated reports of Cardinal Gibbons's peace mission to President Wilson—which seemed possible only for a "German peace"—stirred but for a moment the dull surface of religious resignation.

Even blasphemers recognize that an international spiritual authority cannot easily take sides between its warring children of different nations. Indeed, the very neutral nations which signed the original treaties and later Hague conventions guaranteeing the neutrality of Belgium and Luxemburg kept silence when treaties and agreements were violated—and Pope Pius the Tenth, who also kept silence, had signed neither.

Surprise was felt that Benedict the Fifteenth found so little to say it was almost worse than nothing, when priests were slaughtered, religious communities violated, and the Catholic University burned in Belgium, and when France saw her most memorable cathedral church ruined wantonly. It seemed that, at Rome, Cardinal Mercier and the Bishop of Namur for the Belgian faithful and the French Cardinals for their own had scant credit. Later came the imperious address of loyalty from German Cardinals to their Emperor, assuring him that they would demand from Rome the condemnation of the French book exposing the wrongs which Catholicism was suffering from Germany. The rector of the Catholic University faculty of Paris, who is responsible for the book, has now received assurances that the German Cardinals have not made their demand.

With the other tumult of this long war, religious feeling has gradually settled down in strictly national channels. It is only the intermittent cry from the Vatican—Peace! peace! when there can be no peace—that now for a casual moment stirs disagreeably the religious consciousness.

To the outside, the only interest of all this is for France after the war. There has not really been the least sign that the Pope ever intended to take sides or—worse still—to try to persuade right to accept wrong in the name of peace. The French mean something more than a formula when they set as the end of their fighting a "just" peace. Peoples whose language was moulded by Catholicism say "just" where Calvinists say "righteous," but they also mean "justice" in the strict sense. It is perhaps not the Pope's duty to judge in the present war, as he was credited with saying in the ill-famed interview; and it is surely prudence as well as duty not to interfere.

Looking back on what has happened so far, the only questions which the outsider has a right to ask are—What influence is the attitude of the Vatican likely to have on religion among the French and Belgian peoples? What effect will it have in the resumption of official relations between the Government of France and the Pope? And what about the participation of the Pope in final negotiations of peace?

No one now denies that the sobering thoughts of ever-present death in war have led to a very general religious revival among soldiers who are exposed, that is, among the able-bodied men of the country who are now in the prime of life. It is not a conversion, which was not to be expected naturally. One of the fallacies regarding France was that the mass of Frenchmen are deliberately irreligious. This war has proved that, when obliged to deliberate, very many turn to religion, as did their fathers before them. If these Frenchmen now show themselves relatively religious, it must be because they had a religion beforehand. Benedict the Fifteenth himself must have remembered that when a Roman Catholic missionary or Sister of Charity is descried by Greenland's icy mountains or India's coral strand, it is usually a Frenchman or Frenchwoman.

Now religion of this kind, recovered or intensified, pays little heed to what is going on higher up in the organization of the Christian community. When Irish bishops and even the Pope at Rome turned with averted eyes from Home Rule, there was not a ripple in the faith which comforted the deathbed of the Irish peasant. In France, where there is only newspaper talk, and moderate at that, the question of the Pope's stand towards the war does not even arise with regard to the Pope's religion. At most, there may be a diminution in the Peter-pence that comes from France—largely out of the pocket of the seeming infidel.

For any resumption of official relations between the French Republic and the Vatican, the question is different. War has so far produced no essential change in the composition of French Governments to make such a resumption probable. Perhaps it is not desirable, either for religion or for the Republic, that such relations should again exist in home affairs, and some *modus vivendi* may yet be found by which a Republic sternly ignoring religion in theory may in practice protect the religious effort which most advances the interests of France in the Orient. What is to become of Syria will have much more weight with French Governments than the revival of religious practice among those who are now soldiers.

As to eventual negotiation of peace, the same may be said of the Pope as of the President of the United States. Their very neutrality unfits them for settling questions of "justice" in this war. If, however, the Allies are not victorious enough to secure a "just" peace, but have to content themselves with the German "honorable" peace, then we are likely to have further repetitions of Hague proceedings—without guarantee or sanction, while waiting for the next war. Here, too, only the effective demand of Germany and Austria could force the admission of the Pope among the negotiators, and then only in the supposition that Germany is beaten enough to accept neutrals' help in compounding her own quarrel and its consequences. Besides, there is the precedent of the Hague conventions from which Leo the Thirteenth was deliberately excluded.

In a book which was greatly read in my youth, it was told of a man to whom people came with the moral problems which grieved them sorest: *And the soldiers likewise demanded of him, saying, And what shall we do? And he said to them, Do violence to no man* [*Put no man in fear,* the margin has it], *neither accuse any falsely; and be content with your wages.*

Of course, there were no Hague conventions at that time.

OXFORD AT WAR.

By JAMES F. MUIRHEAD.

LONDON, October 26.

"The college is a barracks, and our tutors are superior officers, and Fellows are elected because they are lieutenants of the Flying Corps that they may make 'physical research with special reference to aerial warfare.'" In these words the *'Varsity* (the Oxford *Crimson*) sums up the present situation in England's foremost university. An admirable little "Handy Guide to Oxford," just published by Mr. C. R. L. Fletcher (formerly Fellow of All Souls and Magdalen), is "specially written for the wounded," and begins with an excursion from the Third Southern Central Hospital (once the Examination Schools) to Magdalen College, just across the way. The hackneyed Latin tag must now be read "Cedat armis toga." A day at Oxford shows at every step that the Grove of Academe has verily been transformed into "the flinty and steel couch of war"; but for the British visitor, at least, the tragedy is glorified by pride in its heroism and devotion.

Instead of the usual crowd of undergraduates (3,000 or more), there are now hardly 600, a number strangely similar to the number of Oxford men (562) who up to now have fallen in the war. The freshmen number a scant 250—a nadir for which we have to go back to the Napoleonic wars of a century ago to find a parallel—and the Britain of that era had much less than half the population of the Britain of to-day. Of the present handful of undergraduates about 100 are Americans, and to judge from the evidence of the college quads, a considerable proportion of the remainder are natives of British India. The Rhodes Scholar of to-day is, in many ways, a melancholy spectacle, "frustrate of his purpose and his hopes." The Oxford he is in is by no means the Oxford of his dreams. He has to consort almost wholly with other Americans, an association for which he scarcely needed to cross the Atlantic. There are no University sports, there are no Union

debates. The American Club is almost the only undergraduates' institution with any life left.

Of the 8,000 Oxford men enrolled in the military forces of England, about one-twelfth are already reported as dead or missing.* The weekly *University Gazette* of to-day has nine or ten black-bordered pages showing each college's quota of slain. The corresponding issues of 1913 announce one or two deaths, occasionally none at all. The rival claims of the colleges for distinction are now sadly different from what they used to be. Balliol boasts the first rowing "Blue" to fall in the war, All Souls the first Don to die for his country. The first Victoria Cross given to a Territorial officer was awarded to a member of Queen's. In March of this year, eighty of the eighty-nine "Blues" of 1913-14 were on active service. The instructors have vied with the students in patriotic sacrifice. At first sight the Lecture List looks much as usual, but the frequency of the cabalistic entry "lecturer on S. and M." is alone enough to tell the tale. This means that the instructors in question, busily engaged in Government work throughout the week, run "up" to Oxford for the week-end to crowd their usual course into lectures on Saturday and Monday. It is notable that the legal instructors tend to give their help at the Ministry of Munitions, the historians (probably in virtue of their linguistic accomplishments) to the War Trade Office. The chemists, happy men, are able to remain in their own laboratories, where, however, they are mainly engaged in researches and experiments for strictly military ends. Some of the instructors will, alas, never give lecture or handle test-tube again; and one cannot help a double portion of sorrow at the apparent "waste" of these gifted young scholars and scientists in the trenches. Many of the dons and officials belong to the Oxford Volunteer Training Corps, which is commanded by the Public Orator, and includes in its ranks the Poet Laureate.

The external signs of the military occupation of Oxford are ubiquitous. The parks are full of trenches; drilling goes on briskly in the open spaces; St. Giles is temporarily an army transport depot for enormous motor lorries and workshops. In several colleges, where members of the Officers Training Corps are quartered, khaki is much more in evidence than gowns. In Magdalen we found Colonial soldiers in sun-helmets, just returned from the Dardanelles, feeding the deer.

The most significant feature of all is, however, the fact that beds for 1,200 wounded soldiers now occupy the Examination Schools, Somerville College, and the Town Hall. It is perhaps not generally known that the Schools (now, officially, the Third Southern General Hospital) were noted among the buildings set apart for base hospitals, in case of need, half-a-dozen years ago under Lord Haldane's sway at the War Office. All requisite arrangements, down to the staffing of the hospital, had been made in advance; and the necessary transformation was thus accomplished at a minimum of time, cost, and labor. To the lay visitor the place certainly looks as if it had always been intended for its present use, and the scent of iodoform seems its natural atmosphere. The commodious modern buildings of Somerville College were found much more suitable for hospital purposes than the conventual cells of the men's colleges. The girls have found temporary quarters in the North Quad of Oriel, which the undergraduates, not to be baulked of their joke, even if the heavens fall, now call Soroiel College. There was, alas, plenty of room for them, as Oriel has sent a larger proportion of her members to the front than any other college.

One other feature of Oxford's arrangements in time of war may be noted. About twenty-four Belgian professors, mostly scientists, have been provided with modest homes and stipends, and are busily at work in the libraries and laboratories of the University.

The immense decrease of fees means a very serious strain on the finances of the University. The difficulties thus arising have been to some extent met by the generosity of the wealthier colleges, the trustees of the Endowment Fund, and private donors; but the problem remains a serious one. The statutes of the University and its colleges are, of course, devised for normal times, and it became necessary to obtain powers to deal with questions arising out of the transference of professors from academic to national functions, the status of Fellows and Scholars, and so on. The University and Colleges of Oxford and Cambridge (Emergency Powers) act has thus been passed, in order to help the universities to adapt themselves to the confused conditions of the times and to safeguard the interests of those who have responded to their country's call.

Oxford has kept the flag flying, and is justified of her children. This venerable university, the home of lost causes, the target of the practical man's ridicule, the forum of speculation and discussion, is at this crisis found to have her feet firmly planted on the solid realities of life. The atmosphere of the University is saturated with facts. Oxford knows in a supreme fashion what has taken place and what is taking place. Its members realize the situation so profoundly that they spend little time on speculation as to the future, though they realize that that will involve great breaks with the traditions of the past. It is significant that one at least of the highest University authorities confines his newspaper reading to the official communiqués. There is, I understand, no clique here which skeptically questions the values of those realities which the nation believes to be threatened as they have never been threatened before. Humanitarians like Prof. Gilbert Murray, liberal philosophers like Dr. L. P. Jacks, physicians like Sir William Osler, economists like Prof. W. J. Ashley, publicists like Dr. A. V. Dicey, historians like Mr. A. L. Smith, poets like Laurence Binyon, and artists like Prof. Selwyn Image are all alike "stalwarts" in their attitude as to the prosecution of the war and the danger of an inconclusive peace. Their views, and the views of the University as a whole, have been admirably embodied in the long series of Oxford War Pamphlets.

*Details will be found in "The Oxford Roll of Service" (Oxford University Press; 2s. net), by E. S. Craig, Assistant Registrar to the University. Dr. Alexander Hill, Hon. Sec. of the Bureau of Universities of the Empire, finds that the British universities and colleges have contributed over 50 per cent. of their men to the war. He asserts that, rather contrary to expectation, the German universities have contributed less than 20 per cent. The returns show that the German universities are much less depleted than those of Great Britain.

Vicarious Thinking

A COLLEGE PRESIDENT DEPLORES THE INTELLECTUAL SLOTH OF AMERICAN COLLEGE STUDENTS.

By WILLIAM T. FOSTER.

A college undergraduate, writing his "Confession" in a recent number of the *Outlook*, admits that he knows of a few students with a zeal for knowledge so intense that not even a college course can quench it; but everything, he says, "unites to extinguish it—the quality of the instruction, the lack of any demand for scholarship, and, above all, the alluring ease of the environment."

However misleading may be the remarks of this undergraduate, or those of Mr. Dooley, as to details, both of these amiable critics have hit upon the chief weakness of the American college: our students have too much done for them and too little required of them. Mr. Dooley says that, nowadays, when a lad goes to college, "the prisidint takes him into a Turkish room, gives him a cigareet an' says: 'Me dear boy, what special branch iv larnin' wud ye like to have studied f'r ye be our compitint profissors?'"

Too much thinking is done for college students by tutors and lecturers and writers of textbooks. As long as boys and girls are satisfied with such predigested food, we can hardly expect them to have moral or religious convictions. The first need among college students is a quickening of intellectual enthusiasm.

College courses should necessitate less memorizing and more reasoning. There should be fewer lectures. You can lead a boy to lectures, but you cannot make him think—at least, not often by this, the easiest of all methods of instruction. It is possible for a student to graduate from almost any college without an original idea in his head. If he will give back to his professors what they have given him in lectures and in prescribed books, he may don a cap and gown and receive a degree. The highest grade, it is true, is reserved in some colleges for those who show independence of thought; but the "gentleman's grade" is still the badge of mediocrity which many present as their sole passport. I have known students to pass courses in even mathematics and formal logic by memorizing selected pages, with only the vaguest idea of what it all meant.

When a student has to write on any subject, his first idea as a rule is to look it up in a book. The college girl who, when asked to write a description of a sunset, applied to the librarian at once for a book on sunsets, was following the usual method. When students undertake to prepare for a debate and cannot find an argument in the library, all put together, they usually want to change the subject. Another substitute for thinking is suggested by a letter I received the other day which read: "Dear Sir: I have been chosen for our champion State debate on

Government ownership of railroads. Please send me six points on the affirmative. Thanking you in advance, Yours truly." Even the thesis required of a candidate for the degree of doctor of philosophy, which is supposed to be original work, does not always reveal original thinking. Some of these theses are no less mechanical and no more valuable than the accounts a bank clerk winds out of his calculating machine. In many colleges boys are virtually required to support their teams, turn up their trousers, choose their companions, and walk across the campus according to tradition. Such courses might better be elective, but thinking should be compulsory.

From year to year I have had young graduates of a number of theological schools in my classes in argumentation. They are difficult to teach because, in many cases, they appear to have acquired fluency of speech without the habit of thought. They do not distinguish between assertion and evidence. As preachers they have become accustomed to assert what they please with no one to answer them back—a dangerous experience for any one, prince or pauper, pope or prelate. They appear to be disciples of the author of a textbook on "Oratory" for young preachers who recommends his own method, as follows: "I went to my room, locked the door, placed the Bible before me on a mantel, opened it at random, and then on whatever passage my eye chanced to rest, proceeded to deliver a discourse of ten minutes. . . . At first I found it very difficult to speak so long right to the point. But, then, if I couldn't talk *on* the subject, I would talk *about* it—making good remarks and moral reflections—being careful to keep up the flow, and say something to the end of the term allotted for the exercise."

Four hundred and thirty-seven essays on "The Essential Place of Religion in Education" have been submitted to the National Education Association in competition for a prize of one thousand dollars. As one of the judges, I have read the best of these essays, many of which were written by ministers and teachers. Nothing in them seemed to me more conspicuous than the lack of logical structure. Most of the writers used undefined terms with shifting meanings, and at times with no apparent meaning at all. Few of the writers felt the necessity of proceeding from evidence to conclusion by logical reasoning; yet all were attempting to prove a proposition. They were arguing, but with little regard for the principles of argumentation. In short, they revealed no power of sustained thinking.

One obstacle to intellectual enthusiasm is the traditional conservatism of colleges. New ideas disturb the academic calm. The teacher is most comfortable who stays in the beaten path, teaching what he was taught and teaching it in the same way. Unless the college teacher takes resolute measures to resist the deadening influences of his position, his thinking is in danger of confinement to a small and diminishing circle. This is the danger referred to in the saying that every occupation has its disease: painters have painters' colic, plumbers have lead poisoning, and college professors have the academic mind. The non-conformist gets into trouble. Woodrow Wilson is safe enough as President of the American people, but as president of a university he had too many new ideas. He made men think about questions which they preferred to regard as settled once and for all by their ancestors.

Certain professors have been refused re-election lately by several universities apparently because they set their students to thinking in ways objectionable to the trustees. It would be well if more teachers were dismissed because they fail to stimulate thinking of any kind. We can afford to forgive a college professor what we regard as the occasional error of his doctrine, especially as we may be wrong, provided he is a contagious centre of intellectual enthusiasm. It is better for students to think about heresies than not to think at all; better for them to climb new trails, and stumble over error if need be, than to ride forever in upholstered ease on the crowded highway. It is a primary duty of a teacher to make a student take an honest account of his stock of ideas, throw out the dead matter, place revised price marks on what is left, and try to fill his empty shelves with new goods.

The "undergraduate" does well to complain of the "alluring ease of the environment," for the growing tendency towards luxurious living is one cause of the wane of intellectual enthusiasm among college students. The New England colleges, one hundred years ago, provided a better environment for study than they provide for all their students to-day, and the most magnificent of modern graduate schools has yet to show whether it will prove more stimulating to scholarship than the humblest college of a generation ago. Even the large universities of our frontier States have increasing numbers of boys who appear to have lost the power of walking from one college building to another. The freshman, stretched out in a barber's chair, with one man working at his head, another at his feet, and a woman at his hands, often acts as though he expected to have his mind taken care of with as little effort on his part. College fraternities, on the whole, have made matters worse. Even their efforts in recent years to prod their delinquent members seem to be prompted by other than intellectual interests. The history of fraternity houses at some colleges is a record of organized competition in luxury, usually maintained on borrowed money.

Another obstacle to intellectual enthusiasm is the dominance of intercollegiate athletics. Out-of-door games should provide recreation as a preparation for study rather than as a substitute for study. But intercollegiate athletics having won supremacy, students do not tolerate conflicting interests. Their own publications, the country over, if distribution of space is a true criterion, indicate that they regard intercollegiate athletics as more important than the combined offerings of art, music, literature, social service, politics, philosophy, and religion. This excessive interest in athletics by proxy is antagonistic to scholarly ambitions and to the cultivation of habits of sustained thinking.

Without habits of this kind students are not likely to find their way to religious foundations. No great truth comes without lasting incentives for the pursuit of truth. Transient and secondary interests in thinking will not suffice. Many college students who think a little about religion find the experience overwhelming. Encountering doubts concerning certain beliefs which they had once accepted without question as essentials of religion, they are inclined to give up everything rather than make the effort necessary to achieve new religious convictions. It is easier to have no convictions. Almost any course is easier for the young people of our time than staying with their difficulties, and bearing the birth-pains of new ideas, until they have builded their own durable bases of faith. For them a little thinking is a dangerous thing. They must come to feel the zest of the struggle—the keen joy of studying their way through—until they can say with Mrs. Browning, "If heads that think must ache, perforce, then I choose headaches."

Notes from Two Capitals

GLADSTONE UNDER THE MICROSCOPE.

OBSERVED BY SIR HENRY LUCY.

To the November number of the *Cornhill Magazine* Mrs. Asquith contributes some notes of a visit paid to Hawarden in December, 1889. They have the charms of vivacity and frankness. Designed with intent of throwing fresh light on Mr. Gladstone, like the quality of mercy, they are twice blessed, since they unconsciously reveal the personality of another, and in her way scarcely less interesting, individual—to wit, the author.

In a long walk taken with her host through the woods and grounds of Hawarden, Miss Tennant seized the opportunity to put the octogenarian statesman in the confessional. "Do tell me," she winningly said, "if you had to die to-morrow, what particular thing in yourself do you fancy has contributed more than anything else to your fame?"

As the House of Commons well knew, the Old Parliamentary Hand was not easily caught at question time. The inquiry was momentarily left unanswered by putting another. "In a similar situation"—that was his characteristically courteous method of alluding to his companion's suggestion of sudden death on the morrow—"what would you say about yourself?" Miss Tennant, thus posed, modestly admitted possession of "wonderful insight into character." Thus encouraged, Mr. Gladstone named power of concentration as the quality which more than any other had contributed to his success.

Unfortunately, in the course of another ramble this supreme power failed him. On starting, it occurred to a little black Spitz dog that he would like to join the company. This he did uninvited, and made constant demands on Mr. Gladstone's attention by retrieving sticks thrown in baffling directions. "Our conversation," Miss Tennant complains, "was constantly interrupted by Mr. Gladstone's remarks to the dog, while he stooped, as pleased as any schoolboy and quite as active, to pick up sticks and throw them for the brute to retrieve. I internally ached to throw the Spitz after them." Perhaps the reader will be obliged to the dog for creating an interlude that showed the usually grave statesman in a new and charming light. Here is another, different but equally vivid, pen-and-ink portrait. Going into Mr. Gladstone's library just before eight o'clock on a Sunday morning, Miss Tennant found him reading at a little table in front of the fire arrayed in an old black and white gardening hat, "like a sailor's hat, the brim sloping and curly with wear, a short plaid cape reaching below his elbows, and a woollen scarf round his neck. His shutters had not been unfastened, and the room was quite dark except for a single candle behind the old gentleman's head."

Miss Tennant's "wonderful insight into character" is illustrated by many shrewd remarks. "Mr. Gladstone," she writes, "is a deeply, sensitively religious man. He is famous not because the British people think him so clever, but because they think him so good. His critical faculty is not fine. Any one knowing him and wishing to impress him as being clever could easily impose on him. A woman would have to be very stupid or very honest to persuade him that she was not a remarkable woman."

Present visitors to Hawarden are of course excepted from the scope of these reflections.

In another passage she repeats what harsher critics were accustomed to say of Mr. Gladstone during his lifetime. "He is dangerously plausible to himself as well as to other people. He has no idea how much he loves power. It is his passion. It has come out of his heart into his head. At times it has carried obstacles away; at other times it has carried him away."

Miss Tennant graciously concedes to Mr. Gladstone that sense of humor others denied him. "It is a little grim and Scotch when intellectual, and rather clownish in its fun. Street-boy chat, practical joking of an amiable kind, all please him."

While in residence at Hawarden, Mr. Gladstone was always called at half-past seven in the morning, walking across the park to early service at a church where his son-in-law officiated. This early up-getting was one of his daily sacrifices. He did not like turning out at so untimely an hour. Once, falling unconsciously into Miss Tennant's manner, I asked him how long he slept at nights. "I always sleep eight hours. I should like to make it nine, and," he added with that twinkle of the eyes that suffused his countenance with a look of the questioned humor, "I think I could do with ten."

In relation to this question of a sense of humor, there is a well-known story. Some one in his company quoted a cynical remark of Disraeli's, laughing over what he called its humor. "You call it humorous?" said Mr. Gladstone with that angry flash in his eyes that genially reminded Mr. Lecky of the look of a vulture, "I call it devilish."

Though in most ways naturally antagonistic to his lifelong rival, Mr. Gladstone had for him some tenderness in his head if not in his heart. From the top of the bookcase in his cherished Temple of Peace at Hawarden, a bust of Disraeli looked down upon him. Talking to Miss Tennant, he said, certainly in no unfriendly way, "Dizzy was a wonderful judge of his immediate surroundings, friends, secretaries, and officials. Not a very good judge of the House, and absolutely no judge of the country." Oddly enough, Lord Acton, summing up Mr. Gladstone, put things just the other way about. "He is," he said, "a good judge of the country, a fair judge of the House of Commons, and no judge at all of his intimates and family."

While Miss Tennant was disposed to sit entranced at the feet of the great statesman, treasuring every word he uttered, her generous nature declined to let all the advantage of intellectual intercourse be on one side. Mr. Gladstone might know a thing or two, but Margot was acquainted with others, and was not backward in communicating them. On the whole, her companion found her a little hard to please. Discussing Goethe, she chilled his more enthusiastic approval by remarking that beyond "Faust," "Egmont," his lyrics, and some beautiful verses here and there, she "found Goethe rather heavy." Mr. Gladstone venturing on the remark that Shakespeare and Aristophanes contained the best humor in literature, Margot corrected him with the remark that "Shakespeare's sense of humor was very uneven and sometimes (like Goethe) rather heavy." Nor did more or less famous painters of modern and ancient times meet with unqualified approval. Holl's well-known portrait of Mr. Gladstone, hung above the fireplace in the dining-room at Hawarden, she "condemned as a portrait, even suspected it as a work of art." As for Raphael, like a once popular person in London society crossing the Atlantic, she was when in Italy "rather disappointed with this master."

There is striking testimony to the pleasure with which Mr. Gladstone regarded and remembered this visit. Immediately after Miss Tennant's departure, he, as was Mr. Wemmick's custom on an occasional afternoon, dropped into poetry.

When Parliament ceases and comes the recess,
And we seek, in the Country, rest after distress,
As a rule upon visitors place an embargo,
But make an exception in favour of Margot.

For she brings such a treasure of movement and life,
Fun, spirit, and stir, to folk weary with strife.
Though young and though fair, who can hold such a
eargo
Of all the good qualities going, as Margot?

Probably the statesman approaching his third term of Premiership was not so proud of some of his more famous triumphs as he was of writing these verses with their ingenious rhymes for Margot.

WILLIAM PITT KELLOGG.

The news that reaches us from day to day about the progress of affairs in Mexico and Haiti with Governments organized under the auspices of the United States, must make interesting reading for one resident of the District of Columbia. You would hardly think, to look at him, that he would find anything absorbing in the details of riots and revolutions, fugitive rulers, and *de facto* uncertainties. In his unpretentious bearing, his serious face with its frame of white hair and almost white moustache, his broad-brimmed soft hat, demure suit of black, and generally clerical presence, your shrewder guess would be that he was a professional man from the near South—a minister of one of the pioneer churches, a family doctor, or an instructor of youth on vacation, and you would be inclined to skepticism when told that he is one of the politicians who have made real history; a man without whose aid the Republican party would have gone out of power when Grant quitted the White House, and who, during Arthur's Administration, might have made Congress wholly Democratic if at one juncture the President had rebuffed his overtures. He is none other than William Pitt Kellogg, the star actor of the reconstruction drama in Louisiana.

Most people address Mr. Kellogg as "Governor," others as "Senator," still others as "Judge," and a few as "General." In truth, he has borne all these titles, and several more. He was a delegate to the Republican convention that nominated Fremont in 1856, and of that which nominated Lincoln in 1860. He was a Lincoln elector, and believes that he is the only one still living. Born in Vermont, he had migrated to Illinois and become a lawyer there, and one of Lincoln's earliest acts as President was to appoint him, though then only thirty years of age, Chief Justice of the Territory of Nebraska. But the Civil War broke out, and he soon exchanged his ermine for a pair of epaulettes, and rose from a colonelcy to the command of a brigade. In 1865 he was appointed Collector of the Port of New Orleans, and became so active a factor in local politics that the wave of reconstruction swept him into the United States Senate. Then he was named for Governor by the Republicans, whose claim to have elected him was disputed with force and arms by the Democrats, and for a while Louisiana had two governments. Presently, the rioting reached such a stage of fierceness that Kellogg, driven from the State executive buildings, took refuge in the Custom House, and directed his Administration from there. President Grant sided with him, and by the use of Federal troops held him in power till the Hayes-Tilden contest of 1876 came on.

It was to Kellogg that William E. Chandler telegraphed the warning that the Republican cause was lost without Louisiana, and it was Kellogg who, as Governor, signed the certificates of the eight Republican electors who voted for Hayes, with results which for a few days raised the spectre of a second Civil War. He was one of the Governors who had to give way when Hayes put into effect his programme of sectional conciliation, but the Republican Legislature elected him to the Senate again, and the Senate seated him in defiance of the efforts of the Democratic Legislature to get his election nullified. Later he sat in the House for one Congress. Could Anthony Hope have crowded more romance into the career of one of his fictitious heroes?

Kellogg is a pleasant enough conversationalist, but prefers leaving most of the talking to the other party. He is no raconteur. If he were, he could tell the full story of an interview he once had with President Arthur. A controversy had arisen between them over some policy that Kellogg deemed vital, but on which the President was disposed to be stubborn.

"Think twice, Mr. President," Kellogg is

reported as saying. "If you persist in your refusal, nothing is left for me but to resign my seat in the Senate. Would you like that?"

Arthur, who knew Kellogg never uttered bare threats, did think twice. The Senate, by a coalition between the Republicans and the Virginia Readjusters, was evenly divided politically, with David Davis, a Republican, in the chair and privileged to decide the issue when there was a tie vote. For Kellogg to drop out would mean not only the loss of one Republican, but the seating of a Democrat in his place, and the House was already Democratic. It took but a minute or two to review the situation, and Arthur yielded his point.

One of the men whom Kellogg used to like best in Washington, and who seemed to have a very kindly feeling for him, was Gen. Sherman. Both were warmly hated in various parts of the South, the one for his memorable march through Georgia, and the other for his conspicuous activities in the carpet-bag era. A common sight in Congress, while Kellogg was a member, was the grizzled head of the General in confidential proximity to the smoother one of the masterful politician, during one of Sherman's frequent visits to the Capitol, when the two veterans exchanged whispered comments on the men and measures of the day. Kellogg is no longer a power in politics, for he is eighty-four years of age; but his taste for the old game, and his interest in every important move made in it, particularly in the far South, is as keen as ever, and will not die till he does.

TATTLER.

Correspondence.

"THE CASE OF MISS CAVELL."

TO THE EDITOR OF THE NATION:

SIR: I cannot escape the feeling that much that has been written in this country and in England on the case of Miss Cavell is not only unfair to the Germans, but rather degrading to Miss Cavell, to her sex, and to the cause for which she so nobly sacrificed herself.

The *Nation*, in its issue of October 28, finds it necessary to go back to the reign of James II before it can find a case in English history sufficiently shocking to compare with the action of the German court-martial. It cannot find "the like of" the Cavell case in any occurrence since the execution of Alice Lisle for sheltering fugitives from Monmouth's army, after that army had been defeated and dispersed.

These two cases are surely far from similar. Alice Lisle's act was performed at a time when there was no war. Monmouth's rebellion was utterly crushed. His followers were all either dead, captured, or in hiding. It was humanly impossible for them or any of them, singly or collectively, to do any injury to the government of James II. Alice Lisle simply tried to shelter some wretched, helpless hares from the pursuing hounds. Neither she, nor the men she tried to help, could possibly—if they would—have harmed the powers that were. The proceedings against them were actuated solely by motives of revenge, unmitigated by any element of self-protection.

Miss Cavell, on the other hand, was engaged in furnishing soldiers to the Allied armies. Living in a place under German control, she was secretly recruiting troops for Germany's enemies. Her acts were acts of direct and conscious participation, on the anti-German side, in a war which could by no means be said to be ended. And these acts were being conducted by underground methods within the German lines.

When spies of a hostile army are caught, they are usually executed at once, without regard to sex. This may be a barbarous practice, but all the present belligerent nations, as well as all other civilized and Christian nations, regard it as a just and necessary one. Miss Cavell's act was, perhaps, not technically espionage, but, to my uninitiated mind, her activities seem to have been even more dangerous, to the Government against whom they were directed, than those of most spies. If, then, it is not barbarous to execute spies after a military trial, I cannot see why it was barbarous to execute Miss Cavell after a military trial—granted that the "offence" in both cases is legally recognized, which appears to be an undisputed fact. The French, Belgian, and English soldiers whom Miss Cavell helped across the border are now engaged in killing Germans. Surely, we cannot blame the Germans for wishing to put a stop to this, and to deter other people, if possible, from doing likewise. According to German military law, it appears, these actions are punishable with death. Being opposed to the death penalty under any and all circumstances, I cannot approve of this; but I cannot see why it is more "barbarous" than—for instance—the execution of spies. And no French or English officer would hesitate to execute a German spy caught within his lines—whatever the sex of the spy.

At any rate, it seems to me that only a false "chivalry" can expect a woman to be favored on account of her sex under such circumstances. To make such claims is unworthy of Miss Cavell and is an insult to womankind. Miss Cavell was evidently a strong, brave woman, who deliberately chose to risk her life for her country. All honor to her. She knew what she was doing; her eyes were fully open; when she was caught she scorned to lie or play the baby; she took her medicine—I was about to say, like a man, but her act was one of those which show that courage—of whatever sort—knows no restrictions of sex. All that I have seen of her history seems to indicate that she would have been ashamed of the antiquated "chivalry" which has been so much invoked to condemn her judges. The work which she did for her country was just as good and valuable work (and therefore just as injurious to the Germans) as any man could have done in her place. She did it intelligently, consciously—in short, as any real man or woman would have done it; knowing very well what the consequences would be if she were discovered, and willing to suffer them.

There are, then, only two grounds on which it can be argued that it was "barbarous" to execute her. One is the ground that most or all acts of war, and particularly the customary treatment of spies, are barbarous. With this proposition I should cheerfully—or rather sadly—agree; but it would scarcely furnish a good ground for an indictment against Germany on the part of any of the nations which are at present vying with her in upholding civilization and Christianity. The other is that conception of woman sometimes called "mediæval" (though apparently it still flourishes), which would make all women irresponsible chattels, who cannot be punished for the same reason that children and insane people cannot be punished—because they are not responsible for their acts; they are not, in the full sense of the term, human beings. This is why it seems to me an insult to the whole sex to say that it was exceptionally barbarous, as compared with other acts of war, performed every day by both sides, to execute Miss Cavell.

Mr. E. A. Powell, in the November *Scribner's* (p. 525), tells of the shooting of a German woman for espionage by the French in Alsace. The French were regretful, of course, but "she was endangering the army"; this is the French for "military necessity." Why does military necessity excuse a Frenchman or an Englishman for doing what would be unspeakable barbarity if done by a German? I have heard no lamentations or denunciations anent the death of this German heroine; Mr. Powell does not even give her name.

Lest my views be supposed to be inspired by pro-German sympathies, let me add that I have been "pro-Ally" since the beginning of the war, and still am, as any acquaintance of mine can testify. But I think that the Allies' case would not be weakened (a) if its public advocates would hold fast to their tempers and to their logical faculties, nor (b) if they would criticise the acts of the Allies and the Germans on an equal basis. Thus (a) the *Nation's* historical "parallel" to the Cavell case proves, on the most casual examination, to be no parallel at all; and (b) while the *Nation* cannot find words to denounce the shooting of an Englishwoman by Germans, it does not think it worth while to mention the shooting of a German woman by French—for substantially identical reasons.

FRANKLIN EDGERTON.

Philadelphia, November 2.

[Our correspondent places the case of Miss Cavell throughout on a par with that of a spy, whereas the essential reason both for the interposition of our Minister and for the world's indignation at the brutal disregard of that interposition lay in the fact that she was not a spy. Had she been a spy, it may be presumed that the military authorities would have seen no reason for rushing her execution in the dead of night a few hours after her sentence had been pronounced and without informing our representative that she had been sentenced.

Another point well deserves attention at the hands of those who find fault with the fierce condemnation passed upon Germany by neutral countries for this act, when no such outcry has been raised over executions of spies in England or France. These fault-finders seem to forget that nobody inquired whether in the course of fifteen months of war Germany has not executed an untold number of spies—and whether among these there was not a woman—and that it was not until she committed this barbarous act against a woman who was not a spy that she was made to suffer the reprobation of the world. If Germany wishes to receive no harsher censure than her enemies, let those who govern her policy draw the line of deliberate and ferocious inhumanity some-

where near the point where the other nations of the world draw it.—Ed. The Nation.]

"LES ECRIVAINS FRANCAIS PENDANT LA GUERRE."

To the Editor of The Nation:

Sir: Madame Fernand Baldensperger has so many friends in America that it may seem superfluous to call attention to the deeply interesting series of books, "Les Ecrivains Français Pendant la Guerre," of which she has general direction. The purpose of this series is to bring together in compact volumes writings, originally occasional and often scattered, in which some of the more eminent living French men of letters have recorded, from day to day, the facts and the meaning of times already among the noblest in spiritual history. The first volume, of some hundred and fifty pages, contains a selection from the articles published between September and March by Maurice Barrès. The next volume will similarly collect writings by Emile Boutroux; the third, writings by Ernest Lavisse. And other volumes will follow. Nothing could more instantly or more deeply appeal to those who care for France.

Barrett Wendell.

Boston, November 4.

IN BELGIUM.

To the Editor of The Nation:

Sir: The press dispatches bring us this morning the particulars of the attempt made by Minister Whitlock and Mr. Gibson to procure some mitigation of the sentence passed by the German officials in Brussels upon Miss Edith Cavell—with the details as to the manner of the carrying out of which sentence we were already too familiar. In another column a telegram from Tiflis estimates that of the million and a quarter of non-combatant Armenian inhabitants of Turkey existing at the outbreak of the war, but two hundred thousand are now alive. In still another column the *Echo de Belge* prints the announcement of the German authorities that, in the event of the bombardment by the Allied aeroplane service of a German military barracks in Belgium, "German soldiers will be quartered in civilian homes and the community where the attack occurs fined in proportion to the damage sustained"—Germany having already given the Belgian people a sample of her methods in the fine levied upon Brussels in July for the destruction by British aeroplanes of a Zeppelin dirigible in the military sheds at Evere.

The question arises once more in all its poignancy as to the responsibility of the nations who are not themselves involved in the war for the existence and the continuance of this régime. In the face of this wholesale and deliberate inhumanity, which depraves alike those who have initiated it and those under whose unprotesting eyes it is persistently carried on, any feeling of complacency over the peace which we enjoy at this Thanksgiving season would seem to be misplaced. What is happening every hour in Europe, while we prepare to feast and praise, is that alike the material and the moral achievements of mankind are being flung into the dust heap by the most pitiless and the most perfidious despotism this earth has ever known.

William Higgs.

Gilroy, Cal., October 22.

THE SEAMAN'S ACT.

To the Editor of The Nation:

Sir: In your issue of October 21 you cite the fact of the Matson Company embarking on the building of a large steamer as proof of the fact that the blighting influence of the Seaman's Act was not so bad as painted, but you overlook the fact that this vessel is for a protected trade, viz., that with Honolulu, which is secure against the competition of foreigners. This instance, therefore, proves nothing, and the fact remains that to-day we have no American tonnage plying across the Pacific to the Orient, and are not likely to have, with the result that business is very much hampered and out of gear. Mr. McAdoo, when here lately, informed us that there was nothing in the Seaman's Act to circumscribe the activities of American tonnage, which shows a strange state of mind. The trouble is, marine matters are being dealt with by landsmen who are absolutely unqualified to deal with laws under which other nations have thriven and grown great. It is the one black mark against the Wilson Administration in these parts.

The new law actually goes to the extent of practically requiring the doubling of crews and lifeboat equipment on the tugs plying on our ocean bar, changing conditions that have obtained from time immemorial!

W. J. B.

Portland, Ore., October 27.

THE LIABILITY OF CORPORATIONS.

To the Editor of The Nation:

Sir: In his letter dated September 10, published in the *Nation* of October 28, Mr. Bagby assigns as the chief cause of the Eastland calamity legislation limiting the liability of shipowners to the value of the vessel plus pending freight, and argues for a wider rule that would enable recovery to be had even to the full extent of the owner's assets, as in the case of land carriers. Unfortunately, a practical consideration stands in the way, except the shipowner be a natural person as distinguished from a corporation; for it is possible so to disintegrate the assets of any maritime company that each unit may be held by a single corporation, substantially all of whose stock would be in the hands of one holding company. With each individual company acting as operator, in effect, the legislative rule will control. Owners of tenement property have for some years, in order to avoid sweeping liability for claims for negligence, incorporated on the lines of one house a company. One accident might wipe out the equity in a single house, but would leave the other assets of the landlord unimpaired—and so the shipowner, taking a leaf from the accident insurance companies and tenement-house owners, will escape all liability except that which the damage-faisant property may incur. No, you will have to cut somewhat deeper into the corporate crust to get anything of substance.

B. T.

New York, November 3.

THE RECOGNITION OF CARRANZA.

To the Editor of The Nation:

Sir: The recognition of Carranza by the Administration may be taken as a masterstroke of enlightened foreign policy, or as an ungraceful backdown from lofty and unaccomplished ideals, according to the temperament of the spectator, but the cold facts remain the same in either case.

Carranza is recognized as the Jefe of Mexico, not as the result of an "orderly, legal election participated in by the whole people," but because he has proved himself in a military sense the strongest of a number of insurrectionist leaders. The same violence, bloodshed, and negation of legal rights characterized his campaign as have characterized most Presidential successions in that unhappy country. He waded through slaughter to a throne—and we have recognized him for that reason, after proclaiming that we should do nothing of the sort. Unofficially and tacitly we have acknowledged that orderly constitutional government in Mexico is an impossibility.

Yet it must be admitted that the Administration has displayed no unseemly haste in the matter. The funeral baked meats of Mr. Bryan's régime have been allowed a decent period to cool.

The difference in the achievements of Carranza and Huerta being not easily comprehended, the uninstructed man in the street will inquire—and the future historian will probably ask the same question—why, if we must accept military success as a criterion, did we not recognize Huerta in the beginning of the rebellion and save our national self-respect and thousands of Mexican lives and millions of Mexican property?

Literature

A PERSONAL BIOGRAPHY OF HAY.

The Life and Letters of John Hay. By William Roscoe Thayer. 2 vols. Boston: Houghton Mifflin Co. $5 net.

Mr. Thayer warns in his preface that this is a personal biography of Hay, not a political history. For the latter, even as it merely concerns Hay's public career, the time has not come. Secrets are still locked in official archives. Documents have still to be read in confidence. To the biographer of Cavour, this limitation must have been somewhat irksome. He would have wished to make each hidden record yield its evidence. And the fact that he could not go to the bottom may have inclined him to be a little careless, now and then, about what is to be found on the surface. One example of this is in his account of the stealing of the Panama Canal Zone. Hay was not responsible for this, except as he acquiesced in the crime, after it was committed, and defended it. But it is necessarily an episode in his official life. Mr. Thayer endeavors to treat it dispassionately, but he falls into a serious mistake. Referring to the famous order to prevent the landing of Colombian troops "at any point within fifty miles of Panama," he remarks: "Such orders were by no means novel; similar ones had been issued during many previous upheavals." This is a discovery of Mr. Thayer's own. Senator Spooner would have given much

to know of it. He was put up to defend President Roosevelt in the Senate, but admitted that the fifty-mile order was indefensible, as being both illegal and without precedent. Mr. Thayer confuses a simple order to keep open the traffic across the Isthmus—as we had a right to do under treaty—with the unheard-of order to prevent the Colombian Government from exercising jurisdiction over its own territory. The effect was, as Mr. Roosevelt elegantly puts it in a letter to Mr. Thayer, here printed, "to prevent the bandits . . . from spending months of futile bloodshed in conquering or endeavoring to conquer the Isthmus."

We hasten to add that there is no other slip like this in Mr. Thayer's pages. Occasional minor errors are met with, besides those obviously due to the proof-reader; and some of the political comments seem to lack both due proportion and sureness of touch; but, on the whole, the work merits praise. It is highly readable. John Hay's personality is brought out most engagingly. To make sure that the impression of it is uncolored, Hay's letters and diaries are allowed to speak for themselves. Mr. Thayer's chief material lay in the volumes which Mrs. Hay caused to be privately printed. To one who had the reading of them much here seems familiar. But it will bear re-reading. And by no other means could the true John Hay have been put before us in habit as he lived.

Particularly welcome is the account of John Hay's early life. We see his precocious talent, which led his friends to believe that he would go far. At Brown he impressed his fellows and his teachers as of superior clay. His class poem was very nearly a sensation. The letters and other writings of his which date from those days suffer from being consciously "fine," but he soon acquired a style at once more facile and more witty. He was still young when he began to display that note of character which Mr. Thayer describes as "shy fastidiousness"; and soon in evidence also was a tendency to fits of melancholy, which persisted to the end of his days. It was a sheer gift of fortune which made John Hay secretary to Abraham Lincoln, but he used it so well as not to discourage fate from showering other opportunities upon him. "I really believe," wrote Hay in 1902 to his brother-in-law, "that in all history I never read of a man who has had so much and such varied success as I have had, with so little ability and so little power of sustained industry." That was not feigned modesty. It was a piece of self-analysis. And it had much truth in it. But if Hay was not a man of first-rate mind, he had varied powers ever at command, and a charm of manner and a gayety of wit which knit for him admiration and many warm friendships. It is, after all, John Hay the man of letters, the lover of art, the humorist, that stands out in these volumes more than John Hay the statesman.

Upon his Civil War diaries Hay drew freely for the Life of Lincoln, which he wrote in collaboration with Nicolay, and of which the genesis and slow execution are set before us by Mr. Thayer. A few stories were left over, with many shrewd characterizations of men and things. It was in a later diary, the one which he kept in Paris, that Hay wrote: "Col. Ritchie informed us to-day of Sumner's engagement to Mrs. Sturgis Hooper. He wrote a letter to Mrs. Adams announcing his engagement, but did not even mention the lady's name. This is eminently characteristic. The great point with Sumner is that *he* is to be married. If the lady happens to get married about the same time, all the better for her. But this is quite a secondary consideration." There could hardly be a neater way of bringing out a foible in the man of whom Howells has said that Sumner's egotism was so great as to be a standing affront. Hay saw Motley in London, shortly after the latter had been recalled from Vienna. "I shall never have any more doubt as to the long-mooted question whether it hurts a man to cut off his head. It hurts like the devil." For a literary reference, take this about Henry James, written in 1882: "The worst thing in our time about American taste is the way it treats James. . . . If he lived in Cambridge he could write what he likes, but because he finds London more agreeable, he is the prey of all the patriotisms. Of all vices I hold patriotism the worst when it meddles with matters of taste." Many other things as good or better the reader will find in Hay's diaries and in his letters to Henry Adams, with whom his close friendship was one of the passions of his life.

What was Hay's attitude towards the political movements of his day? This is a large and difficult question. It visibly troubles Mr. Thayer. He is under no compulsion to make out Hay a hero, but he seems at times to labor under the fear lest an impartial recital of all the facts may make out Hay a good deal less than a hero. At all events, he conceals nothing, even if he seeks to explain away much. He does not deny that Hay became a very intense Republican of the Mark Hanna school, with a strong belief in the autocratic rights of property. And if the later John Hay was ever generous to a political opponent, he failed to leave a record of it. The nearest thing to it in these volumes is this remark about Bayard in London in 1894: "How our Ambassador does go it when he gets a big roomful of bovine Britons in front of him. He knocks them all silly. I never so clearly appreciated the power of the unhesitating orotundity of the Yankee speech as in listening—after an hour or two of hum-ha of tongue-tied British men—to the long wash of our Ambassador's sonority." But of all other Democrats Hay thought exceedingly ill. He voted for Tilden as Governor in 1874, but that effort seems to have dried up his milk of Democratic kindness. He saw nothing in Grover Cleveland. Of other Democratic leaders he wrote with a cynical and corrosive pen.

If this method were to be retorted upon Hay himself, a sorry showing could be made. It could be said that he tried the literary life and journalism and reform until he found that it did not pay, and then gave it up. After marrying a fortune, he sedulously attached himself to the rich wing of the Republican party, became a regular and heavy campaign contributor, and expected and got his reward. He was one of those who paid off McKinley's debts, and McKinley promptly made him Ambassador to England. And it could be alleged that if Hay was very deferential to money, he fairly prostrated himself before power. He had no illusions about his men. He made rather a joke of McKinley until he discovered that in him was a potential President and a dispenser of offices. His first opinion of Roosevelt was altogether the Mark Hanna view—partly amused contempt, partly apprehension as in regard to a trouble-maker. But once Roosevelt had a secure grasp on power, no one was more abject at his feet than John Hay. As Secretary of State under McKinley he had written of the "imbecility" of those who wished to fortify the Panama Canal. But as Secretary of State under Roosevelt he speedily recanted. No Republican President could be imbecile—especially if he kept John Hay in office.

Still further might go the pen dipped in gall like that which Hay used against his political enemies. It could point to the anomaly of a man who, though as editor of the *Tribune* he was famous for his invective directed against public men, when himself a public man could only speak of "filthy newspaper abuse." It could dwell upon his pretty talent for flattery, which he used so unblushingly whenever it furthered his own purposes. It could point out moral inconsistencies, as when he denounced "the dirty politicians" in private, but was willing to take what they had to give him in public; when he railed at the Congressional spoils-seekers who thronged his door in the search for Consulates, yet saw to it that his own son was appointed Consul. And from his relations with Whitelaw Reid the envenomed commentator might infer that Hay knew how not only to profit by his friends, but to throw them over.

All this would be grossly unfair—as unfair as John Hay was in writing of Democrats. A complex nature like his cannot be nicely pigeon-holed. His motives were not so simple as he perhaps thought them. We have, indeed, this early and self-revealing record of his: "I am not suited for a reformer. I do not like to meddle with moral ills. I love comfortable people." It is along something of this line that Hay's public career is to be explained. If he was not delicately scrupulous about the means of getting his abilities an opportunity, he used them so as sincerely to do some service to the state. His Ambassadorship in London was too brief to show fully what he might have made of it. What he did do was useful, though it seems to us to be over-praised by Mr. Thayer. But of his long term in the Department of State, all of us can think with honest pride. He was by no means

a perfect Secretary. In the matter of organization he was weak. A born executive like Mr. Root found much to clean up when he succeeded Hay. And Hay was too thin-skinned to bear up well under the slings and arrows of criticism and opposition. He did not suffer Senatorial fools gladly. He offered to resign, in a good deal of a pet, when the first Hay-Pauncefote treaty was rejected by the Senate. But in the great things of the Department he displayed a flexibility and a grasp which delighted his friends and surprised those who did not know him. He fairly earned his place among our greater Secretaries of State.

CURRENT FICTION.

The Glorious Rascal. By Justin Huntly McCarthy. New York: John Lane Co.

Mr. McCarthy here constructs a conventional romance of mediæval Paris around the person of the youth Villon. The story closes with the death of Sermois. The clumsy street brawl of 1455 becomes a fairly fought duel, brought about under circumstances that would afford a spirited final curtain for dramatization. The royal pardon which actually followed the homicide and the biographically blank three years which preceded it, invite the romancer's counterfeit conjecture that the death of Sermois was a timely service to persons of high degree. But the hero, in his idealistic attachment to the wife of the Provost of Paris and daughter of the ex-Provost, has more the tone of a Dante than of a Villon. Even his student pranks and dissipations are matter of spiritual struggle. The author long since showed himself fluently practiced in the cloak and sword conventions. In this unbelievably rehabilitated Villon he has not improved on his earlier portrait in "If I Were King."

The Insulted and Injured. By Fyodor Dostoevsky. Translated by Constance Garnett. New York: The Macmillan Co.

Russian Silhouettes. By Anton Tchekoff. Translated by Marian Fell. New York: Charles Scribner's Sons.

To the extent that Dostoievsky can be imagined as approaching the commonplace he does so in what is at the same time the shortest and the least distinguished of the novels that have so far appeared in the admirable Garnett translation. Here there is melodramatic plot of a kind that is absent from his earlier tales, and which, taken in conjunction with the gray atmosphere of the St. Petersburg slum, strongly suggests Dickens of the sombre parts of "Bleak House" or "Our Mutual Friend." These very qualities of brevity, sustained plot interest, a minimum of the Dostoievsky horror, and a less exasperating subtlety of character and motive analysis, should make "The Injured and Possessed" the most suitable of all his novels for the beginner, who nevertheless will find enough of the peculiar quality of the greater works to carry him forward. The story has the characteristic Dostoievsky setting of poverty and chill winter and sickness of body and soul, the characteristic movement in the form of almost interminable and almost endlessly repeated conversations, interrupted by poignant bits of tragic action. It has the characteristic Dostoievsky hero in the person of a youth who loves two women in alternate half hours, and continues doing so without subsidence or climax to the end of the book. In this feature lies the very serious weakness of an undeniably great writer. Dostoievsky's enigmatic men and women frequently do not pass through a psychological evolution, but simply keep on changing their minds back and forth, with somewhat of the effect produced by the red and white revolving pole of the modern barber shop. Such is the fickle Alyosha of the present story, to whom Dostoievsky by formula opposes the constant Natasha; always you find steadfastness and gentleness sacrificing itself to selfishness and psychic instability. But in spite of these traits the book does come nearest to our own standards in fiction. We have spoken of Dickens. A scene like the death of Nellie in Dostoievsky's story is very close to the tradition of "The Old Curiosity Shop."

Bracketing Anton Tchekoff with Dostoievsky at the head of the same book review is justified by something more than the accident of publication dates. Tchekoff has eminent merits of his own, but when one takes up this latest volume of his short tales after going through a volume of Dostoievsky, the thought occurs that Tchekoff has a very distinct use to the foreigner as a corrective, we may say almost an antidote, to other Russian writers. For one thing, Tchekoff is a humorist, second only to Gogol in Russian literature. Laughter is not merely a welcome relief in the sad pages of the Russian novelists just now in vogue among us, but is absolutely essential to a proper view of Russian life; for, after all, people do laugh in Russia. We might have known as much when we used to read Tolstoy and Turgenieff, but now that Russian literature is synonymous with the gloom of Dostoievsky and the morbidities of Artzibasheff, it is well to recall that there is at least one Russian who, knowing life far more intimately than Artzibasheff, and knowing it in its tragic aspects, has nevertheless seen another side. That the Czar's empire is not altogether peopled with victims of poverty and oppression, with half-mad intellectuals and eroticists, with the human dregs of Gorky's Abyss, will be made manifest in the present collection of stories of child life, of adolescence, and of the vagaries of adult character which are not always depressing. We imagine that to many it will come with a shock of surprise to learn that in Russia there are schoolboys who run away from home to fight Indians in quite the normal fashion, having first selected for themselves appropriate appellations like Montezuma Hawkeye and Paleface Brother. Tchekoff would not be a Russian if even in his most extravagant moods there did not appear that immediate sense of reality which is the hallmark of the national literature. It is instructive to compare the unforced humor of child life as Tchekoff sees it, in this charming volume, with the artifices of our own juvenile humor at its contemporary best, as we have it, for instance, in Booth Tarkington's "Penrod." With us the type has apparently been fixed once for all by Huck Finn. A just appreciation of Russian literature calls for a bit of Tchekoff with Dostoievsky, with Gorky, Andreieff, Artzibasheff, who, after all, are representative of only one phase of the Slav soul.

MILITARY REFORM.

The American Army. By William Harding Carter, Major-General, United States Army. Indianapolis: The Bobbs-Merrill Co. $1.50.

The casual reader who takes up this book in the hope of finding some account of the Regular Establishment will suffer a momentary disappointment. Gen. Carter's outlook is far broader than a narrow definition of his title would imply. And yet he might very well have written of the Regular Army alone, whose achievements, in both peace and war, would in any other country but ours be a subject of national pride. To the vast majority of Americans these achievements are unknown; it is questionable, given the indifference of our people, if any good purpose could be served by dwelling on them. Be this as it may, Gen. Carter's purpose is wholly different. Under the title chosen by him, he assembles and considers all the elements, regular, militia, or volunteer, that in time of stress would constitute the American army. By that we do not mean that he assumes a national stress as his major premise; on the contrary, he investigates the relations to one another of these elements under normal conditions, and, most important of all, their relations actual or possible to the central authority. Nor is his survey limited to the present day; since the army, or better put the military, question is necessarily an evolution, his exposition involves a discussion of our military policy. In short, as might have been expected from his known studious and scholarly character, from his experience, administrative and executive, and from his researches into our military history, Gen. Carter has given the country a calm and philosophic discussion of the military question as it presents itself to the contemplation of serious inquirers after the truth.

We cannot here name all the subjects covered by this discussion; so to do would be merely to reproduce the table of contents. We must content ourselves with saying that no considerable subject relating to organization has been left untouched, whether pensions, schools, volunteers, the organized militia, reserves. In respect of form, the vol-

ume consists essentially of a series of independent investigations, each complete in itself, save that the great subject of forces outside of the permanent establishment appears and reappears during the course of the argument.

Not so much as a trace of militaristic spirit is to be found in the pages of this volume. Under this head, Gen. Carter's reasoning should make a special appeal to pacifists, to whose earnest consideration we recommend it. For the author does not advocate a great standing army, an army of numbers; indeed, his moderation in this respect is remarkable. But he does point out the fundamental defects in the laws under which troops must be raised if needed, and suggests remedies. These lie mediately with Congress; hence, ultimately, it is the people who must decide: a sufficient answer to any who may see in this book a militaristic tendency.

Gen. Carter makes certain recommendations for the betterment of military affairs in our country, such as the formation of regimental depots; the establishment of an expeditionary force completely organized with its staff and supply system, and the creation of colonial troops for service beyond the seas. He would send enlisted candidates for commissions to West Point, and has the courage to recommend a radical reform in the matter of the appointment of officers from civil life. Although some of these recommendations would call for Congressional sanction, yet they may be regarded as municipal in character, as falling within the domain of the interior administration of the army. It is far otherwise with the great question of militia and volunteers, national in its scope, constitutional in its affections, and vital in its possible results. Unless some change is made in the system, then, in the words of the author, "we are drifting to certain disappointment." For example, under the act of May 27, 1908:

> When the military needs of the Federal Government, arising from the necessity to execute the laws of the Union, suppress insurrection, or repel invasion, cannot be met by the regular forces, the organized militia shall be called into the service of the United States, *in advance* [author's italics] *of any volunteer forces which it may be determined to raise.*

This act was modified by the statute of April 25, 1914:

> to the extent that after the organized land militia *of any arm or class* shall have been called into the military service of the United States, volunteers *of that particular arm or class* may be raised and accepted into service, in accordance with the terms of the act, regardless of the extent to which other arms or classes of militia shall have been called into service. It should be borne in mind that for any military operations beyond our borders the militia cannot be called into service, but must volunteer, so that until the members of each organization decide whether or not three-fourths of the minimum prescribed as the strength of the particular unit will volunteer, the President is debarred from calling for volunteers of similar arms or classes. *All this* [italics ours], *be it observed, is to take place after war is upon the nation.*

How did this muddle come about? Gen. Carter tells us:

> This status of legislation has resulted from the active efforts of the association of officers representing the interests of the National Guard, who have held the opinion that the organization of volunteer regiments for national purposes would, in time of peace, react unfavorably upon the organized militia.

This numbers, be it added, a little over 100,000 in a population of nearly 100,000,000. A by-product of the laws under remark, is that "the trained and proved officers of active military service . . . must needs be employed under generals appointed by Governors of States in time of peace, and for reasons which perhaps would not have been effective had the Governors recognized that the peace appointments would carry actual command in war." Let us pray for peace, not merely because peace is sweet and right, but also because war would find us with our hands self-tied behind own own backs!

Gen. Carter proposes a remedy, the creation of Federal Volunteers, that commends itself to the attention of those responsible for the destinies of the nation, and even more to the body of our citizens, whose opinions and desires in the long run determine our national policies. For there can be no doubt that the people, whether rightly or wrongly, are taking note of our national defence as never before; to them, and to their representatives in authority, Gen. Carter's book should prove a source of wise suggestion and of useful action.

THE PROBLEM OF TRUSTS.

Trusts and Competition. By John F. Crowell. The National Social Science Series. Chicago: A. C. McClurg & Co. 50 cents.

The Prevention and Control of Monopolies. By W. Jethro Brown. New York: E. P. Dutton & Co. $2.25.

Darling on Trusts. By Joseph R. Darling. New York: The Neale Publishing Co.

The "Trust" problem is really very simple in principle. All we want is that to every man shall be given under "fair competition" the "opportunity" that he ought to have and to every company, big or little, the opportunity that *it* ought to have by means of "coöperative efficiency," provided that it pays to labor the wages labor ought to have, buys its materials from producers at "fair" prices, returns "fair" profits to its stockholders, and sells its products at "fair" prices to the consumer. We are all agreed—except the Socialists—that all these things should be accomplished by legislation or regulation, or both, and some of us hope that such accomplishment is feasible. If there be in these days any so poor as to do reverence at the dilapidated shrine of the "Manchester School," they are not, it would seem, writing books or making laws.

It is admitted by most that government must develop a new function—that of "administration." Dr. Crowell in his excellent little handbook says:

> This extension of public powers is differently interpreted. To some it means incapacity in self-governing industry. But the more scientific view is the truer—that it is only a division of labor, in which government, whose business it is to decide controversies, extends its services over into the field of free enterprise. This is not because its decisions are more nearly ideally just; but, as the cricket umpire explained to the novice, that some sort of a decision may be rendered promptly "so that the game may go on." This is why government by commission has come to play so large a rôle in the complex conditions of modern trade and industry. Where one sort of umpiring proves unequal to the task it is set aside for another. Commissions will be needed until the administrative arm of government, as contrasted with the other three divisions, comes to stand on an equality with them. Then we may have the four cornerstones of a complete system of governmental control in the executive, the judiciary, the legislative, and the administrative (pp. 166, 167).

Mr. W. Jethro Brown comes to much the same conclusion when, speaking of the Anti-Trust acts of Australia, he says:

> To leave the ordinary courts to work out by themselves a definition of what is fair and what is unfair competition or to determine when a monopoly is or is not repressive, or to declare what is or is not to the detriment of the public is to impose upon a purely judicial tribunal the necessity of adjudicating upon issues of which the determination more properly belongs to some body especially created for the purpose of dealing with such subjects. . . . A satisfactory administration of anti-Trust legislation involves powers of negotiation with business concerns, powers of mere investigation, powers of calling upon a Trust to revise its scheme of prices, powers of making specific recommendations to the Legislature, and powers of dissolving a repressive monopoly under conditions which shall adequately secure the purposes which the Legislature has in view. These powers should be exercised by a special administrative body capable of giving a judicial decision as a court of first instance, but also capable of acting in more direct and expeditious ways where the circumstances of the case admit of this being done consistently with the attainment of the purposes which the Legislature has in view (pp. 91, 92).

Both Dr. Crowell and Mr. Brown believe in regulation by commission as a remedy for "unfair" competition and a preventive of monopolization. Dr. Crowell does not think much of "publicity"; Mr. Brown considers it useful within certain limits (chap. v). Neither believes in "limitation of size" for corporations apart from the question of monopoly. Neither believes in nationalization in a general way; but Mr. Brown distinguishes certain kinds of enterprise as suited more or less for that kind of control. Dr. Crowell nowhere discusses the fixing of prices by the state; Mr. Brown believes that such control of prices is possible and desirable in the case of monopolies as the only alternative to nationalization.

The conclusion that one reaches from the

arguments contained in both these books is that experimentation in governmental control through publicity, regulation by commission, and fixing of prices will very probably result in some ultimate improvement of trade conditions from a social point of view, but that up to the present time no one has a very clear idea of how things will work. There is almost as much ground for hoping that the improvement will come from the tacit adoption of a gradually higher standard of morals by "business" itself—especially "big business"'—as there is for hoping for it from the superior wisdom and purer intentions of those entrusted with the administrative powers. Railway history of the last twenty years seems to warrant this statement.

The chief value of Mr. Darling's book is its summary of facts with regard to the principal cases decided under the Sherman Anti-Trust law.

LITERARY CRITICISM.

Critical Essays of the Eighteenth Century, 1700-1725. Edited by Willard Higley Durham. New Haven: Yale University Press. $1.75 net.

Excluding, for practical reasons, Shaftesbury and all Shakespearean critics, the editor "aims to present . . . the more significant criticism published between 1700 and 1725." Later he hopes to cover the second quarter of the century and "to offer as a separate study a history of the development of literary criticism and popular taste in the eighteenth century." Judgment of the present volume, therefore, is only judgment of the first instalment upon a project of very considerable scope.

His editorial apparatus Dr. Durham has intentionally made brief in order to permit the inclusion of more text. Notes and bibliography are slight, and the introduction "aims merely to suggest certain points of view from which the texts may well be read." There is, nevertheless, a great deal in this introduction which makes one look forward eagerly to the promised critical history of the eighteenth century. It is unusually brisk and pointed: "there is nothing half-hearted or undecided" about it, as the editor himself remarks of Allan Ramsay's preface to "The Ever Green." One may well object that many assertions are not proved and that a straw man who knows nothing whatever about the eighteenth century is rather needlessly knocked about. But one cannot help liking very much the vigor with which the reasonableness of the moderate classicist is set forth and the good sense of the final comments upon the two tendencies which have been made so falsely clear and separate in many textbooks:

> If, then, we use the words "classic" and "romantic" merely as convenient terms for two fundamental tendencies in the human mind, they are serviceable. If for more, they are misleading. For the two classes of men exist always side by side; the two tendencies exist in the same men. . . . So in the England of this period what we have called the classic tendency—the monistic, the simplifying—was dominant. But men were still conscious of the other point of view; some of them were trying to make their own broad enough to include it. But their basic attitude remained." (Pages xlii-xliii.)

This seems to us good doctrine, and we hope it may help both to discredit that caricature of eighteenth-century classicism so frequent in misguided attempts to "simplify" the period for beginners, and to moderate the glee of those who may chance to flush from the classic coverts a few stray "beginners of romanticism."

As for the texts themselves, one regrets that Dennis and Gildon, who together make up half of the book, could not have been crowded a bit to make room for some of Bysshe and St. Evremond, a little of Swift, and more of Addison. The text, if one may judge after comparing a dozen pages of Gildon with the original edition, seems to be faithfully reproduced.

Notes

Beckles Willson's "Life of Lord Strathcona and Mount Royal" is announced for publication this month by Houghton Mifflin Co.

"Costumes and Scenery for Amateurs," by Constance D'Arcy Mackay, will be published by Henry Holt & Co. on November 13.

"Psychology of the Unconscious," by C. G. Jung, will be published shortly by Moffat, Yard & Co.

T. Fisher Unwin, London, announces the publication of R. W. Frazer's "Indian Thought: Past and Present."

"Our American Wonderlands," by George Wharton James, is announced for immediate publication by A. C. McClurg & Co., Chicago.

George Van Schaick's "The Son of the Otter" is announced for early publication by Small, Maynard & Co.

E. P. Dutton & Co. announce the forthcoming publication of the following volumes: "Fate and Free-Will," by A. S. Wadia; "British Coal Trade," by H. Stanley Jevons; "Dictionary of Universal Biography," by Albert M. Hyamson.

"The Catalogue de Luxe of the Department of Fine Arts of the Panama-Pacific International Exposition," edited by John E. D. Trask and J. Nilsen Laurvik, will be published early in December by Paul Elder & Co., San Francisco. The same house announces for early publication "The Fourth Dimensional Reaches of the Panama-Pacific International Exposition," by Cora Lenore Williams.

Houghton Mifflin publishes at fifty cents net the volume a Riverside Uplift series, containing thus far the following titles: "Why I Believe in Poverty," by Edward W. Bok; "The Cultivated Man," by Charles W. Eliot; "The Amateur Spirit," by Bliss Perry; "The Glory of the Imperfect," "Self-Cultivation in English," and "Trades and Professions," these three by George Herbert Palmer, and "Whither?" These little reprints are attractively published, with the double aim, no doubt, of providing inexpensive readable texts and suitable ornaments for parlor tables.

At first sight, it seems hardly fair to the late Dr. Alexander Young to republish his book, "A Short History of the Netherlands," first issued in 1886, and now reprinted under the title "A Short History of Belgium and Holland," without corrections, revision, and continuation to date. This Boston lawyer, one of the first editors of the *Globe*, of that city, was a scholarly writer and student of the history of the Low Countries. There are no strong indications that he was familiar with the Dutch language, or with that rich body of historical writing which our own Motley may be said to have provoked into creditable being. Since, however, the renascence of learning and art in Belgium, following upon the establishment of national sovereignty and independence, in 1830, both Fleming and Walloon archivists and historians, vieing with each other in generous rivalry, have produced a very respectable body of historical and antiquarian literature in the French language. Of this Dr. Young made discriminating use, so far, indeed, as to modify notably some of Motley's conclusions, while at many points furnishing correctives to the American author's virtuous partisanship. Motley was a rich colorist rather than an exact draughtsman. Indeed, there are parts of his work, as, for example, in "John of Barneveldt," which can hardly be accepted as history. Without the brilliancy and dash of his fellow townsman, Dr. Young produced one of the most trustworthy general histories of the Netherlands extant in English. Especially in the notes is this book illuminating, though the text also shows much independent research. Yet the narrative virtually ends with the opening of the nineteenth century, and the last chapter, though announced in the publisher's note as "partially re-written and brought up to date," must be accepted as the work of an amateur who is not overburdened with knowledge of his subject. It is thoroughly unsatisfactory. A really good summary of the history of the two kingdoms to A. D. 1913 is a desideratum. Yet besides being copiously illustrated and well printed, though lacking an index, this work is worthy of a place in our libraries as giving an excellent view of the evolution of the Netherlands as a unit, before their separation into two countries. (London: T. Fisher Unwin: 5 shillings net.)

Sir Gilbert Murray's Conway Memorial Lecture on "The Stoic Philosophy" (Putnam; 75 cents) is, like all his work, clever, scholarly, and interesting; but it does not get very deep into the real difficulties of the subject. "Goodness," said the Stoic, "is the only thing of significance, the only thing worth living for"; and Professor Murray, like the contemporaries of Zeno, asks the inevitable question: "But what is goodness?" and then answers his own question with the modern equivalent of the ancient Stoics:

> Let us in the meantime accept this conception of a force very like that which most of us assume when we speak of evolution; especially, perhaps, it is like what Bergson calls *La Vie* or *L'Elan Vital* at the back of *L'Evolution Créatrice*, though to the Greeks it

seemed still more personal and vivid; a force which is present in all the live world, and is always making things grow towards the fulfilment of their utmost capacity. We see now what goodness is; it is living or acting according to Phusis [nature], working with Phusis in her eternal effort towards perfection.

But what, we ask, is this perfection? It is goodness. And what, again, is goodness? It is working towards perfection. No Stoic ever worked his way out of this circle; and it is not very creditable to a modern scholar that he thinks such a juggling of words an escape from the real difficulties. And there are other dilemmas in the little book of the author's own making—the dilemmas of one who for long years has lapped himself in a sentimental optimism and now is suddenly and harshly shocked out of his ease by the sound of the Prussian guns.

In the Mount Vernon estate Washington held, divided among five farms, 3,250 arable acres in a total of 8,000. He balanced his gain for 1798, not a good year, at £898 16s. 4¼d. Land, improvements, stock, and slaves together are valued for that year by Paul Leland Haworth in his "George Washington, Farmer" (Bobbs-Merrill; $1.50), at $200,000. The return, two and one-quarter per cent., is more, he observes, "than has ever been got out of it (the Mount Vernon land) by any other person." That Washington made a success of his farming, a proposition the author is at pains to defend, is not supported solely on the more or less conjectural financial showing. More important returns which he drew from the land are to be found in the habits he developed of investigation and experiment; in the attempt he made to apply and adapt the scientific temper displayed at the time in Europe by men like Arthur Young, Sir John Sinclair, Duhamel du Monceau. If he was not in advance of what we should now call the scientific farming of his day, he typified the recognition, destined to characterize the agricultural history of his country, that in all husbandry exact knowledge must take precedence over tradition, however venerable.

Brought up in the "rich middle West," the author laments the unproductive character of Washington's much eroded soil. Not holding with the novel excretory theory of soil fertility, he considers exhaustion to be due to actual losses in chemical content. As a student of Tull, Washington may have considered it due to loss by mechanical extraction. Under whatever theory he not only saw the disadvantageous effect of a customarily unvaried crop like tobacco, but went so far as to rule out this crop altogether. His production began to fall off rapidly from 89,000 pounds in 1763, while his wheat crop thereupon rose from 257½ bushels in 1764 to 6,241½ in 1769. At the time of the Constitutional Convention he sowed 700 acres to wheat, 580 to grass, 400 to oats, 700 to corn, with lesser amounts of buckwheat, peas, beans, turnips, and potatoes. He planted alfalfa in 1798. He was constantly testing varieties of grain. Yet whatever his crop, there was little of it returned to the land. Though he studied rotation elaborately and experimented industriously with composts, in his interest in stock, except for horses, sheep, and mules, he was more of a naturalist than an agriculturist. One of his pet projects of fertilization was to utilize the Potomac muck. Noah Webster reports that a favorite toast of the household was "Success to the mud!" He tried the effects of deep-soil ploughing by running the furrow twice. For all farm machinery he showed a characteristically American attitude of radical alertness. He installed one of the newly invented threshing machines at the first opportunity. He constructed harrows, ploughs, and a cumbersome drill, in which he shows the most engaging delight. Such a man, writing his last annual message to Congress, could hardly fail to recommend the creation of the Board which ultimately took shape as the Department of Agriculture. In breaking new ground Mr. Haworth will seem, to readers who take the title too strictly to heart, to roam a good deal over old ground. "Washington as a private citizen, with some special account of his farming," might in more precise and spacious days have been the title. A brief, popular book, yet packed with recondite information assiduously compiled from the "Diary" (beginning January, 1785), and other first-hand sources, this book will earn many thanks and some grumbling.

Dr. Peterson, principal and vice-chancellor of McGill University, has brought together in a substantial volume of some 370-odd pages a number of "Canadian Essays and Addresses" (Longmans; $3.50), written or given during the last ten or twelve years. These essays and addresses cover a variety of subjects, but fall naturally enough into two classes: Canada's relations with the rest of the Empire and with the United States; and Education. In the first, Dr. Peterson discusses such questions as the Relations of the English-speaking Peoples, the Future of Canada, Canada and the Empire, Canada and the United States, True Imperialism, and the Naval Policy. In the second, he includes addresses on National Education, the Place of the University in the Commercial City, Claims of Classical Studies in Modern Education, the Unity of Education, Education and Business, and a number of memorial or other special addresses. Dr. Peterson is an Imperialist, but not in the sense in which what he aptly calls the "Little Canadians" are fond of describing the supposed attitude of the imperial federationist. "To me," he says, "imperialism is not militarism, or jingoism, or megalomania, or flag-waving and the beating of big drums, or the enthralment of other peoples by a superior power; in its sane and sober acceptation it is the expression of an aspiration which may be cherished in full sympathy with democratic ideals—the aspiration, namely, and the desire that, for the high and noble purposes of its world-wide mission, the British Empire may be enabled to hold together in all coming time." And again: "The Empire of the future must satisfy democratic aspirations, and rest on the broad basis of a democratic ideal. Even the old mother is coming to understand that it is not a question of sovereignty, but of what will grow to be more and more a free and equal alliance. The ideal is not one of a 'cluster of subordinate units grouped in deferential pose round an imperial centre,' for it is now accepted as axiomatic that no scheme of empire will be tolerated which fails to take account of national status. Self-government is the guarantee of equality in this regard." Dr. Peterson quotes appreciatively Kipling's happy description of British states within the Empire as "democratic republics under the gentle sovereignty of the parent-state."

There is much that may be read with profit in Dr. Peterson's addresses on educational topics, the triumphs and failures of modern education, the influence thereon of present-day conditions, the relations between education and business, and the effect of education upon public life. Speaking of the public school as we know it in the United States and Canada, he says:

Independently altogether of the religious question, we shall have to give more attention in our schools to ethical teaching—to a training in morals and manners, in habits and conduct, especially as regards fair-play and what may be called good form. Few can tell what an influence for the exorcising of the unclean spirit in public life might be wielded by more systematic efforts to develop a love even for clean sport in the school. There is a tendency, in a modern democratic society, to push the demands of equality so far as to endanger the claims of discipline. That should not and need not be. The wise Greeks knew that of all the evils which may afflict a state there can be none greater than what they called *Anomia* or lawlessness. Perhaps what this people needs most at the present time is that some prophet should arise—some latter-day Savonarola—who shall set himself to stem the tide that is setting in the direction of a decline in reverence and respect for authority, and preach the wider freedom that comes from obedience to law.

A few words from Dr. Peterson's tribute to the late Lord Strathcona are worth quoting, if only to take out of one's mouth the bad taste left by Mr. Preston's rather vindictive biography:

Some are asking whether men who have been so fortunate as Lord Strathcona are really entitled to all the wealth that has passed into their possession. I make no judgment upon that, except to say that it is well for the world when great wealth is in the hands of those who have anything like the sense of responsibility that animated him, and anything like the same desire to serve the public interest. And after all he was no mere sordid seeker after gain, nor did his material prosperity ever blunt the edge of his moral and social ideals and aspirations. In a word, his soul was not submerged, as is sometimes unfortunately the case, by the gathering tide of worldly success. Duty was his guiding star—duty and conscience.

Einhard's "libellus aureus" on the life of Charlemagne has been edited primarily "to satisfy the needs of students in this [Oxford] University reading for the 'Previous Examination in Modern History.'" by H. W. Garrod and R. B. Mowat (Clarendon Press). The work should have a wider vogue, as the authors hope, but not in its present form. Most of the notes and the chapter on the limits and administration of the Carolingian Empire are sensible and helpful. The chapter on German culture in the early Middle Ages is so full of guesses and errors that the best way to emend it is, in Ovid's phrase, is "to give it to the emending flames." The whole book needs a careful revision by somebody who has more than an elementary acquaintance with palæography. The statement that at the time when Charlemagne undertook the reform of education, those favored monks "who could write, wrote a script almost illegible," is typical. "The illegible script which we call 'Merovingian'" is not a palæographer's definition. Not to mention certain fine varieties of embellished Merovingian cursive, the veriest tiro could read with ease the beautiful Bible written at Corbie in the abbacy of Maurdramnus (772-780), considerably before Charlemagne promulgated his capitularies on education or Alcuin retired to Tours. A special absurdity is the attempt to explain the purity of Einhard's Latin style by the assumption that it is not based on the *lingua mixta*, the dialect inherited from antiquity in Italy, France, and Spain; as Einhard came from Germany, we

are told, he necessarily cultivated an artificial manner, "drawn with labor from the sources and not fetched from any common conduit of literary tradition." But Einhard spent the best years of his life at the court, where he hardly escaped the *lingua mixta*. His usual residence was doubtless Aix-la-Chapelle, in a district containing Trèves, one of the strongholds of Latin culture since the fourth century; and he hardly would have been sent as an Ambassador to the Pope had he not had a fluent command of spoken Latin. The chapter on German culture in the early Middle Ages would profitably be replaced by a more general treatment of education before and during the Carolingian Renaissance, with the German culture of the period summed up in a page.

While this edition does not pretend to offer an elaborate critical apparatus, it includes a brief account of the manuscripts and cites representative readings of the three main classes. In the story of Charlemagne's disaster near Roncesvalles, the much-discussed passage (IX, 3) that includes Roland among the slain, is rightly retained, although omitted in class B, and could be further defended by the observation that, as A and B are obviously branches of the same class, the coincidence of A and the clearly independent C in giving the passage is good proof of its genuineness. There is no warrant whatsoever for deriving all our manuscripts from three copies written in a German monastery where, as at Fulda, Anglo-Saxon influence was strongly felt. Some copies, as seems to be the case with B, may have had such an origin, but it is next to impossible that Einhard, who was not particularly fond of the Irish at Charlemagne's court, should have published his work in a copy made by an insular scribe; the editors have surely done unwisely in admitting the Anglo-Saxon character ð into their text in the word *Nordmanni*. A very vexing feature of the edition is the numbering of lines in the sections, and not on the entire page; this makes the apparatus extremely difficult to use, while reference from the introduction to the unnumbered lines of a page adds insult to the injury. In short, if this book is to be useful to a wider circle than that for which it is primarily intended, it deserves, for many reasons, a thorough overhauling.

Miss Violet Barbour's "Henry Bennet, Earl of Arlington" (published as the Adams Prize Essay of the American Historical Association) gives an excellent account of England's foreign relations during the earlier part of Charles II's reign. By his devotion to the Stuart cause and by his native shrewdness and ability young Harry Bennet rose steadily in favor until he became Secretary of State in 1662. For a dozen years thereafter he was one of the most influential ministers of his lazy, venal, and capricious master, so influential, in fact, that the French Ambassador described him as Charles II's "other self, for this Minister knows his [the King's] most secret intentions and designs and possesses his confidence, his esteem, and his friendship in the highest degree." Miss Barbour, in pointing out that the shortcomings of the Cabal Ministry have been more cordially recognized than its difficulties, devotes her volume to a discriminating study of the extent of Arlington's responsibility for the Government's measures. Typical of his unscrupulousness was his concealment, even from his own colleagues in the Ministry, of the shameful Secret Treaty of Dover. A few weeks later, however, he went through the farce of negotiating with their coöperation a second sham secret treaty of Dover. The new treaty was identical with the earlier one, except that the clause promising Charles's declaration of Roman Catholicism was omitted, and the French subsidy promised for this was assigned for the conduct of the war. Arlington, however, was no more unscrupulous than his colleague and rival, Buckingham, who, in the very matter of this sham treaty, vehemently denied in public the existence of the treaty which he had signed in private. Through all the tortuous intrigues of Ministers against each other, against Parliament, and against one or other of the foreign Powers, the author carries a clear torch illuminating Arlington's path. When finally the Cabal Ministers were threatened with impeachment by an angry Parliament, Buckingham sought to exculpate himself by attacking Arlington at the bar of the House; he even departed so far from parliamentary usage as to call him a lobster (p. 226). When Arlington in turn appeared before the House, he wisely refrained from any recrimination and spoke with such dignity and skill that the talk of impeachment against him was soon dropped. Miss Barbour writes almost wholly from the sources, using particularly the minute and lengthy dispatches of the French Ambassadors and various manuscript letters in the Carte and Clarendon collections. She is also to be congratulated on her graceful use of English which is quite unlike the arid wastes too often characteristic of doctoral dissertations.

BOOKS ON THE WAR.

On the 25th of September, 1914, Miss May Sinclair set out with a Motor Field Ambulance Corps to serve the Belgian army, her own connection with the party being that of treasurer, secretary, and journal-keeper. From Ostend the corps went to Ghent; from there to Antwerp, while that city was under siege; then back to Ghent, where they remained while the crowds of wounded and refugees were pouring in; at the approach of the Germans they followed the Belgian army to Bruges, Ostend, and Dunkirk, and from Dunkirk Miss Sinclair returned to England. The notes she was able to keep during a considerable part of this adventurous tour were naturally meagre, but from them she has, with the aid of memory, pieced out "A Journal of Impressions in Belgium" (Macmillan; $1.50 net), which has the sharp, sometimes almost hysterical, qualities one would expect from her fiction and biographical writings. Her experiences were got at what might be called the ragged edge of war, and give one that sense of confusion and aimlessness with which we are familiar in the books of those who record perceptions from the outside without being in the counsels of the commanders. But the analysis of her own sensations is often extremely vivid—notably, for example, in the record of what she felt on hearing her first gun (p. 146) and on attending her first wounded man (p. 170). Yet we cannot say that we thoroughly like the book. The personal tone of the whole thing sounds a bit shrill in the midst of a people's agony, and, though the writer was engaged in a noble work, her journal gives the suspicion, unjust it may be, of gloating over horrors.

"The Soul of the War," by Philip Gibbs (McBride; $1.75 net), is a stirring narrative of correspondence and hospital service with the western armies of the Allies. Mr. Gibbs belongs to the tradition of the late George W. Steevens. In the interest of vividness and pathos he leaves no screw unturned and no nerve unwrung. Probably no other correspondent has given so ghastly a picture of the war as a shambles. In the less militant pages, as in the account of stay-at-home Paris, Mr. Gibbs has the grace of a ready sympathy and of a somewhat profuse picturesqueness of style. It is precisely this over-excited quality of much of the writing which, while making the pages quite thrilling, also takes them out of the first class. Originally correspondence to the London *Daily Chronicle*, it is well worth reading in this more permanent form. Nobody has made more vivid the neuroses that grow out of such a war as this. Naturally the writer, appalled by this human wreckage, is something of a pacifist; as naturally overstrain and unrestraint characterize his writing.

George Adam in "Behind the Scenes at the Front" (Duffield & Company; $2 net) has more professional imperturbability, more humor, and a consequently steadier vision. He was Paris correspondent, and his letters are interpretative in a general political sense. The book is excellent of its sort, dealing rather little with states of mind and much with facts and methods. It is correspondence of the classic type as Mr. Gibbs's was impressionistic. For one who wishes to inform himself as to the procedures of a great war —from the antecedent diplomacy to the provisioning in the trenches—the book is of distinct value. Having adventured with the Soul of the War, under Mr. Gibbs's guidance, it will do no one harm to consider also the material body of the war in Mr. Adam's terse and lucid chapters.

The French official report on the German atrocities is now translated by J. O. P. Bland and published by Putnam ($2 net), with the title "Germany's Violations of the Laws of War, 1914-15." Numerous documents, largely German soldiers' diaries, are presented in facsimile. It is difficult to interpret with any composure an array of facts so dreadful. First it must be said that the evidential quality of the exhibit is complete and convincing. These horrors actually happened, and very much as they are recorded. The moral decision as to their import is not quite easy. We do not know how much of this sort of horror is incidental to modern war in masses and unavoidable. We do not know what real or fancied provocation there may have been for the repeated burnings and slayings in French villages. There is the fullest evidence that the Germans in many places, and in obedience to orders, killed the wounded and prisoners. This is a blot on their military history that cannot be effaced. For the rest it appears that they made war as a rather brutal and inadequately civilized folk generally will. There seems to us rather small profit in inventorying their minor outrages. Nobody supposes them a gentle race. Indeed, the value of such an exhibit must be chiefly tactical—to offset in advance any complaint which Germany may make against the severity of the campaign against her.

Science

Fighting Frost

By DAVID TODD.

The late Prof. Lawrence Rotch, founder of the Blue Hill Meteorological Observatory, which is still maintained from the income of funds of Mrs. Rotch's and his own providing, was an eminently practical scientist, and very resourceful in devising new and useful methods of research that at once established and still maintain this institution in the first rank. Blue Hill is now included within the Metropolitan Reservation, the observatory building on its summit has been thrice enlarged, its technical library is probably the best collection in the United States outside of Washington, and the regular observations, continued since 1885 unchanged in both method and environment, constitute a unique series in American meteorology; indeed, the International Solar Commission has made use of them in its study of secular changes of climate. On the death of the founder, Prof. Alexander McAdie, of San Francisco, was called to the directorship of the Observatory, and in the recently issued volume of observations of the past four years he presents a thoroughly practical and very timely essay on inversions of temperature in relation to frosts, a subject in which he is an acknowledged authority.

Only in recent years have aerologists given much attention to those slow-moving currents of the lower strata of the atmosphere which greatly differ from the whirls and cataracts of both high and low levels familiarly known as the winds. The larger and more energetic streams of air play a part in the formation of frost, and their importance is not to be underestimated; but primarily it is a slow surface flow, almost a creeping, of the air near the ground which controls the temperature, and is all-important in frost formation. It is, therefore, of some importance to study the conditions which bring about this slow movement or displacement of air. It is true that there are times when, with thorough mixing and ventilation, and little opportunity for slow displacement, temperature will fall to low points and damage from frost result; but conditions of this kind are more properly described as cold waves. In such cases there is an unusual loss of heat by direct convection and the translation of masses of cold air. Strictly speaking, frosts are connected with inversions of temperature brought about by vertical movements of the air rather than horizontal, and are, therefore, essentially problems in local air drainage. In the valleys of California a slow but well-defined flow of the surface air can be traced and utilized in forecasting frosts: condensed water vapor or fog can be seen drifting into the valleys or settling in the low places. There are well-marked stream lines, and one is led to believe that a mixture of air and water vapor of a given temperature is cooled by contact with the hill-tops, and under the influence of gravity and other causes flows down the slopes.

It is well known that soon after sunset valleys and low places serve as catchment basins for slow-moving air that is densest and coldest. The hilltops, terraces, and even mountain tops, if not too high, are in contact with air of higher temperature, which must be either an in-draft from warm surrounding strata, or the displaced air from below. How the circulation begins and how it is maintained are not clearly understood, and unfortunately we have no instruments sufficiently sensitive for our needs. The cooling of the lower levels, the warming of the upper levels, and the existence of an inversion are evidently not the result of a single cause. But one fact stands out strongly in all of the investigations thus far made; that is, that where the air is in motion there is less likelihood of frost than where the air is stagnant. This may be called the first law of frost formation.

One factor in establishing the circulation is the fact that slopes, especially those facing west or southwest, have been heated by insolation during the day, and therefore radiate more rapidly, since radiation is a function of the absolute temperature; but the energy thus radiated is not absorbed by any layer of vapor and dust particles, as generally is the case with the radiation from the lower levels. The valleys and low levels lose heat by radiation; but soon after sunset there is formed a thin blanket of condensed vapor, which interferes with free radiation and checks the rate of cooling. The air at the higher level is robbed of its vapor and dust nuclei, becoming more and more like a pure gas and permitting freer radiation. Mixed air and vapor is lighter than dry air per unit volume; and thus moist air would naturally tend to rise. The condensed vapor, however, must be regarded in a different light from the vapor before condensation. In condensing, and also, but to less degree, in congealing into frost flakes, heat is set free in the sense that molecular energy is decreased. This heat is not shown as a direct rise in temperature, but does serve to prevent fall in temperature, such as expansion due to rising would produce. Thus we have near the ground an increasing load of condensed vapor, or vapor near the condensing point, which either crystallizes as frost with further cooling or is carried away by convective currents.

We see, then, that there are various conflicting processes: gain and loss of heat by radiation (the upper slopes losing heat by radiation, and the lower air masses gaining heat); retardation or acceleration in rate of change of temperature by the change in state of the water vapor; direct gain or loss of heat by convection or the actual translation of cold and warm air masses, and finally some slight gain or loss by conductivity. As to wind, certain types of storm movement easily recognizable are followed by frosts. Gusty northwest winds dying out at sunset, with unclouded skies and low and decreasing humidity above 100 metres, but increasing in the lower levels, are significant local conditions preceding inversion and favoring frost. In lieu of the usual and unsatisfactory apparatus for recording humidity, Professor McAdie has devised an ingenious instrument which is a decided improvement over the usual form of hygrograph: it is known as a saturation deficit recorder, and gives a continuous record of the weight of the vapor in grams per unit volume.

Precedent to a description of the best methods of protection from injury by frost, he formulates as follows the second law of frost formation: "Frost is more likely to occur when the upper air is dry than when it is moist." It is also true that a dusty atmosphere is less favorable for frost than a dust-free atmosphere. Thus we may generalize and say that whatever favors clear, still, dry air, favors frost. The theory of successful frost fighting, then, is to interfere with or prevent these processes which, as we have seen, facilitate cooling close to the ground.

In what way can this best be done? The most natural way would be to conserve the earth's heat, which could be accomplished by covering plants with cloth, straw, newspaper, or, perhaps better still, modern weather-proof sheeting, or in still another way by a cover of dense smoke, generally called a smudge. A second method would be by means of direct application of heat; and this is accomplished in orange groves by means of improved orchard heaters. Large fires waste heat and are neither economical nor effective. A third method would be based upon some method of mixing the air strata and getting the benefit of the warmer higher levels. Fourthly, advantage might be taken of some agency, like water or water vapor, having a high specific heat. Finally, if the crop is of a certain character, such as the cranberry, it will be found advisable to use sand, and to drain and clean, here again making use of the specific heat of some intermediary. And, furthermore, any one of these methods may be combined with some other method.

Regarding the first method, that of covers, it may be said that the practice goes back to the early husbandmen; but only in the last few years has the true function of the cover been properly interpreted, and we are still far from obtaining maximum efficiency, nor is there yet a suitable, scientific cover available. Any medium that interferes with loss of heat through free radiation before and after sunset is a cover. The best type of cover is a cloud; and clouds, whether high or low, are good frost protectors. On cloudy nights there is little likelihood of frost; nor do inversions occur. We have mentioned above the fact that the earth radiates the heat it has received not in the same, but in longer wavelengths. These are easily trapped and held

by the vapor of water. Furthermore, the rate of radiation is a function of the absolute temperature, and so the rapidity of loss depends somewhat upon the heat received. Therefore, the cover should be used as early in the day as possible, that is, just before sunset. Aside from the water cover or vapor cover there are cheap cloth screens, fibre screens, and also lath screens.

The second method, that of direct heating, has met with much success in the orange groves of California and elsewhere. Modern heating methods date from experiments begun in 1895. A number of basic patents granted to Professor McAdie in this connection are dedicated to the public. At the present time there are on the market some twenty forms of heaters, which have been described with more or less detail in farm journals and official publications. It is not necessary to refer to them further here. The fuel originally used was wood, straw, and coal, but these are now supplanted by crude oil or distillate. It has, too, been seriously proposed to use electric heaters, and also gas. Properly installed and handled, there is no difficulty in raising the temperature of even comparatively large tracts five degrees and maintaining a temperature above freezing.

The third method, that of utilizing the heat of higher levels by mixing, has not yet been commercially developed; while the methods of applying water, either in the spraying of trees or the running of ditches or the flooding of bogs, together with methods of sanding, cleaning, and draining, have all been proved helpful. Methods available and most effective in one section may not necessarily be effective in another section where the requirements of other crops may be quite different. Certain devices most effective in the groves of California may not answer in Florida or Louisiana, because of entirely different conditions of weather. Along the Gulf coast, where water is available, it may be advantageously used to hold back ripening and retard development until after the cold waves of middle and late February have passed; whereas on the west coast conditions are very different, water having a definite value and the critical periods coming in late December or early January.

In what precedes, stress has been laid chiefly upon the fall of temperature and the congelation of the water vapor. There is, however, another important matter connected with injury to plant tissue, and that is the rise in temperature after the frost. A too rapid defrosting may do considerable damage where no damage was originally done by the low temperature. It is in this connection that water may be used to great advantage. Water, water vapor, and ice, compared with other substances, have remarkably high specific heats. If the specific heat under constant pressure of water be taken as unity, that of ice is 0.49, of water vapor 0.45, and of air 0.24. Or, in a general way, we may say that water has four times the capacity for heat that air has. Therefore, it is apparent that water will serve excellently to prevent rapid change in temperature. This is important at sunrise and shortly after, when some portion of the chilled plant tissue may be exposed to a warming sufficient to raise the temperature of the exposed portion ten degrees in an hour.

The latent heat of fusion of ice is 79.6 calories, and the latent heat of vaporization of water is nearly 600 small calories or therms per gram. Therefore, in the process of changing from solid to liquid to vapor, as from ice to water to vapor, a large amount of heat is liberated. This does not mean, as is generally assumed, that the air will be warmed, but it does mean a retardation of change in temperature. And it is essential that the restoration of the tissues and juices to their normal state be accomplished gradually, neither too rapidly nor yet too slowly. There is probably an optimum temperature for thawing or defrosting frozen fruits and flowers.

Finally, the records of temperature as ordinarily obtained need careful interpretation. It may be that the freezing point of liquids under pressure in the plant cells or exposed to the air through the stomata is not the same as in the free air. It is unfortunate, too, that in most places data showing temperatures of soil, plant, and air are of doubtful character. A word of warning may be given against the too ready acceptance of records of the Weather Bureau made in cities and on the roofs of buildings. Conditions in gardens and fields vary greatly from these. It is further advisable to obtain a continuous record of the temperature of evaporation, such as is shown by the records herewith. The two temperature curves made simultaneously and easily read at any moment enable the gardener or orchardist to forecast the probable minimum temperature of the ensuing ten or twelve hours. But not always, and some study is necessary. A slight increase in cloudiness or a slight shift in the direction of the wind will prevent the fall in temperature which otherwise seemed probable. With a persistent inversion of temperature there is sometimes an increasing absolute humidity. In fact, the problem is many-sided, and we must consider the motion of the air vertically as well as horizontally. Air gains and loses heat chiefly by convection, and any gain or loss by conduction may be neglected. The plant gains heat by convection, radiation, and perhaps by conduction of an internal rather than surface character. The ground gains and loses heat chiefly by radiation. But the whole process is complicated, nor are the rates of change uniform. Frosts generally are preceded by a loss of heat from the lower strata of air, due to convection and a horizontal translation of the air. Then follows an equally rapid and great loss of heat by free radiation. There are minor changes, such as the setting free of heat in condensation and its utilization in evaporation, but these latent heats are of less importance than the actual transference of the air and vapor and the removal of the latter as an absorber and retainer of heat.

Frosts are recurrent phenomena reasonably certain to occur within given dates, and, as pointed out above, the cumulative losses are considerable. Methods of protection, to be serviceable, must be available for more than one occasion, for there is no profit in saving a crop on one night and losing it on the succeeding night. But the effort is worth while. Consider that the horticulturist regularly risks the labor of many months on the temperatures of a few hours. An efficient frost-fighting device is in a way the entering wedge for solving problems of control of climate. One may not take a crop indoors, it is true; but in the light of what has been already accomplished, there is no valid reason why at critical periods, which may be anticipated, the needed volume of surface air may not be sufficiently warmed to prevent the losses which have heretofore been considered inevitable. Professor McAdie is to be congratulated on successfully pointing out the practical methods of insurance against such losses which in the past have been excessive.

Drama

"HOBSON'S CHOICE."

A title that fits, a neatly constructed plot, and a cast remarkably well chosen, are the considerable assets of "Hobson's Choice," of which the author is Mr. Harold Brighouse. That the public can usually detect a good play is evidenced by the necessity of transferring the piece this week from the Princess to the larger Comedy Theatre. "Hobson's Choice," though cast in the mould of "Bunty," deals with a bit of the British provinces (Lancashire) in a manner sufficiently fresh to merit, in popular estimation, an existence quite its own. Just here it may be remarked that persons who prefer to keep their theatregoing distinct from their slumming will welcome this additional sign of a disposition by managers to substitute the life of the respectable lower middle class for the red-light district which held the stage of yesterday.

"Hobson's Choice," like "Quinneys'" and "Our Children," has the setting of a humble activity. In the present case, it is the bootshop of Henry Hobson, a tyrant among his three motherless daughters, resolved that they shall manage the business, while he pays frequent visits to a neighboring tavern, and shall marry, if at all, men of his choosing. Perhaps he might have had his way if the eldest girl had not possessed a will of her own. But Maggie, diminutive, as played by Molly Pearson, and always unruffled, overrules her father's bluff threats, leaving him only his namesake's choice, and even goes so far as to select for helpmeet Willie, the young apprentice of the head bootmaker, realizing that his deftness joined with her head for business will make a famous combination. The scene in which she woos the bashful boy, after releasing him from the toils of

his landlady, who has engaged him to her daughter, is rich with merriment without being too extravagant. A first act so lavish of dramatic interest left one wondering whether enough material remained to fill out three more acts. But when, at the beginning of the second act, Maggie was revealed planning for her marriage and those of her sisters, who had been quietly encouraging suitors, and also to set up an independent shop for Willie, it was plain that the wrench on the self-centred father would furnish ample matter for a conclusion. Old Hobson is indeed a character worth dwelling on. Having the outlines of Grumpy, without the latter's subtlety, he might have stepped out of Dickens; and in the final act, broken by too much familiarity with the Moonrakers' Tavern, his business fast waning, proud and obstinate still, though yearning for the society of his daughter, he provides the opportunity for a gripping sketch. We are glad to say that the impersonation of Mr. A. G. Andrews could scarcely have been bettered by Mr. Cyril Maude himself.

Perhaps the most amusing scene in the play is that of Maggie's wedding supper, which is attended by her sisters and their fiancés. The latter, with Willie, well played by Whitford Kane, are, of course, notable mainly as types—but such very droll types! Miss Molly Pearson, as might be suspected from her success in "Bunty," is ideally suited to play Maggie. It may be that she shows just a trace more of self-consciousness than was evident in her former triumph, but, if so, it is not annoying. F.

"THE ETERNAL MAGDALENE."

Miss Julia Arthur has not been happy in the play (Forty-eighth Street Theatre) which signalizes her return to the stage. Loose reasoning, especially in regard to the particular subject indicated by the title, we are accustomed to in literature and on the stage and accept with a sigh of resignation; but here loose reasoning is illustrated by looser construction. Mr. Robert McLaughlin has essayed the always perilous "dream-play" with which to elaborate his thesis that justice should be tempered with mercy in our dealings with the class of people truly described as "unfortunate." We give Mr. McLaughlin credit for having originally in mind no more than this, although, carried away by enthusiasm for his subject, he has possibly said a great deal more than he intended. In fact, we leave the theatre at the close of three rather tiresome acts with the distinct impression that we have listened to an impassioned plea for prostitution as an ancient and honorable profession; and this impression is distinctly heightened by the fact that by far the most interesting character in the play, and by all odds the best piece of acting, is the Blanche Dumond, the very refined "Madam" of a brothel, of Miss Lucile Watson.

The plot may be briefly summarized: Elijah Bradshaw, a wealthy bigot, has taken the leading part, even to the extent of hiring an evangelist, in a movement for cleaning up the tenderloin of a Middle Western town. The day has come when the inhabitants of the district are to be driven forth. Where they are to go is the last thought that occurs to the unco' guid. Bradshaw, appealed to on their behalf, has rejected any less strenuous measure than wholesale expulsion as a compromise with Satan. While writing a statement for the local paper he falls asleep. In his dream he experiences a series of misfortunes dimly reminiscent of Job and the Vicar of Wakefield. His daughter, by a woman whom he had betrayed and deserted years before, appears to him and insists on living in his house; his son thieves from the bank and betrays a woman; his legitimate daughter is betrayed by a lover; his wife dies; his reforming friends disown him. Naturally he wakes up chastened and decides not to make his statement on the subject of prostitution quite so strong as he had intended. The illegitimate daughter, known in the play as The Woman, is supposed to represent a kind of embodiment of an idea, not unlike the character of The Stranger, in "The Passing of the Third Floor Back." Miss Arthur's rendering of the part failed to make convincing an unfortunate conception. In Emmett Corrigan a capable actor was wasted on the rôle of Elijah Bradshaw. "The Eternal Magdalene" contains the germs of some ideas that, differently and more capably expressed, might have been welded into an interesting play. The fact that it is for the most part a dreary and futile production is the fault, not of the actors, who did their best with unpromising material, but of the author. S. W.

"AROUND THE MAP."

Although this latest production at the New Amsterdam is not a musical comedy in the sense, demanded a quarter of a century ago, of having more than a thin thread of story, the extraordinary beauty of the costumes and of the scenery do, in themselves, make this a piece worth seeing. For the scenic effects credit is due to Mr. Joseph Urban, who in a similar capacity has recently scored a success at the Manhattan Opera House. To the extent of what meets the eye, including a well-trained chorus, "Around the Map" may be heartily commended. The book and lyrics, by C. M. S. McLellan, and the music, by Herman Finck, are fair, though there is no real "hit" in either. But the main thing is the spectacle, and to set this off there is the neat initial device of two Parisian costumers, male and female, who, insisting that dress makes the woman even more than the man, serve in effect as gods of the machine to ravish hearts by their creations. This, joined with a special condition requiring the entire company to tour the world, provides a chance for gay scenes in Paris, Berlin, Petrograd, Japan, San Francisco, and New York. In this production Else Alder, of the Johann Strauss Theatre, of Vienna, has been brought to this country. Her voice is adequate and her acting vigorous, perhaps a trifle too vigorous. The most engaging figure in the cast is Georgia O'Ramey in the part of the indifferent Lulu Cachou. F.

The half-dozen little one-act plays published under the title of "The Beau of Bath" (Holt; $1.20 net) may be commended to the consideration of our independent and experimental theatrical organizations. The author, Constance D'Arcy Mackay, presumably intended them for amateurs, for whom they are too good. For the regular stage they are somewhat deficient in technical execution and strength of dramatic fibre. Nevertheless, they are effective little sketches, written in facile, simple, and musical rhymed verse, which, without being in any way remarkable, is of good literary quality. They deal with real or imaginary incidents in the lives of conspicuous figures of the eighteenth century. The best of them are "The Beau of Bath" and "The Prince of Court Painters." In the first the faded Beau Nash, in neglected old age, entertains, in a dream, the ghost of a proud beauty whom he had loved in earlier days but never dared to woo. She tells him that she would have proved warmer if he had been bolder. It is a pretty fancy delicately told. In the second the famous painter, George Romney, broken and dying, finds his way, by chance, to the cottage of the wife whom he had abandoned in youth and is by her welcomed and tended as a returning prodigal. Here historical fact supplies the motive of a sympathetic and dramatic scene, excellent in its direct simplicity and genuine feeling. Kitty Clive and Horace Walpole appear in "Ashes of Roses," in which a pretty sentiment is expressed in clever lines. There may or may not be a vestige of truth in the fiction, but, in the light of known facts, it is not easy to think of the vivacious Kitty so faithful to an early rustic love and carrying, as a memento of it, in her halcyon London days, a withered rosebud in her bodice. In "Counsel Retained" Peg Woffington, escaping from a mob of worshippers, takes refuge in the poor quarters of the unknown Edmund Burke. She amuses herself by traducing her own reputation, and is so pleased with the zeal with which he, ignorant of her identity, defends it, that she retains him in a lawsuit in which she is plaintiff, and so gives him the needed start for his career. It is a lively and graceful trifle. "Gretna Green" deals pleasantly with the elopement of Maria Linley and Richard Brinsley Sheridan, while in "The Silver Lining" Fanny Burney is convicted of the authorship of "Evelina." Both these are very light in calibre, but like the others exhibit a dainty literary touch.

Music

AMERICAN AND EUROPEAN MUSIC.

English composers have benefited by the war in so far as their works are, for patriotic reasons, receiving more attention than ever before. American composers, for reasons less obvious, are coming into their own this season, not only at vocal and instrumental recitals, but particularly also at orchestral concerts, the conductors of which have specially announced their intention to put on their programmes a larger number of American compositions than heretofore. The Philharmonic began to redeem its promise by opening its season with MacDowell's "Launcelot and Elaine," which had not been heard before at its concerts. Walter Damrosch closed the second concert of the New York Symphony Orchestra with a new suite by John Alden Carpenter, entitled "Adventures in a Perambulator." It is programme (or descriptive) music of a primitive sort, but executed with considerable poetic and orchestral charm. The suite consists of six parts: En Voiture, The Policeman, The Hurdy Gurdy, The Lake, Dogs, Dreams. An elaborate description, which takes up two columns of the programme, tells in detail what

the baby sees and hears on its daily ride with the nurse, and the orchestra attempts to translate its thoughts into music, step by step. In doing this, Mr. Carpenter has shown much ingenuity; every now and then the revolving wheels of the carriage are heard; there is a special motive which stands for the baby, who also has his "private signal," delivered loudly on a stopped trumpet when he is displeased; the hurdy-gurdy plays a stirring waltz, in which novel effects occur; the dogs have their unmistakable "yap, yap"; and so on. It is, as before said, programme music of a primitive sort, and there is no new melodic message in the score; but the orchestra is handled cleverly, there are choice rhythmic and realistic tit-bits, and the pleased audience repeatedly recalled the composer. He is the vice-president of a business concern in Chicago and, unlike most American business men, seems to find time to bestow on the fine arts.

At the same concert the German colorature soprano, Frieda Hempel, sang, with a voice that was delightfully pure and fresh, and with the true Viennese swing, an arrangement of Johann Strauss's "Blue Danube Waltz." It is not generally known that this waltz was originally written with chorus, and that it was a failure! The only other concerts of the week were by the Boston Symphony Orchestra. They were given, it is needless to say, before crowded and enthusiastic audiences. This orchestra, during the past summer, made a triumphal tour of the country, extending to San Francisco. Among its New York patrons there was some dissatisfaction last season because of Dr. Muck's queer programmes; but no one, surely, could have found any fault with those offered last week. The first of them included the fourth symphony of Brahms, Schumann's "Manfred" overture, Strauss's "Tod und Verklärung," and, best of all, Dvorák's splendid "Husitzka" overture; the second, Beethoven's seventh symphony, Ravel's "Ma Mère l'Oye," Loeffler's "La Mort de Tintagiles," and the most popular of Liszt's symphonic poems, "Les Préludes." In Boston, last season, Dr. Muck won his biggest ovation with Liszt's "Faust" symphony, and it is likely that this composer will have a prominent place on his programmes this year, both at home and on tour.

Among recent entertainments by single artists none was of greater interest to serious lovers of music than the first of the six historic recitals arranged by the great Russian pianist, Ossip Gabrilowitsch. It is the first thing of its kind since the days of Rubinstein, and the series is to be repeated in several other American cities. Beginning with the old English Byrde and Purcell, Mr. Gabrilowitsch took his hearers through the French and Italian gardens of Couperin, Rameau, Scarlatti, before he entered the realms of German and Austrian classical music as represented by Bach, Handel, Haydn, and Mozart. The climax of his recital was the "Chromatic Fantasy and Fugue" of Bach, a piece which not only foreshadows the modern instrumental recitative, half-way between melody and speech, but also the power and grandeur of the modern grand piano. In the days of Bach the organ alone rose to the heights of his fancy, but he had visions of the piano of the future, and in the piece named, as played by this pianist, they are realized in a way that would have thrilled its composer with delight. All of the other pieces of the seventeenth and eighteenth centuries played on this occasion were more old-fashioned, yet Mr. Gabrilowitsch knew how to make them interesting as such.

One of the cleverest things this Russian pianist ever did was to win the hand of Mark Twain's daughter. As a woman she is as attractive and interesting as the best of her father's books, and she is, moreover, a singer of unusual charm. Clara Clemens Gabrilowitsch gave a recital last Saturday which made a deep impression on her audience. It cannot be said that her voice has been trained as it should be, yet with that voice, thanks to its noble quality and the soulful way she uses it, she wins the applause of hearers who would be left cold by the more highly polished voices of singers lacking her temperament, and what one might call her literary insight into the songs she sings. All the *lieder* on her programme were by Russian composers, the most enjoyable of them being four by Rubinstein (the entrancing melodist whom most singers so incomprehensibly neglect), and by her husband, Mr. Gabrilowitsch, who is one of the best song-writers of the day as well as a leading pianist. By playing his wife's accompaniments he provides her with a tower of strength to lean upon.

Another contralto—still the greatest of them all—was heard last week: Ernestine Schumann-Heink; she has a voice which stands the wear and tear of travel surprisingly well, and which speaks to the heart as perhaps no other voice does. Nellie Melba is another veteran whose voice and singing are as fresh and as enjoyable as they were twenty years ago. Another thing to be said for Mme. Melba is that on three continents she has within a year been converting her golden tones into gold coin for war victims, on a larger scale than that of any artist before the public.

The Boston Opera Company closed its brief season in this city with the proud record of having drawn much larger audiences the second week than the first, which speaks well for its merits, as well as for the discrimination of the local public. The performances were repetitions of the first week's operas, with the exception of "Tosca," in the title part of which Olive Fremstad appeared; but she was not in good voice and, dramatically, she never was entrancing in this rôle. The leading tenor of the Boston company, Mr. Zenatello, is well known to New Yorkers, having been a member of the Hammerstein Opera for several seasons. He appeared last week to special advantage as Don José in "Carmen" and as Otello, winning ovations in both operas. The Russian, Mr. Baklanoff, proved to be a good singer and a subtle actor, especially as Iago and as Manfredo in "The Love of Three Kings," which also brought back a tenor, Mr. Ferrari-Fontana, whom the Metropolitan audiences used to applaud. Maria Gay, who sang in this city formerly, both at the Manhattan and the Metropolitan, did not make so agreeable an impression as Carmen as formerly. Luisa Villani gave a sympathetic interpretation of Desdemona, and of Flora in the "Three Kings." The orchestra, conductors, chorus, and scenery of the Boston company have been previously praised in this column; and it may be said in summing up that Max Rabinoff's combination of this company with the Pavlowa ballet is one of unusual excellence, which deserves good luck on its tour.

HENRY T. FINCK.

Finance

FINANCIAL INFLUENCES IN THIS COUNTRY.

Probably most people watching the stock market of the past week or two will have been most impressed by the fact that the reckoning had come for the extravagant "war-industrial" speculation. A good many other people will, however, have regarded with quite as much interest the relatively great strength of the railway and standard investment shares, at the moment when the industrials were collapsing. But a fact somewhat less immediately apparent, but very striking in itself, has been the extraordinary breadth and activity of the market itself.

The "war-stock liquidation" has occurred in a long series of days in which, at generally well-sustained values, a greater number of separate stocks were dealt in than ever before in the history of the New York Stock Exchange. Since the third week of September, there have been only three days in which less than a million shares were dealt in—something almost unprecedented in that market. Transactions even in bonds, during all that period, have been two or three times as great as they were in the corresponding days or weeks of 1913 and 1912. Last month's total business in stocks has never but once before been equalled in October; the same is true of the business in bonds.

What the course of prices in the immediate future is to be, does not seem entirely clear at the moment—not less so because of the fact that, while the shares of industrial companies are watching the war and ignoring all other influences, the railway shares are watching for trade revival in this country and, apparently, ignoring war news. But whether prices rise, or fall, or merely move uncertainly, the all but unprecedented volume of daily trading continues. At first consideration, the natural comment on this remarkable activity would be that it reflects the peculiar facts of the present situa-

tion; the easy money and the overflowing bank resources; the new and unfamiliar elements in our economic position, at home and in relation to the outside world.

These, it will generally be admitted, are conditions making for speculation in the larger sense. There are, however, two or three other much more general influences at work which should go to explain the peculiar characteristics of this movement. They are not the sort of influences to which Wall Street attaches the most importance. Yet, as often happens, the influences which professional speculators overlook may be the largest factors in an unusual economic situation.

The first of these possible influences is the fact that what we are seeing now is in the nature of a pent-up investment and speculative activity, breaking bounds to-day because of a long and forcible restraint. During five months after July, 1914, accruing capital of our investors and speculators was unable to reach the market. The Stock Exchange was closed; none of the customary large offerings of new securities came in sight to absorb our cash resources. It is not wholly strange that, after the markets had reopened on the ending of this long embargo, the accumulated force of our capital reserves—increased by our relations with the outside world—should have brought about, by successive stages, the situation which exists.

The second economic influence bears in the same direction; it may have to do only with the "Wall Street boom" which has occurred already, or with what is to happen later. The United States had reached in 1912 a position perfectly familiar in the "cycle of prosperity." Our process of wholesome recuperation from the breakdown of 1907 had already lasted nearly or quite as long as the similar interval between the panic of 1873 and the beginning of "boom times" in 1879, or between the panic of 1893 and the prolonged trade revival dating from 1897.

What stopped so very abruptly the revival which had actually begun in 1912, every one knows. It was the Balkan war which broke out in October of that year, and the accompanying shadow, never thereafter removed from the financial markets, of the vastly greater coming conflict. Now, however, by a combination of circumstances which could certainly not have been foreseen, our own markets seem to have been released from this long apprehension. We are facing actual facts, and for the time they are playing the American market's hand.

The third possible influence is more obscure; perhaps it will be called fanciful. Yet, on the broadest economic considerations, and in view of the fact that excited speculation and a "boom"—more or less unwholesome as circumstances dictated—has been an invariable incident of a great war with its prodigious government expenditure, it may not be unreasonable to ask what result would logically follow, if all great stock markets in the world but one were to be tied down arbitrarily, so that they could make no such response.

If these three influences were alone in operation, they would largely explain the phenomena of the day, though they would also leave opportunity for the familiar doubt regarding the longer outlook. What the next few months or the next few years will show is the extent to which the unquestionably sound sub-stratum for a forward movement in America will offset the temporary and precarious character of the impulse to expansion arising directly from the war. Regarded from another point of view, they will possibly show how much or how little of the present strong economic position in the United States is (as popularly imagined) a direct and exclusive consequence of the war itself, and how much a result of conditions in this country, which would sooner or later have asserted themselves, even without a European war.

LILLIAN D. WALD'S

FASCINATING BOOK ABOUT A GREAT SOCIAL SERVICE

THE HOUSE ON HENRY STREET

As the head of the Henry Street Settlement on the East Side of New York, Miss Wald has for twenty years watched the transforming miracles which have contracted centuries into years and made American citizens of Jew and Hun, Armenian and Slav.

This book fuses the interest of an important contribution to our social literature and an absorbing personal narrative.

"The record of one of the most valuable services to the nation."
—*New York Tribune.*
"Fiction, even at its best, could hardly hold the attention more closely."—*Baltimore Evening News.*

Illustrated from some 80 etchings and drawings by Abraham Phillips, a member of the Settlement, and from photographs. $2.00 *net.*

HENRY HOLT AND COMPANY 34 W. 33D ST. NEW YORK

THE BOOK FOR THE POETRY LOVER

"A series of these annual volumes for twenty years would furnish the best spiritual history of our generation."—BOSTON TRANSCRIPT.

Anthology of Magazine Verse for 1915

AND

YEAR BOOK OF AMERICAN POETRY

Edited by WILLIAM STANLEY BRAITHWAITE

Price $1.50

CONTAINS

The one hundred best poems of the year selected by William Stanley Braithwaite.
A critical summary of the fifty best volumes of poetry of the year.
A summary of the contents of the best volumes of the year dealing with poets, poetry, and the art of poetry, together with a list of articles and essays on the same subjects.
The Titles and Authors of every poem in twenty of the most important magazines.

1913 Edition $1.50 1914 Edition $1.50

Prussian Memories
Poultney Bigelow
12°. $1.00.

Mr. Bigelow passed some years of his boyhood in Prussia, and in later years made various sojourns in Germany. At the time of his schooldays, his father, the late John Bigelow, was Minister to France. Through the father's friends among Berlin Court officials, young Bigelow had the opportunity of associating as playfellow with the present Emperor. Mr. Bigelow's narrative is dramatic, spirited, humorous, and shows a full knowledge, with an unusual freedom from prejudice.

Inequality of the Human Races
Count Arthur de Gobineau
Author of "The Renaissance."
Edited by Dr. Oscar Levy. Translated by Adrian Collins, M.A.
8° $2.00.

The author shows the philosophical foundations upon which his brilliant studies of the Renaissance are based, and provides the historical student with a totally new standpoint from which to view his subject.

The War of 1914
Neutral and Loyal Belgium
Emile Waxweiler
Director of the Solvay Institute of Sociology at Brussels, Member of the Académie Royale of Belgium.
12°. $1.25.

In order to clarify opinion and to correct wrong judgment, the author has not deemed it superfluous to weigh in the balance all the imputations that have been made against Belgium, even to the inclusion of those that do violence to common sense.

The Nation

NEW YORK, THURSDAY, NOVEMBER 18, 1915.

Summary of the News

The circumstances under which the Ancona was torpedoed remain technically obscure. That is, the Government at Washington has not at present sufficient exact information on which to base a decision in regard to its future course of action. For the moral aspects of the case there is no need to go beyond the cynically brutal statement given out on Sunday by the Austro-Hungarian Admiralty, the burden of which was that, because all of the passengers and crew had not been able to get into the boats in forty-five minutes, by which time another steamer had appeared, the submarine was justified in sending to the bottom the vessel and what remained of its human freight.

As to the facts, there is direct contradiction between the Austrian statement and the note communicated by the Italian Government to the principal neutral capitals of the world. The former declares that warning was given, and that the Ancona was shelled only when she persisted in efforts to escape. The latter, supporting the statement of the Ancona's captain, asserts that no warning of any kind was given and that, after the disembarkation was begun, the lifeboats were shelled. Despite the assumption of responsibility by the Austrian Government, doubt persists as to the actual nationality of the submarine. Reports from Rome on Saturday were that the Italian Government took the view that it was German. It is stated that an American Consul has been ordered to Tunis to ascertain the facts and obtain sworn statements from survivors, especially from citizens of the United States. According to reports available as we write, 207 persons lost their lives. Only two Americans have been definitely reported among the saved.

The North Sea having been rendered by the British navy unsafe for submarines, these craft appear to have definitely transferred their operations to the Mediterranean. In addition to the Ancona, two Italian ships, the Firenze and the Bosnia, have been sunk in those waters, in both cases with attendant loss of life. It is probable also that most of the seven British ships and one French ship reported torpedoed during the past week were sunk in the Mediterranean, although the locale is not always given in the official announcements. It is worth noting that in Germany, according to the *Vossische Zeitung*, the ingenious idea begins to find favor that failure on the part of the United States to press her demands to Great Britain in regard to interference with neutral commerce will absolve Germany from her undertaking not to sink passenger liners without warning.

Second only in importance in the week's news to the sinking of the Ancona has been the revelation of ever-accumulating evidence regarding Teutonic belligerency in this neutral country. It is not even pretended that the fires which occurred on Wednesday and Thursday of last week in the Bethlehem and Roebling plants, causing damage in each case estimated at more than a million dollars, were of accidental origin. The impression of incendiarism is confirmed by the fact that at the same time three other fires were started in the Bethlehem plant, and that the fire-alarms in the Roebling plant had been tampered with. Dispatches from Berne on November 13 described the rejoicings in Germany over the destruction of part of the Bethlehem works.

It is understood that the Government is giving serious consideration to a series of articles published last week in the Providence *Journal*, which detailed the revelations of Dr. Joseph Goricar, an ex-member of the Austro-Hungarian Consular service, concerning alleged illicit activities of Austrian diplomatic officials in this country. It was stated on Sunday that the German, Fay, and the five other men under indictment for plotting damage to ships carrying munitions to the Allies would be brought to trial in the Federal Court as soon as possible, under statutes which apply to the crime of piracy. Fay was reported as being ready to turn State's evidence, but a long statement that he made on Monday appears to have contained no disclosures calculated to be of value to Federal officials in tracing the conspiracy to its source.

Negotiations between the Allied Powers and Greece appear to be reaching a crisis. The mission of Lord Kitchener, decided on hurriedly, as Mr. Asquith stated in the House of Commons on November 11, as a result of "serious information," is now generally accepted as having to do with the future attitude of Greece. That attitude appears to be governed by Byzantine subtlety. The renewal early last week to France of pledges of cordial neutrality "with the character of sincerest benevolence towards the Entente Powers" was closely followed (on November 11) by publication of a decree dissolving the Chamber and fixing elections for December 19. Dispatches on Tuesday stated that an intimation had been received from the Greek Government that any Allied troops seeking refuge in Greek territory would be disarmed. Lord Kitchener was reported on Tuesday to have arrived at Lemnos, and M. Denys Cochin, Minister without portfolio in the French Cabinet, to be at Athens. It is suggested that representations which may be made by Lord Kitchener may take the form of pointing out to King Constantine the unconstitutionality of his action in dissolving the Chamber, the ground for such representations being that the constitutionalism of Greece is guaranteed by Great Britain, France, and Russia.

In reply to a request for information in regard to the alleged searching by a British cruiser of the American steamship Zealandia, when the latter was within Mexican territorial waters, the British Embassy in Washington explained to the State Department on November 12 that the vessel at the time of the search was outside the three-mile limit. This statement is said to be in contradiction of the report of the Zealandia's captain. The State Department is endeavoring to ascertain the facts, and the American Consul at Progreso has been instructed to take affidavits of witnesses. In regard to the seizure of the American steamship Hocking, recorded in our issue of November 4, announcement was made by the State Department on November 11 that it had been informed by the British Government that the Hocking was seized in order to determine whether, although flying the American flag, she was an enemy vessel on account of ownership by German capital.

Austrian aeroplanes have conducted raids on Verona and Brescia. In the former place, thirty civilians were killed and forty-nine wounded. At Brescia seven were killed and ten wounded.

The new treaty between Haiti and the United States was ratified by the Haitian Senate on November 12.

A poll of the next Congress conducted by the National Security League, details of which appeared in Sunday's papers, indicates that there will be a majority in favor of the President's proposals for defence.

Dispatches from Berlin, under date of November 12, stated that virtually the entire food supply of Germany was expected soon to pass under governmental control. The German Chancellor in the Reichstag on the same date assured the Socialists that the hopes of the Entente Powers of starving Germany were doomed to disappointment. Dispatches of the following day from The Hague gave details of new regulations concerning foodstuffs, among interesting items of which is the prohibition of painting in oil colors. By way of Amsterdam has come news of a recent food riot in Düsseldorf.

Official announcement was made on November 12 that Winston Spencer Churchill, Chancellor of the Duchy of Lancaster, had resigned from the Cabinet, and would join the army in France. The announcement was accompanied by publication of correspondence that had passed between Mr. Asquith and Mr. Churchill in connection with the resignation. On Monday Mr. Churchill made a statement in the House of Commons in which he defended his record at the Admiralty. Mr. Churchill's frank statement was well received by the House. Another interesting incident in the House of Commons occurred on Thursday of last week, when both the Premier and Sir Edward Grey warmly defended Lord Haldane, attacks on whose patriotism have furnished one of the most discreditable episodes in England's conduct of the war. Sir Edward Grey revealed the fact that at the time of Lord Haldane's withdrawal from the Cabinet he himself would have resigned but for a crisis in public affairs.

The Ministers of Great Britain, France, Russia, and Japan were informed by the Chinese Minister for Foreign Affairs on November 11 that it had never been the intention of the Administration to change the form of Government hastily; that the majority of the provinces had voted in favor of the contemplated change to a monarchy, but that, owing to the preparations necessary for the ceremony, some delay in effecting the change would be inevitable.

The Week

If universal service is the only way to secure real democracy, real justice and fairness, then the Kaiser is the greatest democrat alive. And for that matter, you find a great many Germans who insist that this is so. In Germany the courts of justice function with admirable impartiality. In Germany the laws are equitably enforced. And in Germany they have exactly Col. Roosevelt's habit of describing the particular way one wants to go as the only way. The only way from Germany to Paris was through Liège and Louvain. The only way to England was by sinking the Lusitania. Mr. Chesterton has pointed out this happy way of using a word to include its opposite. I believe in teetotalism if by teetotalism you mean the right of every man to take a drink when he wants it. I believe in quadrupeds if by a quadruped you understand an animal that has two legs or six or twenty-four as well as four. I believe in democracy if by democracy you mean universal service. Ask the man in the street if by democracy he understands a great standing army. Ask him whether America since the beginning has not meant industry as against armaments, and the will of the people as against the "only way" discovered by Kaiser or Bull Moose. Have your tremendous army if you must, but recognize that you will have more preparedness and less democracy.

The description, from a Bulgarian source, of the situation in Macedonia as another Gallipoli for the Allies, should not be altogether discouraging to the latter. For deadlock means a cessation of the Teuton-Bulgar advance. In southern Macedonia such a condition seems to be fairly established. From the Greek frontier along the Orient railway to Krivolak and the River Cerna and then westward along the Babuna heights, the limit for Bulgar progress has been apparently fixed, so that Sofia now intimates that her armies have already attained pretty nearly everything they were after, and failure to press further means no defeat. In central Servia, where the main army is retreating before the Teutons from the north and the Bulgars from the east, the campaign is also slackening up. Last week was a bad one for the Serbs. Their losses in prisoners after the capture of Nish and the battle of Krusevatz, which was the one big fight of the campaign, were considerable for a few days. The Teutonic pursuit has now slackened, the Bulgars are apparently consolidating their positions along the Morava and the Orient railway, and the Serbs are establishing a line of resistance in the heights north and east of the historic plain of Kossovo. On the other hand, of the rumored Allied counter-offensive there have as yet been few indications.

The activity of Teutonic submarines in the Mediterranean is, of course, closely connected with developments in the Balkans. Sending Allied troops into Salonica, on a scale demanded by the seriousness of the situation, imposes a strain upon the Allied fleets such as they have not previously experienced. Hitherto it has been the British boast that two and a half million men have been ferried to and from England with a loss of less than one per cent., and this loss was almost entirely in the Mediterranean. With a larger proportion of troops now going to the Near East, and the German Admiralty transferring its main submarine operations from the North Sea to the Mediterranean, the toll paid by the Allies is bound to rise. There is no possibility of guarding the long sea passage so effectively as the short lane across the Channel has been guarded. From Marseilles to Salonica is a matter of a week's voyage for passenger ships in times of peace. From Alexandria to Salonica is three days. The offset to this difficult situation is that the German submarines must also set out from the North Sea harbors for a long and perilous trip to southern waters. But once in the Mediterranean, there are the Austrian ports to serve as a base. From now on Great Britain must be prepared for much greater casualties at sea than she has hitherto sustained.

In spite of its effectiveness as a raider of enemy transports, the submarine retains its primary importance as a weapon of defence. Its rôle as a factor in the scheme of coast defence has repeatedly been emphasized. Advocates of "preparedness" against invasion of the United States will ultimately be forced to recognize the lesson of Heligoland and the Dardanelles with regard to the effectiveness of shore batteries, mines, and undersea boats against the attack of a fleet. But perhaps the most striking example of such effectiveness has been shown in the Baltic, as part of the general German operations against Russia. It is more than six months since the Germans occupied Libau, and at that time the fall of Riga seemed to be a matter of a week or two. It is nearly three and a half months since the Germans took Mitau, which is only twenty-nine miles by rail from Riga, the fall of which seemed then a matter of a few days. The capture of that great port could not but be a prime objective with the Germans. It would have facilitated the fall of Dvinsk and given them the line of the Dvina for ideal winter quarters. If the German advance there has been halted and turned into a defensive, the failure of the German fleet to break into the Gulf of Riga, with the consequent failure of transport by sea, has been largely responsible. And if Russian coast defence, supplemented by such submarines as England has succeeded in slipping into the Baltic, has been able to keep the Germans out of the Gulf of Riga, the case of coast defence at its weakest against attack at its conceivably strongest is clearly made out.

Reference to the American note to England was made at the Guildhall banquet by the new Attorney-General, Mr. F. E. Smith. He intimated that the British Government would make a reply, in which, he said, it would endeavor to justify its course on legal grounds, "not altogether," he added sarcastically, "without reference to authoritative decisions rendered by American courts." This opens up a fine prospect for the diplomatic lawyers. They will ransack 3 Wallace. They will play battledore and shuttlecock with the Springbok case and the Peterhof case. "It means exactly what we contend for." "Ah, but you have failed to consider what the court says in another passage." We all know the sort of thing that will be done. It will easily occupy the spare time of the Foreign Office and the State Department until the war is over—probably still longer. And when the diplomatic discussion is finally ended, the American claims for damages will doubtless be submitted to arbitration. Whereupon the distinguished jurists who compose the tribunal will in their turn wreak themselves upon the everlasting 3 Wallace, the agile Springbok case, and the Peterhof upon the rock of which international law was apparently *not* founded.

> Had it [the fortress of Dvinsk] been of rock, experts declare, it would have been knocked to pieces long ago, but an artillery bombardment is of little avail against a sand fortress. . . . Exploding projectiles are smothered in the sand trenches skilfully laid out so that they are mutually outflanking.—[Vossische Zeitung.

While we, in this country, are citing the

Bible for preparedness, the Germans, with characteristic enterprise, have discovered that the New Testament is no longer valid as a military textbook. For the Russians have built themselves a fortress upon the sands, and the rains descended, and the floods came, and the winds blew, and Gen. von Hindenburg has been compelled to fall back with his men and his guns out of a region converted into a swamp. At General Headquarters there may be some disappointment with an erroneous theory of fortifications which held from about A. D. 31 to the fall of Maubeuge and Novogeorgievsk, but there is probably no inclination to carry resentment further and say, "Gott strafe Matt. 7:24-27."

It was a year ago that the new Federal Reserve banking system went into operation. That event occurred at a moment when the financial situation in this country was still dark. Foreign exchange ran heavily against New York; our gold was moving out in quantity. The New York banks had but just emerged from a condition of large deficiency in reserves below the legal limit. The Stock Exchange was closed, fearing that its reopening would be followed by an avalanche of European liquidation of American securities, and by a consequent panic in our investment and money markets. How complete and dramatic a change has since then come over the American financial situation is attested by the great rise in our investment markets during 1915; by the unprecedentedly large gold imports; by the swing of the foreign exchanges, in a degree never witnessed during our time, in favor of New York; and finally, by the entry of the American financial community into the international market as the chief lender of money to all the outside world.

The preliminary signs of this reversal of position in American finance came in sight a very few weeks after the new banking system was inaugurated. Yet all discussions of this interesting anniversary are to-day calling attention to the fact that, during the past twelve months, the new banking facilities of the Federal Reserve system have practically remained untouched. Last week, with $329,253,000 cash reserve in all the twelve Federal Reserve Banks, total rediscounts were only $43,148,000, and Federal Reserve notes in circulation, not specifically covered by deposit of cash against them, were only $13,007,000. This is plain evidence that the facilities of the new banking system have not yet had to be employed. The reason lies on the face of things; the country's extraordinary gain in financial power, prestige, and banking resources came from the working-out of economic conditions due to the war itself. Yet it would not be right to overlook the influence which the fact of a sound and scientific banking and currency system may have had in promoting this very confidence of the outside world in the United States. Nor should it be forgotten that the existence, practically unused as yet, of these new safeguards and facilities for our country's financial system, has an immensely important bearing on the economic problems which will confront us in the later stages of the war, and on return of peace.

With the text of the opinions on the Arizona Alien-Labor law before us, it is possible to state not only that Justice McReynolds's dissent related solely to the form of the suit and not to the merits of the question at issue, but that he took care actually to state his accord with the other members of the Court upon the merits. After stating his opinion that the suit was a suit against the State of Arizona, and therefore beyond the powers of the Supreme Court, he adds: "That the challenged act is invalid I think admits of no serious doubt." Thus we have it as the unanimous judgment of the Supreme Court that any anti-alien law of the type of the Arizona enactment is in violation of the Fourteenth Amendment, and therefore void. So far, therefore, as private employment is concerned, there is an end of the question of statutory discrimination against aliens; whether the case will be found different as regards employment on public works remains to be seen. It is interesting to note in this regard that in the opinion of the Court, written by Justice Hughes, there occurs this remark: "The discrimination [i. e., that against aliens] defined by the act does not pertain to the regulation or distribution of the public domain, or of the common property or resources of the people of the State, the enjoyment of which may be limited to its citizens as against both aliens and the citizens of other States." A reference to the fact that the Arizona law "is not limited to persons who are engaged on public work or receive the benefit of public moneys," taken in conjunction with the sentence just quoted, would seem to indicate that the Court will find, in a law directed only against alien labor on public works, much more reason for doubt than in the Arizona law.

Booker Washington's death lends double interest to an article of his which has just appeared in the New York *Age* upon American duties in Haiti. It was written with especial reference to Haiti as presenting a race problem. The island's acceptance of the treaty establishing a virtual American protectorate was communicated to the State Department last week. Dr. Washington was concerned lest we send administrators there who might show insufficient sympathy with the black people, and who might attempt to draw a color line. "They must fit themselves to be white men in a black man's country if they want to live there and work there and have any influence whatever." But he hoped that young American colored men and women might go to Haiti to engage in educational and general social work. For this two things are necessary. The American Government must give a constructive direction to the work of its Receiver-General and Minister, as by seeing that part of the customs which we are to supervise goes for agricultural and industrial education. Negro agencies should follow this up by sending workers in education and industrial betterment. What is really to be desired, Dr. Washington's statement does not perhaps make sufficiently clear. It is that the American officers should not interfere in Haitian affairs at all except to correct wrong tendencies and to give helpful advice; and that American negroes should show a practical interest in teaching the race in Haiti some of the lessons in citizenship and governmental stability learned in the United States.

A wagon-load of generalities about the "ruin" of the Philippines is not worth one or two such facts as Governor-General Harrison presents in his letter to the head of the Far Eastern Bureau. By the deposit of Government funds in local banks, well secured, he has in two years made available to sugar and tobacco growers nearly 7,000,000 pesos for the development of their lands. The scope of this plan of rural credits he hopes to see doubled during the coming year. He is pushing the work of land survey and land registration; the courts have been reorganized; the permanent road and bridge system is being extended, while every effort is being made to render these highways profitable by teaching the natives their usefulness in agriculture. Though the removal of the export tax and the disturbances resulting from

the war have made necessary the imposition of a business tax, it has been accepted without complaint, and the present fiscal year—coincident with the calendar year—will close with the first safe surplus for some time. Business conditions are better, according to tourists, than in "any other section of the world"; and "the relations between Filipinos and Americans are constantly growing more friendly." These concrete achievements are the best rebuttal of the allegation that, by a policy the main features of which have been the presentation to the Filipinos of the same ideal of ultimate self-government which Mr. Taft himself had previously held out, and a steady effort to teach the natives to take their due share in the government, the islands have been brought to the verge of disaster.

Mr. Garford, of Ohio, the leader of the Progressive party in that State, has found a new reason why his organization should give up. He tells it to a New York reporter. He has discovered that the American people have a very strong desire that there should be "only two parties" in the Presidential election next year. For a set of polite gentlemen like the Progressives, this hint is enough. If informed that "three is a crowd," they will not hesitate to take themselves out of the way. Yet in thus burying their party they score the complete triumph of one of its leading principles—"let the people rule." The people have ruled that there shall no longer be a Progressive party, and so, in obedience to the inner law of its life, it gracefully seeks death. By expiring, it wins a greater victory than it was able to compass while living.

America does not produce so many Nobel prize-winners that a man thus singled out might not be supposed to have first reached a considerable popular reputation. But another evidence of the Cinderella part played by abstract science in this country appears in the necessity for printing a short identifying biography with the announcement that Prof. Theodore W. Richards has been awarded the belated 1914 prize for the most important chemical discovery or invention. It would be easy to name a half-dozen men in America who have become well known in industrial chemistry, but there is no path to popular fame in the revision of the atomic weights of the more common elements, or in investigations of changing atomic volume. In Germany, where the award to Professor Richards has been noted with a satisfaction born of the fact that he studied under Nernst and Ostwald, and made public his first discoveries under the auspices of the German Chemical Society, he was probably better known than anywhere outside New England. In the scientific world international recognition of marked achievement is prompt, and the Harvard chemist had already received a large number of honors from British and Continental sources. In few other lands would such a prophet have been without more honor at home.

Such a life as that of Dr. Edward L. Trudeau shows what scientific zeal can do when conjoined with humane impulse. He was an investigator, but also a public benefactor. A pioneer in the open-air treatment of tuberculosis, and a tireless worker in his laboratory, his most durable satisfaction he found in the relief of suffering and the cure of tuberculosis patients from among the working classes. It was accident that led him to Saranac Lake, but it was no accident that identified his name with that spot and gave it a reputation all over the world as the site at once of profound studies of the nature of a terrible disease and of a sanatorium where thousands found hope and health. In his lifetime Dr. Trudeau received the fullest professional recognition and, what he valued more, abundant testimonials of personal esteem and gratitude. He lives in Stevenson's pages, and he will live longer in the hearts of those who have known his healing touch and been in contact with his fine nature.

An echo of the legal difficulties of the merger of Harvard and Massachusetts "Tech" comes from Philadelphia, where plans for a union of the University of Pennsylvania and the Medico-Chirurgical College are approaching realization. The legal barriers are now down, and the duplication of plant and effort long existing seems now near an end. Under the new arrangement, the Medico-Chirurgical College will become the graduate school of the University, thus not only ceasing to compete with it, but affording larger opportunities for students of medicine. Philadelphia already has a wide reputation as a centre of schools of medicine, and this virtual absorption of one of them by another should mean a gain rather than a loss in every particular except that of the mere number of institutions. On that point, the report of the Carnegie Foundation a few years ago was not only illuminating, but provocative of changes. The mortality of inefficient or worse than inefficient medical schools since then has been large. But it is easier to get rid of these than to stop the duplication of work by adjoining schools each of which is well established and of good repute.

If any doubt the permanent place of the Indian in American imagination, they need only look at the part he plays in every nature-study movement. The latest example is an open-air club for working girls which was addressed at its first meeting by a Sioux in costume, and which will spend its first indoor hours in Indian study under a special leader. Members are expected to read, not Burroughs or Thoreau, but "at least one standard book on the life of the American Indian." Half the impulse of the boy scouts and such organizations is in this country derived from their imitation of Indian tactics. Scarcely a volume written upon camp life and woodcraft but offers us Indian lore by the chapter. All this is apart from the influence of Cooper's and Mayne Reid's stories in predisposing youth to interest in outdoors. The Indian is rapidly becoming the great god Pan of our natural world, our great mentor in nature study, and the great historical figure that gives romance to every forest path. This is the more true, the more urban we become. When the members of even a working girls' organization have to be able to identify ten native trees, ten native birds, and fifteen wild flowers, the function of the noble red man in educating cockneys cannot be doubted.

One indication of clearing skies in Mexico is the Government figures showing an increase of $1,000,000 over last year in our September exports to that country, and of nearly $3,000,000 in our imports from it. Trade is thus being resumed in the nearly prostrated land. Meanwhile the situation faced by Villa is as desperate as that confronting Lee when Grant and Sherman moved simultaneously upon him in the spring of 1865. His army has just been badly beaten at Agua Prieta and forced away to the west towards Naco, on the border, without adequate supplies or means of getting them. From the south a Carranzista force is approaching Naco along the railway from Hermosillo, while from the east Obregon's army is pressing him from Agua Prieta. At the same time the Zapatistas in Morelos are reported to be losing coherence, and to be surrendering in groups of thousands in response to Carranza's offer of amnesty.

OUR GOVERNMENT AND AUSTRIA.

Our State Department has in its hands a flat contradiction between the official statements of two foreign nations. The Italian Government, believing that the submarine which sank the Ancona and killed 200 noncombatants was German, declares that the ship was fired upon without previous notice to stop. But the Austrian Admiralty, assuming that the submarine was Austrian, asserts that the Ancona refused to heave to when warned, and "fled at full speed." Evidently, here is a question of fact, relating to the laws of naval warfare, which the Washington Administration must clear up before it can take decisive action. In its notes to Germany, it accepted the rule that the captain of a merchant vessel, duly warned by a submarine, took the responsibility upon himself of an attempt to resist or to escape. Whether the captain of the Ancona did this or not goes to the heart of the case. The facts must be established beyond doubt.

One fact, however, stands admitted by the statement of the Austrian Admiralty. This is that the sinking of the Ancona was done in the most brutal manner. Whether the firing upon the Italian ship was technically justified or not, her torpedoing, with many passengers still on board, was nothing less than murder. One has no patience with the Austrian pretence that the crew of the Ancona was at fault. It is adding insult to assassination to say that the victims of the Austrian shell-fire were thrown into a panic. And the excuse that "another steamer was approaching," and that therefore it was not safe for the submarine to stay longer, is very like the excuse of a burglar that he had to kill the man he was robbing, because he heard the police coming. It would have been an excuse for the submarine to submerge and go away. Her commander could have reported his danger as sufficient reason for leaving the Ancona afloat. But ruthlessly to sink her before fleeing to safety himself was exactly what a pirate would have done.

And this, be it remembered, is a part of the deed for which the Austrian Admiralty assumes responsibility, that has nothing to do with the question whether the Ancona was or was not signalled to stop. There are two steps in the capture of an enemy merchantman. She must be warned; next, the safety of her passengers and crew must be provided for. When this cannot be done, the ship must be allowed to proceed. Such was the practice of the Emden repeatedly, in the early months of the war. It was simply a recognition of the duty laid upon the captain of a cruiser. And the commander of a submarine rests under the same obligation. This was distinctly laid down by our Government in the first Lusitania note. In it the German Government was informed that the United States could not contemplate the possibility of allowing a submarine to sink a passenger ship in such a way as to "leave her crew and all on board of her to the mercy of the sea in her small boats." And in the second Lusitania note our Government used strong words about the disregard of law as well as of humanity which would be shown by any commander of a submarine who, without "actual resistance," or "refusal to stop," should "so much as put the lives of those on board in jeopardy."

In all this, surely, President Wilson has laid broad the foundations upon which he may stand in dealing with Austria, as soon as the facts in regard to the Ancona are removed from dispute. Our position is enormously strengthened by what we have been able to exact from Germany. People are already forgetting what was achieved. We do not now refer to those who are publicly rending their garments and heaping ashes upon their heads and crying out upon the cowardice of the President and the shame of the country. In these shrill outcries we hear, first of all, those who keenly regret that this country has not somehow managed to get into the war, and, secondly, those who are ready to use any partisan weapon against the President. But we know that, wholly apart from these hysterical or malicious assailants of Mr. Wilson, there are many who think that he has been too patient and deliberate, and fear that he will be so in this new affair with Austria. But they ought not in fairness to dismiss from memory so soon all that patience and deliberation won in the negotiations with Germany over the Arabic.

That chapter is closed. It was a long one, but the end crowned the work. And there seems no reason to expect that the new chapter, now opened, need be lengthy. As soon as a clear basis for proceeding is established, our Government has only to insist that Austria concede promptly what was slowly wrung from Germany. Certainly, the Austrian Government could, in this matter, look for no aid and comfort from its German ally. It would almost surely get, rather, advice to follow the German example and to yield to the just demands of the United States. As for Americans, they cannot complain of the Administration for waiting till the whole truth is known. Even those of them who want to go to war do not desire a hair-trigger war. And the rest may well be asked to possess their souls in patience until they see whether Austria is not brought to give us satisfaction as Germany has done in the case of the Arabic and as we must presume she will do in the case of the Lusitania, still pending.

THE PRESIDENT AND THE NEW YORK POSTMASTERSHIP.

The approaching expiration of Edward M. Morgan's second term as head of the leading post office of the country places before President Wilson a question which admits of no compromise, and the decision of which is bound to have a profound influence upon his standing before the nation. By his entire past record, whether as teacher or as political leader, he is essentially pledged to a view of the public service under which the retention of an officer of Mr. Morgan's ability and life-long experience is a simple duty. If the President should fail in it there would be but one interpretation of the act, no matter how excellent might be the character or general qualifications of the man who was put into Mr. Morgan's place. Plausible reasons might be given for the choice of the new official, plausible excuses might be adduced even for the shelving of the man who has so efficiently filled the important post to which he has risen from the bottom of the ladder. But all this would be brushed aside by the simple and straightforward common-sense of the people. The country would pronounce its verdict in the single word, "politics."

And even if the politics were not Tammany politics, the damage that such a verdict would do the President's moral standing before the country would be very great. This might be more or less of an injustice to him; but it would be sure to happen. No man has set his ideal of public duty higher than has Mr. Wilson. If there is one thing that he stands for more than any other, it is the placing of the public life of the Republic upon the highest possible plane. But nothing is more certain, nothing more notorious, than that this cannot be so long as the administrative offices of the nation—offices in no way involving any question of governmental policy—are treated as party spoils. Here is a thing in which we fall short not only of our own ideals, but of the ordinary practice of all the other leading nations of the world. Moreover, it is a thing in which, in the course of the past thirty years, we have made most gratifying progress, and upon which enlightened public

opinion is unanimous. To throw Postmaster Morgan overboard would be a flagrant offence against standards of action which are no longer mere aspirations, but have come to be regarded as practically binding upon any right-minded Executive. While we have not yet reached the point of excluding "politics" from this whole class of appointments, we *have* attained the stage where it is only at the cost of severe and general condemnation that a man in Mr. Wilson's position can place the demands of party calculation above the claims of public service, in a case where those claims are of such preëminent force as they are in this instance. A false step would deeply grieve a host of the President's friends, and would put into the hands of his opponents a powerful weapon.

All this would be so if the question of Tammany did not enter at all into the case. But the reasons against the displacement of Mr. Morgan are enormously reinforced by the consideration of Tammany's part in the matter. From the standpoint of mere political calculation, it is plain that the President would be worse off if he put an anti-Tammany Democrat into the office than if he simply retained Mr. Morgan. Tammany would be far less resentful of a non-partisan policy in the matter than of a policy directed against the Fourteenth Street organization. If, on the other hand, the President were to name a Tammany man—or even a half-Tammany man, a man agreeable to Tammany—everybody would read in the act a desire on the part of the President to conciliate Tammany, even at the sacrifice of the clear dictates of sound administration. How damaging that would be to the President's reputation, one can best realize by recalling the part that was played by Mr. Wilson's and Mr. Bryan's hostility to Murphy in the proceedings at Baltimore which culminated in Mr. Wilson's nomination.

Viewed, therefore, either as a matter of immediate expediency or as a matter of principle, the displacement of Postmaster Morgan would be one of the most serious errors the President could commit in the field of domestic politics. As for the principle involved, it would be a mistake to regard it as merely a matter of retaining a public servant of exceptional fitness. Far more is involved than that. To make the civil service a career, a career that will attract men of high quality, it is essential that there be held out to those who manifest such quality in long-continued and effective service the reward that naturally attaches to it. Too seldom does it happen that this principle is asserted to the degree that it has been in the case of Mr. Morgan, who, beginning work in the New York post office at the age of eighteen, has risen to be its head, and is universally recognized as possessing a unique mastery of its needs and its problems. To dismiss him would be to turn back, perhaps by many years, the progress we are making towards the general recognition of the principle. We cannot believe that Mr. Wilson will consent to inflict such an injury upon the prospects of governmental improvement. In the midst of the tremendous international problems that beset him, he may not find time to look closely into the case. But fortunately it is a case in which the right answer is also the easy answer. There is no difficulty, no complexity, in saying No. And for the very desire he has most at heart, the desire that he may have behind him the hearty confidence and support of the nation in this crisis, it is of the utmost importance that he shall not give a handle to enemies, detractors, and party opponents by a false step in a matter that does not inherently present any reason for doubt or hesitation.

BOOKER T. WASHINGTON.

In Booker Washington the country loses not only a leader, but one who was in his person a real triumph of democracy. Born a slave, in the aftermath of the war he even slept under the wooden pavements of Richmond, a waif and stray, keeping body and soul together as best he could, but burning with the thirst for education and the desire to get ahead in the world. A colored friend of Dr. Washington's, Richard R. Wright, when also a ragged urchin, answered, in Reconstruction days, a Northern general who asked what message he should take back to the North, with the words: "Tell 'em we'se a-risin', master." Both these boys did rise—to the headship of great educational institutions; but Dr. Washington had the gift of oratory in addition to pluck, ambition, and an innate talent for leadership, and so he forged along until by a single speech in Georgia he achieved national renown. It was Gen. Armstrong, if we recall rightly, who said that if Hampton had done nothing else but graduate Booker Washington, it would have justified its existence and all the labor and money spent upon it.

If there was any secret of his success in overcoming the terrible obstacles which confront every man of color, it lay surely in his unfailing hopefulness, his dogged determination to let no obstacle daunt him, and to be himself above insult or humiliation. He was big enough to see early in life that the man who flouts another because of some difference in natural attributes, injures himself, and not the object of his venom. No disappointment could discourage him; if one benefactor dropped out, he found another for the place; if his audiences were small and the returns disappointing, why, there were other audiences to be found. And so he speedily typified in his person all the great work that Hampton and Tuskegee and a host of other schools were doing for his race, and proved beyond dispute how that work of bringing light to those that would otherwise sit in darkness earns enormous dividends not only for the blacks, but for the entire Republic. Thus thousands who heard him speak realized for the first time what talents, what possibilities of individual usefulness, lie latent among our colored fellow-citizens, and others found in his "Up from Slavery" a real tract for democracy and for the brotherhood of man. A Southern professor nearly lost his position for saying that two colored men, Washington and Du Bois, had written the two greatest books that have come out of the South since the Civil War, but the inaccuracy of his statement has yet to be proved; two more moving human documents are not often the product of travail and suffering.

And so it came about that Booker Washington gradually became the foremost interpreter of one race to another, particularly in the South. When the final verdict is passed upon his achievements, this may well prove to be his greatest claim to renown. Certainly of late years the trips he has taken into the various Southern States, when thousands of both races gathered to hear him wherever he stopped, have been of the utmost value. No one is quite so ignorant of negro aspirations and achievements as the Southerner of the average small town, whose horizon is limited by the negroes he sees upon the street corners. To these Dr. Washington brought a message that opened many an eye and won many a heart. True, he was extremely diplomatic; yet he did not lack courage, for he was never swerved by the threatening letters that often rained upon him. He would not take a guard, and unattended he would go by corners at which he had been told he would be shot like a dog if he dared appear. And, withal, his modest bearing, together with his great devotion to his cause, won him friends wherever he went. Here in the North the doors of many a home swung open to him.

Yet he was not the standard-bearer of a united race. It is a rare educational leader

who does not compromise on some questions, and in his peculiarly trying position, where a single false step might mean the ruining of his work—even the burning of his school—Dr. Washington did not speak out on the things which the intellectual men of the race deemed of far greater moment than bricks and mortar, industrial education, or business leagues—the matter of their social and political liberties. He was silent by choice in the face of many a crying wrong and bitter injustice, and more and more colored men came to resent it. They would not have objected had he, like other heads of schools, kept out of politics and assumed no leadership beyond that of the field of industrial training. But when they saw him, under Taft and Roosevelt, a powerful political factor in the White House, when they saw him in the attitude of a race leader forever dwelling upon the bright side of the picture and having no words of fiery indignation for injustices that cry out to high Heaven for redress, the unhappiness grew until men openly accused him of selling their birthright for a mess of pottage.

However he may have erred, the sum total of the good he did far outweighs the rest. One has only to try to picture the situation as it would have been in the South today without him, to realize how much he achieved. True, he preached the gospel the South wished to hear, because it suggested menial labor, but it was a great thing to those who knew the attitude of the South towards any education for the negro in antebellum and post-bellum days to win it over to any form of training that involved books. Some one must lay the foundations, and in preaching industry, thrift, the acquisition of property, correctness of life and bearing, and sticking to the farm, Dr. Washington preached the doctrine most needed by the bulk of the colored people; for it is upon that foundation of orderliness and good citizenship that a superstructure must be built without which the negro cannot come into his own. Other leaders there are to speak for higher ideals and higher aims towards which the evolution must be certain if our American democracy is to be a true democracy, and more and more such leaders will arise. But in this hour of a great loss to both races it is to be hoped that Dr. Washington's death will recall to the nation's attention, as did his life, that there are great talents to be found among the negroes, as there are certain to be great negro contributions to our literature, our science, our drama, our music, our arts, if only we can bring ourselves to strike from the limbs of Lincoln's freedmen the shackles of ignorance, oppression, prejudice, and injustice with which the race that vaunts itself superior still fetters them.

THE WORLD OF TO-MORROW.

Japan has consecrated her Emperor. China has decided to experiment a little longer with republican institutions. India is described as mutinying against English rule; on doubtful authority, but of discontent and ferment in India we have little reason to doubt. Asia's "teeming millions" crop up every little while in our discussions of world-politics, but it is a cold and stereotyped phrase demanded by the conventionalities of the theme. It is still true that when we speak of the world-war and of the world as it will look after the war, we think almost exclusively of the nations of the West. What will happen to seven million Belgians, what will happen to less than five million Serbs, is a more entrancing question than what the war will do for more than three hundred million people in India or nearly three hundred and fifty million in China. Where India and China are taken into account, they still figure as mere appendages to Western interests. Will Teutonic or Allied influence in China be paramount after the war? How seriously are the German threats against British rule in India to be taken? In other words, will India belong to Great Britain or will it pass under Germanic influences? We admit that Asiatic problems have been brought into closer touch with Western problems, but when we speak of the great settlement after the war, the settlement of Asia hardly enters into the reckoning except as it may enter as an incidental factor in the rearrangement of affairs in Europe.

Yet we have the example of Japan to show that Asia cannot go on indefinitely as a mere appendage of Western interests and civilization. The Emperor Yoshihito was crowned with all the rites of an ancient ceremonial, but the Japan of Yoshihito is no longer Asiatic in the sense of being dependent on the West. In the war with Russia the Japanese nation entered into the sphere of world-interests, but only to the extent that Asia was affected. Japan to-day is fully admitted into the confraternity of European nations. She is a member of an alliance that is waging a war arising out of European conditions, and, though her military operations have not extended outside of the Pacific, she is in a very direct fashion contributing her share towards the "settlement" of Europe. She is supplying Russia with munitions. She is reported to be lending money to France. The mere fact that the dispatch of a Japanese army to Europe is a subject of discussion shows to what extent the barriers between the West and Asia have been removed, so far as Japan is concerned. In this suggestion of Japanese troops fighting the battles of the Allies in the West, there is clear proof of how completely, in her case, the traditional superiority of the West to the peoples of Asia has vanished. It is rather a compliment of the highest kind to Japanese resourcefulness and efficiency that statesmen should think it a comparatively simple matter for Japan to send a quarter of a million men five thousand miles away from home with the assurance of victory.

No close parallel can be drawn between Japan and India. But among the people of India there are at work the same desires that actuated the founders of the new Japan, the ambition to be treated, not as anybody's problem or "burden," but as an entity whose own interests must receive consideration independent of the effect on Western world-power. The case against Great Britain, as revolutionary India sees it, has recently been summed up with unmistakable vigor by a native of India. Mr. Wagel's assertions may perhaps be controverted in part. His implication that India should receive complete self-government—if not independence, then autonomy—will impress a great many people as not falling within the field of immediate practical politics. But where the writer's case does hold good is in its protest against a state of mind rather than a set of conditions; the state of mind, namely, that such concessions as are offered to the people of India must be just sufficient to hold discontent in check. The people of India are entitled to more than they can obtain through the threat of general sedition. The object of British statesmanship should not be to keep the people of India quiet, but to facilitate their education towards self-government. The white man's burden as a permanent condition for the people of India has lost its validity in view of the unmistakable trend among the peoples of Asia towards ultimate self-rule. Even partial concessions work to this end. In placating Indian sentiment by the establishment of more and more universities, by the admission of natives to the Executive Council, by supplying wider opportunities in the civil service, the British Government is only strengthening the educated classes in India and feeding the appetite for fuller liberties.

The state of mind against which the new spirit among the peoples in Asia protests is the one which sees the world as made up of two continents only, and which regards a world-settlement as any settlement that regulates matters in these two continents, with a minimum of cutting and trimming here and there in Africa and Asia to make the Western adjustment as smooth as may be. "We shall not falter or pause," said Mr. Asquith, "until we have secured for the smaller states of Europe their charter of independence, and for Europe itself final emancipation from a reign of force." But radical opinion in India fails to understand why a war fought in Asia as well as in Europe, and one in which the people of India are taking part, should leave Asia out of account in the settlement. There are Indian aspirations as well as Serb and Polish aspirations. Asia is part of the world. Unquestionably, the war will bring about a wider recognition of the true area of the globe, if only through the fact that it has brought together on the battlefield a more extraordinary mingling of races than the Roman armies ever witnessed—from America, from Africa, from Australia, and from Asia, as well as from Europe.

THE AMERICAN UNIVERSITY LIBRARY.

A history of the Harvard Library, just published in connection with the opening of the Widener Memorial building, shows clearly how the University's growth has been marked by its stages of book-collection, how its books have always been its heart. This University library, like most others, has been built up through the care and sacrifice of groups comparatively small. Its beginnings were theological, but before 1700 we not only find critics recognizing the fact, but benefactors remedying it. By the end of the Revolution it contained "thirteen thousand books, disposed in ten alcoves." With the new century began a steady increase which still continues, the library having doubled approximately every twenty years. It received its second special fund only in 1801, but like gifts have come to it till they now total over a million dollars. Almost the first special collections were the Boylston medical books and John Quincy Adams's Russian books; such collections are now enumerated by the score. The expansion of University courses in recent years might be gauged by the appointment of new curators —in Modern Italian History, in South American Literature, and a dozen other subjects. "Sturdy beggars," as the librarians have been called, have been increasingly zealous in making new books lead the way to new fields. There are now nearly two million books, to furnish the facilities in a thousand different studies.

It is not many decades since the place and value of a college library were ill understood. That was the day of texts, with few lectures, and hence little required reading; the students were left almost entirely to their own choice; the libraries were poorly classified and arranged, and many branches were open only on certain days; while administration was so poor that investigation was arduous rather than attractive. There is still remembered the library head who used indignantly to inquire: "No provision for students? Why should there be? They have all they can do to take care of their daily work." The remarkable advance in administration has been the work of a quarter-century. It was not until fifty years ago that Harvard really had a librarian in the modern sense; and it was not until the coming of Justin Winsor that her collections achieved their full usefulness. "The mere accumulation of books," said Winsor in his first report, "is not in itself sufficient: a great library should be a workshop as well as a repository." This the modern college library, with its systems of reserved shelves, its seminar and departmental libraries, presided over by scholars specially qualified to act as guides, its general reading rooms, and its efficient system of classification and cataloguing, has become.

The method of administering a college library by a corps of central officers reached its maximum of efficiency some years ago. A general oversight has to be retained in some officer or officers, and the attention of specialists has consistently been fixed upon the best methods of cataloguing, shelving, delivering, and general organization. But as the peculiar functions of departmental libraries have developed, it has been necessary to have experts who can treat the library of a department as its "laboratory," and who can make the seminar collections of the department of Romance languages or of sociology as useful as—for example—the head of the Harvard Law School Library was making his ten years ago. Harvard now has her eleven departmental libraries and thirty-eight special libraries, administered in partial independence of the general library. And the results upon the student body of the more complex method of book-handling and distribution are now fairly plain. The great gain, in a general literary sense, is probably in the large opportunities to introduce students to the great field of bibliography and book-classification, and to enable them to understand the wealth of information to which a few simple keys will give admission.

That college students no longer browse as they once did, that they do not spend solid hours in library alcoves, is a common complaint. Some libraries may once have neglected the general reader. But there is nowadays a very frequent provision of some central stock of ten thousand volumes or so. If these are attractively arranged, they are a standing temptation to the student. If care is taken in their classification, they reveal the relation among various parts of the world of thought, and may lead the undergraduate to read with some systematic scheme. At any rate, no university library should be without something answering to a "college study" to attract and hold the casual reader.

Foreign Correspondence

FRANCE AND RIGHTS OF NEUTRALS—IS THERE INTERNATIONAL LAW?

By STODDARD DEWEY.

PARIS, October 30.

The note addressed by the American Government to the English Government concerning the rights and wrongs of Orders in Council and the rights of neutrals to non-contraband trade with belligerents and what does or does not constitute a technically legal blockade interests France vaguely in its details. In substance, whether Germans shall continue to be fed up to prime fighting condition by Chicago preserved meats is of vital interest to her; and France has her own controversy to like effect with Switzerland, and, indirectly, with the United States. In general, the academic discussion is heard with a certain wearied attention—for the previous question presents itself more and more to every French mind, Is there any international law left?

Not the United States nor Switzerland nor any neutral Power protested against the violation of the neutrality of Belgium and Luxemburg, although such neutrality was supposed to be guaranteed by international law, based on treaties. This is not all. The French nation, relying on the treaties and international law, had never fortified its Belgian frontier; and any attempt at safeguarding such a frontier would have been proclaimed a *casus belli* by Germany in the name of international law. The invasion of France by Germany across Belgium was therefore a doubly flagrant violation of whatever international law existed. That is, Germany invaded precisely a frontier of France which international law pretended to guarantee against invasion.

This is very justly noted by Prof. Ernest Denis, when, in the name of the International League of the Right of Peoples, of which he was president before the war, he declined the recent invitation of a Neutral Peace Association to preliminary conversations intended to lead up to formal conferences and ultimately to a peace congress.

"A part of France is occupied by Germans who burn, pillage, rob, and assassinate—in unceasing violation of the law of nations.

"If a part of France is thus in the power of Germans, it is not as a consequence of battles engaged loyally. This fact has not been brought out in sufficient relief. The German invasion could not have been made by the frontier where France had the right to establish permanent defences. (Herr von Jagow acknowledged this in his conversation with the British Ambassador, on August 4, 1914.) The aggression took place by the frontier of the north (France's Belgian frontier), of whose inviolability France had been assured by treaties, and which, for this reason, she had not fortified."

Whenever, therefore, Americans plead international law against England, they must expect to hear Frenchmen say: "Plead rather your own self-regarding legality—for, indeed, you have not maintained the existence of any international law regarding all nations."

Knowing this, I have asked here and there opinions—without prejudice—concerning the existence and the particulars of an international law between England and the United States in the present conjuncture. The French have fairly threshed out their own contentions with Switzerland, and they are occupying themselves with Spain—and they are quite willing to let England fight her own lawsuits. I have, however, gathered three very general impressions of the average man—the man in the street—who has received those very elementary notions of international law which President Woolsey, of ancient Yale, thought essential to any liberal education.

First, there is the feeling that much of the legality which Americans now claim was made by themselves—quite logically, of course—during their Civil War; and that they ought to admit the possibility of further logical consequences in the new turn war has taken.

Secondly, if Mexico during the Civil War had been a trading neutral country, with easy communication across her frontier into the Confederacy, would the principle now put forward by the Government at Washington with regard to Scandinavian trade and equal rights for neutral America based on it have been admitted in favor of England and France?

Thirdly, since the introduction of non-contraband goods and payments for exported products may suffice to turn the economic and financial scale in favor of a belligerent country having a land frontier with a neutral, may not the legality claimed by Americans as neutrals amount to a very unneutral casting of their influence in favor of said belligerent? At this rate, only an island or a country like the Southern Confederacy having in practice nothing but an ocean frontier could ever be made to undergo an efficient blockade. Thus the military power of England from her navy would run up against all this contradictory legality—which is called international in virtue of precedents rather than of conventions, for these war has now smashed from the base up.

Legally, all this may be very uninteresting, and doubtless, Americans must maintain their own legality. All the same, is there not somewhere here a *reductio ad absurdum* of an international law without logic and without sanction? Surely, it is well that Americans should advert to this consequence of their present contention as well as to its legal principles.

With Switzerland, France has had to deal more "objectively," if I may still use German scientific slang. Switzerland is an island surrounded by land, and all the lands around her are at war one with another. To Switzerland which is neutral in between, each belligerent country—France and Italy, Germany and Austria—may give of her own as she pleases and may allow other neutral nations to send—in transit across her own territory—what she pleases. I do not think Americans have claimed the right to send their wheat and petroleum freely through France or Italy into Switzerland.

So far poor Switzerland has had many things to suffer in her stomach and her pocket; and she runs the risk of suffering cold this winter from lack of coal. In the first months of war a tragic embargo was put on pastry through fear of a flour famine. At the grocers' shops, twice a week, a long line of women, with various vessels in their hands, waited for the dole of a quart of kerosene. Only military automobiles were seen. Little by little, a *modus vivendi* has been reached for many staples of life that must cross suspicious frontiers.

The Federal Council itself has had to take the responsibility of the wheat and petroleum received through France not getting further—into Germany. Germany now threatens to stop off coal if used in manufactures that may help France. On the other hand, Germany demands "compensations" in French imports for her own products which she allows to enter Switzerland! It must be acknowledged that France has shown greater consideration for Swiss necessities, in spite of a home campaign more or less well grounded against that underhand provisioning of Germany which is charged on Switzerland. In this Swiss extremity, with Federal sanction, a funny "trust" S.S.S.—*Société de Surveillance Suisse*—has been organized to reassure both sides; but there are breakers ahead. So there is a republic of neutrals suffering yet more virtuously than the United States from this war puzzle.

The particulars of the Spanish underground railway to and from Germany, into and out of France, might be more racy still if they were known. The French authorities have eyes fully open to them. And this can only furnish one more proof that international law, in the present state of the world's civilization, is very largely a matter of international comity—and of a country's honesty.

THE EXODUS TO HOLLAND IN PICTURES—DISSENSIONS AMONG THE BELGIAN EXILES.

By A. J. BARNOUW.

THE HAGUE, October 26.

On October 8, the anniversary of the fall of Antwerp, an exhibition was opened at The Hague of sixty-three drawings by the Dutch painter, Leo Gestel, all illustrating the miseries of the Belgian exodus into Holland. Leo Gestel has lived through various episodes of that eventful time, and has recorded them with brush and pencil in scenes so throbbing with woe and speechless agony as to haunt the mind for days after. The most impressive are those in which the artist shows the interminable, wave-like procession of the wearily tramping crowd: young, thin-faced mothers with deep-sunk eyes, dragging their children along and bending under the burden of all their belongings tied up in bundles; old women wheeling a perambulator turned into a removal van; street-walkers in showy furs and painted faces; young fellows with lowering looks, carrying heavy bags slung over their shoulders, or pushing a wheelbarrow in which an old paralyzed father is propped up against a pillow; dirty patriarchal Jews and dangerous-looking hooligans; tottering omnibuses packed on the top with an indistinct mass in which nothing but heads and arms and fists and dangling legs can be descried; and over this sea of tearless despair a dark sky looms, lit up in the far distance by the lurid glare of a town on fire. Pictures like these are mighty epics in black and white. But the artist has also observed these poor exiles in their higgledy-piggledy, makeshift camps, improvised on sodden fields by the roadside, in the shelter of a haystack, and in drenching rain with only a straggling tent or the tilt of a cart to cover them. Still, after the former, these resting scenes are pleasant to behold, and the artist, who drew the flight in black only, has painted these camping episodes in bright, transparent water-colors. The collection reveals the powers of a great artist, and is a lasting monument both to his own fame and to that terror-stricken flight of half a nation.

The Belgians, at that time fraternized by affliction, have, in their exile, resumed the old political quarrels by which the nation was sadly divided before the war. In a letter to the *Nation*, published in its issue of April 22, I considered it possible that the danger from abroad would eventually prove a means of consolidating the Walloon and Flemish elements. But when the first terror of the invasion and flight had subsided, and the war dragged on with hardly a change to stir their flagging hope of a speedy return to their abandoned homes, the refugees, in the monotony of their prolonged residence abroad, fell back upon the discussion of the old political and racial problems, to discuss which means to quarrel about them. The Walloon press, irritated by the cringing attitude of that Germanophile paper *De Vlaamsche Post*, edited at Ghent by a few misguided Flamingants under the German censor's control, began to upbraid the Flemish in general with treason to the Belgian cause, quite disregarding the telling fact that the majority of the Belgian soldiers who are fighting for that cause are true-born Flemings. "Vous suivrez la culture latine ou vous ne serez rien," they were told in that haughty tone which is the Walloon's usual manner in dealing with his Flemish brother.

The challenge was not left unanswered, and, which is worse, became the cause of dissension among the Flemings themselves, dividing them into two hostile camps with widely different ideals and aspirations. The one which seems to be the larger of the two adheres to the cause of Belgium as a matter of paramount interest, second to which comes the cause of Flanders. For that reason, this party disapproves of the gauntlet being taken up by the Flemings which the Walloon press had thrown at them. But the other

group raised the cry: "Flanders first, Belgium second." These Flemings do not care for a free Belgium in which a Walloon Government should again rule over an unenfranchised Flanders, as it did before the war. They demand home rule for Flanders in the Belgium of to-morrow, and they will not wait till the new day dawns, but want to extort from the Government at Havre a definite promise that autonomy shall be granted them. They are the die-hards, the Flamingants through thick and thin. Their principal spokesmen are the poet René de Clercq and a young philologist, Dr. Jacob. Together they edit *De Vlaamsche Stem,* which has lately passed into their hands. Originally this paper, which is published at Amsterdam, was meant to be a meeting ground for all Flemings in exile. The founder, Mr. Alberik de Swarte, conducted his paper in a true spirit of Belgian patriotism, avoiding all fruitless polemics on domestic discord, and representing the liberation of Belgium as the Fleming's nearest duty. But this attitude implied a compromise with the Gallophile Government at Havre, and the die-hards, once roused by the Walloon challenge, would not hear of such a compromise so long as home rule was not guaranteed to Flanders. Either group had its adherents among Mr. de Swarte's staff. Mr. René de Clercq, his co-editor from the beginning, stood up in opposition to him, and succeeded in persuading Mr. de Swarte to resign, leaving *De Vlaamsche Stem* in the hands of the extremists.

The other group, the "Flanders next to Belgium" men, have at once started a new paper, a weekly called *Vrij België* (Free Belgium), by the choice of this title asserting their devotion to King Albert's country. *Vrij België* accuses Mr. de Clercq of bringing grist to the German mill by starting his anti-Government action while this Government is still in exile; Mr. de Clercq, in his turn, reproaches the *Vrij België* leaders with faintheartedness and betrayal of the Flemish cause. "It need not concern us whether a Flemish Flanders is to the interest of Germany, it suffices us to know that it is of the highest importance to our people," writes Mr. de Clercq's co-editor, Dr. Jacob. And while this leader, in happy unconcern of Germany's interests, is dictating to his followers the tenets of true Flamingantism, the anything but disinterested German conqueror at Ghent dictates to a few Germanophile Flemish journalists the tenets of true Pan-Germanism for the edification and instruction of the subscribers to *De Vlaamsche Post.* In this paper, the agitation for an autonomous Flanders has lately, under German auspices, gone to the extent of summoning the Flemish to open rebellion against their exiled rulers. "Thus far," writes one of these hotheads, "we Flemings have been satisfied with begging and talking—we had better smash windows and preach revolt against our Frenchified Government when it returns to Brussels." And while such irresponsible penmen are compromising the Flemish cause, branding it with the suspicion of apostasy, Flemish soldiers are daily shedding their blood in defence of that country for whose unity their writing leaders pretend not to care!

Which must we take as the truer reflex of the Flemish people's mind: the journalist's word or the soldier's deed?

No doubt the latter. The average Fleming cares not for the nice distinctions which cause schism between intellectual Flamingants. He feels one craving: an undisturbed possession of his native soil; he knows one truth: that his enemy, who denies him that peace, is the German. And he expresses that conviction with laconic eloquence by calling *De Vlaamsche Post,* which dickers with the enemy, *De Vlaamsche Pest* (The Flemish Pestilence).

Gogol

A PRECURSOR OF MODERN REALISTS IN RUSSIA.*

By G. R. NOYES.

Not many years ago a lecturer on literature, of more than local reputation, and of unusual talent for catching the attention of the typical summer-school public, commented somewhat as follows on the gloomy, depressing tone of Russian authors: "Just think of even the titles of their works! 'Dead Souls'! The very name is enough to send a shiver through one's frame!" Poor Gogol! This lecturer was not more ignorant of him than are most other professors of literature, but he ought to have read at least a few pages of a book that is a spiritual cousin of "Huckleberry Finn" and "The Gentle Grafter" before he indulged in reflections on its serio-comic title.

Turgenieff, Dostoievski, and Tolstoy have been well translated into English, and have won not only the enthusiastic admiration of discriminating judges, but genuine popularity. Gogol (1809-52), their predecessor, the great realist and satirist who, together with the poet Pushkin, laid the foundations for all modern Russian literature, has had no such good fortune. No collected edition of even his best work has ever been printed in English. Most translations of single works that have appeared are now out of print. There could be no more worthy enterprise for friends of Russia than to prepare a proper edition of Gogol, with an adequate account of his life and literary significance. An edition of this kind ought at least to pay its own way.

The Russophile enthusiasm awakened by the present war has as yet done little for Gogol. In particular, the reissue of an anonymous translation of his masterpiece, "Dead Souls," apparently the version originally published by Vizetelly in 1887, cannot be regarded with satisfaction. The translator seems to have had a competent knowledge of Russian and English, but he capriciously omitted important paragraphs, and even whole pages, of the original. Such are the description of Sobakevich as a bear in chapter v, Gogol's moralizing on his own task in chapter vii, and his famous apostrophe to Russia in chapter xi. Furthermore, Gogol printed only eleven chapters of his projected comic epic, which, however, form a well-rounded whole. Of a sequel, hopelessly inferior in talent, he left only fragments, which were published after his death. The translation prints continuously Gogol's finished work and his fragments, with no hint of the gap between them, and then adds a continuation of the book by one Vaschenko-Zakharchenko that is forgotten and unregarded in Russia. The new introduction furnished by Stephen Graham is perfunctory and uninforming. Altogether, the volume does not command respect.

I.

Gogol is of all Russian writers the nearest akin to Mark Twain or O. Henry. He has the same command of the grotesque, the same blending of fantastic humor with occasional homely pathos, the same lack of any intellectual, philosophic insight into the depths of human character such as lends distinction to the work of his great successors. This very likeness to our American humorists has hindered Gogol from winning the wide fame that he deserves. He is no master of plot; the subjects of both "The Inspector" and "Dead Souls" were suggested to him by Pushkin. His whole narrative art lies in stringing together, around some central figure, a succession of amusing incidents. His genius is in the creation of clear, distinct characters. These characters, however, are not types of universal significance, like Don Quixote and his squire, but rather local, Russian oddities. His humor and pathos are expressed through an unfamiliar medium that in our eyes dims their brilliancy. His grafters are like our own, but, like O. Henry, Gogol emphasizes not their souls but the tools of their trade, and those tools were emphatically made in Russia. Hence the humorous portraits that are so rich in suggestion to Gogol's countrymen may lose their savor in a translation. The difficulty is the same with other humorists, say, with Aristophanes. But no one attempts to read Aristophanes who has not a certain elementary knowledge of Athenian life, while a similar knowledge of Russian conditions is not yet a necessary part of even the most finished literary education.

Yet Gogol was too great a man of letters for us to sum up his genius by any such crude formulas and comparisons as have been suggested. He grew up in the romantic period of Russian literature, and paid toll to its spirit. "Taras Bulba" is a splendidly successful tale of the Cossack wars against Poland. Here we have the Cossack point of view of the conflict described by Sienkiewicz in "With Fire and Sword." A small volume, "Taras Bulba" has a barbaric largeness of setting. This prose epic is full of a boyish delight in conflict that recalls hours spent with "Marmion." The conventional love story is virtually absent; more adventure and bloodshed are raised to the level of art by an Homeric vigor of style. So in the ghost story, "The Viy" (translated as "The King of the Gnomes"), Gogol succeeds in giving literary form to some of the grimmer elements of popular superstition. A gay young student, bethinking him-

**Dead Souls,* by Nikolai V. Gogol. Translated from the Russian, with an introduction by Stephen Graham. New York: Frederick A. Stokes Company. $1.25 net.

self of the prayers appropriate to his plight, overcomes and beats to death a witch who has attacked him and ridden him over the fields by night. The witch revenges herself by having the student forced to read prayers for three successive nights over her dead body. For two nights he faces valiantly the evil spirits who crowd about his charmed circle; on the third, just before cock-crow, he dies from terror at the sight of the Viy, a subterranean goblin:

Suddenly the church became quiet. The howling of wolves was heard in the distance, and soon heavy steps echoed through the church. Glancing sideways, Homa saw that they were leading forward a stout, squatty, bandy-legged being. He was all covered with black earth. His legs and arms, sprinkled with earth, resembled stout, sinewy roots. He stepped heavily and continually stumbled. His long eyelashes reached to the floor. With terror Homa remarked that his face was of iron. Supporting him under the arms, they led him up and placed him just opposite the place where Homa was standing.

"Lift up my eyelashes; I cannot see," said the Viy in a subterranean voice, and the whole throng rushed to raise his eyelashes.

"Do not look!" an inner voice whispered to the student. He could not refrain—he looked.

"That is he!" cried the Viy and levelled an iron finger at him. And all the spirits in the church rushed upon the student. Fainting, he crashed upon the floor, and there for very terror his spirit left him.

But "Taras Bulba" and "The Viy," however excellent in themselves, are subordinate incidents in Gogol's career. His genius was essentially realistic and satiric. It expressed itself best in a short story, "The Overcoat"; in a farce-comedy, "The Inspector," and in "Dead Souls."

Akaki Akakievich, the hero of "The Overcoat," is a copying-clerk of some fifty years, who by conscientious, unremitting toil barely earns enough to keep himself alive. His overcoat wears out and he suffers incredible privations in order to buy another:

He thought and thought and decided that he would have to lessen his ordinary expenses, at least for a year; to give up drinking tea in the evening and not to light a candle in the evening, and if he had some work to do, to go into the landlady's room and work by her candle; when he walked the streets, to step over the stones and slabs as lightly and cautiously as he could, almost on tiptoe, in order not to wear out the soles of his boots too fast. . . . To tell the truth, at first it was somewhat hard for him to get accustomed to such privations, but later he got used to them and all went well—he even learned how to get along without eating anything at all in the evening. To make up for that, he nourished himself spiritually, cherishing in his thoughts the eternal idea of his future overcoat.

At last he procures the overcoat, only to have it stolen from him that same evening. He soon catches cold, takes to his bed, and dies, more from a broken heart than from the fever. Such is the slender plot of a tale that is rightly termed the germ of the Russian novel. Gogol loved to discourse on the invisible tears that lay hidden beneath the laughter of his writings. In this tale they are not hidden at all. Sympathy, compelling human sympathy, runs through this portrait of a man of no moment in the great world:

The young clerks laughed and jested at Akaki Akakievich to the full measure of their office wit; they related in his presence various stories that they had made up about him; they told how his landlady, an old woman of seventy, used to beat him, and would ask when they were going to be married; they sprinkled bits of paper on his head and called it snow. But never a word would Akaki Akakievich reply to all this, behaving as though he were quite alone in the room. It did not even have any influence on his work; in the midst of all these annoyances he did not make a single mistake in his writing. Only when the joking became quite unbearable, when they joggled his elbow and kept him from attending to his business, he would say: "Let me alone! Why do you insult me?" And there was something strange in these words and in the voice with which they were uttered. In it could be heard something that moved one to pity, so that one young man, who had only recently entered the office, and who had permitted himself to follow the example of his comrades in making fun of Akaki Akakievich, suddenly stopped as though stricken with fear, and from that time on all seemed changed before his eyes and appeared to him in a different light. Some supernatural force repelled him from the comrades with whom he had become acquainted and whom he had taken for decent, cultivated fellows. And long after that, in his merriest moments, there would arise before him the figure of a short little clerk with a bald spot on his forehead, and with those piercing words of his: "Let me alone! Why do you insult me?" And in these piercing words there rang out other words: "I am thy brother." And the poor young man covered his face in his hands, and many times did he tremble in his later life when he saw how much inhumanity there is in man, how much fierce cruelty is hidden beneath refined, cultivated society manners, and, O God! even in many a man whom the world recognizes as noble and honorable.

Such tears it is difficult to discover beneath the ludicrous satire of "The Inspector." A drunken scapegrace, detained at a provincial inn for want of cash to continue his travels, is mistaken by the mayor and other town functionaries for the inspector sent from St. Petersburg to examine their conduct of affairs. At first nonplussed at the situation in which he finds himself, he has just sense enough to enter into the part, "borrow" money from all whom he meets, and make his escape before the imposture forced upon him is discovered and before the real inspector appears. The comedy portrays a small world of petty graft and bribery. It has held the stage as part of the répertoire of almost every Russian theatre from Gogol's day to our own.

II.

The whole-souled laughter of "The Inspector" (1836) made Gogol dear to the souls of Russian liberals. Here was a man, they argued, who dared to rebuke spiritual wickedness in high places. His fame as a reformer was increased by "Dead Souls" (1842). This book shows the same world of graft, ignorance, and stupidity, but of graft, ignorance, and stupidity that spread over all Russia.

In days before the emancipation of the serfs (1861) the wealth of a Russian country gentleman was estimated by the number of *souls* or serfs whom he possessed, and he was taxed so much per soul for his human property. A census of *souls* was made at irregular intervals. In 1842, nine years after the census of 1833, a serf-owner would still be paying taxes on certain serfs who had died since the official count was made. Furthermore, the Government, in order to encourage colonization, offered tracts of land in southern Russia to any one who would settle there with enough serfs to till the soil. Here, then, are the elements of the bunco scheme that gives the title to Gogol's book. A swindler seeks to buy up *dead souls* by the hundred. With the papers representing his property he will go to the land office and claim a tract of land for colonization. Once possessed of this, he will mortgage serfs and land to the Government for hard cash.

In the portion of the book that he completed Gogol narrates the experiences of his swindler in one town and the surrounding country districts. There he meets different types of landowners: a silly, kindly dreamer, a loose-lived gambler, a wooden-headed old woman, a skinflint, and a miser. He purchases some souls and records the transaction at the proper office. He excites the curiosity and the gossip of the townspeople and drives off in search of further fields to exploit. The volume excels by its wonderfully concrete picture of the seamy side of Russian provincial life. Each satirical portrait is polished with perfect skill. Nothing great is exhibited, not even great villany; murder, robbery, adultery, are not subjects that Gogol cares to treat. But no satire remains longer in the memory and grows less stale with repeated readings. Nozdrev and Sobakevich are types as familiar to the Russians as are Falstaff and Dogberry to ourselves. And a discerning reader finds tears rather than wrath beneath Gogol's ridicule. He has performed with perfect art his task of presenting a series of abhorrent types while preserving an attitude of human kindliness and charity. Even the base Chichikov, the swindler, he hoped some time to bring to redemption.

Gogol was now the idol of all progressive Russians. We are in the time of Nicholas I, be it remembered, when the censorship was at its worst. No criticism of the Government, no open discussion of political, economic, or social problems, was possible in the press. Fiction and literary criticism were, however, a vehicle by means of which at least a point of view as to the state of Russia, and the measures needed to promote its progress, could be put forward. Hence the seriousness with which the Russian public scanned the works of its great

artists for indications of their social theories. And, surely, no man had more bitingly shown the urgent need of reform than Gogol, with his vivid, sad, and true pictures of Russian corruption, ignorance, sloth, and coarse brutality. Suddenly Gogol issued, in 1846, a volume that effected a revolution in the public estimate of him, "Selections from my Correspondence with Friends."

III.

As a matter of fact, when reflecting on public questions rather than picturing real conditions, Gogol had always been a conservative. He believed in personal honesty, decency, piety, and kindliness, morality of the sort that keeps families at peace. Of social philosophy he knew not a word; his ideal was the patriarchal old times, untouched by the money economics that were already creeping into Russia in his day. In serfdom, execrated by all Russians of the least progressive tendencies, he firmly believed as a divinely ordained institution. Into "Dead Souls" he wove lyric passages that breathe an unreflecting, boyish faith in the supreme excellence of Russia and its superiority to all other nations. Always a devoted member of the Russian Church, in his later years he became a religious fanatic. His new book breathes a devotional spirit and is aimed at the instruction of his fellow-countrymen. He adopts the tone of a prophet, proclaiming the virtues of autocracy and orthodoxy, and fulmining forth his scorn of western self-government and western education.

A state without an autocratic monarch is a mere automaton; it will do much, very much if it reaches the point that the United States have reached. And what are the United States? Carrion. Man in them is so withered that he is not worth a sucked egg-shell. A state without an autocratic monarch is like an orchestra without a leader: however good all the musicians may be, if there be not among them one who by the motion of his bâton gives signals to the whole orchestra, the concert will amount to nothing.

Elsewhere he warns serf-owners from teaching their cattle to read, except for the purpose of perusing religious works. A village priest can give better instruction to hard-working peasants than "all the empty little books published for the common people by European philanthropists."

The "Selections" aroused the righteous wrath of the great critic Bielinski, the leader of Russian liberal thought, who addressed to Gogol a letter in which he hailed him as "preacher of the knout, apostle of ignorance, champion of obscurantism and insane bigotry, panegyrist of Tatar manners." Two or three sentences will show the tone of this famous document:

Russia sees its salvation not in mysticism, not in asceticism, not in pietism, but in the progress of civilization, culture, and humanity. It needs neither sermons nor prayers, but the awakening in the people of a feeling of human dignity, for so many ages lost in dirt and filth. . . . The most living, pressing national questions in Russia now are the abolishment of serfdom and of corporal punishment and the strictest possible execution of what laws we have. . . .

Remark one point. When a European, especially a Catholic, is seized by the religious spirit, he becomes a rebuker of unjust authority like the Hebrew prophets who rebuked the lawlessness of the mighty men of the earth. With us the contrary is the case. When a man (even a decent man) is seized by the disease known among psychiatrists as *religiosa mania*, he immediately begins to burn incense to the god on earth rather than to the God in heaven, and so exceeds all due measure that the very man who would like to reward him for his slavish zeal sees that he would thereby compromise himself in the eyes of society.

Bielinski has overstated the case. On the one hand, Gogol was not insincere or a renegade in his piety. On the other, though Bielinski's indictment still holds good against the powerful League of Russian People, Jew-baiters in the name of Christ and sanctimonious champions of despotism, it will not fit the Russian nation as a whole. Of this the most powerful witness is Leo Tolstoy.

Like Gogol, Tolstoy rejected the artistic works that had brought him fame, and in his later years assumed the tone of a prophet. Between the doctrines of the two men one can find now and then a chance resemblance: Gogol's advice to officials' wives that they economize on dress and so preserve their husbands from the temptation to take bribes, might seem a comic first hint of Tolstoy's doctrine of the simple life. But really a whole abyss separates the two men. Just as Gogol's "Overcoat" gave the hint for Dostoievski's "Poor Folk," so Gogol's fanaticism was a more concrete, less mystical forerunner of Dostoievski's chauvinistic religiosity. In contrast to these two panegyrists of the established order, these slaves of a moribund tradition, Tolstoy is a free man and a rebel against government in the name of moral perfection for the individual. Whatever measure of truth there may be in his doctrine, in his character and temper he fulfils Bielinski's description of a religious leader in the free west.

IV.

Gogol died under a cloud, disliked by progressive Russians because of his "Selections," and disliked by the authorities because of the negative tendencies of his artistic works. Turgenieff was punished for writing an article in which he termed him a great man. Bielinski pronounced "Dead Souls" a classic exclusively of Russia, and Korobka, one of the most recent critics of Gogol, chimes in with his opinion. But as time passes and Russian history and life become more familiar to outside nations, "Dead Souls" may after all prove to be a world classic. Rascality and meanness are independent of political barriers. A writer who can depict them as nothing but meanness and rascality, yet with a charity that does not refuse a handshake to the sneak and the rascal, with the light of humor that makes all men brothers, deserves a place among the great satirists and fun-makers of all ages.

Correspondence.

DEATH-SONG OF THE MARINE FUSILIERS.

To the Editor of The Nation:

Sir: *La Maison du Passeur* ("Ferryman's House") was—until it was no more—somewhere on the right bank of the Yser Canal between Ypres and Dixmude. On the 14th of December, 1914, after a month's attacks by French and Belgian marines, it was taken finally from the German invaders; and all counter-attacks, even with the far-famed heavy artillery, have been in vain. As late as the 22d of February, 1915, a Belgian officer fell gloriously fighting there and his King pinned the Leopold Cross to his coat where he lay dead. The Belgian *communiqué* of the 452d day of war (October 29) still speaks of "violent combat" at the place.

Name and place have already entered legend, and four of the canal ferries in this short space claim the honor. They are all stations on what the Belgians call "the way to death." "When our men hear they must go to the 'Thank'—the name they give it at the front—there where death watches and the foe casts without stop his bombs and shells, they look about them wildly; but they hold to this 'Way to Death' and yield not an inch of it."

Of the real Ferryman's House, only ochre-colored bricks and bits of green shutters lie pell-mell with the stones of the foundations where the waterline is still marked by a few surviving poplars and willows and tall elm-trees of these Flanders flats. Those who would know more of the deeds of men done in "this great flat land, streaked with canals, more of the water than of earth," should read "Dixmude—a chapter of the history of the Marine Fusiliers," by Charles le Goffic, although his narrative does not reach as late as the present episode.

To understand the last stanza of the stirring song here translated line by line, remember that, after Joan of Arc, known to all the world, Bara and Vialat are the thirteen-year-old boys sung in the "Chant du Départ," dead at their post like the English boy who stood on the burning deck; d'Assas was the French captain who, scouting alone, fell giving the alarm—*à moi, Auvergne!* while Bayard is, of course, the *chevalier sans peur et sans reproche.*

S. D.

Paris, October 29.

LA MAISON DU PASSEUR.

By Lucien Boyer.

Ferryman, ho! In the night so black
Hark to the clank of iron:
'Tis heroes of the Yser,
'Tis sweethearts of glory,
'Tis lads who are unafraid!
Ferryman, ho!

The down is bathed in the dark of night,
Heaven has shut its dead-lights,
And marines, blue-collared lads,
Creeping under the moonless sky,
Come to cut the invaders' throats—
Ferryman, ho!

Ferryman, ho! the task is rude,
But, when time comes for action,
In vain their cannon bellow and roar,
Each of us says as we did at Dixmude:
—"For France, in death or victory."
Ferryman, ho!

Swifter! strain upon your oars,
To the bank where we'll be dying,

We're in a hurry to get to land.
Swifter! you are bringing our souls
To Paradise where men have hearts—
Ferryman, ho!

Joan of Arc, the hero maid,
Bara the boy with Vialat,
D'Assas and Bayard, all are there,
Smiling to us from the other shore
In a blaze of light resplendent—
Ferryman, ho!

EDUARD MEYER'S NOTION OF AMERICAN "RED BLOOD."

To the Editor of The Nation:

Sir: In his recent book, "Nord-Amerika und Deutschland," Prof. Eduard Meyer, of the University of Berlin, explains to the Germans why they should be indifferent to American opinion or even proud of its disfavor. To strengthen this conviction, he publishes a letter from an unnamed American correspondent.

"Um den Eindruck der kräftigen, schwungvollen Worte nicht abzuschwächen," he gives the English original; and, for the benefit of his countrymen whose mastery of our language is less thorough than his own, he translates it. His correspondent declares (p. 65): "The men in whose veins courses rich red blood are for Germany. . . ." Professor Meyer translates the sentence: "Die Männer, in deren Adern eine reiche Beimischung roten Blutes fliesst, sind für Deutschland. . . . ;" and not content, adds in a footnote the following remarks: "Während die Vermischung mit Negern in Amerika seit dem Bürgerkriege für ein verabscheuenswürdiges Verbrechen gegen die weisse Rasse gilt, und jeder, der sich derartiges zuschulden kommen lässt, aus der Gesellschaft ausgestossen und als Paria behandelt wird, gilt die Vermischung mit Indianern für unanstössig, ja sie wird geradezu gesucht. In Virginia und dessen Nachbargebieten ist es ein stolzer Adelstitel, wenn jemand der Abstammung von Pokahuntas, der halb sagenhaften Häuptlingstochter aus der Zeit der Entdeckung, sich rühmen kann; in Texas besteht die gesamte altansässige Bevölkerung aus Mischlingen von Indianern und Weissen (während Neger aus dem Staat völlig ferngehalten werden), und in dem neuen Staat Oklahoma sind Ehen mit Töchtern von Indianern ganz gewöhnlich, weil diesen ein grosser Teil des Grundbesitzes gehört. Ich bemerke übrigens, dass der Schreiber des Briefes weder selbst indianisches Blut in den Adern hat, noch mit einer Indianerin vermählt ist."

("While intermixture with negroes has been regarded in America ever since the Civil War as a horrible crime against the white race, and every one guilty of it is ostracized from society and treated as a Pariah, intermixture with Indians is not offensive, and is indeed sought after. In Virginia and neighboring States it is considered a claim to the highest aristocracy if one can boast of being descended from Pocahontas, the half legendary daughter of an Indian chieftain at the time of the discovery of America. In Texas the entire old settled population consists of a mixture of Indians and whites (though negroes are excluded altogether), and in the new State of Oklahoma marriages with the daughters of Indians are quite usual, since Indians own a large part of the landed property. I may add that the writer of the letter neither has Indian blood in his veins nor is married to an Indian.")

Professor Meyer, however, expresses no joy over the sympathies of this seemingly large and influential element of our population; nor does he discuss the possibility that our "red-blooded" stock may some time bring us a warlike spirit with, perhaps, the attendant blessings of Prussian *Kultur*. When damning us to the degenerate future of a peace-loving nation, he leaves this important aspect of the case quite untouched.

Richard S. Meriam.

Geneva, Switzerland, October 22.

SENTIMENT ON THE WAR IN THE NORTHWEST.

To the Editor of The Nation:

Sir: The reactions of the public in this northwestern part of the country towards the war are worth recording. As everybody knows, the German element here is very strong. St. Paul is almost as German a city as Minneapolis is Scandinavian. And we are close to that great German settlement along the Minnesota River the capital of which is New Ulm. Hence for the first nine months or so of the war German sentiment was most in evidence, and the newspapers, anxious to maintain their circulation, presented the point of view of Berlin with great elaboration, and were constantly alert to say nothing that might offend their Teutonic subscribers. The average man, inclined to that easiest of fallacies that, where there are two opinions, the right must be somewhere between, was often unpleasantly self-righteous in his determination to follow the President's injunction of strict neutrality. Again and again one heard that both sides were to blame. The Scandinavian element—the less intelligent part of it—was on the whole favorable to Germany, though many of the leaders were pro-Ally.

All that seems to have been changed within the last few months. The newspapers, quickly responsive to changes of popular opinion, have at length become plain-spoken, more plain-spoken than they would dare be if their circulation or advertising were in danger. The farmers and the working people, who have been reading for themselves and who know a great deal more about international politics than ever before, have come to fear German ambitions. The Scandinavians, provoked by German interference with Swedish and Danish commerce, and inclined to be fair-minded, are much less favorable to Germany than at first. In this shift of sentiment, the Germans have been of real service. Their ill-judged utterances in defence of the Lusitania and Arabic outrages, as well as of Miss Cavell's execution, have served to interpret the Teutonic spirit to the public.

The change of opinion is decidedly manifest among university students, who in a State university are fairly representative of popular sentiment; it is manifest in street cars and shops, in country hotels, indeed, in all sorts of places. It is significant that, when a former Secretary of State passed through here recently on his errand of peace, he received less notice than an up-State politician in town, and his doved words were listened to by a suburban woman's club. There is still German sentiment, New Ulm is still breathing forth threatenings and slaughter, but it is on the defensive.

Wallace Notestein.

Minneapolis, November 4.

INTERCOLLEGIATE ATHLETICS.

To the Editor of The Nation:

Sir: In the current issue of the *Atlantic Monthly* is "An Indictment of Intercollegiate Athletics," by Mr. W. T. Foster, president of Reed College, on the ground that the system (1) alms to win games, (2) attempts to make money, and (3) has the athletic prestige of the college as the main desideratum. I would like, as an upper-classman of an Eastern university, to express what I consider to be the main arguments which the undergraduates may oppose to President Foster's indictment.

The criticism of the system on the score that its object is to win games is at the same time a criticism of human nature—particularly of human nature as it is found in youths of twenty years. The spirit of good sport is inherent in the blood at that age, and the race may well be thankful that it is. And the fact that the game is desired makes victory desired, for the game that is not worth winning is not worth playing.

As for making money for the college by intercollegiate athletics, the general situation, I think, is that whatever money is made during the football season is turned back to make up the deficit arising from sports and contests during the remainder of the college year. And I know of no case where the object of charging admission to intercollegiate contests is not to carry on the work of building up the physique of all students who are willing to take advantage of the facilities offered them in the form of boathouses, gymnasiums, etc. Further, I know of no case in which these facilities have not tended to lie idle for want of enthusiasm on the part of the students, until some incentive for their use, such as intercollegiate contests, is furnished. Intercollegiate rivalry is of vast importance. It lends an invaluable *esprit de corps* to the undergraduate body—a community interest, and the subordination of the individual to that interest. Every time one college team plays another the whole undergraduate body is put to the test of battle.

In attacking the system President Foster is opposing a custom that is as old as time. It is the same thing that the mediæval chroniclers have in mind when they tell us of whole armies deciding their contest by means of a duel between the leaders. Not that the institution must be worthy because it is an ancient one; yet its very age tends to demonstrate that the athletic system is a natural phase of the physical leadership of the few—just as we have always had religious, intellectual, and political leadership of the few. And here, it seems to me, President Foster fails to point out the greatest possibility of evil pertaining to the system—the danger that social groups may be built about the system on the basis of athletic prowess. It must be admitted that social success based on athletics is a dangerous one, and likely to throw a man's ideas of relative character-values hopelessly out of normal balance. This is, however, a criticism more of the student's personal attitude than of the system itself.

President Foster suggests a system of intracollegiate athletics, which he calls "athletics for education." Yet it seems to me that he fails to show why such a system would necessarily preclude the existence of intercollegiate athletics at the same time. The two systems do exist in several cases without any lack of harmony because of the com-

bination of the two. In fact, every college in the country where there are any facilities for physical development has in reality a system of "athletics for education," in the sense that men engaged in such exercise seldom have a college team as their goal.

As for the sordid accoutrements of intercollegiate athletics—cheap sportsmen, gamblers, and indifferent scholars—these are not, I think, the fault of the system, as President Foster seems to believe. Rather we may say they are not worthy of the system. Intercollegiate athletics are an incentive to, and a means of, acquiring true college spirit—which is the farthest possible removed from the puerile insanity of the "rah-rah boy."

A. L. G., Jr.

Cambridge, Mass., November 5.

WASHINGTON SQUARE AND BOSTON IN FICTION.

To the Editor of The Nation:

Sir: May I be allowed to express some surprise at the question raised by your reviewer of "The Crown of Life" (November 4, p. 548)? Is the earlier James completely obscured by his present style? Is Howells entirely a back number? It appears that Washington Square continues in print and "Silas Lapham" is still listed among the best American books; some go so far as to count it our best American novel. I had supposed that James as the inventor and perfecter of the international novel had done that very thing the reviewer laments as undone, namely, to make New York, its atmosphere and influence, as real and potent in fiction as are London and Paris. Certainly a short generation ago it was the glory or the shame of Howells to have become so obsessed with Boston as to be able to write of nothing else. Beacon Street, the Back Bay, even the South End, became to us more familiar than Hoosierdom. If Washington Square is in James quaint, if the Boston society which knew Bromfield Corey was other-worldly, surely these qualities appear not from anything amateurish in the writers, but because of a set purpose so to present them. Surely the success with which Howells has accomplished his purpose of writing the Odyssey of Boston cannot safely be challenged. It is hard for one who has lived there to tell which seems the more real, the Boston of brick and concrete or the Boston of Howells's printed page. If James is less perfect as a gulde to New York, can't Mrs. Wharton supplement his shortcomings? Can't Howells's own aid be invoked as he contrasts ln "A Hazard of New Fortunes" the stald and familar Boston with the new and rapid New York?

Wm. H. Powers.

Brookings, S. D., November 8.

[Of course, Mr. Powers is right; my generalization does not hold water. Oddly enough, "Silas Lapham," which I adore, did not exist in my consciousness when I gave vent to what was not better than a little flare of impatience at the woodenness and amateurishness of the current Boston novel. There was a Boston of Dr. Holmes, and a Boston of Mr. Howells, and now all we have is the Boston of Judge Grant and the rest; a place which has consciously kept or consciously changed its manners—and has lost its personality. Is Boston responsible for the feebleness of her interpreters? That is really what I was asking myself. Certainly, Mr. Howells knew when he had enough of her!—The Reviewer.]

KNOWLEDGE OF THE MILKY WAY.

To the Editor of The Nation:

Sir: Professor Hart need not ask astronomers whether the lines

> Thus unseen stars i' th' Element
> United make the Milky Way

might have been written as early as 1630-1650. As early as 1612 Bacon, in his essay on Fortune, wrote: "The way of fortune is like the Milken Way in the sky, which is a meeting or knot of a number of small stars, *not seen asunder*, but giving light together."

Ernest Bernbaum.

Harvard University, November 8.

Notes from the Capital

SAMUEL WALKER McCALL.

Any commentator on the recent elections must be short-sighted who ignores the significance of the political resurgence of Samuel Walker McCall. There is a common assumption that Massachusetts is normally too well grounded a Republican State to furnish an available candidate for the Presidency in a critical year; but there is one Bay State man already ln the field, and it seems to many shrewd observers that conditions may arise making it necessary to push McCall ln ahead of Weeks to meet an emergency. It would not be the first time that national executive honors have moved his way. In the convention of 1912 which renominated Taft and Sherman, he was very seriously considered by the party managers for Sherman's place. They realized that Sherman was not a well man physically, and the campaign threatened to be a hard one; Taft was not going to arouse any popular enthusiasm, and they felt that he ought to have a running mate who would stir things up. Into the midst of the discussion of McCall some one threw the word "reciprocity," and then it was recalled that one of McCall's speeches ln the House favoring reciprocal tariff concessions had attracted wide attention. This settled it; for among the most difficult tasks of the campaign was likely to be that of explaining away, for the benefit of the old-fashioned, hard-shell rural Republicans, the attitude of Taft on that very point.

In spite of his leanings towards reciprocity, McCall is a protectionist; he demands only that his party shall not drive a willing horse to death. He is a moderationist in everything, and the extremists long ago gave up their fruitless efforts to stampede him. When the Jingoes were prancing up and down the aisles of the House in the early spring of 1898, crazy to jump at Spain's throat, he maintained his usual calm demeanor. Matters presently reached a stage where every man had to declare himself with no uncertain voice. "Now we'll see McCall climb down from his perch!" cried the Jingoes, gleefully. They did, but it was on the wrong side from their point of view, for he voted against the war. It was of no consequence to him that he was warned that he would be the only man in the Massachusetts delegation to take such a stand: his sole regret was that there were not more to look at the question dispassionately, and to exhaust the resources of patience and diplomacy before proceeding to bloodshed. The war came and went, and left us with a colonial system for which the Constitution had made no provision. As a member of the Ways and Means Committee he stood out alone again in warning the United States not to copy, in its treatment of Porto Rico, the blunder of England in her treatment of Ireland, by raising a tariff barrier which would proclaim that "freedom does not follow the flag." And his later protest against American militarism was a denunciation of "a policy which shall tax and burden two-thirds of our people in order that the other third may wear uniforms or be borne upon pension-rolls."

In his quiet, unhysterical way of looking over every public question and carefully weighing its pros and cons before determining the position on which the Government shall plant itself, McCall suggests the teacher rather than the advocate. Indeed, his appearance and air carry out this idea. His spare but strong frame, his bald head, his finely cut profile, the serious expression of his countenance in repose, his clean, well-measured enunciation of his pure English phrases, his slow gait and deliberate motions, are all tributary to a general effect which makes it seem the most natural thing in the world that Dartmouth College, his *alma mater*, should have invited him some years ago to its presidency; and they seem to consist quite as well with his declination on the ground that the work in public life to which he had addressed himself was not lightly undertaken and could not be easily dropped. He deplored the apparent tendency of the time towards throwing off constitutional restraints and listening to the voice of the autocrat, lest "some chance barbarian might overturn our temples, and do more harm in the direction of unelvilizing the country than all our colleges together could possibly repair."

As illustrative of the absent-minded trait we often attribute to the professional scholar, they tell an amusing story of McCall in connection with one of his most important essays as a biographer. Somewhere he had heard of an incident in the career of Thaddeus Stevens which amused him vastly. Stevens, it seems, while a member of the House, had started one morning to walk to the Capitol with a friend, but dropped in a moment at a rather gay resort on the way up the Avenue, took a "flyer" at faro, and won a hundred dollars, which was paid him in a single banknote. He had barely reached the Capitol steps when he was accosted by a party of Quaker constituents, who proceeded to lay before him a religious enterprise in which they had interested themselves, and expressed the hope that he would contribute something in its aid. Stevens at once drew from his pocket, with a considerable flourish, the banknote he had just won at the gaming-table, and handed it to the spokesman, remarking to his friend with oratorical solemnity:

> God moves in a mysterious way
> His wonders to perform!

McCall's delight in the anecdote kept it running in his mind so that he began to read everything he could find about Stevens, and this led to his writing the life of the eccentric commoner, only to discover, after the work was off the press, that he had left out of it the one story which had furnished its original inspiration!

Tattler.

Literature

A DOUBTFUL INTERPRETATION OF AN ANCIENT TABLET.

Sumerian Epic of Paradise, the Flood, and the Fall of Man. By Stephen Langdon. Philadelphia: Publications of the Museum of the University of Pennsylvania, Babylonian Section, Vol. X, No. 1.

The basis of this publication is a cuneiform text in the Museum of the University of Pennsylvania, which was found in the course of excavations at Nippur and which presumably formed part of the temple or school collection of that ancient centre of Sumerian and Babylonian culture. A small fragment of the text had previously been copied by Dr. Langdon and an account of it published by him about a year ago in one of the numbers of the proceedings of the Society of Biblical Archæology. Although it was only a fragment, Dr. Langdon was quite sure that he had discovered a Sumerian story of a flood and of the fall of man, with direct bearings on Biblical traditions. Since then two other fragments, one of them very large, the other small, have been found in the course of an examination of the University collection, and as a result we fortunately now have a tolerably complete text.

Having made a study of the entire tablet, Dr. Langdon now enlarges his former announcement by calling the tablet the "Sumerian Epic of Paradise, the Flood, and the Fall of Man." In other words, according to Dr. Langdon's interpretation, we have in this tablet a story or a myth of the same order as the famous Biblical tale of the Garden of Eden, where, as in the Bible, man forfeits the pleasures of Paradise by eating of a forbidden fruit. To be sure, there are some deviations from the Biblical narrative. In Dr. Langdon's tablet the flood comes before the fall of man, and it is the supposed survivor of the flood, whose name Dr. Langdon reads Tagtug, who, after escaping the catastrophe, is foolish enough to eat of the cassia (according to Dr. Langdon's interpretation) and thus forfeits immortality.

In the introduction to his translation of the tablet in the present volume he sets forth at great length the "Nippurian" theory of the fall of man, and also the dependence of the Biblical tradition of Paradise upon the views of Paradise and of the fall of man as developed at Nippur, though other portions of the Biblical tradition he would derive from what he calls the "Eridu" version of man's forfeiture of immortality. Dr. Langdon does not tell us how the Hebrew writers happened to get hold of these old Babylonian tales, and whether they read them in the Sumerian original or in a Babylonian translation; but the general thesis is confidently set forth, and, it must be admitted, the tablet would be of great importance in the study of the Biblical traditions, *provided* Dr. Langdon's interpretation of it were correct.

A close examination of the text reveals that this is far from being the case, that many of Dr. Langdon's renderings of the Sumerian original are exceedingly precarious, that some can be shown to be incorrect, and that a considerable number of his readings of the original text are more or less uncertain. Dr. Langdon appears to be particularly fond of indulging in conjectures, and his interpretation of this tablet is a good example of the dangers to which a scholar is exposed in basing an elaborate theory on slender foundations.

In the first place, it should be remarked that the original of this tablet is in Sumerian, which is the non-Semitic language of Babylonia, spoken and written by Sumerians who came as conquerors into the Euphrates Valley. Now, Babylonian texts written in Semitic Babylonian, or, to use the more correct name, Akkadian, are entirely intelligible to scholars at the present time, but this is not the case with Sumerian texts. It is only within the last ten years that decided progress in the interpretation of Sumerian has been made, and though, thanks to the labors of a number of distinguished German, French, and English scholars, we now can approach a Sumerian text with some degree of confidence, there are still great obstacles in the way of an entirely safe interpretation of a text deciphered for the first time. No one would have criticised Dr. Langdon had he interspersed interrogation marks liberally throughout the translation, but it is a rather serious matter to find a scholar proposing translations as definite which turn out to be uncertain and probably erroneous. Let us take a single example, but one which may be regarded as characteristic of the author's somewhat slovenly, or, let us say, too rapid method of working.

He reads the name of the place in which, according to his interpretation, the Sumerians placed Paradise as Dilmun. Now, Dilmun has been known to Assyriologists for some time, and there is no reason to question the general concurrence of opinion that it is the name of one of the islands lying in the Persian Gulf. Apparently, however, it does not fit in with Dr. Langdon's theory of the relation between Sumerian and Biblical Paradise to have Dilmun an island; accordingly, he suggests a forced interpretation of a perfectly simple passage in one of the inscriptions of Sargon, in which the king speaks of ruling certain districts "as far as the boundaries of Dilmun as one land." Dr. Langdon declares that "one land" proves that Dilmun must be on the mainland, as though a writer could not also refer to islands adjacent as part of a single territory. But now let us look further and see what proof Dr. Langdon has for asserting that the land described as the seat of the supposed Sumerian Paradise is to be read Dilmun.

He confesses in a note that the sign used in his text is not the one which is to be read Dilmun, and then refers us to another text—where there is a sign which is somewhat like the one in our tablet, but not by any means identical, and—what Dr. Langdon fails to tell us—is also *not* the sign for Dilmun. His identification, therefore, is without any warrant, and yet our author assumes throughout the publication that no one will raise the slightest doubt as to the identification itself.

According to Dr. Langdon, the tablet opens with a description of Paradise (identified by him with the doubtful Dilmun) and this Paradise is described as a place where neither raven nor kite shriek, where lions and wolves do not plunder. So far, so good. But what are we to think of a Paradise where there is a lack of water, for, according to Dr. Langdon himself, one of the lines of the description (if one gathers the sense of his somewhat ambiguous English correctly) states that "water was not poured for cleansing in the city one inhabited not." And it is quite evident from the description at the beginning of the second column that some one prays to the god of waters to bring on a rich flow, so that the city may have water in abundance. This passage may possibly furnish a clue to the interpretation of the tablet, and one which, to say the least, will be found to be as satisfactory as Dr. Langdon's purely fanciful notion of a Sumerian Paradise. So far from describing an ideal residence, which might, to be sure, be inferred from the fact that it was free from noises, and that the lion and the wolf did not follow their ordinary occupations, the text seems to describe a deserted and death-like place where all activity had ceased, where even ravens and kites did not shriek, and lions and wolves did not plunder, and that, as suggested, the cause of this desolation was a drought. Such an interpretation furnishes a more satisfactory explanation of some of the lines in the description than does Dr. Langdon's conjectural suggestions. So, for example, Dr. Langdon translates one of the lines: "'A man has changed a canal,' one said not," whereas it should probably be rendered: "The ferryman did not cross over," which indicates still further that the ordinary activities of the place suffering from the drought had ceased. Again, according to Dr. Langdon's interpretation, one of the features of this Paradise is that there were no diseases of the eye, no headaches, and no old women or old men. But the lines in question might be interpreted quite differently. Accepting Dr. Langdon's translation, "'Oh Headache, thou art a headache,' one said not," this does not necessarily prove that there were no headaches, but could also be interpreted as an indication that the disease could not be exorcised, which would be done by a formula beginning with "headache," and when we read further, "'Thou art an old man,' one said not," and "'Thou art an old woman,' one said not," this could be interpreted to indicate, not that people did not grow old, but that people died before they became old.

What Dr. Langdon takes for a deluge which, according to his interpretation, lasted nine months, would seem to be the answer to the appeal made to the god Enki, the god of waters, to inundate the fields. So far from this inundation lasting for nine months, the text seems merely to indicate that each month for nine months in succession there was rain on a certain day, though this, too, is not certain. However, setting this aside, we have another illustration of the ease with which Dr. Langdon throws out his conjectures in his interpretation of a line occurring thrice in the course of the tablet, which reads, "Like fat, like fat, like tallow." Now, it ought to be said that the rendering is by no means certain, but accepting it, what does Dr. Langdon make of this line? He tells us that this line indicates the destruction of all mankind who had "dissolved" in the flood like fat and tallow. The comparison is somewhat halting, for the one thing that fat and tallow do not do is to dissolve in water; but there is not the slightest reference at this point in the text to mankind or to a dissolution. Equally precarious is Dr. Langdon's supposition that in the continuation of this tablet there is an account of a hero who escapes from the deluge in a boat. This rests upon a single line occurring twice in the tablet in which the word boat does occur, but all that is said is, "His one foot he set on the boat," or, as Dr. Langdon has it, "His foot alone upon the boat set." Who is meant is not at all clear. This is the *only* reference to a boat in the tablet, for in another line in which Dr. Langdon introduces the word ship in his translation there is no such sign in the original Sumerian. The entire translation of this line does not tend to inspire one with confidence in our author's conscientiousness, especially as the line occurs again—also without any sign for ship in the original—and yet the word "ship" is introduced in both cases in Dr. Langdon's translation.

Perhaps, however, the most serious example of our author's carelessness in drawing far-reaching conclusions from a purely conjectural starting-point is his endeavor to identify a certain Tagtug, whose name does not even appear till *after* the account of the conjectural "Deluge," with the Noah of Biblical tradition. Here is his reasoning:

This name is written with two characters, the first of which is to be read *Tag*, though it could also be *Shum*, and the second of which might also be read *Ku* or *Tush* as well as *Tug*, which Dr. Langdon selects in order to bring about an assonance between the two syllables. Dr. Langdon needs this assonance as a support for his theory, for, according to his interpretation, the meaning of the name is suggested by the first element, *Tag*, whereas the second is merely added to give emphasis. Now, *Tag* has a variety of meanings, prominent among which is the idea of "overturning." Among other equivalents in Akkadian for the Sumerian *Tag*, we find also *nâkhu*, meaning "to rest," and because this meaning coincides with the stem underlying Biblical Noah, Dr. Langdon reaches the conclusion that Tagtug is the Sumerian equivalent which the Hebrews translated as Noah. Why the Hebrew transmitter of the old tradition should have gone to so much trouble, or how he happened to be so well versed in Sumerian, which ceased to be the current language of Babylonia after the middle of the third millennium, Dr. Langdon does not tell us. But let that pass.

Tag, when it is made the equivalent of *nâkhu* in the sense of "rest," is not intended to convey the idea of cessation from activity or release from trouble, as is the case with the Hebrew stem of Noah, but rather the "rest" that comes through destruction. In other words, the idea of "rest" involved in the Sumerian *Tag* is a synonym of to "destroy"—to put to rest in that sense. What the Sumerian *Tug* (if we are to read it in that way) means, we do not know, because the Akkadian, or Babylonian, equivalent has not yet been found. Dr. Langdon realizes this, and, therefore, suggests that *Tug* has been added to *Tag* by way of assonance and in order to emphasize the idea of "rest." Tagtug would, therefore, be something like our humpty-dumpty or higgledy-piggledy. The Sumerians, however, when they wished to give an emphasis to the meaning of a stem, repeated the stem just as it was. We would, therefore, expect Tagtag, and Dr. Langdon himself confesses that he has not found a single example where, in order to emphasize the meaning of a root, the root was repeated with a change of vowel. In other words, Tagtug, in place of Tagtag, would be an isolated example. The obvious conclusion to be drawn from such an omission is that Tagtug cannot mean "rest" in an emphatic sense, and that there is no reason for selecting *Tug* as the reading of the second sign in preference to *Ku* or *Tush;* but if we select one of the latter readings, Dr. Langdon's already tottering thesis falls completely to pieces. On this flimsy foundation he builds up his theory that Noah is the Hebrew translation of Tagtug.

This specimen of word-juggling, with the heaping of one hypothesis upon another and then drawing far-reaching conclusions, is unfortunately not isolated, and we must confess that with due admiration for Dr. Langdon's ingenuity, this unfortunate habit of making fanciful combinations raises a question as to the validity of all the results set forth by him in the introduction to his translation of the tablet. He makes his favorite Tagtug to be the survivor of a deluge, but we have seen that the "deluge" discovered by him on his tablet is exceedingly problematical, and that there is absolutely no indication that Tagtug has anything to do with the deluge, even as interpreted by Dr. Langdon. Furthermore, Tagtug does not seem to be a human being, but a god. His name is written with a sign attached to the names of gods. In order to get around this, Dr. Langdon calls Tagtug "the divine," and assumes that, though a mortal, he has received immortality from the gods. By such a process any god can be changed into a divine human being. If you can prove that a certain being *was* human, then you are at liberty to conclude, if you find his name written with a sign for god, that he has been changed into a deity, but since Tagtug appears for the first time in Dr. Langdon's tablet, without any indication that he is a human being, we are forced to conclude that, in making Tagtug merely a divine being, we are again dealing with purely fanciful speculation.

Lastly, this same Tagtug is supposed to have eaten a forbidden fruit, and thus to have forfeited immortality and the delights of Paradise. The tablet is particularly fragmentary at this point, and it is not clear on what ground Dr. Langdon supposes that Tagtug has anything to do with the references to certain plants in the concluding portion of the tablet. The name does not appear in that connection. Nevertheless, Dr. Langdon has permitted the sensational announcement to be spread far and wide through the press of this country and England that it was Tagtug-Noah and not Adam who ate the forbidden fruit and thereby forfeited immortality. But the case made out for the forbidden fruit is equally as precarious as the supposition that it was Tagtug who ate it. In order to get this interpretation Dr. Langdon is obliged to supply in one line the sign for plant and in another the sign to eat. Granting these two conjectures, which are probably correct, he would make out the forbidden fruit to be cassia. Now, it happens that cassia is one of the few medicinal remedies mentioned in cuneiform medical texts that can be definitely identified, for the Babylonian term *kasu* is the source of our own cassia, coming down through the medium of the Greek. Kasu, or cassia, occurs as one of the most common remedies in Babylonian-Assyrian medical texts, and since in Babylonian-Assyrian medicine a remedy meant driving out the demon of disease, cassia would obviously be looked upon with great favor. Is it likely that the same people who use a plant as a beneficent remedy would regard such a plant as forbidden, the eating of which entailed punishment? One need merely raise this question in order to see how improbable it is that the concluding portion of Dr. Langdon's tablet has anything in common with the story told in the third chapter of Genesis. As already stated, the tablet at this juncture is rather defective, but an interpretation that suggests itself as a result of a study of the words and lines preserved is that we have here a list of plants that are put together as beneficial, and that these remedies for diseases are traced back to some god through whom they were given to man. A "salt" plant, *e. g.*, is among those mentioned, though apparently not recognized by Langdon as such. At all events, Dr. Langdon's interpretation that the tablet gives us the story of a forbidden fruit is as fanciful as the identifica-

tion of Tagtug with Noah, or that the tablet contained an account of the Deluge, or that Tagtug survived this supposed Deluge, or that at the beginning there is a description of a "Sumerian" Paradise.

Scholars will feel grateful to Dr. Langdon for the publication of this text, which deserves further study. No doubt, its interpretation will be advanced within the next year or so through such further study on the part of Sumerologists; and if Dr. Langdon could only put a restraint upon his too active imagination and curb the vicious tendency to heap combination upon combination and conjecture upon conjecture, there is every reason to believe that he would himself be able to make a contribution to the better interpretation of this difficult text.

CURRENT FICTION.

The Bent Twig. By Dorothy Canfield. New York: Henry Holt & Co.

Three years ago, with "The Squirrel-Cage," Mrs. Fisher took her place among the current novelists who are bent upon a serious interpretation of American life. More recently, in "Hillsboro People," she has carried the scene of her interpretation from the Middle West to New England; and her Vermonters ring true as her Kansans. The setting of "The Bent Twig" shifts from "La Chance" to Vermont, from Vermont to Paris. La Chance is such an upstanding Western town as was pictured in "The Squirrel-Cage." It has its "best families," its pretensions to social elegance, its State University scorned by the aristocracy and obscurely influenced by their standards. Sylvia Marshall's father is an unconventional professor in the university, with a like-minded wife. They choose to live in an old farmhouse in an unfashionable neighborhood, and make no attempt to keep up "dignity" at the cost of solvency. Of society in the foolish sense understood by most of the faculty wives, they have none. Their dress and manners are their own. Their house is open to various queer characters, to "rough-neck" students, and unpresentables of various kinds—notably the old violinist, Reinhardt. It is a place of rough-and-ready hospitality, of free talk, and of good music. There are two daughters, Judith and Sylvia, of very different types. Judith, the younger, inherits her parents' clear-headed independence and their desire to be of use in the world. Sylvia is the softer and commoner type, a born lover of ease and pleasure, with little apparent sense of responsibility, and distaste and resentment for the unworldly life of her home. There is a beautiful and selfish aunt whom Sylvia perilously resembles. The girl has brilliant powers, and makes her mark as a scholar in the university; what she really values is the social advancement her talents bring her, and she seems for a time to be throwing herself away. But always at crucial moments, when a momentous choice must be made between the world of her shallower desires and the real world of which her home has been a microcosm, she finds herself drawing upon sources of strength of which she has been unconscious. So, after engaging herself to the rich young Apollo of her college days, she at once recoils from his brutal passion. And, in the end, after dallying long with the possibility of a worldly choice, she gives herself wholeheartedly to the man who deserves her as a man. Sylvia the lovely, the self-willed, the covetous, the petty intriguer and poser, who yet fights in vain against the deeper principles of pure and noble action which are her heritage—here is a type more common in America, perhaps, than elsewhere. Mrs. Fisher has studied it with sympathy and without sentimentality.

Felix O'Day. By F. Hopkinson Smith. New York: Charles Scribner's Sons.

The present book, the last of the late F. Hopkinson Smith, has for narrative outline a story of unusually mysterious and rapid sort, and while it presents as chief personage a type by no means new to Smith—the type of the gentleman vagabond—it is again unusual in making him a highly-born foreigner. Felix O'Day is an Irish baronet who has contracted an unfortunate marriage, his wife Barbara being headstrong, impetuous, and flirtatious. He suddenly loses his fortune, and attempts to persuade her to accompany him to Australia to regain his estate by sheep-farming. She refuses, returns to her father with the lie that O'Day is attempting to force her into a life of ignoble toil, and immediately after flees with an old lover of hers, one who bears the melodramatic name of Dalton. O'Day follows her to New York, resolved to regain possession of her somehow, though he is utterly without a clue as to her whereabouts. His funds fail; he is determined to maintain himself in some cheap boarding-house while he tramps the streets in his quest; and in his extremity he pawns his dressing-case at the shop of an old German curio-dealer, Otto Kling. The acquaintanceship he strikes up with this irascible but good-hearted dealer leads to his employment in the shop as an expert on antiques, and to his residing across the way with a hearty Irishwoman, Kitty Cleary, engaged with her husband in the draying business—a woman highly reminiscent of Tom Grogan herself. The background of the stage is at once peopled with a multitude of lower East Side characters of the better social strata—two old artists of decayed fortunes and engaging eccentricities, rival curio-dealers, children, priests, policemen, and several frank derelicts. Mr. Smith draws all these with a keen eye for individual foibles and with unerring observation of the life of the section. Meanwhile we are introduced to Lady Barbara, who, deserted by her lover in a cheap boarding-house, obtains employment in mending fine garments, endures the insults of a harsh agent in a department store named Mangan, and finally is dragged into court to answer for the loss of a fine piece of lace entrusted to her. It is at this moment that O'Day reappears upon the scene and rescues her, the book closing with their complete reconciliation. But it is as a picture of the lights and shadows of life among the decayed gentle-folk and rising laboring classes of the lower East Side that "Felix O'Day" will be remembered. It is a satisfying book to place beside Mr. Smith's previous descriptions of plantation life in Virginia and Maryland, of Baltimore society, of the rigors of lighthouse labor, and of the lives of the docks—the last in an excellent gallery.

The Gray Dawn. By Stewart Edward White. New York: Doubleday, Page & Co.

Two years ago, with "Gold," Mr. White embarked upon the serious enterprise of expressing in the form of a trilogy of novels the development of the Far West as represented by California. He here takes up the narrative in the year 1852, the moment at which the city of San Francisco has emerged from the cruder material conditions of pioneering, but has hardly begun to suspect her need of other qualifications as a civilized community. The bar-room and public gambling-places which are social centres of a frontier town have been overlaid with crude gorgeousness, but have lost nothing of their original status. For the rest, the society and government of the city are in the hands of a spurious Southern "chivalry," a group of fire-eaters, carefully appointed as to dress and bearing and scrupulous as to the defence of their personal "honor," but otherwise without scruple or honor. Duels are openly announced, and public excursions are arranged so that the public may enjoy them as spectacles. Also the frontier privilege of killing on sight has been carried over; and chivalry, aided by perjury and the subtleties of the law, ordains that there shall be no penalty for this kind of murder.

To this city come Milton Keith and his wife, a young pair from Baltimore, lured hither by the fabled charm of a new greatness. Keith is delighted with everything, at first. He becomes a member of one of the most fashionable of those amateur fire companies which played so important a part in the social and political life of the young city. For the rest, the place is overrun with young lawyers like himself, and it is by a clever and unscrupulous stroke of business, at the expense of the city treasury, that he makes a start. He has no qualms about this: "His sense of justice was naturally strong and warm, and an appeal to it outside a courtroom or a law office always got an immediate and common-sense response. But inside the law his mind automatically closed, and a 'case' could have only legal aspects. Which is true of the majority of lawyers to-day." Moreover, there was no local sentiment to combat. Keith is heartily congratulated upon his *coup*. A quaint fact, surely, about "graft" and democracy: "Every last one of these merry, jovial pirates was inordinately proud of the ship he was helping to scuttle! That one fact, attentively considered, explains much." But

the city has a conscience, though it is asleep. The time comes when Keith and thousands of other citizens with sound hearts are forced by the corrupt conditions of the Government and the judiciary, to take up again the work of the Vigilantes, under their old leader, Coleman. We leave the city still in its gray dawn, but with warmer tints upon the horizon.

Mr. White has told with much point and vigor of that episode, in its rawer colors so typical of a nation-wide experience in municipal evolution. If his human figures seem rather to play their parts creditably in the larger action than to exist for their own sake, this is the failing of all but the really great historical romances.

ROMANTIC REALISMS.

The Rose of Youth. By Elinor Mordaunt. New York: John Lane Co.

The Rivet in Grandfather's Neck. By James Branch Cabell. New York: Robert M. McBride & Co.

In Mrs. Mordaunt's volume the bag of tricks of the uncompromising realist is pressed into service by an up-to-date idealist. Her theme is less a biography than a fantasy. She tells what happened to one Teddy Earp, the cockney clerk who was nine parts a poet, and she retails with great particularity the unpleasantnesses of "living-in" and the distressful varieties of downtrodden humanity that did "live-in" and clerk at Finney's. Yet what she really reveals is how the spirit of young romance might keep alive even at Finney's, nourish itself upon the sumptuous and exotic even at those shabby counters, and find at last among the shipping on the Thames an open sesame to the kingdom of its dreams—a vision of adventurous joy, clean and brave as when the world was young, winning out of the heart of commercial London its enlargement and a pathway to the ends of the earth. As to individual episodes, many parallels suggest themselves in the work of contemporary English writers; the originality is in the theme itself, impersonal as an Arabian Nights tale, and in the consistency with which the issue is kept clear of moral and social problems. This author does not attempt to turn knight-errantry into practical reform, her wild swan into a domesticated and useful bird, and she will not suffer love or duty to lay a detaining hand upon the radiant voyager.

Mr. Cabell has attempted something much more difficult and less picturesque. He fain would dissect your old-fashioned Southern gentleman—and then put him together again, turn him inside out, and yet keep him a hero, shatter illusion and retain partiality—in short, he proposes in one and the same book to exercise the acumen of an Ellen Glasgow and indulge the sentiments of a Thomas Nelson Page. It has the look of an incredible feat, and what the reader will chiefly enjoy is the ingenuity of the title as applied to the involuntary heroism of the true-blue aristocrat, and a very cleverly drawn—or shall we say vocalized?—daughter of the newer South. It is the inimitable quality of Patricia Stapylton's speech that better than anything else conveys the woman—vivid, irrepressible, dainty, and, in the last analysis, commonplace. Fluent and convincing, it amounts in itself to a little triumph of art.

A COMPENDIUM OF JAPANESE HISTORY.

A Short History of Japan. By Ernest Wilson Clement. Chicago: The University of Chicago Press. $1 net.

In a modest preface the writer of this handy volume, intended to give "a bird's-eye view of the history of Japan," expresses a hope that it may be sufficient for the purposes of the average reader who has not time or inclination to go into the details of Japanese history. He is already favorably known as author of a "Handbook of Modern Japan," and of a revised edition of Hildreth's "Japan as It Was and Is." A long residence in the country, partly in the interior and partly in Tokio, has insured intimate acquaintance with the language and the people, evidences of which appear throughout. His treatment of the prehistoric legendary period is judicious. Quoting from the official "History of the Empire of Japan," he concedes that "in order to understand the history of the Empire's beginnings, the traditional incidents of the age, however singular, must be studied." Moreover, he adds, "the incidents and names of the actors are so inextricably interwoven into the fabric of Japanese art, religion, and literature, and are so influential yet among the common people and even in politics, that one cannot afford to ignore this period."

The account of the rise in the thirteenth century of four new Buddhist sects, "all of which have remained powerful to the present day," comes in appositely at the close of chapter vi. The mystical Zenshiu, or Contemplative, sect, which sought salvation by meditation, and whose doctrines may be summed up in the following injunction: "Look carefully within, and there you will find Buddha," immediately attracted the warrior class. "This was largely due to the fact that, in Zen, each believer must work out his own salvation by austere discipline, and could thus develop the measure of self-control needed by a true knight." To its influence may be traced in part, at least, the chivalrous bearing of the best type of Japanese soldier to-day. But Mr. Clement does not make the deduction; nor in describing the more fanatical and narrowly national Shinshiu sect, "the Jesuits of Japan," as he calls them, does he refer to their missionary propaganda in the Hawaiian Islands and on the Pacific Coast. Recently, in making demands on China, Japan has asserted the right of her subjects to disseminate the Buddhist faith. And yet, as Mr. Clement tells us (page 120), both Buddhism and Shinto were disestablished in 1884. This, his only reference to Buddhism in modern Japan, is surely inadequate, in view of its recent assertiveness. How has the change come about?

The personality of Prince Ito, in many essential ways the maker of new Japan, is perfunctorily dealt with. He is dismissed as follows (p. 144): "In October (1909) Ito was assassinated at Harbin by a Korean fanatic; and he was honored, as the greatest statesman of modern Japan, with a most elaborate funeral." A good opportunity presented itself at page 107, where reference is made to the unification of Italy, of Japan, and of Germany, all within little over a decade, and all presenting much the same features. As Italy had her Cavour, and Germany her Bismarck, so had Japan her Ito. The three paragraphs dealing at length with the character of the late Emperor might be condensed, and one at least devoted to Ito.

Mr. Clement's outlook, as well as his phraseology, is essentially that of the missionary teacher, and yet his treatment of Christian education is feeble and scrappy. He refers to the Doshisha University at Kyoto without explaining that it grew up under the wing of American Congregationalism; and other like institutions of high grade are left unnoticed. While "Count Okuma's well-known institution at Waseda in Tokyo" is remembered, neither the Keio University, founded by the famous editor and patriot, Fukuzawa, nor the great man himself, is deemed worthy of mention. These two universities may be regarded as complementary to the over-Germanized state institutions, which date from 1886. "In 1884 and 1885 the people took up athletics; and in 1886 and 1887 waltzing was the rage. This was also about the time when 'the German measles' prevailed; but it was only a mania for imitating 'things German.'" Now, this epidemic of "German measles," as it was facetiously termed, was pretty well confined to the Government departments of War and Education; it was an official, not a popular, craze. Mr. Clement gives no details regarding the founding of the four Imperial Universities and the eight Higher (Middle) Schools, a result of the "epidemic." The reader meets with one solitary reference to the higher education (p. 156): "The most unique feature of the Imperial University at Tokyo is its department of seismology with a seismograph."

There is a misleading statement in regard to things financial at page 117: "The first decade of the Meiji era closes in 1878, when bimetallism was adopted." The subject is forthwith dismissed for good. Now, in the excellent account Mr. Robert P. Porter gives of the economic progress of the Japanese Empire up to 1911, it is rightly asserted ("The Full Recognition of Japan," chapter xiii, Finance) that

> The evolution of the Japanese currency is one of the most extraordinary in the history of national finance. In 1871, when the work of regeneration was begun, the currency system adopted was one of gold monometallism; in 1878 it had become a system of gold and

silver bimetallism; by 1879 it was to all intents and purposes a system of inconvertible paper money; in 1886 the paper money had been redeemed by silver coins, and at the end of 1897 a gold standard had replaced the silver system (with silver rated at 32 to 1).

Sometimes Mr. Clement's touch upon Japanese life and customs fails him. He makes two references to landscape gardening. It (the Ashikaga period), he tells us, "was a glorious era for architecture, landscape-gardening, decorative painting, the tea-cult, the flower-cult, the incense-cult. . . . It is only in Japan that landscape-gardening can be said to be 'reduced almost to an exact science.' And Japan seems also to be the only land where incense-burning and tea-drinking are likewise systematized." But why does he twice separate landscape-gardening and the tea-cult? All the celebrated gardens of Japan, as Okakura informs us in his delightful "Book of Tea," were laid out by the tea-masters; and the two cults are inseparable, historically and essentially.

The final chapter closes with a naïve expression of the author's wonder at the progress made by Japan since 1867. "As we contemplate the marvellous transformations of the Meiji era, we can only throw up our hands with Dominie Sampson, and exclaim: 'Pro-di-gi-ous!'" This editorial (or platform?) "we" might be replaced with advantage, here and elsewhere in the book, by an honest "I," for the author is well entitled to speak for himself.

THE MECHANISM OF COMMERCE.

International Trade and Exchange: A Study of the Mechanism and Advantages of Commerce. By Harry Gunnison Brown. New York: The Macmillan Co. $1.50 net.

No subject within the field of economics has had so few good books to show as that of foreign exchange; no subject has had so many bad books to its discredit as that of foreign trade and tariff policy. Conditions have changed within the last few years. Several excellent manuals on foreign exchange have recently appeared; and Taussig devoted to international trade a whole book of his "Principles," published in 1911, and for the first time set forth in a general treatise the laws of foreign trade and exchange, with an appreciation of the importance of the topic, and with the knowledge and skill necessary to show its bearings.

The distinguishing feature of the modern treatment is the application of the quantitative theory of money to an analysis of the effects of international trade on price levels, and thereby on the relative position of producers and consumers in various countries. This method of analysis is one in which Dr. Brown is entirely at home. He assisted Irving Fisher in preparing the book on "The Purchasing Power of Money," which is a restatement and amplification of the quantitative theory, and has given evidence in independent articles of marked ability in the field of theoretical economics. He makes no attempt in the present book to go outside his chosen line. He borrows his account of existing business practices from Escher, Clare, and Margraff, and is content to offer only a bare suggestion of the present organization of foreign trade and the actual results of present policies. What he does is to state with precision the principles of foreign trade and exchange, and to carry to conclusion his analysis of the effects of trade and trade regulations under various hypothetical conditions. The book is the most comprehensive and clearest statement of the theory of the subject which we have.

The first part covers foreign exchange in the narrow sense. The author introduces the subject by chapters on the laws of money and the nature of bank credit, and thereby is enabled in the following chapters to carry the reader further than ordinarily is done in the discussion of influences determining the rate of exchange, and of reactions of the rate on the phenomena of business. The section on "Exchange between Two Countries, Assuming Effective Prohibition of Specie Export," is interesting in the light of present conditions, due to the war; and it speaks well for the author's careful habit of statement that nothing in the section appears to require modification as a result of recent experience.

The second part, paged separately and entitled "The Economic Advantages of Commerce," begins with two excellent chapters on the gains of trade and how they are shared. The author makes extensive use, in this part, of hypothetical illustrations. Suppose, for example, that in Canada one man in a week can produce twenty bushels of wheat or fourteen yards of linen cloth, while in Ireland in the same time a man can produce but six bushels of wheat or ten yards of linen. Ireland is at a disadvantage in both wares, and may be forced to offer the product of two weeks' work in exchange for the product of one week of the Canadian. Assuming that a yard of Irish linen is sold for a bushel of Canadian wheat, then Canada, producing in two weeks forty bushels of wheat, can exchange half of it for linen, and will have twenty bushels plus twenty yards instead of twenty plus fourteen; while Ireland, in four weeks' work, will produce forty yards of linen, but will still gain by trade, for by exchanging half of its linen it will have twenty yards plus twenty bushels, instead of twenty plus twelve. Examples of this kind, covering the various situations which may be conceived in the commercial relations of various countries, prove nothing, of course, but they do make definite the principles which govern the distribution of the advantages of trade, and they clear the way excellently for the discussion of commercial policy in the chapters following. If the reader here misses the pungency of the older critics of protectionism, he gains at least by the scientific and exact analysis to which the author subjects the operation of protective duties and the arguments advanced in defence of them. A certain amount of bias towards free trade does appear, in the reviewer's estimation, in the treatment of the military and social arguments; but the analysis of the economic arguments is all the more effective because it concedes the theoretical possibility of gains by restriction, while it suggests the improbability that these will be attained under the actual conditions of politics. The last chapter is an impressive demonstration of the evils consequent on ship subsidies, public canals, improvement of rivers and harbors by general taxes, and government subsidies to railway-building.

The book is written by an economist for economists, and will give slight satisfaction to the general reader or the popular politician. Appealing as it does, however, to a professional class, vigorous protest should be entered against the duplication of the paging in the two parts, which will certainly cause trouble in citing passages, and which appears to offer no advantage of any kind.

Notes

"The Mary Frances Garden Book," by Jane Eayre Fryer, is announced for publication on December 1 by the John C. Winston Co., Philadelphia.

The Macmillan Co. announces the forthcoming publication of Stephen Graham's "The Way of Martha and the Way of Mary."

"The Harim and the Purdah: Studies of Oriental Women," by Mrs. Elizabeth Cooper, has been published by T. Fisher Unwin, London.

In "Moonbeams from the Larger Lunacy" (Lane; $1.25 net) Mr. S. Leacock does some more admirable fooling upon a very great variety of subjects. His is a mind bubbling over with whimsical ideas; one gets the impression that all he can need is time to "get them off," in his rapid sketchy way. The quality of his fun is distinctive. It is based on the English method, does not always escape facetiousness, but is, on the whole, lighter and more limber than the *Punch* standard. In fact, it has much of the spontaneous extravagance which is supposed to belong on this side of the water and this side of the border. The reason may lie partly in the fact that many of these little skits have been written for the American market as catered for by *Life*, *Puck*, and the funny compartments of the magazines. But it may be that we have here a genuine new blend destined to be called Canadian Humor. Why not? Mr. Leacock sees, to begin with, the humor of his own job as a professor. He is and, so far as we know, intends to remain head of a university department of political economy. Such positions are probably safe only for incumbents of the larger lunacy. Mr. Leacock (like the Irish clergyman who writes as G. A. Birmingham) appears to be in no way oppressed or embarrassed by his office. He has, apparently, no conception of that ideal of professional dignity which makes even the gambols of our own parsons and professors so self-conscious and elephantine. The present volume contains various bits of burlesque, in the "Nonsense Novels" vein.

"Spoof: A Thousand-Guinea Novel" very amusingly takes off the fatuity of the conventionalized best-seller. "Passionate Paragraphs," short as it is, is even better as a parody of the latest style of sophisticated prose. But the best fun and keenest satire in the book belongs to the series called "Afternoon Adventures at My Club," which hits off, with great freshness and dispatch, many of the familiar types of club bore or convive or disputant.

Mr. John Jay Chapman sees things simplified and rather tinged with red in his "Notes on Religion" (Laurence J. Gomme; 75 cents). "It is the union of true religion with a perfected system of social tyranny," he believes, "that gives the Roman Church its particular character. . . . The Church Dominant says to a man: 'I am your consciousness of God; therefore obey.'" His essay, in fact, is intended to awaken the dormant consciousness of the American people to the vast plot of Rome, as he sees it, to make good her losses in Europe by laying a strong hand on this Continent. And within the Church, yet scarcely of it, are the Jesuits. Mr. Chapman draws a startling picture of a conspiracy hatching in the Archbishop's palace in Madison Avenue, and of the conspirators departing in two directions, the Jesuits together one way, the rest another. It is all very vivid, and so simple. Besides this essay the book contains a few notes on the nature of religion in itself. Here again things are simplified; but we rather like the essay the best.

Mr. Arthur J. Balfour, for obvious reasons, was not able to give his presidential address at the opening meeting of the Aristotelian Society last year, and as a consequence the first paper in the "Proceedings" (just issued by Williams & Norgate) is the substitute address by Vice-President Bernard Bosanquet on "Science and Philosophy." His starting point is Bertrand Russell's lectures "On Our Knowledge of an External World" (these "Aristotelians" have a delightful way of starting from one another), and against those who have been trying to give to philosophy the exact procedure of scientific investigation he argues subtly and, to us, convincingly. The buffoonery of the book is furnished, as usual, by F. C. S. Schiller, who, having failed to bring other philosophers to consider "the really important issues of logic," now condescends to return to their "immemorial wallowing grounds." A notable discussion on "Instinct and Emotion" is conducted by William McDougall, A. F. Shand, and G. F. Stout. There is a long study of Croce's "Æsthetic," besides other papers, historical and critical, which we must pass over unmentioned. The volume as a whole maintains the value and interest of its predecessors.

That earnest Manxman, Mr. Hall Caine, in "The Drama of Three Hundred and Sixty-five Days: Scenes in the Great War" (Lippincott; $1 net) cleanses his bosom of the perilous stuff wherewith war and indignation have stuffed it. His is, of course, the indignation of the patriot spellbound by the sacred glories of his own cause, and hag-ridden by the infamy of his foe's. This, however, is no ordinary patriot, of whatever island. It is one who, by his own admission, has been, either as witness or as confidant or as adviser, really in the thick of matters. All things have worked together as by a miracle for his enlightenment. He saw the Kaiser in Rome years ago, and had no trouble in summing him up:

> The glittering eyes, the withered arm, the features that gave signs of frightful periodical pain, the immense energy, the gigantic egotism, the ravenous vanity, the fanaticism amounting to frenzy, the dominating power, the dictatorial temper, the indifference to suffering (whether his own or other people's), the overbearing suppression of opposing opinions, the determination to control everybody's interest, everybody's work—I thought all this was written in the Kaiser's masterful face.

And just as clearly as he recognized this monster, whose arm was written in his face, so clearly did he detect, among the snows of the Engadine, the Crown Prince in his true character: "I saw a young man without a particle of natural distinction, whether physical, moral, or mental." Also, in the course of a month spent in the same hotel with the Archduke Ferdinand, he got to the bottom of that arid, though fateful, personality. Years ago, moreover, his own soul aligned itself with the present partners of England. He travelled in Galicia and Poland and saw the effects of Austrian government; and his "impressions were unfavorable." Germany more or less deceived him. His German friendships and memories helped him to cajole himself and to be cajoled: "Even yet it strikes a chill to the heart to recall those German homes as scenes of prolonged duplicity." Russia he visited only once, but, "under conditions which were calculated, beyond anything that has happened since down to to-day, to reveal to me the whole secret of the Russian soul." He saw, in short, that the Russians were not barbarians, but a simple, religious, and kindly people with great reserve forces of character.

From such vantage-points of previous knowledge, he has seen the war unfold with more grief than surprise. As he reviews the first year of the conflict, he is unable to find anything but merit in the conduct of the Allies, anything but shame in the conduct of the Powers. Like so many other British writers whose only permitted weapon is the pen, he is determined to make the most of it, as a weapon. For the rest, it was he, we learn, who persuaded the proprietors of the *Daily Telegraph* to publish "King Albert's Book." Mr. Caine's sincerity cannot be doubted, but it is the sincerity of the recruiting officer who must get his results for the cause, not that of a trustworthy chronicler of events. He ends with a plea for prayer also as a weapon:

> Let us, then, pray with all the fervor of our souls for Belgium, for Poland, for Italy, for Russia, for France, but, above all, for our own beloved country, mother of nations, mother, too, of some of the bravest and best yet born on to the earth, that, as long as there remains one man or woman of British blood above British soil, this England and her Empire may be ours—ours and our children's.

Shades of the Fourth Reader! Echoes of D'Annunzio! It is too clear that among the primitive habits to which, under the stress of war, we are destined to revert, spouting will be one.

To most of us, it is to be feared, the mention of Saint-Simon's "Memoirs" recalls chiefly the rather forbidding vista of M. de Chéruel's twenty tomes and the echo of Macaulay's remark: "I finished Saint-Simon's Memoirs and am more struck with the good parts than ever. To be sure, the road from fountain to fountain lies through a very dry desert." And not unnaturally. Saint-Simon, in the words of another authority, is "not a writer to be 'sampled' easily, inasmuch as his most characteristic phrases sometimes occur in the midst of quite uninteresting matter." What we need, therefore, is the good offices of an editor who will make Saint-Simon readable and—an essential requirement—still leave him Saint-Simon. A book of extracts will not do; condensation must not, as heretofore, be carried too far—a difficult task, but one that has been successfully begun by Francis Arkwright in two volumes, entitled, somewhat fancifully, "Gossip and Glory of Versailles" and "The Silver Age of Louis XIV" (Brentano's; $3 net, each), the first ending appropriately with the year 1701 and the signing of the Grand Alliance, with which, as the memoirist says, "ended all the King's prosperity." The second takes us to 1707, the year of the death of Mme. de Montespan, which, if not the end of an epoch, is well enough as a milestone in the path of a writer of court gossip.

There is, of course, as much difference between these volumes and the works of modern popular compilers as between dry bones and the living flesh. In the one case, we sit in our easy chair while Mr. Gribble or *qui quc ce soit* tells us pleasing anecdotes of this period or that, with his own point of view, and too often his own personality, well to the fore. Here, on the contrary, we are, as it were, transported back to old France, where the picaresque Cardinal Borgia, possessed of a family Bull permitting, nay exhorting, him to eat meat on Good Friday, is part of the landscape; where the medical faculty orders D'Harcourt to return to his beloved snuff, "to recall the humors to their old courses; but it was too late, he had left it off too long, and a return to it did him no good." Through the eyes of Saint-Simon we see the first as not only funny, but "in the picture"; and the same may be said of the adventure of Mme. de Nemours, who, going for confession to a strange church and in mean attire, told the priest the exact truth about herself, her position, her riches, and, above all, her sins, with the result that the good father thought her mad and advised her to "go home and, if she could afford it, to take some good strengthening broth," doubtless accompanying the advice with the coveted absolution. The prescription of the doctor was quite *secundum artem*. We have picked out these trifling anecdotes as some slight suggestion of what the reader misses if he is content to accept the annexations of historian and compiler as all that is to be obtained from the work of one who, professedly, set great store by small things, and who gratefully remembered Chamillart's daughters because they "told me an immense number of feminine trifles, often more important than they were aware of." We understand that the present translation is to be completed in four additional volumes within the twelvemonth.

"The Spell of Southern Shores," by Caroline Atwater Mason (The Page Company; $2.50), a sequel to "The Spell of Italy," by the same author, like many another book of

travel may be described in the words of the old French chronicler, "Ne tot mençonge, ne tot voir, Tot folie ne tot savoir." In it we follow in their wanderings one of the pairs of American mothers and daughters, familiar to all tourists on the Continent. Their route leads them from Genoa down the Riviera di Levante to Viterbo, Rome, Naples, Capri, Sicily, Venice, Lago di Garda, Ravenna, Rimini, Padua, and back to Venice. Pleasant and usually not too exuberant descriptions of natural scenery are mingled with historical sketches, and an enlivening element is added by a slender thread of fiction in the romance of an English girl and a *marchese,* whose experiences furnish an opportunity for the typical reflections on international marriages. Our pair of travellers are agreeable, "Mother" well read and communicative, "Filia" impressionable and receptive, and their interchange of information and emotions in dialogues which recall Rollo or Plato, according to the habits of the individual reader, supplies us with the facts and the sentiments suitable to the places visited. The author has an admirable acquaintance with the general stock of historical facts that may be found in the best guidebooks, from which she supplements her own intelligent narrative by well-selected quotations. She occasionally gives brief chronological summaries of the history of certain places, which many travellers may find convenient, but which may seem to others inappropriate in a book written distinctly in the vein of light narration. Her interest, it is evident, lies primarily in the field of history, and some of us will question whether any account of Southern Italy that takes so little cognizance of its art can be said adequately to convey its "spell"—whatever that may be understood to mean. For example, the precious sculptured architectural bits still lingering in the midst of squalor at Viterbo receive merely a passing notice; the highly interesting frescoes of Lorenzo di Viterbo in Sta. Maria della Verità, the beautiful Pietà, a *capolavoro* of Sebastiano del Piombo in the Museo Municipale, are not mentioned at all, yet these go quite as far in forming the charm of Viterbo as do its associations with Papal history, to which several pages are devoted.

Occasionally the author is to be caught in slight inaccuracies. We might suppose from her description of the theatre at Syracuse that the sixty rows of seats are all "marvellously well preserved," but as a matter of fact, although it is estimated that there were originally sixty tiers, only forty-six remain. One would like to know the authority for the statement that in this theatre "some of the great tragedies of Aeschylus first were rendered under the eyes of the poet himself." Aeschylus was twice in Sicily; the first time in 470 B. C., when the "Persians," which had previously been given in Athens, was produced in Syracuse; his second visit was in 456-5, and the chronology of the plays would make it improbable that any of them were given before him then in the Syracusan Theatre. On page 365 it is implied that the Spozalizio del Mar was instituted at Venice in the year 1000; but this was the year in which the ceremony of supplication and aspersion celebrated on Ascension Day was instituted, while the Spozalizio del Mar itself dates from 1177, when the Venetians, having succeeded in gaining certain indulgences from the Pope after the Congress of Venice, gave a sacramental character to the celebration of Ascension Day and made it a nuptial rite. We may note, too, that the battle of Curzola was fought in 1298, not 1290 (p. 367); Selinus was founded in 628 B. C., not 623 (p. 177); "two centuries" is a rather loose term for the period of the war between Genoa and Pisa, which began in 1120 and ended nominally with the battle of Meloria in 1284; the chains taken from Porto Pisano by the Genoese hang on the west, not the north, wall of the Campo Santo at Pisa (p. 31); four doges, though the author finds only three (p. 367), are buried in S. Marco—Vitale Falier, Marino Morosini, Giovanni Soranzo, and Andrea Dandolo. The most serious blemish is one regrettably common to books on Italy written by Americans who have far too slender an acquaintance with Italian to risk using it in print. The English used in the advertisement of the Hôtel des Temples at Girgenti, which Mrs. Mason quotes with a jest, is scarcely less extraordinary than the Italian with which she sprinkles her pages. We mention a few errors from a copious selection. She regularly summons a *carozze* instead of a *carrozza;* when she wishes to say *Aspetti* ("wait"), the command with which all tourists in Italy become familiar, she says *Aspetto* ("I wait"); she turns *sì* ("yes") into *si* ("if"). But the book as a whole, with its many attractive illustrations, belongs to the type that we are all glad to find in a hotel library wherewith to while away an evening hour after sight-seeing in the places described. It will in the future have an additional interest of its own, for Mrs. Mason sailed from Trieste for America in May, 1914, and it is therefore one of the latest records of travel in Italy before the war. What the first after the war will have to tell us, *chi lo sa?*

It is perhaps not generally known that the Government of British Columbia has gathered a large and rich collection of historical materials. This work has been in the competent hands of Mr. E. O. S. Scholefield, Provincial Librarian and Archivist, who possesses unbounded enthusiasm coupled with a fine sense of discrimination. The books, pamphlets, maps, and manuscripts relating to the discovery, exploration, and settlement of Northwestern America which he has garnered are of the utmost importance. Many of the items are of great rarity. Mr. Scholefield is a collector of the uncommon sort; his labors in this direction, however, have hitherto been known but slightly beyond the borders of his own province. Until very recently, it has not been possible to make these treasures available. Now that the Government has generously added a handsome wing to the Parliament Building, the library is charmingly housed, with all the apparatus which makes for comfort and efficiency. The writer of this note was much impressed by the extent and richness of these collections, and gratified indeed to learn that the "open-door" policy will be inaugurated. Scholars from all sections may freely make use of the library's resources. And now that the great work of gathering is in a large measure accomplished, Mr. Scholefield's aim will be to make available in the best sense the materials in his keeping. No one who is studying the history of the Pacific Northwest, exploratory or otherwise, can afford to pass them by.

The Archives Department of British Columbia should have no reason to regret the publication of the initial number of its series of Memoirs. "The First Circumnavigation of Vancouver Island," by Dr. C. F. Newcombe, is the result of years of painstaking investigation. Although the question is not one of great historical importance, it has far more than a local interest; and it will be remembered that it has in the past been productive of much discussion and not a little controversy. Dr. Newcombe has presented a convincing case, which is "to vindicate the contention of Capt. George Vancouver that his ships [in 1792] were the first to complete the navigation of the inner channels which separate the island, now called by his name, from the mainland of British Columbia." The author writes frankly from the British point of view, but he is fair and judicial throughout. It would be pleasant, of course, to claim the honor of the first circumnavigation of Vancouver Island for the American Capt. John Kendrick in the autumn of 1789. Dr. Newcombe, however, appears effectually to have disposed of that question. The monograph is well printed, with marginal notes, and contains eight maps. It would have been better if some of the matter appearing in the text had found a place in foot-notes. The marginal style made this impossible, and for that reason the usual form should have been used.

"Scandinavia of the Scandinavians" (Scribner; $1.50 net), by H. G. Leach, secretary of the American-Scandinavian Foundation, is a well-organized and interesting hand-book of information about Denmark, Norway, and Sweden. After a succinct résumé of the history of the three nations, the book is divided into three almost equal parts, each one of which is devoted to an exposition of modern conditions in one of the countries of the North. The author treats successively the politics, the economic and social organization of the country, the educational system, the literary and artistic life of the nation, and even the customs and manners of social life. As a book of reference the work is invaluable. The writer has evidently scanned innumerable tables of statistics, many of which he has incorporated in his book, and assembled almost every fact about Scandinavia in which the general reader could be interested. Besides, Dr. Leach, from his frequent sojourns in the North and extensive travels there, has been able to present the actual life of the countries suggestively and graphically. The comparatively unimportant blemishes in the book are the result of the author's great enthusiasm for his subject. The unwary reader might be charmed into believing that only the people of the North have labor unions and various forms of industrial insurance, and that only they have "the inherent power to analyze character swiftly and accurately" which "gives a dramatic zest to conversation and letter-writing." Ungoverned enthusiasm, too, leads him to describe Drachmann as "a Walt Whitman blessed with the lyrical talents of a Poe" and to state that "Jacobsen's Irmelin Rose may well be compared to Sappho's Ode to Aphrodite." Usually, however, the style of the book is at once lively and sensible. The volume is provided with a number of attractive photographs. In the selection of these, too, the author has been influenced by a peculiar democratic enthusiasm which has prompted him to insert a photograph of Amundsen in conventional street costume; but one of King Haakon on skis; and one of King Gustav engaging in a game of tennis.

"The Divine Mystery," by Allen Upward (Houghton Mifflin; $1.75), is an attempt to set forth "the history of Christianity down to the time of Christ," that is, to sketch the origin of the administrative ideas (concerning the divine government of the world and the salvation of men) that took full shape in Christianity. It is, in fact, a grandiose generalization, a definition of the lines of advance by which man has created all religions, but with special reference to Christianity; and it is, at the same time, an exhibition of the persistence with which primitive conceptions have maintained themselves in the great religions alongside of spiritual ideas; it is not the author's purpose to describe these last, but he recognizes their value. His scheme of religious progress is indicated by the titles of his chapters (which are so worded as to point to Christian dogmas): the Divine Man (the Wizard, the master of the powers of nature, or the Genius, the chief man of the clan and its protector); the Wise Men (the enchanters, forerunners of modern fortune-tellers, clairvoyants, and faith-healers); the Divine Child (the son of any mother, especially of the Queen, the clan-woman who dwells apart and receives her partners in her own tent); the King (whose office results from the marriage of the Wizard and the Queen, whence he is both religious and political chief—and the Son inherits the Father's powers, but is subordinate to him and becomes Mediator and Saviour); the Kingdom of Heaven (the development of the worship of the sun); the End of the World (the fall of kings and gods through advance of scientific knowledge); the Baptism of Fire (Zoroastrianism as the culmination of sun-worship—the heat wave). Four concluding chapters deal with Israelite history and the beginnings of Christianity.

Mr. Upward has produced a volume attractive in content and style, to be read, however, with caution. He brings out the fact of the survival of primitive beliefs in the orthodox Christian creeds, and he follows in a general way the commonly accepted sequence of ideas leading up to Christianity. But his fondness for personalizing the tendencies of thought and his desire to trace Christian terms and expressions through them lead him insensibly into colorings and interpretations that are or may be misleading. His description of the genealogy of the divine Son as Saviour (p. 78) is logically and historically insufficient. The rôle that he assigns to the cult of fire and to Zoroaster as its apostle is not borne out by known facts. The introduction of astrological (zodiacal) science as an element of religious development is not illumining. Some etymologies adopted by the author are unfortunate; such is the identification of Assyrian Assur (p. 137) with Iranian Ahura (Sanscrit Asura); and the derivation of the Christian ejaculation "Amen" from the name of the Egyptian deity Amen (p. 144) has no better support. In the sphere of sociology the view that the discovery of paternal heredity, the reorganization of society in the patriarchal group, and the institution of marriage may be attributed to the institution of slavery, since the free woman had many consorts, while the slave concubine and her children belonged to her master alone (p. 70), is not essential to the author's argument, and may be left to students of social relations. The history of origins is necessarily obscure, and may easily give occasion to hypotheses that explain nothing, as in our author's assertion (p. 139) that the name of the prehistoric Copernicus, to whom we owe the discovery that the sun's heat is the cause of vegetable life, has been confounded with that of Zarathustra. Bold or rash generalizations and hazardous hypotheses will confront the reader of this volume, but he will also find not only acute remarks, but useful suggestions for the solution of the questions herein considered.

Drama

MR. MASEFIELD'S TRAGEDY.

The Faithful: Tragedy in Three Acts. By John Masefield. New York: The Macmillan Co. $1.25 net.

This is a true tragedy, embodying a somewhat dismal philosophy, but inspirational in its dominant theme that, in the end, love and endurance will conquer all imaginable evil. Picturesque and strong as drama, it is yet more remarkable for its literary qualities. Written in rarely pure, simple, and pregnant English, it is rich in epigrammatic point and passages of genuine poetic beauty. A story of old Japan, dated two hundred years ago, and exceedingly felicitous in its reproduction of an appropriate spirit and atmosphere, it is nevertheless modern in much of its thought and satire, and it is difficult to think that it was composed without reference to existing conditions, although the connection with them is by no means clear. The most obvious moral is the nobility of resistance unto death against unjust tyranny.

There is no real plot. Facts and consequences are depicted, very vividly, in three episodes, with a minimum of exhibited intrigue. The protagonists are Asano; an idealistic, philanthropic Daimio; Kira, the embodiment of bold, unscrupulous craft, and Kurano, Asano's devoted friend and avenger. In the first act, or episode, Asano, who has governed a small patrimony upon patriarchal principles, thinking only of the welfare of his dependants, is tricked by Kira into violation of sacred ritual, and doomed to harakiri, with confiscation of his property. In the second, Kurano renounces his wife—who has been instrumental in preventing him from going to Asano's assistance—binds the dependants of the latter by a solemn oath to devote their lives to the pursuance of revenge upon Kira, and feigns madness to deceive the agents appointed for his destruction. In the third, Kurano, with the remnant of his faithful followers, after pitiful suffering, makes his way by stealth into the palace of Kira, who hitherto has triumphed all along the line and been made a duke, and slays him in the temporary absence of his guards. Then, in obedience to official decree, they all, rejoicing, kill themselves on Asano's grave. Future glory is to be their reward.

Set forth thus in the barest outline the tale might seem ordinary Oriental melodrama, but it is something much more than that. Having no love interest, or very little, it does not fall within the category of romance. It is a veritable tragedy, of which the burthen is the impotency of benevolent and courageous virtue, even with precedent, law, and justice on its side, to prevail against malignant greed and cunning aided by power. In other words, there can be no successful appeal against the doctrine that might makes right, except that of brute force, and that can only be made at the hazard of life and everything that makes it worth having. The poetic value of the piece resides in its general conception, in its imaginative, concise, expressive prose and occasional interludes of heroic or plaintive lyrical verse, some of which is exquisite. Of descriptive or explanatory passages there are none, all the action properly unfolding itself on the stage. The environment, of course, could be made highly pictorial, and there is no lack of effective theatrical incidents. Among them may be noted the ritual scene in the first act, with the betrayal of Asano, his futile assault upon Kira, and his condemnation; the final meeting of the leaguers, and the last scene, in which Kira, defying omens and exulting in his security, makes love to a terrified dancing girl, while his deadly foes are creeping upon him from without. Here there is a growing tension of suspense until the thrilling climax.

The best act of all, however, from the literary point of view, is the second, in which Kurano, after dismissing his wife, feigns madness to escape the death which Kira has ordained for him. This is admirably written in all its moods. Very poignant is the scene in which the embittered counsellor renounces his repentant wife. But the imaginative genius of the writer is best displayed in the mad scenes, in which wayward humors, despairing pessimism, fierce satire, and broad raillery are commingled with striking realism. Bits of them, though utterly unlike, are strangely suggestive of kindred passages in "Hamlet" and "Lear." A diatribe on woman is quite Elizabethan in its style. All the principal personages are drawn with a fine consistency. The benevolent but skeptical Asano—too wise to appeal against the machine of the world, the strong, unscrupulous man, and old custom—the shrewd, valorous, devoted Kurano; the specious, bullying, crafty, and insatiate Kira; his wily counsellor, Sagasaka; the hotheaded old Daimio, Kamei, and his faithful Honzo, are all vital sketches, while even the minor characters have their distinct individualities. That the play, with its pictorial attributes and simplicity of construction, and its variety of histrionic opportunity, is well suited to the theatre, is beyond question, although it is not likely to be seen there. The fine spirit of fearless and tireless revolt against unjust tyranny with which it is animated would scarcely, in the managerial mind, compensate for its lack of a love story and its gloomy pessimism. But it is a notable work that will meet with the hearty appreciation of discerning readers.

J. Ranken Towse.

"THE GREAT LOVER."

This is a pleasant trifle, written by Leo Ditrichstein in collaboration with Frederic and Fanny Hatton, and presented by Messrs. Cohan and Harris at the Longacre Theatre. Mr. Ditrichstein, in the particular kind of rôle which he affects and which, since he is playwright as well as actor, he is fortunate enough to be able to provide for himself, is always interesting, an extremely clever and graceful player within his limitations, but not a versatile one. As "The Great Lover," namely, Jean Paurel, a famous baritone idolized by women, Mr. Ditrichstein has just such another part as he made conspicuously successful in "The Concert," but the setting is vastly inferior. The story is a hackneyed one: the loss of voice by a middle-aged operatic star; the yielding of his laurels, and incidentally of his fiancée, to a younger rival. The piece is typically an "actor's play," exhibiting at once the strength and the weakness that one expects when the actor turns playwright, especially his own playwright. No technical artifice is neglected that shall get a situation or a line "across" to the audience, and the first act is a clever piece of dramatic writing. The scene is in the office of an operatic impresario, when the constellation of singers from all parts of the world has come together preparatory to the opening of the operatic season in New York. In a setting of lively and very amusing satire on the foibles of the artistic temperament the main motive of the play is developed, the fatal charms and no less fatal impressionability of the great baritone.

As the curtain goes down on this very successful act the experienced playgoer suspects that this is too good to be kept up. And his fears are justified, for by the middle of the next act the authors have shot their bolt. Having exposed the theme of the play, they have little more to say. There is not enough real stuff in the piece to carry it on. It is Leo Ditrichstein to the rescue, and for the rest of the play we listen, willingly enough, to the pleasant patter of the middle-aged and flirtatious singer and rest our eyes on really delectable stage settings. It is all well enough, but it is pretty thin even for the label attached to it, "Romantic Comedy." If the psychology of Jean Paurel had been more clearly defined, that rôle might have carried the play; but it is not a study in psychology that we see, it is a study of Mr. Ditrichstein's engaging methods. In point of fact, the authors seem to have had in their hands an opportunity, and by some odd chance to have missed it. Considerable emphasis is laid on the superstitious element in Paurel's character—he knocks wood, he refuses to commence an engagement on a Friday, he puts faith in charms and amulets—but these qualities are accidental and bear only an arbitrary relation both to Paurel's character and to the development of the plot.

Mr. Ditrichstein's was, of course, a finished performance, and William Ricciardi and John Bedouin, among the principals, were excellent as, respectively, an Italian conductor and Paurel's valet. The part of Ethel Warren was overplayed by Miss Virginia Fox Brooks, as was the Bianca Sonino of Miss Camilla Bertolini. On the other hand, Miss Beverley Sitgreaves might have infused more fire and spitefulness into the rôle of a jealous and vindictive prima donna. The various types of operatic artists in the first act were admirably portrayed, and the stage management of these scenes was noteworthy. The play was received by the audience with manifest approval. S. W.

"THE LIARS."

The second production of Miss Grace George and her company at the Playhouse, though perhaps not quite so successful as the rendering of "The New York Idea," has been welcomed by large, enthusiastic audiences. Mr. Jones's play, like Mr. Mitchell's, provides an opportunity for a great variety of acting, and, if Miss George's company has not carried out in every detail the author's intention, it has at least adapted the drama in excellent fashion to American tastes. The play itself is not above criticism. Avowedly artificial, it characterizes with much shrewdness certain foibles of English society of the upper class. The kernel of the satire is much the same as that of Clyde Fitch's "The Truth," in that it lays bare the complications, especially domestic, which result from fashionable fibbing. But "The Liars" is weak in two important details. The first and more significant is the part of a man who spies on his brother's wife and makes methodical reports of her flirtations to the husband. Whether it is because spies are held in special disfavor just now, or because such a part is that of a cad, this rôle seemed out of place in a play of some pretensions. It is, too, the key to the central situation, for without it the husband would have remained in ignorance. The second weakness follows from the first and concerns the reconciliation at the final curtain. This seems entirely arbitrary. Put the matter in this way: if the wife had not been forced into a confession by the espionage of the brother, would she have given up her exciting flirtations? And is there any guarantee that her dull husband will long hold her interest?

So much is said in order to put part of the blame upon the author for the lack of entire conviction which is noticeable in this production of "The Liars." As Lady Jessica Nepean, Miss George is all that Americans expect of a woman of quick mind and personal charm who requires to be interested, even if that involves turning to other men than her husband. Conway Tearle is a spirited lover, yet his rôle is not entirely satisfying. Here again the author is probably at fault; for Falkner is too sincere to be a villain and too brilliant to be an utter fool. He loves Lady Jessica madly and almost persuades her to elope with him; in the end, he returns to his work in South Africa, not because he has seen the folly of his conduct, but because Lady Jessica has been led to see the folly of hers. Altogether the character of Falkner is unmeaning in any true dramatic sense. The one personage in the play who commands instant sympathy is Col. Sir Christopher Deering, as played by Ernest Lawford. This actor deserves all praise for his performance. Usually cast in some eccentric rôle, he here has a chance to impersonate what we like to think of as the typical Englishman—a person worldly wise, well-rooted, and possessing common-sense of the sort which helps one's friends out of their follies. Mary Nash, who takes the part of Lady Rosamund, has the considerable asset of being able to wear good clothes effectively; in the two productions thus far she has been a satisfactory figure as a lady of fashion. F.

"FAIR AND WARMER."

Those who were entertained last season by the farcical comedy "Twin Beds" will know what to expect of Mr. Avery Hopwood's "Fair and Warmer," (Eltinge Theatre) and will find much to their liking. Here, again, there are compromising situations, innocent in themselves, but suggesting the gravest possibilities, until the course of the action finally clears them of reproach. And here again is Miss Madge Kennedy as fair and engaging as ever. Without the special qualifications of Miss Kennedy, let it be said, the play would prove to be altogether suggestive and even raw. Even as it is, the author in certain moments, especially at the close of the second act, has overstepped the bounds of delicacy and has prejudiced a situation which in other respects is most amusing. A mitigating element is the tact with which Mr. John Cumberland plays the part opposite to that of Miss Kennedy. In the hands of the usual road company, the play would be quite unpalatable.

Laura Bartlett (Janet Beecher), after two years of married life, finds herself heartily bored by her husband, whose only mistake has been that he has acquired none of the natural vices and has yielded to her every desire. No other woman exists for him, and, therefore, he exists for no other woman. The situation is sharpened by the return of a former lover to whom, indeed, she was once engaged. Unable to bear her present plight any longer, she has decided to break with her husband and to marry the suitor. As a preliminary, she consents to go with the latter to the opera and then to supper, leaving her husband at home to meditate on his errors. But, meanwhile, a married couple in the same apartment building have dropped in, and the man (Ralph Morgan), hearing of Billy's troubles, undertakes to advise him how to win back his wife. He must take a night off once a week, in order to set her to wondering, etc. Jack phrases the whole programme in extravagant terms and starts forth on one of his own (really innocent) evenings, leaving his wife alone with Billy. She, upon worming Jack's advice from Billy, at once regards herself as a much mistreated woman, and by way of retaliation suggests that she and Billy compromise themselves. The first step is to the wine cellar, with results that might be expected in the case of two persons as innocent as they. Enough of the plot has been related to indicate the serious complications which arise when the other husband and the other wife come upon them at two in the morning. There is a "morning after" scene, which is of course funny. F.

"THE ANGEL IN THE HOUSE."

English and American tastes disagree on this play. The work of Eden Phillpotts and MacDonald Hastings, it is representative of a body of writing which vainly strives for the manner of Bernard Shaw. When wit gives out, farce is brought in for substitute. Now, "The Angel in the House," which had a run of two hundred nights in London and which satirizes the fads of cubism and eugenics, fell flat in New York because it was manifestly not what it pretended to be—an airy nothing with a sting. It lacked both airiness and sting, and degenerated into the sort of extravaganza permitted in comic opera. For the sake of argument it may be admitted that, as a whole, the play was not performed as ably here as in

London. Mr. Arnold Daly, as the æsthete bachelor of forty years, who can glibly espouse any newest movement, showed that he had caught the outlines of the part and would improve with practice, and George Giddens was excellent as the foster father of this prodigy and the victim of the new nonsense. But others of the company kept the stage in a continual clatter; perhaps they thought to carry the audience off its feet by their own vociferous good humor. They were not equal to it, and the play met with a speedier death than it might have met with in more capable hands. Why it should have survived so long in England is a mystery. F.

"SECRET SERVICE."

Originally produced in 1896, William Gillette's play of the Civil War was successfully revived for a short engagement at the Empire Theatre last week. If it be admitted that the play, which never pretended to be a piece of dramatic writing of high order, shows some signs of age, we must also remember that our conception of war has also aged with astonishing rapidity during the last sixteen months. Nevertheless, the play was cordially received and the revival is welcome. William Gillette is as gallant and sympathetic a figure as ever in the rôle of Lewis Dumont, of the United States Secret Service—the secret service men of those days appear to have been more sagacious than they are to-day—and the whole caste acquits itself well. Joseph Brennan, the only one, with the exception of Mr. Gillette, who was in the original cast, is seen in the rôle of General Nelson Randolph; Miss Helen Freeman is a pleasing Edith Varney, and Miss Irene Haisman, charming and sprightly, scores a distinct individual success in the ingenue part of Caroline Mitford. S. W.

Music

A GIRL PIANIST FROM BRAZIL.

When Liszt, in 1840, played the group of twenty short pieces included in Schumann's "Carnival" in Leipzig, he did not succeed in interesting his audience in it—he, the greatest pianist the world has ever heard. Schumann was so impressed by this failure that he modestly declared that "the whole has no artistic value whatever." Details in it, he added, might interest some, "but the musical moods change too rapidly for a whole audience, that does not want to be startled every minute, to follow them. My good friend, Franz Liszt, failed to bear this in mind at his Gewandhaus concert; and, sympathetic and inspired though his playing was, he may have touched some, but the multitude was not affected."

One could not but recall this historic incident last Thursday when the same group of pieces was played in New York by Guiomar Novaes, a charming Portuguese girl, who was born in the backwoods of Brazil twenty years ago. This young girl succeeded in interesting not only individuals, but a large audience, including many prominent professionals, in Schumann's work. Concert-goers have learned, since 1840, through familiarity with Slavic music, not to mind being "startled by frequent changes of mood." Schumann's music otherwise presents no puzzles to modern audiences. And yet it was strange that this girl from the Province of Sao Paulo should win such cordial approval from a select and critical audience in New York.

Miss Novaes does not come of musical stock; neither her parents nor her seventeen sisters and brothers have revealed any talent for the tonal art; yet, at the age of six, she improvised tunes on the piano for her playmates, and ten years later the Brazilian Government sent her at its expense to Paris, where she promptly won the first prize for piano-playing at the Conservatoire. At her public appearances in that city, as well as in London and other European centres, she won applause and encomiums which her playing here of works by Bach, Beethoven, Schumann, Brahms, Chopin, and Moszkowski proved to have been well earned. She belongs to the rare species of musicians who love their art more than themselves. After one of her pieces, when the applause was particularly persistent, she ended it abruptly by beginning to play, with an air of saying: "Please stop and let me show you how beautiful the next piece is." Better than columns of technical criticism, this indicates her artistic stature. Her technique leaves nothing to be desired, yet it is, to her, always a means to an end. Her playing is uneven; almost commonplace at times, it suddenly soars into regions which thrill the hearer. It is safe to predict a brilliant career for this Brazilian girl, South America's most important gift to the musical world since Teresa Carreño came from Venezuela.

Two world-famed pianists competed for hearers last Saturday. Mr. Godowski played a Chopin programme in one hall, while in another Mr. Gabrilowitsch gave the second of his historic piano recitals. Such conflicts are frequent; indeed, it is not unusual for the critics to be expected to be in from six to eight places at once, especially on Sundays. Last Sunday Melanie Kurt was to have made her first appearance of the season as soloist of the Philharmonic, but was not able to appear, wherefore Wagner's "Siegfried Idyl" and Grieg's lovely orchestral versions of his songs "Heart Wounds" and "The Last Spring" were substituted. The concert opened with Dvorák's fourth symphony, too long overlooked because of the great (and deserved) popularity of the same composer's "New World Symphony." If less inspired than the later work (which was composed in America), it is nevertheless well worth hearing once or twice a year. The final number was Liszt's "Tasso," that brilliant proclamation of Liszt's genius which, as performed by the New York Philharmonic Orchestra under Stransky, always arouses as much enthusiasm as a Liszt rhapsody played by Paderewski.

The past week gave striking evidence of the growing popularity of Grieg's music. With the people it has, indeed, always been popular; five months before his death, the great Norwegian wrote to a friend from Berlin, telling how whole families came to him there, among them "a mother with two sons who, with tears in their eyes, told me about the happiness my music had brought into their homes and that I could have no idea what I had done for them through many years." Most of the professionals, on the other hand, for reasons hard to guess, have long been neglecting Grieg; but the reaction has set in. Besides the two pieces played by the Philharmonic, there were Grieg songs on the programmes of the recent recitals of Frances Alda and Evan Williams, while Albert Spalding played the third of the Grieg sonatas for violin and piano with André Benoist. It is a difficult work, not so much on the technical side as because of the temperament required to do it justice; but the two artists named played it with real sympathy and expression. Mr. Spalding was also represented on the programme as a composer by a new suite, the prelude of which, in particular, is a virile, effective piece that may be cordially commended to other violinists. Another choice specimen of American music on his programme was Edwin Grasse's dainty "Waves at Play," which has been made famous by Maud Powell. These two are America's foremost violinists.

Great singers were less busy last week than usual, but mention must be made of a recital given by Emilio de Gogorza. Unlike most "prima-donna husbands" (his wife is Emma Eames), this Cuban baritone is himself a great artist—a singer endowed not only with a glorious voice, but with a style that few can boast. As is natural, he makes a specialty of Spanish songs; his programme included several by Granados, whose "Goyescas" is to be the most important novelty of the Metropolitan Opera season.

That season began on Monday with a revival of "Samson and Delilah," the most popular of the many operas composed by Saint-Saëns. It was one of the most successful productions of Oscar Hammerstein at the Manhattan Opera House a few years ago, but had not been sung at the Metropolitan for twenty years. Its choice for the opening night may seem singular, for, while there is much beautiful music in it, on the whole the work is more of an oratorio than an opera, being, indeed, often sung in concert halls. The Metropolitan has, however, a particularly well trained body of singers to cope with the choruses in the grand style of oratorio. Moreover, Caruso was in the cast, and when he is in the cast it matters little what the opera is. It was his first appearance anywhere as the Hebrew Hercules, and he acted the part with dignity and pathos. His singing in the first act was so labored as to awaken apprehensions, but in the second and third acts he was himself again, his voice being as luscious and smooth as ever. Honors were shared with him chiefly by Mme. Matzenauer, Amato, and the new conductor-in-chief, Polacco.

HENRY T. FINCK.

Art

THE INTERNATIONAL.

London, October 25.

The unfortunate effects of war upon art are more keenly felt this autumn than they were last. The season begins with the opening of the exhibition of the International Society of Sculptors, Painters, and Gravers, a society which by name and tradition represents all that is most independent and accomplished not only in Great Britain, but in the world. Of late it has threatened to throw off the responsibilities of both name and tradition, but this year it has actually succeeded in making its exhibition as national as any other held in London, and almost as mediocre. Work that of old would never have been admitted now helps to cover spaces that might more profitably have been left bare. Many of the more distinguished members are absent altogether, many of those who do show have been unable to conceal the labor and strain of invention and perseverance under the shadow that now hangs blacker than ever over their country.

William Strang, the vice-president, has come out of the ordeal less perturbed than most. He has not allowed emotion to modify his shrill color, his harsh outlines, his prosaic vision. It is said that he paints for posterity, that time is to give his paintings the quality he deliberately withholds from them. If this be so, it means virtually that he exhibits his canvases unfinished, and therefore, as it is inevitable, nothing strikes one so much in them as their rawness. They should be put away, like other things which improve with time, until time, his collaborator, has completed its task. The largest of his three this year is typical: A Café Bar, a fairly large canvas filled with several figures. A man and a woman sit at the bar, the woman raising a cup to her lips; a man stands behind the bar; a third man, the portrait of Strang himself, and a woman doing nothing in particular, are crowded into the opposite corner. All have that air of arrested motion he seems to go out of his way to give to his figures; none has the least relation to the others either in the scene depicted or in the design. There is no apparent reason why they should have been brought together, except the artist's need of covering his large stretch of canvas somehow. They do not belong to each other, like the figures grouped in the old masters' "conversation pieces." Nor is there any pattern, any cohesion of design, any scheme of color, to explain or justify their haphazard meeting. The lines so emphatically insisted upon have no meaning, no use in the general arrangement, nor have they the beauty in themselves that might make up for their meaninglessness. It is not easy to pass a painting like this without looking at it—it does not merely call, it screams from the walls; but a poster can do that as well and for a more legitimate end.

William Nicholson is another exhibitor who evades the increasing depression of the times by the use of strong color. His sitters have the advantage of being Hindus, and their costumes give him his excuse. The uniform of Duffadar Rar Singh, in his half-length portrait, supplies him with a vibrant, brilliant note of red, and a still more vivid space of white is his pictorial motive for his large full-length of The Viceroy's Orderly. But beyond this arresting vividness, Nicholson has nothing in common with Strang. The one thing he never disdains is design; he goes rather to the other extreme, he makes too much of design, forgets too easily that he is painting not formal decoration, but human beings of flesh and blood. Both his scarlet space and his white space take their right place on the canvas and are not dragged in by haphazard to fill up an odd corner. But preoccupied as he is always tempted to be with his decorative intention, he is apt to overlook the fact that the head of his sitter should have something more than a secondary decorative value in the composition, that there should be solid bodies inside the most gorgeous uniforms, and that men move in a world of light and atmosphere. His spaces of scarlet and white have none of the gradation, the quality, the subtle suggestion of form and movement, the magic of modelling that are the gifts Velasquez brought to painting when he first made his men and women within their frames stand upon their feet. Nicholson has never quite emancipated himself from the conventions of the wood block to which he owed his first fame and triumphs. Glyn Philpot, no less than Strang and Nicholson, is all for a strong effect. In his Countess Beauchamp and Daughter the mother stands, a sumptuous figure in a richly brocaded gown of gold, gold-red hair crowning her florid face, in almost startling relief against a sober background. But this piece of brilliant painting must have exhausted the painter, for the little flaxen-haired, white-robed girl who nestles close to her mother's side is as lifeless as a wooden lay figure.

I am not sure that it is not Philip Connard who has suffered least from the storm and stress of the day. His big portrait group of two little pig-tailed girls, one seated with a black cat on her lap—The Mascot, he calls it—has the curious jerkiness, the dazzling restlessness, the over-emphasis of detail, the spotty color that tire the eyes in so much of his work. But his Nude is a good, restrained, straightforward study of a woman lying on a couch, the figure well-placed, well-observed, well-modelled, and the painting of it free from the usual meretricious glitter. Like so much else in the gallery, however, it strikes one as less original than reminiscent. Something in the pose and the treatment of the flesh suggests that the painter had come to his study straight from the Louvre and the large room where Manet's Olympia now hangs in the company of Ingres and Delacroix.

To turn to Lavery, once vice-president, is to wonder at the transformation. In the beginning he invented a formula for himself, founded on sympathetic study of many masters, by which his portraits could be recognized at a glance. It was by no means an unpleasing formula, though it tended to over-picturesqueness of pose and a dangerous misuse of black in the painting of flesh. Now, as if conscious of the danger that lies in any formula for the painter who becomes a slave to it, he has suddenly broken away from his own and substituted in its place emptiness pure and simple. Instead of trusting to his eyes, he has borrowed a convention from the eighteenth century. The largest of his three portraits —Mrs. F. A. Konig—shows a lady and a greyhound standing on a vast expanse of canvas, with, for background, the conventionalized arrangement of landscape and architecture that was the fashion in an artificial age. The masses of foliage are heavy, the architecture, with the prominent column dear to Reynolds and Gainsborough, is an unpleasant yellow-gray in tone, the lady is out of all proportion to her setting—you simply do not see her. Reynolds and Gainsborough, despite their convention, gave dignity and distinction to their figures; Lavery's is lost in a scheme as ineffective as no doubt it was meant to be grandiose and fine. Another of his portraits, Miss Jean Crombie, much smaller and less pretentious, is singularly colorless and characterless, while in painting The Rt. Hon. Winston Churchill he could invent no better device to express the force and determination supposed to belong by right, or election, to every prominent politician, than to exaggerate and concentrate the effect of light until the figure seems to be jumping out of the canvas.

Weariness is the dominant note in Charles H. Shannon's decorative panel. It is one of a series of five, and Autumn is its subject. Playing their parts in a gray-blue and green harmony, a group of women, shadowy apple-gatherers, stand with arms uplifted, as exhausted by their pose as unmistakably the painter was by his task of weaving them into his decorative schemes. The stooping figures below are no less exhausted by the necessity of fitting into the space reserved for them, and the fruit upon the ground fades from very weariness. Really, the effort in this and many of the other canvases is so obvious that for once the manufactured compositions of Charles Ricketts appear by comparison almost spontaneous. The wheels creak audibly in his choice of subject, which is nothing less remote from reality, nothing less familiar to him, nothing less removed from the distracting and difficult observation of Nature at first hand than Montezuma Sacrificing to the Sun. He cannot quite escape the memory of Delacroix, he cannot quite forego the pleasure he always has in introducing into his composition a mass of naked, distorted figures.

But the machinery this time has turned out an agreeable, if forced, arrangement of color, the altar rising, a tall structure of sombre red, the lines repeated in the long upstretched arm of the officiating Montezuma, against a sky of the deep, rich blue never yet seen anywhere save in the painter's land of romance.

If Lavery has abandoned his formula, D. Y. Cameron and A. D. Peppercorn cling trustfully to theirs. Cameron's skies and waters have not lost their ivory smoothness, nor have Peppercorn's rivers and shores sacrificed their sadness. The feebleness of the landscapes, as a whole, bears witness possibly to the restrictions the war has placed upon the landscape painter, who is no longer free to do his work out-of-doors. James Pryde also is among the painters who pin their faith to formula and risk falling its victim; his tall, out-of-all-proportion Bed, in a new Variation, is simply a bore. Curiously, the Post-Impressionists, with their strident formula, have entirely disappeared for the moment. And altogether the failure of modern inspiration in the exhibition that was its home makes it a relief to come upon even so self-conscious a crib from Van Dyck as Kelly's Lady Norah Brassey, or so undisguised a reëcho of Velasquez as Roybet's Return from the Chase, for they are at least reminders of the repose, the reticence, the dignity in painting that the earlier masters did not despise.

The prevailing dulness or inertia among the British exhibitors makes the loss of foreign work all the more keenly felt. Last autumn, though the war was already a few months old, it was still possible to obtain the paintings of a group of American artists who had been showing in the Anglo-American Exhibition at Shepherd's Bush. In the spring the Belgian artists who are in London managed to send striking examples from a collection that, before the war, had been lent to British provincial galleries. This autumn one picture by one of the same group of Americans can make but a slight impression in so large a gallery, and the only Belgian who seems to have had the heart for new work is Emil Claus. He has not let slip his opportunity for a study of London, and his note of Leicester Square—with touches of warm red in its tawdry architecture and with a pleasant subdued brilliancy in the March sunlight of the music-halls and hotels so ugly in themselves, and the open space where children play—has a freshness, a gayety, a tender illumination that the Londoner does not often discover in his grimy town. But Claus has brought to it unprejudiced eyes. His interest and pleasure in the atmospheric effect are unmistakable, which means that the little painting has the life and vivacity so few painters have managed to give any sign of this year.

Sculptors are forlornly few, but among the few it is the sculptor from abroad who counts. Rodin's bust of the Countess of Warwick is a reminder that, after all, the Society's president is a Frenchman, and also a reproach that, in his honor, more has not been done to uphold its international name. The bust has, I think, been exhibited before. It is not one of his most successful nor one of his most typical performances. The modelling has a tendency to slickness, the face is unexpectedly without character, while the care with which the head is finished makes its emergence from a great mass of rough marble seem but mere affectation, a misplaced mannerism. There is far more character in Mestrovic's Lady Cunard, though evidently his sitter did not appeal as emotionally to him as the stronger, simpler models who sat for the Servian women in his great monument, or for the holy women in his bas-reliefs, while his direct, primitive method does not harmonize with a highly conventionalized modern type. An almost barbaric touch is in the exaggeration of the long, expressive neck, and in the archaic treatment of the hair. But all the same this head and another of Thomas Beecham, Esq., have more distinct character than anything in the gallery. Beside them, the Rodin dwindles into commonplace.

One of the great glories of the International has been from the beginning the black-and-white section. No trouble was spared to get together all that was best in illustration, all that was finest in etching and lithography and wood-engraving. For the first time in a big London exhibition, drawings and prints were rescued from the dark and hidden nooks and corners usually reserved for them, and hung with a feeling for their decorative value on the walls that amounted to genius. The result was that, for the first time in a big London exhibition, drawings and prints were looked at; for the first time people began to see in black-and-white not a lesser medium, but a form of art as important and as full of possibilities as painting and sculpture. And this year? The black-and-white room is given over to water-colors and pastels, and might be an annex to the New English Art Club. Drawings and prints are banished to the long, narrow hall that leads from the street into the gallery, where it never occurs to the visitor that anything of any account is to be found. There is no work from abroad, if I except two or three lithographs by Claus, and next to no work from the men at home to whom black-and-white owes its chief distinction. On every side, indeed, the International emphasized for me the fact that the country is at war and that the country begins to realize it, and I should not be surprised if the rumor is true that there will be no more Internationals until the war is over. Of one thing I am certain: in its prime the International would far sooner have shut its doors without delay than have made a mediocre showing so little worthy of its reputation. N. N.

It is disconcerting to the reader of "Barbizon Painters," by Arthur Hoeber (Stokes; $1.75), to run into pages of quotations from Muther and similar accessible books of reference. One apparently has to do with lectures worked over into essay form. The tone is sympathetic, the method biographical rather than critical, and while in the preface the author claims, modestly enough, the special competence of the practicing landscape painter, the actual contribution from this intimate knowledge is rather slight. Besides such major figures as Millet, Rousseau, and Corot, the affiliated figures of Diaz, Dupré, Troyon, Daubigny, and Jacque are included. There are 87 well-selected illustrations, many from unfamiliar originals. It would have added to the usefulness of the book if the ownership of these pictures had invariably been indicated.

A popular summary of information lately revived regarding several workers in the applied arts has been undertaken by Walter A. Dyer in "Early American Craftsmen" (Century Company; $2.40 net). This compilation will interest the general reader and prove valuable even to the professional collector. The researches of Messrs. L. V. Lockwood, E. Alfred Jones, R. T. Haines Halsey, E. A. Barber, Mrs. Alice Morse Earle, Miss Esther Singleton, and many others have revised the life stories of personalities as important in their way as our military and political worthies. Mr. Dyer has drawn liberally from these sources, his original contribution being a statement at the end of each chapter of recent prices brought by the works of the artists named. Craftsmen to whom large space is rightly allotted are Samuel McIntire, designer of Salem doorways; Duncan Phyfe, furniture-maker of New York; the Massachusetts Willards, clock-makers; Baron Stiegel, who manufactured glass in Pennsylvania; Paul Revere, silversmith and manufacturer of munitions. Defective proofreading caused the slip on page 285: "In the same year 1869 [obviously 1769], efforts were made to start and maintain a china factory in Boston."

Finance

ANOTHER ECONOMIC PREDICTION UPSET.

Of all the many apprehensions which arose in the public mind when the war broke out, in regard to its economic consequences, one superseded all others. Whatever else might happen, an immense depreciation of high-grade investment securities, the world over, was inevitable. That result seemed to be a logical certainty. Government war loans to a total value ten times or more the usual total issue of new securities were bound to be, and actually were, placed on the market in the first year of war. For military purposes alone, something like $20,000,000,000 of investment capital was destined to be used up before the end of 1915.

The inference was plain. There is a limit to the whole world's accumulated or accruing capital. Therefore this stupendous increase in the supply of Government securities would, first, use up the supply of investment money which ordinarily flows into the general bond market; next, it would compel realizing sales of older securities, at sacrifice prices, and on an unprecedented scale;

finally, it would necessitate such advance in the interest rate on the new Government war loans that the old 4 and 5 per cent. bonds would lose caste with the investor. It was a perfectly plausible assumption that this triple process would cause a disastrous fall in prices of investment bonds already outstanding. When the war began, the popular prediction was for an "all-around 20 per cent. decline." What this would mean to savings banks, trust estates, even to individuals who had raised money on their bond investments, nobody dared to picture. These gloomy expectations were the main reason why the New York Stock Exchange, from July 30 to November 28, 1911, refused to reopen.

On this view of a year ago, regarding the outlook of the bond market, the course of events, particularly in this present week, throws a very curious light. In the first place, the business done on the Stock Exchange in bonds this week was the largest since the Exchange reopened last November. It was double the weekly average of so recent a month as August, and well above the average of October, which itself comprised the highest total transactions of any month in half-a-dozen years.

But activity might have been equally great, even with the "all-around 20 per cent. decline." How about prices—as compared not only with the early months of this year, but with the months before the war was even thought of? That even the "gilt-edged" railway bonds should now be selling 4 to 6 points above the low prices of the year is less surprising than the fact that their present price is in nearly all cases above that reached just before the war began, and as a rule within 1 or 2 points of the highest level of 1914. This is in fact the story of the bond market as a whole, except only where influences peculiar to one security have prevailed.

One might suppose that bonds of municipalities would have been particularly affected by the foreign Government issues of the war—especially after our own market had subscribed for the $500,000,000 Anglo-French 5 per cents, the largest subscription to any single loan in the American market's history. Yet New York city bonds have not only risen 3 and 4 points from the low price of the year (touched not many weeks ago), but are within 1 to 3 points of the highest of 1914. What is perhaps the most striking fact of all is the increasing possibility of placing new bond issues, even of smaller American municipalities, on a 4½ per cent. basis—the rate prevailing before the war began—whereas 5 per cent. was the only obtainable basis in the middle of the present year, if indeed the bonds could be sold at all. In short, the indication of the moment is that the market for investment securities is moving back with a good deal of rapidity to the position which it occupied before the war began.

How is this very extraordinary upsetting of so convincing an economic prediction to be explained? A good many other financial forecasts have gone similarly by the board, but none had been so plausible as this. In the larger economic sense, one explanation for the seeming paradox is to be found in the crowding into our powerful and prosperous neutral market of the investment capital of the whole neutral outside world. The United States had become the one secure place for investment capital.

From a narrower view, the immensely increased bank resources in this country (wholly irrespective of the Federal Reserve Banks), the mounting-up of reserve money through the inflow of gold from Europe, the easy money market in America, and the large profits of industries connected with the war, combined to bring into the investment bond market an aggregate fund of capital perhaps unprecedented. Perhaps, also, the long decline in bond prices during the years when this war was dimly threatened may have been in some sense an instinctive preparation for it. But the salient fact, after all, is that, so far as our own market is concerned, the enormous issue of war loans by belligerent Europe has failed entirely of what would have seemed to be its logical effect.

The question will remain, as in all other branches of finance and industry, whether such conditions as exist to-day can continue after peace. It is possible that this will be determined by the extent to which our own investors, when the war is over, transfer their capital from good home securities to the Government loans of Europe. But the American investment market has not had to wait for the end of war for this process to be tested. A highly important consideration, with a bearing on this very problem, lies in the fact that exactly such a process has been going on while prices were rising for our home securities, and apparently without the least effect on them. Ever since our Stock Exchange reopened, twelve months ago, European holders of American investment bonds have been realizing in our market on an enormous scale, and investing the proceeds in the war bonds.

Prussian Memories
Poultney Bigelow
12°. $1.25.

Mr. Bigelow passed some years of his boyhood in Prussia, and in later years made various sojourns in Germany. At the time of his schooldays, his father, the late John Bigelow, was Minister to France. Through the father's friends among Berlin Court officials, young Bigelow had the opportunity of associating as playfellow with the present Emperor. Mr. Bigelow's narrative is dramatic, spirited, humorous, and shows a full knowledge, with an unusual freedom from prejudice.

The Nation

NEW YORK, THURSDAY, NOVEMBER 25, 1915.

Summary of the News

Lord Kitchener's interview with King Constantine of Greece took place last Saturday, but as we write we are without official word as to any agreement that may have been reached. Unofficially, the mission of Lord Kitchener and of M. Denys Cochin is thought to have had satisfactory results for the Allied Powers to the extent that Greece may consent to partial demobilization and that "benevolent neutrality" may be interpreted in terms of guarantees that Servian and Allied troops who may be compelled to retire into Greece will not be disarmed. Germany, on the other hand, according to unofficial reports to Athens, has warned Greece that if her neutrality is to be observed by Teuton and Bulgarian armies, troops of the Allies crossing into her territory must be disarmed. That the Allies, as was reported, have brought pressure to bear on the Greek Government by a declaration of a commercial blockade of the country, was denied on Tuesday by the British Foreign Office.

One result of Lord Kitchener's mission to the Near East appears to be certain: that is, that the campaign in Gallipoli is not to be abandoned. Closely following on an admission by the Marquis of Lansdowne in the House of Lords on November 18, that Gen. Monro, the new British commander in Gallipoli, had recommended the withdrawal of the troops from the Peninsula, came the news of the renewal of the Allied offensive there, which resulted in the capture of Turkish positions along a front of 280 yards at Krithia. The offensive might have been explained as a covering movement for the withdrawal of troops, but that it is of an extensive nature is apparently confirmed by dispatches from Germany and by the Turkish official report of Monday's date. We may presume, then, that this is Lord Kitchener's reply to reports that the campaign was to be abandoned.

The decision of Rumania is still in the balance. Austria and Russia have both concentrated considerable forces near the Rumanian frontier. Evidence that there are serious dissensions in the country itself was contained in dispatches from Bucharest to the Rome *Giornale d'Italia* of November 19, which stated that Premier Bratiano had summoned for consultation with the King a number of Liberal Senators and Deputies.

The text of the Austrian official version of the sinking of the Ancona, duplicating that given out by the Austro-Hungarian Admiralty, was received by the State Department on November 17. Directly contradicting the Austrian version of the attack is the exceedingly clear and straightforward affidavit of Dr. Cecile L. Greil, of New York, believed to be the only native American survivor of the disaster, which was cabled to the State Department on November 18 by the American Consul at Algiers. Dr. Greil declares that "the bombardment lasted forty-five minutes and was continued after the vessel had stopped, killing and wounding many persons." So far as is known at present 139 passengers were lost on the Ancona, of whom eleven were American citizens. No official information has been vouchsafed by the State Department as to what action the Government contemplates taking to hold the Austro-Hungarian Government to a "strict accountability" for the murder of American citizens. Dispatches from Washington of Monday's date indicate that Secretary Lansing and Count von Bernstorff are still discussing the Lusitania.

Submarines have not been particularly active during the past week. The Italian liner Verona reported by wireless on Saturday that she was being chased by a submarine in the Mediterranean, but she escaped. With Belgian relief ships German submarines have had better luck. Confirmation was received by the State Department on November 20 that the Norwegian steamer Ulriken, carrying wheat for the Belgian Relief Committee, was torpedoed without warning on November 17. Four lives were lost, and it is understood that the State Department has instituted inquiries to ascertain if any of these were Americans. One American citizen on board was saved. According to a statement made by him, another Belgian relief ship, the Greek steamer Otamas, was torpedoed at the same time as the Uriken, but did not sink. Two British ships were reported sunk in the war zone in dispatches on Monday. It is perhaps recalling old, unhappy, far-off things to note the official announcement made by the British Embassy in Washington on November 19, based on an affidavit by the commander of the Hesperian, which pretends to supply the evidence lacking that the piece of metal shown by experts to be the fragment of a torpedo was actually picked up on the Hesperian's deck.

The position of the Allied forces in Servia remains critical. Virtually the whole of Old Servia is in the possession of the invaders, and the Teutonic forces and the Bulgarians report the capture of considerable numbers of prisoners. The situation was somewhat improved, according to reports on Monday, by a Servian victory over the Bulgarians at Leskovac, on the Nish-Salonica railway, which has relieved the pressure on that part of the line and has also held up the Bulgarian advance on Monastir. On the Russian front the situation remains virtually unchanged. In the west a heavy bombardment of the German trenches by the Allies has been taken as a sign that a new offensive may be expected.

Washington is reticent concerning the investigation by Federal authorities into Teutonic conspiracies conducted in this country, but the mass of evidence continues to pile up in such proportions that it is impossible even to summarize it. Federal laws are apparently inadequate to deal with the conspiracies, and it is understood that the cooperation of the States has been invited by the Federal authorities. On Monday the trial began of Dr. Karl Buenz, director of the Hamburg-American Line and formerly German Consul-General in New York, and others on a charge of conspiracy to defraud the United States by procuring false manifests and clearance papers under which, early in the war, steamers left New York, ostensibly bound for neutral ports, but really to carry supplies to German ships of war.

German statements that British hospital ships were being used for the transport of troops and munitions to the Dardanelles received explicit denial by the British Admiralty on Monday.

Reports circulated from German sources regarding serious disorders in India were denied last week in the House of Commons by Mr. Austen Chamberlain, Secretary for India, and by a formal announcement issued by the India Office.

The first meeting of the joint Anglo-French war council was held in Paris on November 17. Those who took part were: Premier Asquith, A. J. Balfour, David Lloyd George, Sir Edward Grey, Premier Briand, Gen. Gallieni, Admiral Lacaze, and Gen. Joffre.

According to dispatches from Washington of November 19, the State Department is engaged in the preparation of notes regarding contraband which will be sent impartially to all the belligerent Powers.

Associate Justice Hughes, of the Supreme Court, on November 18, wrote to the Secretary of State of Nebraska declining the nomination to the Presidency put forward there by petition and formally requesting that his name be kept off the primary ballot.

A curious incident occurred last week in connection with the execution of Hillstrom, the I. W. W. man convicted of murder at Salt Lake City, who had already received one respite on account of the intervention of the President. On November 17 President Wilson addressed a second plea for a reconsideration of the case to Gov. Spry of Utah, without, however, stating any reason for his action. Gov. Spry declined to grant the President's request, and the sentence was carried out on Friday of last week.

News came from Washington on November 19 that efforts are being made to induce China to ally herself with the Powers of the Entente, the object of the negotiations being, it is stated, to put a stop to certain German activities in the Orient. Specifically, the fomenting of an anti-Russian movement in Manchuria and the forwarding of arms to India are mentioned as instances.

Three documents bearing on the war came from Berlin last week. The German Foreign Office has published a collection of diplomatic correspondence unearthed at Brussels in August, 1914, which the official editor declares reveals the intrigues of England against Germany during the nine years preceding the war. In the *Lokal-Anzeiger* has appeared what purport to be the instructions of the British Admiralty to masters of merchantmen in regard to the use of neutral flags and methods to be employed in escaping submarines. In Sunday's papers was published Ambassador Gerard's highly unfavorable report concerning the condition of British prisoners of war in the camp at Wittenberg, Prussia.

The Week

As the session of Congress approaches, the question of ways and means is bound to loom into greater and greater prominence. And whenever the project of increased preparation for war takes anything like definite shape, the problem of the wherewithal will of necessity become insistent. Some time ago, the notion that the Administration might favor a jacking-up of the tariff was put forward, without any particular authority, and possibly only as a feeler; but it soon appeared that there was little reason to expect anything of the kind, except as to retaining the present duties on sugar, instead of carrying out the programme of the Underwood act calling for their gradual extinction. This is manifestly desirable from the standpoint of revenue, and is open to but the minimum of objection from any other; but to "monkey" with the wool schedule, or any similar one, would be to put all the fat into the fire, and that with very little assurance of results at all worth while in the shape of revenue. Accordingly, attention is beginning to be markedly directed to the possibilities of increase in the income tax, and also to the question of an inheritance tax.

In relation to the income tax, some tentative schemes have been set forth, and are more or less discussed. The chief question, in case it should be increased, is whether that increase should take the shape of a lower exemption or a higher rate, or both. Naturally enough, increase in rates offers the greatest temptation, both from the fiscal and from the political standpoint. It is easy to decree, and it is easy to execute; the 350,000 or 400,000 persons subject to the tax are already there—they are birds in the hand, and good fat ones at that. An increase in the "normal rate" to 1½ per cent. in place of 1 per cent., the beginning of the surtax at $10,000 instead of $20,000, and the increase of surtax rates so as to run to a maximum of 9 per cent. instead of 6 per cent. as at present, would obviously mean an increase of many millions in the revenue. On the other hand, it is said to have been estimated at the Treasury Department that a lowering of the exemption limit to $2,000 for unmarried and $3,000 for married men (in place of $3,000 and $4,000) would, if the rates remained as at present, yield only $5,000,000 of added revenue. Of this, it is to be noted, about $3,500,000 would be got from persons already on the lists. Still, the principle of a lower exemption is a sound one; but the question is whether any party would be willing to enact it on the eve of a Presidential campaign.

The defence of the Greek Government's policy by M. Rhallis, a veteran statesman and a member of the present Cabinet, contains one argument of some apparent force. M. Rhallis complains that Great Britain, after inexcusable delay in sending troops to the Balkans, would now have the Greek army save a situation precipitated by her own neglect. "Now, when you have only a few thousand troops to help us, you want to force us to step in and die." The other side of the argument consists in the fact that Great Britain's inaction was largely based upon the expectation that Greece would live up to its treaty obligations with regard to Servia, and its promises, through the mouth of its most influential statesman, with regard to the Allies. The Teuton-Bulgar attack upon Servia brought about 400,000 men into the field against that nation. Servia has just half the number of men. Had Greece entered the war with Servia in compliance with its treaty, the disparity in numbers would have been almost entirely redressed; especially as Bulgaria, under the circumstances, would have been obliged to detach large forces for the purpose of watching Rumania. The overwhelming of Servia would have moved forward at no such pace as has occurred, and the Allied aid thrown forward from Salonica would have seemed less inadequate than it does now, when operations must be carried on with a rush in order to save a remnant of Servian territory and the Serb forces. Neither would there have been the fears and hesitancies aroused by the present Greek attitude, a factor which has certainly operated to delay the development of the Allied movement from Salonica.

The testimony of Dr. Cecile L. Greil, of New York, in her affidavit of which a summary account has been sent to the State Department by the United States Consul at Algiers, is in itself fairly convincing evidence of the falsehood of the Austrian statement as to what happened. The very fact that Dr. Greil's deposition is, as the Consul says, "not conclusive as to whether any effort was made to escape by the Ancona" makes what she does say in conclusive fashion the more trustworthy. Being in the dining-saloon when she first became aware of the danger, she was not in a position to state of her own knowledge what happened at the beginning of the shelling of the ship. But when she says that the bombardment continued after the vessel had stopped, killing and wounding many persons, she states what she had an opportunity to observe, and what there is every reason to believe she reports truthfully. So much for the mere question of credibility; but the inherent probabilities of the case serve immeasurably to reinforce what this trustworthy witness asserts. To suppose that the captain persisted in trying to escape when subjected to that murderous fire, when in charge of hundreds of non-combatants—men, women, and children—and when in pursuit of no errand connected with the war, is to suppose what is without any known precedent, and is contrary to the ordinary operation of human nature.

The latest advices from Washington put the facts concerning the Zealandia case as follows:

> Reports both from American naval officers on the battleship Kentucky, which was sent to Progreso to investigate, and from the American Consul at that port, say that the officers from a British cruiser searched the Zealandia at a point which was 2.66 miles from shore. The reports to the British Embassy from the officer of the British cruiser said the search was made 3.25 miles from shore.

The question of whether the Zealandia was or was not within the three-mile limit thus reduces itself to a matter of pretty close measurement. Nevertheless, if in point of fact the British commander transgressed the limit—whether through an honest mistake or otherwise—our State Department will be right in holding the British Government responsible for the offence. But it is not without instructiveness to contrast the issue involved in such a case as this with the kind of issue which has been involved throughout our controversy with Germany, and is involved again in the matter of the Austrian submarine that sank the Ancona. What must always be borne in mind—and this is true even of the British contentions in the matter of blockade and contraband, however wrong they may be—is that Great Britain's offences, however serious, lie in a domain in which definition is difficult, in which the stretching of precedents, the remaking of rules, has always been going on, while the German pretension of a right to kill non-combatants on merchant ships is in flat violation of a principle of international right which has been held inviolable for generations, and the abandonment of which would be a betrayal of the cause of humanity itself.

The Armenian massacres, which, when

news of them first came, were dismissed by Ambassador von Bernstorff—if correctly reported—as "pure inventions," very soon reached the stage of merely "gross exaggerations," but in only too short a time after that were shown to be horrible beyond exaggeration. Then began the business of justifying what could not be denied. We do not refer to the attitude of Reventlow, but to the alleged provocation given by the victims in rebelling against the Turks. Of the falseness of this excuse there have been many declarations from sources entitled to credence; but a statement more authoritative than any we had seen before is contained in a letter to the New York *Tribune* by Dr. C. D. Ussher, chief of staff of the American Red Cross Hospital at Van, Turkey. In the most circumstantial detail he presents the facts, as they came to his personal knowledge.

Dr. Ussher's account of what actually happened to the Armenians, and how they came at last to make such resistance as they could to wholesale massacre, is concise, but harrowing. "From the beginning of the mobilization," he says, "it was made perfectly evident that it was the determination of the Government to ruin the non-Moslems." Some of the ways in which the purpose of the Turks was shown are thus set down:

> Both in the army and out of it many Armenians were shot down, and payment of "badal," or exemption money, was no protection. . . . Turkish officers took Armenians out of the ranks, on the march, tied them to telegraph poles and shot them, with no better excuse than the accusation that they wanted to desert. Self-respecting and faithful Armenians in the army were disarmed and made the slaves of Turkish soldiers.

That these atrocities resulted in many desertions of Armenians, Dr. Ussher admits; but, he says, "in spite of all this and a thousand times more, of which I must not write, the Armenians did not rebel," and only "when it was evident that a general massacre was on did the Armenians begin to resist." The story of the particular massacre the news of which led to the heroic defence undertaken by the Armenians in Van, and maintained throughout a siege of twenty-eight days, is thus narrated by Dr. Ussher:

> The Kaimakam of Arjesh, trusted by the Armenians, called the men to the government building and, marching them out under guard in companies of fifty, shot down two thousand five hundred, regardless of their having paid their "badal" and contributed in many ways to the Government.

But of course it is open to the Kaimakam of Arjesh to plead that he shot down these 2,500 villagers in self-defence, since he had trustworthy information that they had made a secret agreement with England to attack the Turkish army with scythes and pitchforks, the moment its back was turned.

The President has been universally commended for his prompt and sensible action in the case of the Illinois postmaster, dismissed for alleged criticism of him. He has had the man put back. Hereafter, no fussy or super-serviceable superior will undertake to remove a postal employee for private remarks supposed to reflect upon the President. As Mr. Tumulty said to the correspondents, when announcing the President's decision: "This is a free country." We know no *Majestätsbeleidigung*. In putting his foot upon this attempt to establish it, the President has shown both a proper sense of official dignity—so high that it cannot be touched by mere gossip—and a due regard for the rights of men working for the Government. He will not have the Post Office made an instrument of personal punishment. We can but hope that Mr. Wilson will display an equal justice and a like indignation against prostituting the postal service when it comes to a question of removing the Postmaster of New York, purely for political reasons. The thing which the President has to bear in mind is the public good. If that forbids the dismissing of a postmaster in Illinois for having said something derogatory to Mr. Wilson, it even more strongly forbids the displacement of a man like Mr. Morgan at the behest of politicians.

Mr. Root has told his Minnesota friends, who are urging him for the Presidency, that he is not seeking the nomination, and does not expect it to come to him. But he added, in words vouched for by Mr. Carroll, of Minneapolis: "Of course, if the nomination were offered to me, I should feel it my duty to accept, even if it killed me." This is a perfectly dignified and correct position. The only doubt left is whether so keen and crystal-clear a mind as Mr. Root's can cherish any illusions about what is most probable in the immediate political future. We ourselves do not think so. No man is wise enough to read the book of fate in advance, especially to be sure that he knows every line of the chapter of accidents in that volume. But on the assumption that we must "fend miracles," nothing seems more certain than that Mr. Root will not be the Republican candidate in 1916. Of this, we believe, nobody is more thoroughly convinced than himself. When he retired from the Senate and spoke of his office-holding career as closed, he was, we do not question, entirely sincere. If he is not equally so now in expressing the belief that the Presidency will not come his way, then his intellect, so remarkable in power of analysis, must be a little less accurate an instrument than we had thought in self-analysis.

If the chances of ex-Vice-President Fairbanks for the Republican nomination for President are as good as the logic of his sponsor, ex-Gov. Durbin, of Indiana, it is all over but the shouting. "Personally," President Wilson is unobjectionable, but there is great dissatisfaction with "business conditions brought about by the Administration." The interview should have ended here, but the ex-Governor was anxious to prove the case up to the hilt, and so he added this crushing statement: "It is true that general business has started up again, but that is not due to the Administration, but is in spite of it." This shows the country the utter incapacity of the Democrats to manage things at Washington. They are not able to keep prosperity away, but it breaks in upon us despite all their efforts to discourage it! Once they were more capable, and with a man in the White House and a majority at both ends of the Capitol, they could put up a barrier against good times overnight. The only trouble with Mr. Durbin's logic is that unthinking people will be apt to forget the nice distinction that prosperity under a Republican Administration is to be credited to the Administration, while under a Democratic Administration it is but one more count against the party in power.

Among happy thoughts for producing full-grown a dye industry in America has been that embodied in the so-called Paige amendment to the patent laws. Its purpose is "to compel the working of patents" issued upon the extraction of chemical dyes by special processes—to see that this class of patent-protected goods, as made chiefly in Germany, is also made in the United States by the holders of United States patents, regardless of nationality. The experience of nations is that this "compulsory working" has never been successful. It encourages dumping rather than home production, and has usually led to treaties abrogating the original legislation. An attempt to enforce it in this country in 1832 was given up in 1836. But at the recent meeting of the American Chemical Society in Rochester the weighty arguments against it in the case of the dye industry were well pre-

sented. The contention that German primacy is due to a compulsory working clause in her patent laws was easily demolished. In 1856 the French and British coal-tar dye industries were started; in 1859 the Swiss; in 1860 the German, and in 1866 the American. In 1874 Germany was making 90 per cent. of the world's coal-tar dyes, and her compulsory working clause was not enacted till 1877. In 1896 the Swiss coal-tar dye product was equal to that of France and England combined, and the Swiss clause was not enacted till 1907. The clauses have obviously had no influence in determining the seat of the industry; and it is asserted that European countries are only waiting for an opportunity to coöperate in repealing them. Further, Germany holds American patents for much less than half of those marketed dyes which she originated. And a great objection to the Paige bill is that it would provoke retaliatory legislation in chemical lines in which we are foremost.

Another verdict attesting the promise of surer justice to the negro in our courts comes from Colleton County, South Carolina. Some months ago a negro, falling in with two white men the worse for liquor, was threatened by one of them, and when he attempted to flee was shot. Last week the county jury, after twenty minutes' deliberation, found the assailant guilty of murder. This verdict is the first of its kind in the community since the war, yet the unanimous decision of the jurors has been warmly applauded, as has that part of the judge's charge in which he denounced the superstition that the presence of the negroes in the South justifies the carrying of concealed weapons. "It is not true," Judge Thomas, of Alabama, has observed, "that the negro fails to get justice before the courts in the trial of the specific indictment against him, but too often it is that the white man escapes it."

It is a cold day when one of our States refuses to profit by Uncle Sam's munificence, as the nation-wide response to the Smith-Lever act is just showing. That act provides that, in amounts increasing year by year, the Federal Government shall give one of its dollars for every dollar appropriated by the States to promote instruction in agriculture. An initial appropriation of $480,000 became available last July, it is increased by $600,000 for the fiscal year 1915, and by 1922, when the act "matures," there will be a continuing Federal appropriation of nearly $9,000,000 annually for agricultural extension. It was feared last year that the cooperative scheme might fail because of indifference on the part of the States. Yet, as shown by the national convention on farm marketing in St. Louis, under the auspices of the Department of Agriculture, every State has responded. The net result is that there are now over 1,100 county agricultural agents at work in as many counties or groups of counties, teaching the best methods of stock breeding, conservation of soil, and rotation and disposal of crops. In the Middle West such "county advisers" had already proved their worth, coöperative farmers' and business organizations paying some as high as $4,000 a year. The new arrangement makes possible their introduction into even the poorest sections of the South.

If the National Institute of Arts and Letters was to award a gold medal for distinguished service to American letters, there could be no question that its recipient would be the man on whom that honor was bestowed last Friday. There might, indeed, be those who would favor Henry James; but, aside from the circumstance of Mr. James's recent adoption of British nationality, there could not, at any time, have been in his case anything like the unanimity which marks the recognition of Mr. Howells's deserving. There is, essentially, between the two, somewhat the same kind of difference as that which, in medicine, distinguishes the great general practitioner from the eminent specialist. In Mr. Howells, we have the qualities of grace, and sympathy, and winning humor, and all-round comprehension, as well as—at his best—the art of the true story-teller; and the man that one sees in the books, like the man as he is known in the flesh, is as much loved as the author. The occasion was worthily marked by Brand Whitlock's address, which touched with understanding and insight many a phase of the perennial questions of literary art, and especially those which pertain to our American aspirations in the domain of letters. Mr. Whitlock's reference to the long-cherished vision of the Great American Novel will revive memories half-amusing, half-pathetic. He does not claim for Mr. Howells the actual achievement of that somewhat indefinite dream; and if we cannot accept his view that its non-fulfilment is due to the vastness and complexity of our strange new country, it is perhaps as good as any explanation that can be given of a thing that neither admits of explanation nor requires it.

As a well-wisher of the *Unpopular Review*, the *Nation* is glad to call the attention of its readers to the current issue of this distinguished quarterly, which is admirable alike in variety and in quality. If to be unpopular means, as Mr. Holt appears to apprehend it, to subject topics of the day to reason, and not merely to ventilate them or to clamor over them, then unpopularity should be our refuge and strength in this time of trouble. The present number contains articles on such pressing matters as the war, prohibition, equal suffrage, vocational guidance, the psychology of advertising, and the minimum wage, not to exhaust the list, and though they will not all command general assent even among thoughtful people, they do at least show reasonableness and, what is equally to be desired just now, a philosophic breadth of treatment. Perhaps it is not too early in the life of the *Unpopular* to predict that Mr. Holt, by this venture, will have done much to reinvest the American essay with some of the characteristics which once made it a vehicle of both charm and power. His avowed distrust, at the outset, of minds that placed their main reliance upon a process of "counting noses" was a guarantee that truth would be served by his journal, and that ideas would take on the full implications which they should have.

The tributes to Dr. Schechter which the press has collected from a number of representative Americans testify to the place that was gained in American life, after a residence of little over a decade, by a Hebrew scholar whose chief interests lay in fields that can concern but few. His catholic tastes, his warm sympathy for American ideals, and the vitality with which he caused his personal influence to be transmitted by the various agencies of American Judaism, made him far more than a sectarian figure. Yet the notices of his death have properly emphasized his scholarship, with some sense of the profundity of the erudition required to give him first place among the English-speaking scholars of his race. About the discoveries he made at the University of Cambridge among the Genizah manuscripts there was fortunately something of that dramatic quality which so often illuminates outwardly dry research. To find the Jewish originals of Biblical writings known only in the Greek, to bring to light an entire kingdom lost to history, were achievements to give new vitality to popular conceptions of Jewish literature and Jewish history.

LET US HAVE THE TRUTH.

"I have been in favor of a reasonable programme of preparedness, especially with reference to a reasonable enlargement of the navy; but I begin to believe that we are losing our heads over the subject. I am certainly opposed to a large standing army." This is the word that comes to us from one of the leading Republican Senators. We heartily agree with him. The country is losing its balance, and is in danger of being swept away by an unreasoning fear of the Germans, which must rejoice the hearts of the militarists in Berlin. The public in the East appears no longer able to distinguish between fact and rumor, between what is possible and impossible, credible and incredible—a state of mind intensified by the President's and Mr. Daniels's reversal of their position of a year ago without giving a single valid reason why we are not even to await the outcome of the European war. More than that, there is such a multitude of experts and counsellors that people do not know what to believe as to matters of fact about which there should be no question.

Take the case of the navy. Until the present wave of fear swept over the country, it had always borne a good reputation. Its exploits in 1898 were remembered, its personnel was well thought of, its ships, if not always up to the British standard, ranked high none the less, and it was generally considered a source of pride to the nation. Suddenly we are told by many that it is of no value at all, and sensational writers on every hand demolish the fleet daily. To-day it is Henry Reuterdahl who dismisses our enormously costly armada with the statement that "it has been demonstrated and proved beyond argument [in the pages of the magazine he writes for] that the American navy is not strong enough to maintain the command of the sea and uphold the Monroe Doctrine," after which the American fleet is "swept off the sea"—by him as by so many others who are asking for the introduction of Prussian militarism, under the cover of another name, in America. But at the very moment at which we have such shrill, almost hysterical, outbursts as this, we have much testimony on the other side. Congressman Kitchin, for instance, reiterates in the convincing statement of his position that our navy is the best and largest in the world save that of England, and that we have nothing to fear from Germany or Japan.

Mr. Kitchin himself challenges anybody to dispute his statement of facts. He has served for years on the House Naval Affairs Committee, voting each year for a considerable increase, and knows the navy from top to bottom. But he is not content to rest the case upon his own opinion, knowing that it will be challenged as a layman's. Hence he quotes the statements of three of our highest naval officers—Admiral Fletcher, now in command of the Atlantic fleet; Admiral Winterhalter, commanding the Asiatic fleet, and Rear-Admiral Badger, a former commander of the Atlantic fleet—all of whom testified before the House Committee on Naval Affairs last winter (1915) that our fleet was superior to that of Germany. Surely, the testimony of such experts on this question of fact ought to be accepted, if any expert opinion is convincing. Secretary Daniels said that he would rather have Admiral Fletcher's opinion than that of any living man. More than that, Mr. Kitchin makes a very serious charge against the Year-Book issued by our Navy Department, that it deliberately falsifies as to the German navy, carrying in one place, as afloat, two vessels sunk by the British; in another ranking four pre-Dreadnoughts as Dreadnoughts, though Jane, the English naval authority, ranks them correctly, and also adds that they are "defective, unsuccessful ships," topheavy because of over-armament. Finally, Mr. Kitchin asserts that the last five Dreadnoughts authorized by Congress are superior to the last *six* Dreadnoughts laid down in Germany.

Now, in this confusion of counsel, is it not highly desirable that some means should be found of establishing the facts, as regards both the army and the navy, before we embark on any new programme? Sensible people and sensible nations ought to legislate on a matter so vital and so far-reaching only in cold blood and upon exact information. And so Congressman Bailey, of Pennsylvania, has offered the suggestion that there be an immediate Congressional inquiry into the actual status of both the navy and army before a programme is entered upon which involves two billions of dollars' outlay in the next five years. Shall we vote first and inquire afterwards, and make ourselves a laughing-stock, or shall we act like reasonable persons? The country ought surely to know if its navy is as worthless as so many think it.

We do not believe that the President knows, because he, too, must receive highly conflicting evidence—there are doubtless naval officers who disagree with the three high Admirals quoted by Mr. Kitchin. But it ought to be possible to establish where the preponderance of evidence lies. With that determined, the question what policy the country should pursue, and whether it should make any radical change in the size of the army and navy before the world-war is over, would be in order, as it is not now. We need to calm down and consider, to refute the statements of Mr. Kitchin if they are false, before we take any hasty step whatever under the lead of Mr. Wilson or of any one else.

THE FINE ART OF GARBLING.

We had last week another publication in this country by the German Foreign Office, designed to correct American opinion about the origin of the war. It consists of dispatches of Belgian Ministers in Berlin and London and Paris, during the years 1905-1914. They were captured by the Germans in the archives of the Belgian Ministry for Foreign Affairs at Brussels. Large extracts from them have before been given out by the German authorities. Now they are printed in full, the French originals being accompanied by an English translation—the latter not always happy.

The documents themselves are interesting, and have a certain evidential value. This is obviously, however, at second or third hand. None of these Belgian representatives was directly concerned in the negotiations to which they refer. They reported the diplomatic gossip, and gave their personal opinions. These have, undeniably, a good deal of weight. But they are not conclusive. The best proof that they are not is that they lean, now to the side of the German contention, now against it. And here comes in the most significant part of this German publication. It begins with a long "Introduction" in which are massed what the German Foreign Office considers the new proofs that the war was a "monstrous crime," long plotted against Germany by England, France, and Russia, and culminating in a wicked attack against which she was compelled to defend herself. But the strange thing is that this Introduction seems to take it for granted that no one will read the subjoined documents; for it sometimes garbles them, often makes a strained use of them, and leaves out every scrap of them that makes against the German view.

One extract, for example, the Introduction considers so important that it prints it in capital letters. It is from a dispatch sent from Berlin on April 24, 1914, by the Belgian Minister, Baron Beyens, apropos of the visit of the King and Queen of England to Paris. This raised the question whether

England would be inclined, "as three years ago, to range itself by the side of France in the case of a conflict of the latter with Germany." Baron Beyens asked—and this is the deadly matter of the German capital letters:

> Would it be the same to-day, and *should we still have to fear* THE ENTRY OF BRITISH SOLDIERS INTO BELGIUM IN ORDER TO HELP US DEFEND OUR NEUTRALITY BY FIRST COMPROMISING IT?

Now, will it be believed that the Belgian Minister immediately answered his own question, and that the Introduction entirely omits what directly follows in the dispatch? What Baron Beyens wrote was as follows:

> *If the question is examined from the German point of view alone—the only one which I can consider—a negative answer is not doubtful. To an observer living at Berlin it seems that the ties of the entente cordiale have loosened somewhat, that the point of that weapon of defence is no longer exclusively directed at Germany, as it was at the time of King Edward, and that the Triple Entente has rather become a concert than a union of Powers acting together in certain questions which are determined by considerations of common interest.*

If Germany appeals to the Belgian Cæsar, to Cæsar must she go. A Minister whose dispatch is good enough to prove the infamous conspiracy against Germany, must be good enough to disprove it. Here we have him, only in April of last year, affirming that the Triple Entente was a "weapon of *defence*"—not of attack, mind you—and that it was not "exclusively directed at Germany."

These Belgian documents undoubtedly throw some indirect light upon the long negotiations leading to the formation of the Triple Entente. The facts have long been known. At no time during the past five years has it been questioned that France and England and Russia were drawing together. And their chief motive was admittedly to place themselves in a position where they could make head against Germany. This aim they always represented as purely defensive. Germany has chosen to picture it as deliberately offensive. But to assert this is to ignore the fact that England in 1912 offered to make a treaty with Germany binding Great Britain never to take part in an aggressive war upon her. It is also to forget that, in July of 1914, Sir Edward Grey urged the Kaiser to call an international conference, where and when he pleased, in order to settle the dispute between Austria and Servia without war. Such a proposal would have been impossible if the theory of this Introduction were correct—namely, that England, out of jealousy and hate of Germany, had for years been scheming to attack her, and jumped at the opportunity offered by the Austro-Servian imbroglio in July of last year.

It would take too much space to cite from these Belgian dispatches all the passages which fly in the face of what is affirmed in the Introduction. For instance, it declares roundly that the French military law of three years' service was a provocative measure looking directly to war. Nowhere is it hinted that the measure was in response to what Germany had first done. But note these extracts from the very Belgian Ministers whom the German Foreign Office summons as witnesses:

> The German press showed astonishment at the military measures which the French Government was going to take in answer to the increase of the forces of the Empire.
>
> The French Government in declaring its readiness to impose the three years' conscription has adopted the only attitude worthy of the great Republic in face of a German provocation.
>
> The considerable increase of Germany's armament at the moment when M. Poincaré enters the Elysée will increase the danger of a too nationalistic trend of the French policy.

We quote, finally, from the favorite witness of the German Foreign Office—the Belgian Minister in Berlin—a passage from a dispatch of June 12, 1914, which contains more truth of more weight than anything adduced in the Introduction. It is as follows:

> The result of the agitation shown by the French has been an increased tension in their relations with the neighboring Empire, and the idea which is falsely spread or accepted without verification by the best heads in this country [*i. e.*, Germany] that war is inevitable in the near future because France desires it ardently and is arming feverishly to prepare for it. At Paris the same intentions are being imputed to the Imperial Government, some of whose members have, it must be admitted, occasionally used unfortunate words, as the Minister of War in speaking of a "lightning offensive" and of an "unexpected attack" which were to secure victory for the German army. Perhaps even to-day there is nothing but a terrible misunderstanding on the part of either of the two countries. The majority of the French nation certainly does not want war and Germany has no need of it. In a few years no balance of forces will any longer be possible between her and her neighbor. Germany has only to be patient, to pursue in peace the incessant development of her economic and financial power, and to wait for the effect of her preponderant birth-rate, in order to dominate without dispute and fight in all of central Europe.

If that dispatch could have been captured by the Germans before it ever left Berlin, and if their statesmen had been wise enough to follow its counsels, there would have been no war.

ITALY IN THE WAR.

It is almost exactly half a year since Italy declared war on Austria, yet it is no exaggeration to say that even to the fairly conscientious reader of the dispatches it looks as though she might as well have remained neutral. We read of Alpine fighting and attacks along the Isonzo, but in both regions progress has been apparently small and the nature of the fighting desultory. The facts are otherwise, but such is the common impression. Peculiarly puzzling is the lack of perceptible effect on the general progress of the war produced by Italy's entrance on the side of the Allies. If we consider the results of Bulgaria's entrance into the war and the anxieties now centring upon the possible action of Greece, with a population of less than five millions, it is nothing less than astounding that Italy, with a population seven times that of Greece, and a potential fighting strength of at least two million men, should have failed to affect the general situation. Italy entered the war three weeks after the initial Russian disaster in Galicia. Yet the new danger Austria was compelled to face did not seemingly slacken the Teutonic operations in Galicia. The Austrian armies continued for months to press the attack against the Russian left wing, and only within the last two months has there been evidence of a weakening of their operations in that direction. Even then Austria has been in the position of sparing some troops for the work in Servia without undue anxiety regarding what was going on in the west.

A closer study of the situation shows that Italy's rôle has been far from negative. The fact remains that she has after all kept the attention of important Austrian forces which might have been used with effect against Russia or Servia. In Karl von Wiegand's account of the Isonzo campaign in the New York *World*—one of the most remarkable pieces of war reporting that have appeared—the Austrian commander estimated his own forces on the Isonzo at one-third of the Italian strength. Take it at that minimum, and it would mean that at least 150,000 men are engaged in the defence of Görz and Tolmino. If these had been available in Russia, the Teutonic forces might, indeed, have pressed on to Kiev in the south and to Riga in the north. Or the invasion of Servia might have been begun two months earlier, and all of the Balkans would have been definitely lost to the Allies.

This result has not been attained by Italy's

standing upon the defensive. Her armies have pressed the attack. On the Tyrol front they have been engaged in the conquest of the mountain passes. On the eastern front they have delivered three great attacks on a fifty-mile line from Tolmino to the Adriatic Sea, and are now engaged in a fourth assault on a narrower front, with Görz as the sole objective. If one may argue from the tone of Mr. von Wiegand's story, the Austrians are not at all confident of their position. He speaks of Görz and Tolmino as "still" in their possession. He speaks of the Austrian defensive position as one not particularly favorable and one which it was originally intended to abandon altogether. There may be here the foreshadowing of an ultimate evacuation of the line. Nevertheless, the Austrian showing on this front emphasizes the enormous advantages of the defensive in the present war.

The actual gain in territory by the Italian armies is small when measured by the standard of Teutonic achievements in eastern and southern Europe, and considerable when measured by the rate of progress in France and Belgium. On the Tyrol front the Italians have occupied a strip about forty miles long by ten miles wide along both shores of the Lago di Garda, with Riva and Rovereto as their objective. On the Isonzo front they have occupied a zone about fifty miles long and fifteen miles wide at its southern extremity on the Adriatic, narrowing to less than five miles at Plava to the north of Görz and five miles at Tolmino. Of important places they hold Monfalcone, Gradisca, and Plava, some six or seven miles to the north of Görz and on the eastern bank of the Isonzo. On the heights of Podgora they are almost at the gates of Görz, which by this time must be denuded of its civilian population. The bombardment of the city has been recently reported from Vienna. Hitherto it has been rumored that the Italian artillery has been checked in its operations by considerations for the civilian population, which is largely Italian. In Italy's operations, both in the Tyrol and along the Isonzo, the usual advantages of the defensive have been enormously enhanced by the nature of the country. It has been a case either of mountain fighting or of frontal attacks on trenches cut in the solid rock.

Except as her pressure on Austria's western line has affected the general situation, Italy has apparently not participated in the common strategy of the Allies. It is conceivable that in a perfectly unified scheme of Allied operations, Italy might have been content to stand on the defensive as against Austria, and place part of her armies at the disposal of the Allies outside of Italy. She is more favorably situated than either France or England for throwing considerable forces into the Balkans. But she refrained from doing so in Gallipoli at a time when her help might have been precious, she has not as yet participated in the landing at Salonica, and we are still to have confirmation of the rumors about the landing of an Italian army in Albania.

Yet it is not necessary to suppose that in this policy she has been actuated by purely selfish motives. In France and England there has been serious question of the wisdom of the Gallipoli and Salonica campaigns. It has been described as a frittering away of strength on a mere diversion. Expert opinion on both sides still holds that the war will be decided along the main battle-fronts. Gen. Cadorna, head of the Italian army, has been reported as firmly opposed to any policy of adventure outside of Italy. And his reasons may be two-fold. It is not only that more decisive results can be won by operations from a near base directed against the flank of the enemy, but in the special case of Italy there is always the danger of a concentrated attack by Germans and Austrians in case the Italian offensive should definitely fail. If Germany has found troops for a distant campaign in Servia, she could operate with much greater ease and advantage from her own frontiers through the Tyrol. Events in the Balkans dictate a policy of caution. Berlin and Vienna speak of pressing on to the Suez Canal. But it is not at all unlikely that, with Servia beaten down, the next blow will fall upon Italy's northern frontiers.

A YEAR OF THE FEDERAL RESERVE SYSTEM.

Last week occurred the first anniversary of the formal inauguration, on November 16, 1914, of the new banking system in the United States. During the three months which had preceded that date, the putting into operation of the new facilities for safeguarding American finance was considered, in the face of the European storm, to be an immediate and urgent necessity. This was done with the utmost expedition; it was done while financial conditions in this country, as a result of war, were still obscure and precarious. Nevertheless, expert comment on the first year of the new banking system has, during the past week, been unanimous to the effect that the broad facilities which that system offers to the country's machinery of credit and currency are now, after twelve months, substantially untouched.

The questions are therefore very pertinent: Why were those new facilities not instantly made use of, when the economic strain of last November was what it was? What part, if any, did the new banking system really play in the subsequent revival? When is it likely to exert a really powerful influence on the American situation, and with what results? The answer to the first question is, that the financial situation was in actual fact already turning in favor of this country when the new system was introduced. Gold exports had just come to an end through a fall in sterling to the normal par of exchange. A few weeks before that event, the New York banks had turned the September deficit of $38,000,000 into a surplus reserve of $15,000,000. Money rates at New York, which had stood at 8 per cent. since the war broke out, had got down to normal figures early in November.

How swiftly this turn of events was followed by the dramatic movement of the exchanges in our favor, and by the largest monthly gold imports in the country's history, everybody knows. No doubt, if the Federal Reserve system had been in operation when the war began, the $369,000,000 "Aldrich emergency currency" would never have been issued. The banks would have taken out Federal Reserve notes against their rediscounted paper. But even so, the emergency currency had passed its maximum, and was rapidly declining, in the last week of October.

The second of the above questions, therefore—as to the part which the new régime actually played in the great financial recovery of the twelve past months—must be answered by saying that it has probably played directly no part at all. In effecting a thorough organization of the country's banking; in standardizing many methods and practices of the business, and in breaking ground for the new business in "acceptances" of foreign trade bills, the Reserve Board has already accomplished results of high importance. But the main achievements to which the public and the framers of the law had looked forward, as a result of the actual establishment of the new reserve banks, were in connection with the rediscounting of paper for the member banks, and with providing an elastic currency, based on commercial assets.

At the start the twelve regional institutions together held $262,000,000 cash re-

serve; they hold $348,000,000 to-day. Yet their total rediscounts are even now only $45,000,000—an utterly insignificant use of their facilities. But when the New York banks, for instance, held at the end of December a surplus reserve of $117,000,000, and increased it continuously to $224,000,000 last September (the very period when "harvest demands" used to pull the surplus down), it was hardly to be expected that they would ask relief from the burden of their loans.

As for the new Federal Reserve notes, it is true that $160,000,000 of them are now in circulation, as against $80,000,000 at the end of June and $17,000,000 on January 1. This at least would appear to indicate use of the new facilities. But the singular fact is that nearly all of such notes now in circulation are based, not on the commercial assets which were designed to stand beneath the new bank currency, but on special gold deposits by the issuing banks, to an amount as large as that of the notes outstanding. Notes thus secured are actually nothing more or less than gold certificates. Of Federal Reserve notes issued and secured on the basis chiefly contemplated by the law, less than $13,000,000 are to-day outstanding. In other words, the Reserve banks have not yet been called upon to perform either of the principal functions expected of them.

What, then, of the new banking system in the future? When will its real facilities begin to have their full effect? That does not seem likely to happen until the abnormal flow of foreign gold in this direction slackens, or until financial and industrial expansion in the United States rises far beyond its present magnitude. But the provisions of the organization would almost certainly be brought into play when the war ends and the world is plunged into the unknown economic conditions which will follow return of peace.

This country may conceivably be confronted in the new and confusing conditions then prevailing, in and out of Europe, by a wholly unprecedented demand for credit facilities from the outside world. Or it may have its share of the profound economic reaction which will undoubtedly ensue in Europe. The Federal Reserve system was equally designed to facilitate a heavy legitimate demand on the country's resources, and to act as a safeguard against a financial strain. It could perform the one function by its great and as yet unused rediscounting powers. It could perform the other by its as yet unused facilities for both currency and credit.

In either possible sequel to the return of peace, it is certain to operate as a reassuring influence. The salient fact is that, in the changed world in which we shall then be living, and with financial relationships inevitably altered as between the nations, the United States will confront those new conditions with complete and up-to-date machinery for sound financial expansion. This will be true at the very moment when Europe is brought face to face with the results of its own financial exhaustion and of the overstrain in its credit system.

LESCHETIZKY AND HIS PUPILS.

The death of Theodor Leschetizky removes from the world of music the man who in one respect came nearer to Liszt than any one else. No one has ever approached Liszt in the combination of his supreme gifts as pianist, composer, editor, educator, and writer, not to speak of his missionary work for composers or artists who needed help, all of which, considered in their ensemble, made Wagner proclaim his father-in-law "the greatest musician of all time." But as his successor in the field of musical pedagogy, as an inspirer of other pianists, Leschetizky accomplished wonders second only to Liszt. Pupils of Liszt are not so abundant as they were a decade or two ago; but the woods are full of pupils of Leschetizky, and, what is more, many of them are excellent pianists, and some of them good composers. To be able to teach the "Leschetizky method" from personal experience is undoubtedly, also, the greatest recommendation a piano instructor at present can have.

What that "method" is cannot be stated in a sentence or two. Leschetizky himself objected to the term; "I have no technical method," he said. "There are certain ways of producing certain effects, and I have found those which succeed best; but I have no iron rules. . . . There can be no rule. I am a doctor to whom my pupils come as patients to be cured of their musical ailments, and the remedy must vary in each case." This attitude accounts for the fact that not a few pianists who had already won fame came to him for advice. He told each one frankly what was lacking. Less considerate than Liszt of the feelings of his pupils, he commented on their faults freely in class, excusing this seeming rudeness with the question: "If a pupil has not sufficient courage to stand buffetings from me, how will he stand them later on from the world?" His critical judgment seldom failed him in prophesying which of his pupils would make a stir in the world, and from those whom he liked particularly he refused to accept payment. According to his English biographer, Annette Hullah, he used to say to a group of pupils: "Ah, what a marvel I could make could I mix you all up!"

Probably the most important factor in Leschetizky's teaching was the importance he attached to pedalling. Moscheles once declared that the test of a great pianist was his ability to get along without the pedal, and that was true in the olden days, the days before the scattered chords brought together by the use of the sustaining pedal. But Rubinstein called the pedal the soul of the pianoforte, and Chopin said it was the study of a lifetime. In the pieces of Chopin and Liszt, and all good modern pianoforte music, the sustaining pedal is of extreme importance, because it lifts the dampers from the strings and thus enriches each tone struck, by the sympathetic vibration of other strings (overtones). Leschetizky had the wisdom to recognize this importance of the pedal in tone production, and gave his pupils, including Paderewski, hints that helped to make them famous for their "touch," which, as we thus see, was quite as much a matter of the right foot as of the fingers.

Modern pianists have a great advantage over those of a generation or more ago in that the instruments at their disposal have a much richer tone than those played on by their predecessors. But Leschetizky would not allow his pupils to rely too much on this advantage. He wanted them to be prepared to get a good tone, if need be, out of an inferior instrument, modifying their touch to suit the case. While thus insistent on the importance of touch he by no means neglected questions of interpretation. As a young man he listened intently to the great pianists of the day, to Liszt, Herz, Kalkbrenner, Saint-Saëns, Tausig, Henselt, Thalberg, and others, and what they did served him as material for the "method" he subsequently developed.

He himself played in public for a time, but soon realized that his proper sphere was in the classroom. His career and his world-fame show that a teacher may become as great a man as a public player; earning as much, too, and receiving the same kind of homage. Though he was often extremely "temperamental"—slamming doors, crushing the music and throwing it on the floor, remarking to one of his class that he had better spend his future as a "tomato-grower," or turning off the gas and leaving the

class in darkness—all his pupils seem to have loved him. One of the most prominent of them, an American, burst into tears when she heard of his death last week. Though he was eighty-five years old, she had hoped to see him once more.

Besides teaching his pupils how to acquire a touch that commanded all shades of tone production, Leschetizky probably did most good to them—and in turn to the thousands of pupils of his pupils—by emphasizing the importance of concentration. A vast amount of time is wasted by most young people in practicing with the fingers only. Some teachers even allow their pupils to read a book while practicing on the piano. On this custom Leschetizky frowned. The player, he taught, must have his attention fixed every moment on what he is doing. "The brain must guide the fingers, not the fingers the brain," was one of his maxims. As an illustration of his graphic way of teaching the meaning of expression-marks this will serve: "To make an effective *accelerando* you must glide into rapidity as steadily as a train increases its speed when steaming out of a station."

Foreign Correspondence

AMERICAN OPINION—WHAT ENGLAND IS DOING.

By JAMES F. MUIRHEAD.

LONDON, November 2.

Two messages from America, received within the last few days, have evoked in us a certain amount of astonishment, though in totally different ways. The optimistic article of October 28 in the New York *Tribune* ("Germany Is Beaten") coming at a time when we were rather lugubriously reaping the bitter Bulgarian fruit of an unavoidable lack of military success on the East front, and a perhaps not quite so unavoidable lack of statesmanlike foresight, was all the more welcome because so wholly unexpected. To know that a competent and impartial neutral observer, so far from feeling qualms about our errors and rebuffs, cherishes a strong and positive conviction that our cause is on the highway to victory, revives us like a cordial, or like a cup of cold water in the desert.

The shock received from Mr. Roosevelt's article in the *Metropolitan Magazine* is that of cold water applied in a very different manner. That so warm a friend of England and the Allies should, at this juncture, feel called upon to state his belief that Great Britain has failed, on the whole, to take her duties seriously enough, is something to make us indeed search our hearts and find out what measure of truth really lurks in an assertion that certainly seems on the face of it far too sweeping. One is assuredly tempted to think that Mr. Roosevelt would have moderated his judgment if he had personally visited England or any of her battle fronts within the last month; and one wonders also whether any one is entitled to pass so very cocksure a verdict who has not been in actual touch with his evidence. In plain words, I believe that our honest and friendly, but impulsive, critic is speaking to a large extent out of a cloud of ignorance. That he ventures to speak as he does, is, I suspect, greatly due to the attitude of a certain section of the English press. But Mr. Roosevelt should have realized how very deceptive the printed word can be in cases like this.

The action of the journals I refer to, in belittling our efforts and emphasizing our failures, does not in the least call for any such ugly brand as unpatriotic. I am quite ready to believe that the fundamental wishes and intentions of the journalists in question are sound and loyal, and that they really think it is desirable to induce a sort of mild panic in the breast of John Bull, in order to stimulate him to do his best. This rests, however, on a shallow analysis of British psychology; and it moreover forgets that, in any case, the disastrous effect produced on antagonists and neutrals is likely to outweigh any possible good effect on ourselves.

We must, I think, also admit that the attitude of our Press Bureau has provided Mr. Roosevelt with some excuse for the imperfection of his information. No intelligent British patriot is opposed to the principle of rigid censorship of the press in such a crisis as we are now passing through. But he must be a blind partisan who is not willing to express regret and astonishment at some of the vagaries of our present staff of censors. To ordinary common-sense, many things seem to have been passed that should have been deleted, and many things have been suppressed or delayed for no apparent good reason. All men are likely to err, and no doubt some of the actions we now take for errors are quite susceptible of justification at a later stage of the game. In any case, a neutral observer, who, with all his sympathy for England, is not quite so British as a Briton in his psychology, may be pardoned if he misinterprets or exaggerates something that we understand, in part at least, and so can make allowance for.

For indeed it is not by any means sure that England is not approaching the point when it can be truly said that we are realizing the situation to the full, and are ready to do our utmost. It seems to us almost absurd to say that the size of our army is "utterly inadequate," compared with those of the other Powers. To pass over the point that we are not supposed to be a great military power, or to be called on to rival the numbers of the great Continental armies, the bare and actual fact stares us in the face that when the troops on all our different fronts and in all our Oriental garrisons are taken into account, our army is not, after all, so very much smaller than that of France. This is still more true if we include our partly-trained troops, because it would have been physically impossible for us to have produced and equipped more trained troops in the time at our disposal. How could we, starting from zero, hope to equal within a year an ally who started somewhere about normal summer heat?

I wish Mr. Roosevelt could see the men who are now flocking to the colors in response to Lord Derby's recruiting scheme. This, coming on the top of the National Registry, has had a most encouraging effect in awakening the doubters to the gravity of the situation, and in convincing them that this is their last chance to volunteer. I hazard the prediction that the War Office will have all it can do, during the next six months, to train and equip the men who are now offering themselves. Mr. Lloyd George would have something to say to Mr. Roosevelt on the score of his reproach as to our production of the artillery and munitions of war. Here, at least, it is evident that Mr. Roosevelt cannot have the latest information. Strikes, too, on which Mr. Roosevelt lays much stress, have pretty well ceased; and moreover, as I have already tried to show in the *Nation*, it is easy to read a much too sinister interpretation into these regrettable events. Great Britain is, at this present moment, one great hive of industry for purposes of war. Our women, our old men, our physical weaklings are practically all doing their bit. If Mr. Roosevelt had neighbors such as mine, he could never have written what he did—neighbors whose sacrifices range from giving up three or four sons (alive or dead) to the army, down through dismal, cold hours of night-guard duty by sexagenarians, to eating margarine instead of butter, and abjuring alcohol and tobacco.

Much might be said, too, of the financial side of the question. It hardly seems unfair to affirm that part of the armies of our allies may, in a sense, be reckoned as belonging to the military organization of the country that supplies them with rifles and ammunition. The sums already advanced are said to be enough to equip and maintain 8,000,000 men.

The readers of the *Nation* may possibly be interested by two illustrations of the quality of our sacrifices. These happen to have come under my notice because they refer to sons of old friends of my own; but doubtless they are typical of many others. The following passage is quoted from the letter of a young Oxford man, written shortly before his death in a charge at the head of his company—a captain at twenty. The extract is, perhaps, enough to show that he was a youth of unusual intellectual promise, and his character and personality were of an equally rare order:

"The chess players are no longer waiting so infernally long between their moves, and the patient pawns are all in movement, hourly expecting further advances whether to be taken or reach the back lines and be queened. 'Tis sweet this pawn being; there are no cares, nor doubts; therefore no regrets. The burden which I am sure is the burden of ill-temper, drunkenness, and premature old age, to wit, the making up of one's own mind, is lifted from our shoulders. I can now understand the value of dogma, which is the General Commander-in-Chief of the mind. I am now beginning to think that free-thinkers should give their minds into subjection; for we who have given our actions and volitions into subjection gain such marvellous rest thereby. Only, of course, it is the subjecting of their powers of will and deed to the wrong master, on the part of a great nation, that has led Europe into war. Perhaps afterwards, I and my like will again become indiscriminate rebels."

The other young man I have in mind, just a shade older than the one already mentioned, was a scion of a Scottish family well known for its intellectual achievements in more than one field. The following sonnet, referring to the last place he had seen in Scotland, was

written on the battlefield not long before his heroic death:

ST. MARY'S LOCH.

Dropping their veils the hills receive the sun
And hold him till old Silence beckons Night
To cover their last kisses one by one.
Here restless spirits would delay their flight,
And antique deities from wrath incline.
Sometimes young Love, too passionate grown, here dips
His glowing wings, lays his hot cheek by thine,
Touching thy waters with his ardent lips;
War's hissing axles here their way explored,
Then broken lay before the enemy Peace.
Some day in weariness our latest lord
Will from his smoky temples have release,
And, leaning from the hills, will sigh to see
The furrows of his forehead glassed in thee.

L'UNION SACREE—A LESSON IN PARLIAMENTARY GOVERNMENT.

By STODDARD DEWEY.

PARIS, November 6.

Americans for the most part decline to understand why and how the French change their Government, and Germans regularly misunderstand. The French people quite commonly sum up their own experience in the refrain of Madame Angot's daughter:

C'était pas la peine assurément
De changer le gouvernement.

Or else they say over with resignation their proverb in which the political wisdom of the ages is condensed: *Plus ça change, plus c'est la même chose.*

This time, surely, the change has made a Government which is "more the same thing," that is, a strengthening of that Sacred Union which, for a year and a quarter, has kept the French people united. And so, this time, the change is worth the trouble. It is also a lesson in Parliamentary rule, which is so strange to us whose Republic is not Parliamentary. In like way, French Republicans cannot understand why Congress is not "controlling" President Wilson.

A singularity of the present French change is that it has not been made with the regulation ceremonies of Parliamentary opposition. There was no vote of lack of confidence in the Viviani Ministry; on the contrary, it had what in normal times would have been considered a good working majority. But the work before Government and Parliament is not normal now, and it is no longer majority-rule which is needed, but *l'Union sacrée*—the union of all in the sacred work of saving France. If the enemy counted on self-counteracting operations of Parliamentary rule in the French Republic—

Backwards and forwards and sideways did she pass—

he must have lost his illusions by this time. The *Frankfurter Zeitung* denounces the new Government in France as nothing better than a scheme to silence opposition.

Let us go back to the beginning. War found M. Viviani at the head of Government, travelling officially with the President of the Republic in Russia. Such absence by itself proves that the French, at least, did not expect the breaking out of war. Also, they cannot have understood how thoroughly the German Government had been preparing its army and its people for a sudden attack on France. It was not until the disastrous fighting at Charleroi and Mons revealed the superiority of the enemy in men and guns that the French—and tardily the English—Governments wakened to the life and death struggle before them.

Then, for a first time, Prime Minister Viviani made a change in his Government. It was chiefly signalized by making M. Millerand War Minister, by leaving military operations entirely in the hands of the General-in-Chief—and by silence in Parliament for a time. What General Joffre has done is known to the world. The inconceivable amount of labor of the lawyer Minister of War Millerand, during fourteen months, will perhaps never be appreciated.

After a time the many voices of Parliament (in accord with the derivation of its name) began making themselves heard *crescendo*. Various Under Secretaries were appointed in various Ministries, but this did not change Government sufficiently for the traditions of a Parliament to which change means change of label. With great tact, still in possession of his own majority, Prime Minister Viviani has yielded the first place to his Minister of Justice, Briand, and has himself stepped down to second place—without rejoicing the enemy by any Parliamentary disputes.

The *Strassburger Post* pronounces that "President Poincaré could not have found a cleverer artist for his purpose"; that Briand's "oratory is the essential quality to please the French people"; and that, "thanks to his voice, Briand can produce all the effects desired." So opium produces sleep because it has a soporific quality!

The French Parliament, no doubt, has often experienced the effects of M. Briand's voice, for he has more than once in the past been a notable Prime Minister; and, no doubt, too, his oratory is effective for the simple reason that it is Parliamentary, in other words, he is first and foremost a great debater. His early experience in the give and take of seaport politics has stood him in good stead through his whole career. But he has some thing "cleverer" than oratory and debate to his credit. When the English lately had to face the strike of coal miners who could not be made to understand that their country was at war for its life, many Britons who never will be slaves regretted the absence of a compulsory military service law—for that enabled Briand, in time of peace, to "militarize" French railway strikers with instantaneous cessation of their strike. At the time, I had the luck to see the measure at work, having permission to await at the tracks the arrival of the train bringing an aged lady from Switzerland. Each railwayman had his military band around his sleeve, to show that he had been mobilized in accordance with the personal record book which every Frenchman has for his military service. They laughed themselves at the feat of Government, legal and constitutional.

Any sane observer might have predicted there and then that the German Socialist illusion that French workmen would strike rather than obey their country's call would be dispelled the moment real war came. For that matter, not a German Socialist struck against war either—for the red blood of families and neighbors and fellow-countrymen is thicker than the water of Internationalist theories.

Another German organ—of Stuttgart—says that "the Viviani Cabinet has succumbed to the sickness of unsuccessfulness." As the Viviani Cabinet has been taken up essentially into the Briand Government, this German sour saying may be doubted. The open failure of the diplomacy of all the Allies in dealing with the Balkan nations did make the position of M. Delcassé very difficult, although the French Republic owes more to him in its foreign affairs than is appreciated now. His resignation may or may not have been necessary—at least, he had carried out the tradition of France, to take it for granted that nations, too, have their honor.

There is no secret in the new change of Government in France. Such change is the legal, constitutional procedure of a Parliamentary Republic—which the United States is not. The new Government is an evolution, a widening out and strengthening of the rule which all Frenchmen from the beginning of war decided was essential to their existence as a people.

In France, Parliament represents the people and Government represents Parliament. This principle leads in ordinary times to absolute rule of the country by a party majority in Parliament. But when all the people, of every party and class, must stand or fall together, Government must be made to represent them all. Parties—Socialist and Radical and Conservative—and classes—workmen and peasants and nobles and *bourgeois*, Freemasons, and Catholics—must all have their representatives in Government as they have in the armies fighting afield. This is everybody's theory, and the new Government is only striving to bring it at last into full practice.

It is extended even to the class of old men, of whom it has been said foolishly—as if that were possible—that this is their war. In the Tuileries gardens, there are still vast marble benches in semicircles which Robespiere placed that the Ancients of the Republic might look on at the sports of Young France. So M. Freycinet, in his eighty-eighth year, after nearly half a century's watching the foreign affairs of France, sits in Government "without portfolio."

Notes from the Capital

JAMES EDGAR MARTINE.

Now that it is definitely settled that, no matter who else may come to the United States Senate from New Jersey in the Sixty-fifth Congress, James Edgar Martine is out of the running, the question arises, who will there be in that august body competent to represent in his own person the interests and aspirations of the Great American Farmer? Tillman, of South Carolina, remains, to be sure, but Tillman's sphere is parochial, and, besides, he has not brandished his pitchfork in so many years that he probably has forgotten how. There are one or two Senators who include farming in a varied catalogue of their occupations, one who makes a specialty of cattle-raising, one who has grown rich by trading in the raw hides of calves—which is only a short remove from stock-farming—and a few who maintain a suspicious silence about their non-political means of livelihood. But Martine began by posing as the simon-pure, unadulterated human embodiment of Agriculture with a capital A. He was also a product of the People with a capital P, being the first Senator elected in New Jersey as the result of a popular expression of preference registered at the polls. His formal response when apprised of his election was characteristic. "This contest," he announced, with portentous solemnity, "has been for a

principle, one vital to our country and to the future of self-government. The victory is not that of an individual, but of the people. . . . My candidacy personified an eternal truth in government. Public opinion vitalized it!"

From the day he took his Senatorial oath he let no opportunity slip to emphasize his identification with the horny-fisted sons of toil. One afternoon, during a tariff debate on the agricultural schedules, when all the Senators were voicing in generalities their notions on the market for milch-cows, Martine plunged into his first recorded speech. "As a farmer all my life," he declared, "I can assert that throughout New Jersey and the most of New York it is a rarity to find a milch-cow in the dairy districts that will command over fifty dollars. There are instances where dairy cows will run from a hundred to a hundred and fifty dollars, and I have neighbors who have paid as high as twenty-five hundred dollars for a cow. But the average cow throughout the dairy districts of New York State, up in great Orange County and through Sussex County, will not bring more than from forty-five to fifty dollars."

He presented these statistics with an air of authority so final that nobody ventured at the time to challenge his pretension to speak for the whole agricultural community; and this emboldened him on a subsequent afternoon to break summarily into a speech in which Elihu Root was expounding the virtues of protection, by asking permission to put a question. Root was annoyed at the interruption, but Martine was so importunate that he presently yielded for a moment. "The farmers," cried Martine, as soon as Root had suspended his remarks, "have been looking for forty-odd years for the magnificent dream and the rainbow that was to come. But each year the struggle for the bread-and-butter winner and toiler has grown harder and harder and more and more bitter, while they have seen their farms sold out under foreclosure, and the manufacturers growing wealthy beyond the dreams of avarice. Hence the farmers of this land have held up their hands to God and said, 'Pray, how long!' And the last election decreed that it should be short. I can say to the distinguished Senator from my neighboring State, in which I was born, that your day of promise is too far off with your Republican talk of protection, and we want no more of it!" Root's only comment was that the Senator from New Jersey "really ought not, under permission to put a question, to make my poor, dull remarks the matrix in which shall shine the bright jewels of his eloquence!"

This sort of thing went on till one day Martine tackled Borah, of Idaho. Borah was in the midst of a speech to which he had given considerable study. But he looked as harmless as a spring lamb, and was demurely rehearsing some of the conditions which had made for the decline of agriculture in the East, among them the growing tendency of farmers to leave their farms and crowd into the cities, where life was easier and money more plenty. Suddenly Martine strode forward with a suggestion that, being a farmer himself, he was prepared to dispute that statement. Borah, without the slightest sign of irritation, turned towards his opponent. "The Senator," said he, "has been speaking here in the interest of the American farmer for some days. I could not believe that the distinguished-looking gentleman, with his gold spectacles and his Hyperion curl, was indeed a farmer, so I began to investigate. I found that my friend, eighteen or twenty years ago, had a farm in New Jersey, and that he farmed it for a while and played politics some. Years afterward, a great manufacturing town grew to his farm, and he cut his farm into little lots, and built seventy-five or a hundred houses on them, and sold or rented the houses and lots, and came to the Senate."

The whole Senate sat back and stared at Martine, expecting him to retort. Instead, he recognized his master, and made no attempt to respond, except to confess that what Borah had said was true. The end of his farmer comedy had come.

The late Senator Gorman remarked of a certain politician of his day: "He entered public life with universal acclamation, and quitted it by unanimous consent." It might be unfair to apply this epigram to Martine's whole career, which, whatever its absurdities, has at least been free from scandals. But it would fit not badly his theatrical part of a modern Cincinnatus, which many an actor on the political stage at the Capitol has performed so much better. TATTLER.

Shall Professors Form a Union?

By WILLIAM MACDONALD.

The American Association of University Professors, whose second annual meeting is to be held early in January, has before it a problem upon whose solution may very possibly depend, in considerable measure, the future usefulness of the organization. Briefly stated, the question is whether the Association shall confine itself mainly to the investigation of abuses, trusting to the publication of its findings and the support of a friendly and enlightened public opinion to bring redress; or whether it shall so enlarge and perfect its organization as also to secure, for the university professoriate, the full measure of rights, position, and recognition to which that body is entitled.

Those who were privileged to participate in the first meeting of the Association, last January, could hardly have failed to watch the course of discussion with mixed emotions. Men and women from several institutions, and representing the various departments of learning, often did not know one another, and had to identify themselves when they rose to address the chair. Members of recognized leadership in particular institutions could not predict how other members, of equal prominence elsewhere, might think or vote on any proposition before the Association; nor could they venture to speak with confidence either for their own institutions or for colleagues in their own departments. That prevailing vice of faculties and educational conventions, the disposition to split hairs over phraseology or definition until the main question is almost lost sight of, and to view general problems from the local or personal standpoint only, was not absent from the debates. But the rapidity with which the Association, after a brief period of unsteady but earnest groping, at last found itself and realized the solidarity of its interests, was inspiring; and its emphatic exclusion from membership of presidents and of deans or other administrative officials not chiefly engaged in teaching or research, together with its clear determination to debate in due time the grave question of academic freedom, constituted an unmistakable assertion of corporate unity to which the history of American higher education had hitherto been stranger.

The question now is whether or not the Association, numbering a charter membership of 862 professors from sixty-one institutions, and already well organized for investigation, publication, and protest, ought at its next meeting to go further, and organize its forces for the positive redress of grievances. I am aware that any allusion to the principles or methods of unionism is pretty certain to suggest a procedure widely believed to be foreign to the professorial habit, and out of harmony with the dignity and restraint long associated with the occupation of university teaching. No organization for peace can wholly lay the suspicion that it includes also, if need be, organization for war. Yet it is not putting the case too strongly to say that the American professorial world is characterized to-day by profound and increasing dissatisfaction, suspicion, and unrest; that the grievances of university professors are fundamental and real; that the situation as a whole is not improving, but rather getting worse; and that the efficiency of university education is threatened by the continuance of untoward conditions which are in no way inherent in a healthy academic life, and which it is within the power of the organized professoriate to remedy if it will.

What, briefly, ought to be the assured and recognized status of the professor? First of all and above all, he should be competent. Whatever the grade or special field of the institution, professorial chairs ought to be forever barred to men or women who have not clearly demonstrated ability and productive power as scholars, and efficiency as teachers, lecturers, or directors of research. It is indeed a saving grace that our universities have been able to gather into their faculties as many scholars and teachers of ability and distinction as they have; but it must be sadly admitted that the average is not high, that professors who are neither sound scholars nor respectable teachers encumber every faculty list, and that either the acquisition or the retention of strong men is quite as often the result of accident as of design. Yet it is hard to see why any other condition should be expected. There is no common standard for first appointment, no recognized and carefully observed system of promotion save in a few universities, and no rational discipline for insuring harmony, coöperation, or continued efficiency. It is notorious that promotion too often goes by favor, or follows mere physical continuance or the accident of a "call." Hence it is

that persons who ought never to have been made members of a faculty at all are to be found occupying high positions under what amounts to permanent tenure, while colleagues of ability, ambition, and ripe experience are kept back or crowded out because the president, or the trustees, or some influential alumnus or donor is unfriendly. No wonder, therefore, that the intelligent public speaks flippantly of professors as a class, and rejects their expressions of opinion as "academic" or inconsequential. We may not expect the title of professor to receive again the recognition which it deserves until those who hold it have earned it, and until those who begin their progress towards it can be assured that it may, by ability and faithfulness alone, be realized as a goal.

In the second place, a professor ought to be adequately paid. The situation in this respect to-day is as lamentable as it is frankly notorious. In scarcely any institution has the advance in salaries kept pace, even approximately, with the increased cost of living; and it will hardly be questioned that professors as a class are financially worse off at the present time than they were a generation ago. What accentuates the grievance is the fact that few colleges or universities have a fixed scale of salaries, or in practice adhere to one if they have it; that men of lower rank sometimes receive more than men of higher grades; that nominal schedules in different departments or schools of the same institution show wide variations, and that a few highly paid professors at the top usually mean a depressingly large number of underpaid men below.

I have long been convinced that the demand for a living profesorial wage ought everywhere to be accompanied by a demand for equal pay to professors of equal rank. The theory of university finance which insists upon a variable salary within the same grade of appointment, on the ground that without such "elasticity" it may be impossible to get or retain specially desirable professors, is both fallacious and demoralizing. Beyond the means afforded by graded differences in salary or tenure, there is no rational method of determining the relative worth of professors to an institution. Not every professor can hope to make some great discovery, or render some notable public service, or even contrive a "call"; and when special salaries, above the maximum of the group, are accorded, as they commonly are, in recognition of such fortuitous conditions, they are a discouragement to all other members of the faculty or group, for the obvious reason that few can ever hope to be so honored. Unequal pay for equal rank is demoralizing because the real grounds upon which the excess stipend is based are rarely stated, and could rarely be made to commend themselves to the judgment of the group or faculty as a whole; because it opens the way to all sorts of private "understandings" and allowances, infallibly gendering dissatisfaction and suspicion; and because, wherever it exists, it is widely believed to be the result of presidential favoritism, or personal "pull," or both. Most of all, it lowers the value and standing of a professorship by making its emoluments uncertain, strikes a blow at academic freedom and solidarity, and puts it in the power of a president to cajole, punish, coerce, or reward the faculty at his discretion.

In the third place, a professor should be free; and in order that he may be free, his tenure should be secure. It is no part of my present purpose to discuss either the nature or the precise limits of academic freedom; on the other hand, I certainly hold no brief for professorial freaks, or for the spectacular teachers of whom the most charitable can only say, as of the horses of Scripture, that "their power is in their mouth." The melancholy fact, however, and the only one to which I wish now to advert, is that the American professor to-day is not free. So long as he keeps well within conventional lines, or, if he oversteps them, does so with daintiness or apology, he may talk or act about as he pleases. He may even, now and then, make a fool of himself without incurring any more weighty punishment than that of being laughed at. But if, unable to follow the crowd and also retain his self-respect, he attacks the social evils of his time, or questions the soundness or efficacy of conventional morals, or runs athwart the prejudices or schemes of rich donors of university funds, he runs the risk of jeopardizing both his professorship and his reputation. Only a strong man, or one financially independent, may ordinarily venture to take the risk; and university professors know only too well the devices, some open and some tortuous, by which punishment may be meted out. I have no confidence that the evils of this situation, constantly growing as our universities come to lean more and more upon the state or upon large personal or corporate wealth, will be cured by mere publicity. The report of the American Association of University Professors in the case of the University of Utah ought to convince any one that the Association will proceed, in any matter of the kind, with painstaking care and judicial impartiality; but neither the existence of the Association nor the knowledge that it was investigating this particular matter appears to have weighed with the trustees of the University of Pennsylvania. Something more than words will be needed before the American professor is free.

I have mentioned only three of the fundamental rights which the professorial class in this country ought to enjoy in full measure, but which they now enjoy either very imperfectly or not at all. What can the American Association of University Professors do to bring these rights to realization?

For one thing, the Association can institute a searching inquiry into the status of the professor in American colleges and universities: the conditions of appointment and promotion, the tenure of office, the services required or expected, and the organization or discipline of faculties, departments, or schools. A properly constituted committee, with a comparatively small sum of money at its disposal for secretarial purposes, could prepare such a report in a year. Secondly, the Association can make a similar investigation of professorial salaries, not only with reference to the amounts paid to members of different grades, but also with regard to the relative salary lists of departments or schools, and the relation of the salary list to other items of university expenditure. With these two reports before it, the Association would be in a position to consider the whole subject of professorial organization and pay. Incidentally, the ease or difficulty with which the information called for under these two heads was obtained would be a suggestive intimation of the attitude which university executives are likely to take towards the Association and its work.

Lastly, the Association can draw up a code of professorial ethics. The most powerful labor union in the world—the medical profession—has long had an ethical code to which not only its own members, but pretty much the whole community as well, must bend; and there is need of one for professors. Pending the adoption of a code, the members of the Association can pledge themselves to take up, through the machinery of the organization, every case of dismissal in which it is asserted that professorial rights or academic freedom are involved; and in the event that such dismissal shall be found, upon full investigation, to have been without proper justification, to refuse to accept for themselves, or to recommend for any colleague, an appointment to the vacant chair, or to give further professional recognition to any one who shall accept such appointment, until assurance is forthcoming that the rights of professors in the institution in question will henceforth be respected. So long as men or women, otherwise of respectable standing in their profession, are willing not only to accept, but actually to seek, appointments regardless of the way in which the vacancy has been brought about, so long will professors as a class be held in light esteem.

American colleges and universities are everywhere struggling to-day with the problem of executive usurpation. The arbitrary conduct of presidents and governing boards is a perennial topic of conversation in every academic circle, and now and then the public overhears snatches of the tawdry tale. I venture to think that executive usurpation, pervasive and baneful as it often is, is more the fault of faculties than it is of presidents. One who is called upon to lead a loosely aggregated crowd rather than an organized and disciplined army must needs rule arbitrarily, if the enterprise is not to go to pieces on his hands. We of the professoriate, however exalted the plane on which we may conceive of our work, are without organization, without discipline, without professional solidarity; and we are led when we ought to lead. It is for the American Association of University Professors, if it will, to put the slumbering giant upon his feet and set him at his task.

The National Institute of Arts and Letters

THE SEVENTH ANNUAL JOINT MEETING OF THE INSTITUTE AND THE ACADEMY.

The National Institute of Arts and Letters and the American Academy of Arts and Letters held their seventh annual joint meeting in Jordan Hall, Boston, on November 18 and 19. About fifty members of the Institute—of whom perhaps twenty were Academicians—attended the sessions. The Institute, limited to two hundred and fifty members, comprehends the Academy, a body of fifty men chosen as the most distinguished in the departments of literature, art, and music.

Mr. Howells, president of the Academy, who it had been expected would occupy the chair at the first session, was unable to be present; Professor William M. Sloane, chancellor of the Academy, took his place. First on the programme was an address by Mr. Brooks Adams on "The Revolt of Democracy Against Standards of Duty." Mr. Adams put forward his views with diffidence; he felt that in convictions he was so sundered from the mass of the people of this country as to invite by the expression of his ideas either censure or derision. He would not have obtruded them upon the public; but having been asked by the committee of the Institute to prepare a paper, he had deemed it his duty to respond. In brilliant and trenchant fashion he attacked what he conceived to be American ideals of democracy. He found in the German system of compulsory military service the truest democracy, and denied that it was a system foisted upon an unwilling nation by a tyrannical junker class; rather it was the cheerfully assumed obligation of the entire people, who had been educated for it by the Seven Years' War. A nation that abhorred universal military service had set its face in the wrong direction. The men of our nation should be willing to bear the burden of a man, just as the women had once been willing to bear the burden of a woman—though apparently they were so no longer. Mr. Adams earnestly asserted that American ideals of democracy tend to establish the habit of supreme selfishness in both men and women.

In striking contrast to Mr. Adams's address was that of Mr. William Allen White, the next speaker. Mr. White eulogized the course that American democracy was taking as enthusiastically as Mr. Adams had decried it. His treatment of his subject, "The Country Newspaper," was so unfettered as to allow for the expression of his tolerant and optimistic philosophy. In contemporary American life he saw the old fairy tales becoming again new: Cinderella the factory girl is finding her fairy prince now in the whole world; Sindbad is being relieved almost daily of some one of his burdens—the twelve-hour day is vanishing into the limbo of an evil past; leisure and recreation are, under the magic wand of democracy, ceasing to be the privilege of a few, and are becoming the inheritance of all.

Mr. Paul W. Bartlett had taken for his subject "An American Mania as Seen by a Foreigner." The mania in question proved to be that for portrait sculpture. The theme of the witty dialogue which Mr. Bartlett rendered as having passed between himself and a royal art commissioner from Europe was the distressing quality of our sculptural decorations. Mr. Bartlett castigated the trousered enormities of park and market-place, the artists who created them, and the public that accepted and retained them. He deplored the practice of riveting them to their pedestals by solemn and public ceremonies. A community seldom had the courage to rid itself of a statue, however atrocious, that had once furnished the occasion for one of these semi-religious dedicatory rites. Mr. Adams's stimulating pessimism, Mr. White's humorous optimism, and Mr. Bartlett's denunciatory picturesqueness made certainly a well-balanced entertainment, to which the reading by Mr. Robert Underwood Johnson of two highly uncutral war poems by Dr. Henry van Dyke provided an effective climax.

In the afternoon a concert of compositions by members of the Institute was given by the Boston String Quartet, with Mr. Charles Bennett as soloist. The composers represented in the programme were Mr. Charles M. Loeffler, with "Lyrisches Kammermusikstück in F Major for Strings"; Mr. David Stanley Smith, with four songs; Mr. Howard Brockway, with three selections; Mr. George W. Chadwick, Mr. Frederick S. Converse, Mr. Arthur Foote, and Mr. Edgar Stillman Kelley, all with songs; and Mr. Henry Hadley with "Quintet in A Minor for Pianoforte and Strings."

On Thursday evening, November 18, the annual dinner was held at the Harvard Club, and the following were elected to membership in the Institute: In the department of literature, Mr. Gamaliel Bradford, Mr. Charles R. Miller, Hon. Elihu Root, Mr. Ellery Sedgwick, and Mr. Henry Osborn Taylor; in the department of art, Mr. Robert I. Aitken, Mr. Ralph Adams Cram, Mr. Bertram G. Goodhue, Mr. James Earle Fraser, and Mr. Breck Trowbridge; in the department of music, Mr. Arne Oldberg and Mr. Ernest R. Kroeger. At the annual meeting of the Academy, held the same day, Judge Robert Grant, Mr. J. Alden Weir, Mr. William Gillette, Hon. George L. Rives, Mr. Frederick Macmonnies, and Mr. Paul Elmer More were elected to membership.

At the session on Friday morning, November 19, Mr. Edwin Howland Blashfield, president of the Institute, presided. Mr. Arnold W. Brunner read an epigrammatic and entertaining paper entitled "Architecture and the Man." He expressed the opinion that people underestimate the influence that their background, their scenery, exert on them. The influence of such a street as Broadway, for example, is necessarily vicious. It is a street that is, architecturally speaking, in the mob state. How can men and women in such surroundings be expected to "fill the unforgiving minute with sixty seconds' worth of distance run"? And Broadway cannot be excused on the ground that it is picturesque. The picturesque results from the happy collaboration of time and chance.

President Nicholas Murray Butler read a paper on "Discipline and the Social Aim in Education." His ideas of American democracy might seem to lie midway between those of Mr. Adams and Mr. White. He believed that the difficulties of democracy are the opportunities of education. He also believed that the service and the sacrifice which are the result of self-imposed limitation are worth many times the service and the sacrifice that are directed by prescription and compulsion.

Mr. Percy MacKaye read a short poem, "Federation," in which he declared the belief that out of the war a federation of world-wide democracy would emerge.

Mr. Hamlin Garland read Mr. Brand Whitlock's paper, "The American Quality in American Literature," a paper most striking perhaps by reason of the power of detachment it suggested on the part of the author. It seemed extraordinary that the Minister to Belgium could have found time or inclination in the midst of the harrowing sights he has seen and the harassing labors that he has so well performed to compose a thoughtful and finished essay of purely literary character. His tribute to Mr. Howells as the man who "gave the first impulse towards a native and indigenous fiction" was, as it proved, a happy touch; for immediately after the reading of his paper the announcement of the conferring of the gold medal of the Institute for fiction upon Mr. Howells was made by Mr. Mabie. Mr. Ripley Hitchcock, secretary of the Institute, read a letter from Mr. Howells, in which he wrote: "A rumor of one of the good things which seem too good to be true has come to me with such insistence that I must take it for fact," and after expressing his appreciation of the honor done him he added, "I have been writing novels now for nearly fifty years, and I have outlived nearly every contemporary who might have outrivalled me in the competition. If this triumph of longevity has its inevitable sadness, I hoped that there might be some touch of the kindness which sweetens the acclaim of his arrival to the man who is out of the running."

So closed a truly noteworthy meeting.

ARTHUR STANWOOD PIER.

Correspondence.

DR. LEPSIUS AND THE ARMENIANS.

TO THE EDITOR OF THE NATION:

SIR: In his communication concerning the possible fate of Armenia in the *Nation* for November 4, the Archbishop of Dioclea falls into an error of fact from which a misleading inference is drawn. Dr. Johannes Lepsius (son of the famous Egyptologist) is a man of brilliant parts, but he was decidedly not a "court preacher," but pastor in the little town of Friesdorf, near the Harz Mountains, when in 1896 he published his flaming appeal in behalf of the Armenian Christians: "Armenien und Europa, eine Anklageschrift" (it soon appeared also in English and French versions). In 1897 Lepsius asked for a leave of absence from his pastoral charge for a term of six months, in order to devote himself entirely to the cause of the Armenians. When this request was denied he resigned his pastorate. He was now able to continue his work for the Armenians unhindered; and he pursued it with much vigor and no little success. One of the fruits of the agitation in behalf of the Armenian widows and orphans, led chiefly by Lepsius and Pastor Lohmann, was the establishment of the German Orient Mission. After a time Lohmann brought the German work in Armenia under the direction of the American Board, while Lepsius continued the work of the Orient Mission elsewhere in the East as a mission among the Mohammedans.

That upon his first espousing the cause of

the Armenians in Berlin the Kaiser "promptly discharged him from his office" (of court preacher!) is indeed a strange fancy. It may be that the superior ecclesiastical authorities were moved to deny Lepsius his request by the fear that to grant him a furlough for this specific purpose would be interpreted as giving governmental sanction to an agitation that must inevitably involve criticism of another Government, and so might naturally lead to international misunderstandings. If such was the motive we must deplore it. But it is clearly desirable that we should not be led, by a flagrant misapprehension of the facts, to entertain a grossly exaggerated notion of the relative degree of the guilt of *one* of the Christian nations, which, as passive witnesses of the unspeakable tragedy, are all essentially one in the guilt and the shame.

J. R. Van Pelt.

Mount Vernon, Ia., November 10.

SIMONIDES TO BELGIUM.

To the Editor of The Nation:

Sir: The epigrams, written by Simonides in the fifth century before Christ about the Greeks who died for their country in the Persian wars fit so peculiarly the heroes of Belgium that I have made an arrangement and translation of some of them—for the Belgians. I have kept the metres of the Greek to emphasize, by contrast with the old form, the new meaning.

A VISION.

One startled night, I saw Simonides
Rise from the dark, a great and angust shade,
And as I waited, breathless, half afraid,
On tablets gold he wrote such words as these:

I.

Champions here for the world, the Belgians held this fortress.
Gold-bearing Huns they stayed. Lasting shall be their renown.

II.

Stranger, announce to the British that here we fell on our borders,
True to neutrality's law,—no open road to their foes.

III.

Deathless the glory these men have won for their country forever.
Heavy about themselves death's black cloud they wrapped.
Yet, though dead, they live, for Valor, doing them honor,
Leads them back from the grave, Hades' abhorred abode.

IV.

If to die bravely is called the greatest portion of valor,
Then to us beyond all, Fortune has granted this boon.
Hastening were we to keep for Belgium the right of her freedom.
Fallen, we yet have won deathless praise among men.

V.

Due to the valor of Belgians was it the smoke curled not upward,
Eddying black to the sky, rising from Paris in flames.
They wished only one thing, to leave as a gift to their children
Belgium safe and free,—death in the front for themselves.

VI.

You, Monarch, living, still are alive far less than the men you slaughtered.

Sad was his mien, but bright his eyes.
I read and wept. In stern surprise,
He chanted as he went away
Another lasting, solemn lay:

VII.

Glorious the fate and fair the fame of these men.
Their tomb is an altar, not tears, but fame is for them—and compassion!

Elizabeth Hazelton Haight.

Vassar College, September 6.

PAUL HERVIEU.

To the Editor of The Nation:

Sir: With the death of Hervieu the French drama loses its chief representative in the domain of high tragedy. An artist in sentiment and expression, a rigorous logician in technique, a moralist in his penetration of the destiny of character, this writer, better than any other modern, recalls the tragic elevation of Corneille and Racine. He has especially voiced two underlying conflicts: the conflict of man-made laws with individual passion, of character in the clutch of circumstance.

Born in 1857, Hervieu was a schoolboy at the time of the Franco-Prussian War, an advocate for a brief space of time, a journalist and novelist during the 'eighties and early 'nineties. Among his best-known novels are: "L'Inconnu" (1887), "Peints par Eux-mêmes" (1894), and "L'Armature" (1895). The first is a fantastic humorsome sketch of insanity, remarkable mainly for its psychological delving into dreams. The second depicts the adventurous and material struggles of various unengaging types, whose letters radiate from a country house. "L'Armature," more dramatic, has been turned into a play by M. Brieux.

In these and other similar stories, Hervieu does not appear at his best. Besides evincing the faults of his generation, the preoccupation with the ignoble, the addiction to a certain perverse hardness, he scarcely shows the broad sustained power of the true novelist. It is in his dramas that he sounds a higher and clearer note.

His first play of consequence was "Les Paroles restent" (1892). This concerns an officer who has carelessly slandered a young woman, who later wishes to marry her, and makes the *amende honorable* by a duel and his death. The treatment, which has romantic touches, is not tragic throughout, but a strong and painful scene, of a novel sort, is that in which the officer confesses to the girl at once his slander and his love. His wound proves dangerous only because of a revival of the gossip which he has started; this makes a *dénouement* which, if not inevitable, is at least in accord with the exigencies of the theme and with poetic justice.

"Les Tenailles" (1895), more tensely tragic and far better known, opens the series of Hervieu's problem-plays. It is the first drama to stage the conflict between law and the individual. It deals with a disunited married couple, of whom the wife is wilful and passionate, the husband as tenaciously logical and grimly unsympathetic as the doctor in Lavedan's "Duel." The "pincers" of matrimony are applied by the husband to grip the wife when she wishes to divorce and remarry; they are applied by the wife to grip the husband when, after ten years, she makes him continue to sustain the burden of herself and of her child by the former lover. In each case, the too moderate divorce-laws, as Hervieu considers them, operate not for freedom, but to compel the bearing of the yoke. The characters are excellently studied, here and elsewhere, the "seeds" anticipating the main events are carefully planted, and the Egoism of Barrès and the Nietzschean 'nineties is clearly indicated.

The dramatic swing of the pendulum and the injustice of the Code are again features of "La Loi de l'homme" (1897). The thesis is that "man's law" is unjust in two respects: it is difficult for a woman to obtain legal proof of her husband's infidelity, and it is hard that her control of her daughter's marriage should be subordinated to that of the father. The conclusion is that the older generation, as frequently with this author, must be sacrificed to the younger. It is the first play in which Hervieu shows himself clearly feminist. "L'Enigme" (1901) presents the rigor of a mathematical puzzle. It is a question of determining, almost by the methods of a detective-story, which of two women has taken a certain lover, and the audience is kept in the dark as well as the actors. In both of these plays the characters tend to become simple exponents of the problem or pawns in the game.

It is far otherwise in "La Course du flambeau" (1901), which is probably Hervieu's masterpiece. Here the main characters are profoundly analyzed and revealed, the struggles of mother-love are universalized in the manner of the greatest classical tragedy, and there is straightforward, exact measuring of the means to the end. The title suggests the theme, which is that love and sacrifice descend through the generations. Of the three women concerned, Mme. Fontenais, the grandmother, will be devoted to her daughter, Sabine Revel, who for *her* daughter, Marie-Louise, will immolate everything, including Mme. Fontenais and herself. This motive of sacrifice is sounded constantly through the play, thus recalling the martyrdom stories of Balzac and the cumulative blows of Dumas *fils*, whose influence also seems responsible for a too evident arrangement of the minor characters around the same theme, and for certain speeches of a *raisonneur*. But this excess of demonstration hampers only the first act, after which the movement is natural, concentrated, inevitable. Sabine successively loses, for her daughter's sake, an opportunity for remarriage, her self-respect, and her own mother. She sends away her American suitor rather than compromise the fortune of Marie-Louise. But the latter immediately marries, and, as a result of her husband's difficulties, she instigates Sabine to write to the American, imploring aid. The next sacrifice, vainly attempted, is where Sabine forges the name of Mme. Fontenais, in order to realize on bonds. Finally, for the health of Marie-Louise, Sabine drags the old lady to an altitude which is dangerous for her heart. The grandmother dies, the daughter leaves her mother, and the latter is left alone.

Each step in this poignant drama seems necessitated. It is as cruel and keen as nature, whose processes it depicts as inexorable and unlovely. The money-question introduces the modern note, but the ancient sense of doom still pervades the play. It is the most impressive, the widest in appeal that the author has written. It has already been twice revived, with Mme. Réjane still in the leading rôle.

In "Thérolgne de Méricourt" (1902), written for Sarah Bernhardt's theatre, Hervieu achieved success in a field not peculiarly his own—the large historical "machine," inaugurated by the Romanticists, and recently represented by Mendès and Rostand. In "Le Dédale" (1903), our author returns to the triangle and to the hard situation of French women in the matter of divorce. A woman, divorcée for adequate reasons, remarries and is then attracted back to her former hus-

band. As in "Les Tenailles," the child again appears as a great influence, and finally as the solving feature for the heroine. As for the men, they perish by the will and strength of the second husband. We have not only the legal, but also the Catholic view of divorce as personified respectively in the father and the mother of the woman. The former allows remarriage—but not with the first husband. The latter regards marriage as indissoluble, and so condones Marianne's return to her first husband, whom she should never have left. Marianne appears as a new Phèdre, jealous and passionate. The *dénouement* through the death of the men has been criticised, but seems indicated in that Marianne could never live satisfactorily with either husband, and is left with the love of her child.

Subsequent plays are "Le Réveil" (1905), "Modestie" (1909), "Connais-toi" (1909), and "Bagatelle" (1912). Of these, "Connais-toi" may be selected for especial mention. It is interesting as showing how a psychological crisis may still be capably handled within the limits of the three unities. It develops a theme already used in "Le Réveil"—the unknown and dormant depths of character revealed under stress. A severe, uncompromising general urges a friend to use vigorous measures towards an unfaithful wife. When it is discovered that the corespondent is the son of the general himself, the latter slackens in his zeal. He abandons altogether his severe attitude on the discovery that his own wife, repelled by his harshness, has been listening to the wooing of a better man. Thus Hervieu, who stands for a logical rigor derived from Henry Becque and Dumas *fils*, exhibits towards the end a more philosophic charity and a mellower dramatic touch.

His style went through the opposite process. Obscure and affected in the novels and the earlier plays, it struggles forth towards a clearer expression, a closer relation with dramatic necessities in his best work. Still, there remain traces of difficulty, especially in the first acts, and of an over-literary, flowery tendency, like that of Lavedan. But in the strongest portions of his theatre, the language becomes simply the algebra of a direct mathematical demonstration. "The play's the thing." Yet his prose generally maintains a classic elegance in precision and an effect of elevated harmony.

His main idea is that society and individuals are tainted with grievous failings which laws can scarcely remedy. In the operations of the latter so much hard injustice is wrought, paticularly on women, that human motives seem preferable to their correctives. Consequently, Hervieu is not a social propagandist or apostle of the type of Brieux. He is interested rather in individuals, he is a feminist and an aristocrat. Rarely pathetic on his own account, he yet apparently commiserates, like Racine, the plight of his tempest-driven heroines. Their hope, their future, is bound up more with children than with husbands, and this solution is emphasized in at least four plays.

He conceives each small group of people as fatally gripped together ("Les Tenailles"), as squeezed inexorably in a vise, according to Faguet's figure, or as drifting, at daggers' ends, on a raft that is headed for destruction. It is true that Fatality is represented with a countenance of more concentrated grimness than she ordinarily wears.

Hervieu is certainly a very distinguished dramatist. The *pièce rosse*, the deliberate indulgence in cynicism, is absent from his system; he knows better than to limelight high tragedy with the knowing leer of the *boulevardier*. He is distinguished in the refinement of his language, the breeding of his characters, the delicacy of his analysis and sentiment. Ironic rather than tender, philosophical rather than social, aloof from the grosser discords, he has slowly elaborated this series of painfully powerful tragedies, depicting in classical form the ultra-modern conflicts of the One and the Many, beauty and the beast, the law and the lady.

IS WAR EVER JUSTIFIED?

Evolution and the War. By P. Chalmers Mitchell. New York: Dutton & Co. $1 net.

The World Crisis and Its Meaning. By Felix Adler. New York: D. Appleton & Co. $1.50 net.

The International Crisis in Its Ethical and Psychological Aspects. Lectures by Various Writers. London: Oxford University Press. 3s. 6d. net.

The Soul of Germany. By Thomas F. A. Smith. New York: George H. Doran Co. $1.25 net.

The War and After. By Sir Oliver Lodge. London: Methuen. 1 shilling net.

The War and Its Issues. By John Oman. New York: G. P. Putnam's Sons. 90 cents net.

The first books on the war—written at the beginning of the great struggle—concerned themselves almost exclusively with its immediate causes and with the question where the direct responsibility for it lay. We were all so dazed by the suddenness of the catastrophe that most of us could only ask whom to blame; and those who found it possible to write were too busy answering our questions to have any leisure for philosophic reflection upon the broader aspects of the problem. The last year and a quarter, however, has brought opportunity for thought; and the books now appearing upon the war are coming to view the question in its wider relationships. Of the six books under review, not one deals with the immediate causes of the struggle.

The title which Dr. Chalmers Mitchell has chosen for his book would be more descriptive had he left out the article; for it is war in general and its relation to the Darwinian theory that he discusses. Dr. Mitchell is a zoölogist of note, as well as a patriotic Briton, and it is in both capacities that he feels moved to challenge the view of German militarists (and of many other militarists nearer home) that war is a fundamental law of nature, and that (in Bernhardi's words) "this great verity has been convincingly demonstrated in modern times by Charles Darwin." Writing as "a hard-shell Darwinian evolutionist," Dr. Mitchell analyzes this attempt, so popular to-day, to justify war by biology, and concludes that it is quite unscientific. By the "struggle for existence," Darwin did not mean chiefly the violent kind of contest which the popular militaristic view seeks to justify, but rather competition in adjustment to environment. Nor is it scientific to speak of modern nations as if they were "units of the same order as the units of the animal and vegetable kingdom from which the law of struggle for existence is a supposed inference." Darwin's "struggle for existence" takes place chiefly *within* species and among individuals; and the nations of Europe are not even biological divisions of the human race. Modern war, in short, is so different in every way from the struggle which Darwinism finds in Nature that the two things have little but a name in common; and to seek to justify one of them by the other is a cheap and flimsy piece of argument from analogy.

If Dr. Mitchell dips below the surface, Dr. Adler's work is fundamental. In fact, the advertisement on the cover of "The World Crisis and Its Meaning" says: "This volume is not a war book, but primarily a work on social ethics." While this is true, the chief interest of the book for most of its readers will lie in the large way in which its author treats the fundamental questions involved in the war. Essentially the volume *is* a war book, and one of the right kind, though very different in nature from most books on the war. Things like the ultimatum of Austria, the mobilization of Russia, the violation of Belgian neutrality, the author tells us, bulk too large in our view, "and we forget or relegate to a secondary place the really most vital question of all, namely, What blame ought to attach to *all* the belligerents, to those who in this immediate contest have the larger measure of justice on their side, and to those who have not? —the question, *What is wrong in our civilization as a whole?* What deep flaw penetrates it to its core? What is the radical cause that has led to this universal strife?"

This radical cause is not to be found in particular acts of men or governments, nor even in the militarism of Germany or of Europe. Far behind militarism and explaining it is the selfish blindness of nationalism and individualism, which are unable and unwilling to take any point of view but their own or to recognize the importance of other people's values. "We are witnessing a vast struggle of the types of civilization with one another, each claiming superlative and exclusive values for itself, and therefore intolerant of the existence and claims of the others. Each of the great stocks that are at war is fighting for its supremacy in the belief that on its supremacy depends the existence of the mental pattern which it cherishes above all else—above peace, above pecuniary prosperity, above the millions who are sacrificed in the conflict." "And yet it is so plain that no one type of civilization as yet achieved by any of the nations of the world is perfect or exclusive. They not

only can, and should, exist side by side, but each requires the others to supplement its defects." "We have dwelt too long upon the cosmopolitan ideal of the likeness subsisting underneath the differences that distinguish men from one another. We must insist, as we have never yet done, on respect for the differences themselves, on the right of men and of nations to be unlike ourselves, on our obligation not only to tolerate, but to welcome the differences, recognizing their fruitful interdependence and seeking to achieve their eventual harmony. This is the new conception of human brotherhood, without which war and the preparation for war will not cease."

The strong nations of the world have been doing everything they could during the years of peace preceding this war to make this necessary tolerance of differences hard if not impossible. They have vied with one another in intolerance, as may be seen in their treatment of the "lower races." And it is merely the spirit of the "white man's burden" that has now transferred the struggle for dominance to Europe itself. There is little hope for international justice among the strong unless there be established international justice as between the strong and the weak. "The sinister spirit of aggression on the part of the strong against the weak" is the poison that has permeated our whole system of international relations, and there can be no change for the better until the poison is driven out.

How may the war spirit, resting upon such deep-lying foundations, be attacked? Dr. Adler has several suggestions to make. As more superficial remedies he proposes an international conference, whenever peace seems endangered, to be made up not only of representatives of the governments, but "of representatives of the laboring class, of the manufacturing class, of the chambers of commerce, of the agriculturists, of the universities, of each country—say, two for each of the groups mentioned within each nation." This would give some opportunity for the two peoples to come better to understand each other's points of view. Some kind of international law-making body is also advocated, consisting of representatives of the peoples. But the fundamental evil, of course, cannot be rooted out by any sort of mechanism. It lies in the heart of man, and there it must be met and dealt with. Only the substitution of a far-reaching *goodwill* for the present provincial selfishness can bring about the permanent peace that we long for.

"The International Crisis in Its Ethical and Psychological Aspects" has for its subtitle "Lectures Delivered in February and March, 1915, by Eleanor M. Sidgwick, Gilbert Murray, A. C. Bradley, L. P. Jacks, G. F. Stout, B. Bosanquet, under the scheme for Imperial Studies in the University of London, at Bedford College for Women." The brilliant galaxy of authors here brought together makes the reader approach the book with much the same feelings of keen anticipation with which the theatre-goer takes a ticket for an "all-star performance." The result, however, is somewhat disappointing. The first of the authors begins her lecture by confessing that she is entirely without such special knowledge on anything connected with her subject as would enable her to speak about it with authority, and although most of the six authors are distinguished in the field of ethics or in that of psychology, few of them seem to have anything original to contribute on the Ethical and Psychological Aspects of the War. That does not mean that the papers lack interest, as readers of the *Atlantic* can testify; for two of them have appeared in that periodical, namely, Gilbert Murray's "Herd Instinct and the War," and L. P. Jacks's "The Changing Mind of a Nation at War." And nearly all the papers show that unwillingness to exaggerate the virtues of one's own nation, and that calmly objective view and earnest desire to be fair in judging one's adversary, which are distinctively English. Mr. Bradley and Mr. Bosanquet both go out of their way to defend German philosophy against the attacks that have been made upon it by those English, French, and American writers who have suddenly discovered that there never has been and never can possibly be anything good in Germany. And Professor Stout devotes his lecture (which is easily the best of the six) to a very able analysis of the precept, "Love your enemies." Is it ethically wrong to hate the enemies of one's country? asks the Professor. And his answer is emphatically in the affirmative. Hatred is evil, but it must be carefully distinguished from just resentment or righteous indignation. It is evil "inasmuch as it is blind, inasmuch as it perpetuates at a higher level the original blind and undiscriminating character of the primitive emotion of animal anger. . . . It blinds us to the fact that the essential good of man is to be sought in union with his fellowman and impels us to maintain disunion with them and to seek our highest good in hurting and destroying them." It is true that Germany has been blinded in just this way. "But if this is taken to imply that the German people is much worse by nature in this respect than other peoples, I must disagree. I doubt whether under like historical conditions any people would have done better." This sentence is typical of the author's openmindedness; and throughout the lecture Professor Stout tries to make his hearers see the German point of view, and, while not lessening their grim determination to "see the thing through to the end," urges upon them the avoidance of that determination to be blind to all possible virtues in one's adversary which is the essence of hatred.

A very different type of book is Dr. Smith's "The Soul of Germany." Its aim, in fact, may be said to be the very reverse of Professor Stout's. Dr. Smith lived for twelve years in Germany as instructor in gymnasium and university, and during all that time apparently failed to find a single redeeming feature in the German character. German homes are uncomfortable, ill-aired, and inhospitable. "Although the writer is a sincere admirer of Germany's splendid system of schools," he has hardly a good word to say for them. He singles out, instead, all their unfortunate and un-English (and hence ridiculous) aspects, to tickle the palates of his fellow-countrymen. Much the same is true of his chapter on German Universities—whose sub-heading is High-Schools of Kultur and Brutality. "Germans," he assures us, "are naturally quarrelsome." The German state makes it impossible for any of them to be gentlemen. German social life is "hollow, unsatisfactory, and lonely." Every-day intercourse in the Fatherland is lacking in true feeling, and is characterized by "superficiality, mistrust, and hard-heartedness." Germans are not even "sentimental"—for "officialdom, militarism, and intellectualism, as well as financial prosperity, have all done their part in restraining the growth or in obliterating the finer feelings." The Germans are notably lacking in sympathy, chivalry, and gratitude. In fact, "the only virtues which could be unreservedly ascribed to the German are obedience and thrift." "In summing up Germans are characterized by unbounded vanity, love of secrecy, morbid sensitiveness, envy, absence of consideration for others, a strong tendency to revert to the ape and tiger; Germans lack true sentiment and affection, but have a remarkable inclination to reckless brutal self-assertion."

It may be desirable from military considerations to lash the British lion into fury; but it is hard to conceive how a book like "The Soul of Germany" can do anything but harm. One can only hope that its readers will be few, and that those few will refuse to be prodded into the very attitude of blind hate which they are urged to despise in their enemies.

Sir Oliver Lodge's "The War and After" is characteristic of the man. Having cleared up for us most questions of science, philosophy, and religion, of this world and the next, he now enlightens his readers on every aspect of the present war that he can think of, whether it be historical, political, social, economic, ethical, or religious. Most of his book is merely a rehash of what has been said much better by various previous writers—from whom he quotes extensively. But it would be unfair to Sir Oliver to imply that he *merely* reproduces other people's opinions; for he is a thinker as well as a wide reader, and has views of his own. Among other subjects, he has views on a question that has occupied several of the other writers whose books are under review—namely, the proper mental attitude towards the enemies of one's country. Non-resistance, he reminds us, is not the only lesson taught by Christianity. "When there was a revolt in Heaven, orthodox people are given to understand that it was put down by suitable means, by contest and violence, in other words, by war. It was not tolerated nor treated leniently. . . . When a nation has behaved as the German nation

has behaved we are justified in sharing with the Highest a blaze of righteous anger, and we are summoned to the activities which accompany such anger." We should indeed love our enemies. But "to love people as ourselves does not mean to be uncritical towards them or to refrain from blaming or punishing them. But it does mean trying to understand, to see their point of view, to rejoice at any spark of good and of honorable conduct which may be detected. In so far as there are none such—approbation and affection would be utterly misplaced." A conclusion which in theory seems to agree with Professor Stout, and in fact with Dr. Smith.

To love your enemies is in practice a difficult matter; and to adjust and, if possible, to harmonize the claims of Christianity and patriotism is not easy, even in theory. No one has seen more clearly into the real difficulties of the situation than Mr. John Oman; and in no book that has come under the reviewer's notice have the relations between these seemingly rival loyalties been better stated than in Mr. Oman's "The War and Its Issues." How far the real problem is from coming home to the average ecclesiastic is indicated in one of the early pages: "If one were to judge by such outward manifestations as the tone of the religious press, resolutions at ecclesiastical gatherings, sermons on the war, occasional deliverances of persons prominent in the religious world, and by the frequency with which in private gatherings the religious official is the most belligerent person present, no kind of problem exists for the religious mind to solve. To defend the political justice of our cause, not without satisfaction that a good thousand years of Christianity have passed over our enemies in vain, would appear to be the sole religious task. And the sounder the orthodoxy the less the sense of any possibility of conflict between war and Christianity or any sense that the causes of the war may be deeper than politics and be in the idolatry of riches and pleasure, and private disregard to obligations, and blindness to the claims of poverty and need."

A man to whom the whole matter has seemed, from the beginning, perfectly simple, and who has never been perplexed over the moral aspect of the war, may be sure that he has never squarely faced the problem. For on the one hand, no one can doubt that the war presents tremendous moral issues; and if a man's Christianity prevent him from taking any part in it or lending all his forces to the cause he considers the righteous cause, that man's Christianity is unimportant and insignificant in the moral world. Yet on the other hand, Mr. Oman insists, the whole of Christian teaching is opposed to the *spirit* of violence; and neither the solution of the problem quoted above from Sir Oliver Lodge nor that of Professor Stout is fully satisfactory. "The matter does not end with precepts, which might have their justification in the occasion, so that, while they might be absolute as against personal rancour, they might not be absolute as against moral indignation; or, while they might be absolute against personal injury, they might not apply to the oppression of others or to public resistance to an act which wrongs humanity. A more general and a more impressive consideration springs from the nature of the kingdom of God as righteousness and peace and joy in the Holy Ghost. Such a combination of righteousness and peace and joy in spiritual blessings is presented as possible, precisely because their security is not by might nor by power, but by God's Spirit, because the strong thing in the world in the end is not violence, but the sacrifice and service of love." "How is our kindly nature changed!" Many of us have known the Germans as generous and warm-hearted friends, "yet in these days we hear with ever-diminishing pain that two thousand of them have gone to the bottom or that their casualties are to be numbered in millions. Can a strife which breeds in us such a temper be rightly regarded with anything except detestation and horror?"

The question at issue is too complex for any simple solution. It involves both one's immediate attitude towards the present struggle and one's relation to the wider considerations. There can be no doubt that it is one's duty to fight for one's country if thoroughly convinced that one's country stands in the large for spiritual freedom, and that only by defending it can one defend that cause from a foe who respects only force. To say this "is not to hold life a light possession or war a small evil, but it is to hold that there are worse evils than war—moral surrenders against which one must contend even to blood, and it may be the blood of others as well as our own."

Such a view is not in contravention to the teachings of Christianity. It embodies their very spirit. The real doctrine of "non-resistance" as Christ meant it is still in force, and from it one may derive at least these four applications for our present guidance: "(1) We should never accept war as eternally necessary. . . . (2) We must never consent to fight merely for a material triumph. . . . (3) We can have no part in any gospel of hate, as if at the present time the Germans were mere fiends in human shape. . . . (4) We should recognize that a peace to be abiding must be established in righteousness and a sense of mutual benefit and good-will." For no victory of arms is ultimate, and the real victory of righteousness cannot come by might or by power, but only by the spread of the spirit of love. When thus regarded, the present war—and, in fact, war in general—will be seen to be, not an isolated fact, but merely a simple expression of a larger evil. The important struggle is not between Germany and England, nor even between militarism and pacifism, but ultimately between the material and the spiritual. And this struggle goes on within each of the countries now at war, and through all the years of peace, as well as in war time. "All who live for position, money, or any kind of material power, are involved in the tyranny of immoral force as much as if they were fighting in an unjust and predatory war."

The ultimate solution of our problem demands, moreover, that the State shall be regarded as subordinate to the welfare of humanity, and that our first loyalty should be not to it, but to mankind. This does not mean that the state must cease to exist, but that it "must find itself by losing itself in a higher fellowship and in serving a larger purpose than its own, and upon that subjection all its security as an organization for justice and freedom depends."

In short, "a Christian is a member of a society which represents the kingdom of God. That, at least, means a rule not established by force, and a peace victory in war cannot give nor defeat take away. And he belongs to it by faith, which means he has rejoiced to see for himself that to the methods of the kingdom of God all might ultimately belongs. This society he finds wheresoever two or three of any nationality are met in Christ's name. To meet in His name means to believe in the powers in which He believed and to use them by the service of love He rendered."

CURRENT FICTION.

The Path of Life. By Stijn Streuvels. Translated from the West-Flemish by Alexander Teixeira de Mattos. New York: Dodd, Mead & Co.

The Later Life. By Louis Couperus. Translated by Alexander Teixeira de Mattos. New York: Dodd, Mead & Co.

It is always a pleasure to take up fresh work by this translator. One may be sure that his material will not be trifling, and that he will have dealt skilfully with it. He has almost uniform success in rendering the atmosphere of exotic literary art without doing violence to English idiom. And he seems to work always with enthusiasm. The two Netherlandish writers whom he here conveys—and, it is not too much to say, interprets—are, to begin with, objects of his admiration. Of "Stijn Streuvels," who first comes before English readers in these tales, his opinion seems, on the evidence, somewhat extravagant. "Stijn Streuvels," he says, "is accepted, not only in Belgium, but also in Holland, as the most distinguished Low-Dutch author of our time; his vogue, indeed, is even greater in the North Netherlands than in the southern kingdom. And I will go further and say that I know no greater living writer of imaginative prose in any land or any language."

The writer who calls himself Stijn Streuvels, and whose real name is Frank Lateur, is a native of West Flanders, that little district of little Belgium marked by such names of present omen as Ostend, Bruges, Dixmude, Ypres, and Courtrai. Within a decade he was a baker in a village near Courtrai. He writes in the West Flemish dialect, the tongue of not more than a million persons, but, according to Mr. de

Mattos, a speech of uncommon richness and power. The tales and sketches here collected are of peasant life, most of them concerned with the sorrows and the hardly less pathetic pleasures of peasant children. Some of the shortest among them, like "In a Squall" and "A Pipe or No Pipe," are especially poignant. Two longer tales, "White Life" and "The End," interpret with grim and unsparing realism certain typical episodes of adult experience. Power is here, not only of keen sight, but of inner vision; though the scope of the group is not sufficient to impress the reader as a larger acquaintance with the author's work has impressed the translator.

"The Later Life" is the second of the four "Books of the Small Souls," the later volumes of which Mr. de Mattos has now in hand. It carries on the family chronicle begun in "Small Souls," which appeared in English something more than a year ago. Couperus also is a recorder of facts, the minute facts which make up the experience of a group of ordinary people. But his minute facts are not set down haphazard, or for their own sake. One may say that the facts of his choice are themselves interpreters of these small souls of our study. And our guide, ruthlessly as he exposes their pettiness, seems to invite us, not to sneer at it, but to muse upon it in all kindness and sympathy. Addie, now a boy of fifteen, remains the strongest figure of the group. That strange wisdom and commonsense which as a child gave him authority over his childlike parents, have grown with his growth. He has saved them from each other; now by merely being what he is, he brings out of each of them, against the strongest temptation towards individual happiness for them both, unexpected elements of strength which in the end save them from themselves. Through the hapless passion of the father for simple little Marianne, and of the mother for the dreamer Brauws, they seem on the way to the fulfilment of their natures. Addie himself consents to his parents' separation; but there he is, and to him, at the moment of crisis, both of them are bound more closely, not by duty (as the conventional situation would have it), but by love, than to anything else in the world or out of it. The translator says that in this book Couperus reverts to an earlier "sensitivist" method which he did not use in "Small Souls" or in the third and fourth novels of the series, "The Twilight of the Souls" and "Dr. Adriaan." We trust the warmer human quality of this chapter may not be traceable to a lapse!

The Proving of Virginia. By Daisy Rhodes Campbell. Boston: The Page Co.

This bright story of college life and after has for theme an idea which has been treated numberless times since Louisa M. Alcott's "An Old-Fashioned Girl"—the conception of a fresh young woman of unsophisticated training thrown into contact with a group of more experienced and worldly-wise young people, but maintaining her unspoiled personality through all vicissitudes, and emerging into well-rounded womanhood at the end. The didacticism of the book is implicit rather than expressed, and lies in the wholesomeness of the principal character, who is drawn with delicacy as well as warmth. If there is a certain commonplaceness about the incidents chosen to depict the development of Virginia Hammond, this but harmonizes with the naturalness of the narrative, and never results in dulness. Half the book is given over to a description of college days—games, dances, and study. It is upon Virginia's emergence that the test to which the title refers comes, in the shape of family losses which make impossible a continuation of the musical study, and which force her to begin playing in public to earn her living. How she pursues her ambition, despite disappointments, hardships, and sundry offers of marriage, how she manages to cultivate social cheerfulness, and disseminate some of it, and how she finally wins her coveted course of study abroad, complete the story. The young men of the novel are without exception priggish, and the older personages, such as the lyceum managers and other folk with whom Virginia comes into contact in her professional work, are mere shadows. But the centre of the stage is always occupied by the group of young girls, and they want neither vitality nor geniality. The victorious career of Virginia, who is not too far idealized to be real, should carry inspiration to almost any youthful reader, and a certain amount of entertainment to adults. The style of the narrative too often lacks due dignity.

The Little Iliad. By Maurice Hewlett. Philadelphia: J. B. Lippincott Co.

Of the details of the plot of Mr. Hewlett's latest book it is unnecessary to speak at length. It is a story of the skilled social fencing that can be carried on in little groups of the European élite when met in one or another of the aristocratic centres of Italy, Switzerland, or Southern France. The personages are chiefly English and German, but nationality plays no part in the narrative. There is a sufficiency of sharp characterization, and this, with the cultivated style which distinguishes all Mr. Hewlett's work, is the chief merit of the book. Helen, or Helena, as she is called, is a young Austrian baroness of sedate but winning type. The Menelaus is a disagreeable and contemptible old satyr, who plays the villain's part in the piece; the Priam is a silly and tiresome fellow; the Hector is far more attractive, but is annoyingly faddish and impulsive. Paris takes the chief place in the action, but for a hero he is a very insipid gentleman. Inasmuch as there is no Hecuba or Andromache, Helena has two extra lovers to her string, and upon it she keeps them all through three hundred pages. Our interest is never keenly enlisted in the fate of any of her suitors, and it is this fact which prevents an unpleasant ending from being intolerably so; for her final marriage is not, as we have been led to expect, with Paris or with Hector, but with Hector's father, old Theseus—and an extraordinarily ill-assorted one it is.

HISTORIC NEW YORK.

Old Roads from the Heart of New York: Journeys To-day by Ways of Yesterday Within Thirty Miles Around the Battery. By Sarah Comstock. New York: G. P. Putnam's Sons. $2.50 net.

Few subjects probably awaken a more fleeting interest in the bosom of the average New Yorker than historic New York. His daily rush along the island in the tube or on the elevated, with eyes glued to the morning paper, endows him with a perfect obliviousness to the past. The preoccupations of the moment render him blissfully indifferent to the early stages of the development he is furthering. His recreations are of a nonchalantly episodic and unpremeditated character. An evening at the musical show, an afternoon at the ball-game, an occasional visit to the theatre probably exhaust his normal relaxations away from the apartment. The country cousin may rouse him to a trip to the museums, the parks, and the zoo. But the chances are that the country cousin will shock him with too minute a knowledge of many points of interest of which he has barely heard.

Yet it is the average New Yorker whom Miss Sarah Comstock apparently addresses. In a light and gossipy style far removed from the business-like brevity of Baedeker she endeavors to lure him towards figures and events of the past connected with many vicinities within thirty miles of the Battery. For example, she directs his footsteps to Morningside Heights to trace the Battle of Harlem Heights. Harlem Heights, by the way, she extends southward only to 110th Street, whereas the district was anciently supposed to reach the present 106th Street. With a light-hearted renunciation of exactness, she places St. Luke's Home for Aged Women "on Broadway, north of 113th Street." It is on the corner of 114th Street. By merely mentioning the memorial window on the staircase landing there, possibly she thinks to pique the native's curiosity. The tablet on the Engineering Building at Columbia University she describes thus: "The flags, swords, muskets, and smoke of battle, and heroic figures, are depicted." Does the fear of the guide-book manner restrain her from pointing out in that bronze picture the fallen Major Andrew Leitch, and the valiant Col. Thomas Knowlton with waving sword encouraging his men? Her love of anecdote should have led her to describe the action fully enough to record Knowlton's words, "I do not value my life if we but get the day." The inclusion would be the more natural as she details the patriotic hospitality of Mrs. Lindley Murray in detaining Howe and his men and the concluding action begun in the

buckwheat field on the present grounds of Barnard College.

With such mingled haste and leisure, she describes Dutch homesteads not far from the beaten path to the Mecca of the average New Yorker—Coney Island. She recites many a tale and legend of Staten Island and New Jersey. She moves on around the circle till she reaches the Sound and turns back to the heart of the metropolis. She unaccountably overlooks some opportunities. She often indulges in copious quotation. Nevertheless, she has put together an inspiriting account of the historical and traditional associations with which Gothamites should be familiar. They have a past rich with romantic personages and heroic deeds. They have outgrown and also forgotten their picturesque development. They too seldom seek out the memorials of an elder age yet lingering to refresh one with their quaintness or the beauty of their surroundings. The hundred illustrations that garnish Miss Comstock's chatty pages, even though they are but indifferent half-tone reproductions of photographs, should entice many to a personal acquaintance with the originals. Two maps clarify her accounts (wherein may be found Paterson, N. J., endowed with two t's). Besides, although hers is in no sense a guidebook such as the one compiled for the City History Club, a group of itineraries makes easy for the enthusiast journeys by trolley or on foot, and an index will enable the curious to scan among her four hundred pages those dwelling on any topic. Even if the volume should prove futile in its aim of drawing forth the inhabitant of Manhattan or Brooklyn from the rush of his daily routine, it may at any rate entice the more leisurely and less preoccupied denizen of Iowa or Texas to inspect on his summer visits the relics at Morristown or explore the haunts of Sleepy Hollow.

ARGENTINA OF TO-DAY.

The Real Argentine: Notes and Impressions of a Year in the Argentine and Uruguay. By J. A. Hammerton. New York: Dodd, Mead & Co. $2.50 net.

It hardly needs to be said that the Argentine Republic is so different from all other Spanish-American countries that it is in a class by itself. Its climate, its vast fertile plains, its agricultural and pastoral possibilities, remind one more of our own Mississippi Valley than any other part of the world. Furthermore, there is no country among our neighbors to the south that can compare with Argentina in quality of population. Peru, Bolivia, and the other Andean republics are permanently handicapped by the great preponderance of native Indian stock. Brazil has too many negroes and too few Europeans in proportion to her size and extent. Argentina alone has a very small percentage of the so-called "backward races of mankind" and a very large percentage of virile European stock. This, in addition to her climate, her soil, and the ease with which her systems of transportation are extended, gives her a tremendous advantage. No other country in the world to-day is more likely to make great advances in the next twenty-five years than Argentina. Since the war began we have begun to purchase her foodstuffs in ever increasing quantities. A few years ago it was said that we could not increase our exports to Argentina because we bought so little from her. Now the reverse is true, and we do not begin to pay for what we import with what we sell her.

Authors and publishers have not been slow in grasping the significance of Argentina's greatness, and more books have been published about that country in the last ten years than about Brazil and Chili combined. Yet most of these books are either compilations of old standard encyclopædic material or tales of casual travellers. It is decidedly refreshing to encounter the present informing and fair-minded volume. Mr. Hammerton has taken advantage of a year's residence in Argentina and the skill acquired in a lifetime of literary effort (particularly in studies of Stevenson) to give us that unusual combination, a travel book of literary merit.

Some of the characterizations are delightful. Those who have been in Buenos Aires will appreciate the author's description of far-heralded, fashionable Palermo as "a great dusty meeting of wide roads." Those who have been disappointed in their first sight of the Southern Cross will agree with his remark that it is "a lop-sided and unimpressive group of four stars." There are a few mistakes. The Brazilian *milreis* is not worth 54 cents (p. 23), but only about half that. Though it is true that the theoretical value of the gold milreis is 54 cents in United States currency, the actual value of the current milreis varies from 22 to 27 cents. The figures given in United States currency for the cost of living in Rio are therefore misleading, and should be reduced by at least 50 per cent. The pictures are excellent and new. Unfortunately, they seldom illustrate the immediate text.

An Englishman, Mr. Hammerton is yet not partial to his countrymen, and is ready to praise admirable qualities in strangers. For instance, he says, regarding modern building construction in Buenos Aires: "It would be impossible to find more inspiring examples of human energy and ingenuity in the face of extraordinary difficulties than in the erection of these great buildings." He praises the temperance of the Argentines, and adds the candid *obiter dictum:* "If ever one saw a face that had been made repulsive by drink, a nose that was reddening with malt, it was invariably the guilty possession of a Britisher." A systematic study of the Argentines has resulted in giving him a real insight into their character. He lays stress on their most admirable trait, strength of the family tie, and that intense feeling of family pride which enables any unfortunate member of a clan to be sure of the immediate sympathy and practical help of his relatives. "What we consider generosity," says the author, "the Argentine brother-in-law regards as a simple duty, and there is hardly a limit to what he will do in the shape of service to the family of his dead brother."

Perhaps the most valuable part of the book is the keen comment on business conditions. Though it is true that the possibilities of the Argentine Republic are colossal, and its power of recuperation after ruined harvests and the destruction of cattle and sheep amazing, Mr. Hammerton finds that enormous sums of money are annually being wasted. It has been very easy to borrow from Europe, and these heavy borrowings have led to general extravagance:

> Right through the Argentine this spirit of borrowing prevails. They are a nation of borrowers; and in all ranks of society—by which is meant the various divisions graded according to the supposed dimensions of their banking accounts or their credit—the one notion of doing business is by drawing on the Bank of the Future.

The ease with which the Republic has been able to borrow and the avidity with which foreign manufacturers have rushed into the market, and more particularly the readiness with which the Argentine people are willing to burden themselves with responsibilities, make it all the more important for our business men to practice caution rather than boldness in approaching this, the richest and most attractive field in South America. Although the Argentine offers almost unequalled opportunities and will give a rich return for intelligence, industry, and honest merit, it is a field that should be entered only after thorough understanding of the difficulties. Such an understanding cannot be obtained by the official visitor or the widely heralded Chamber-of-Commerce tourist.

> Honesty is a quality that does not bulk unduly in South American character. Having had peculiar opportunities of testing the honesty of the general public throughout the Argentine, Uruguay, and Chili, and having listened to all sorts of local and foreign stories about the shameless disregard for the ordinary usages of decent straightforward business, said to be characteristic of one country more than another, I am persuaded that there is little to choose in this matter between South Americans in general.

But the author candidly adds that "in Buenos Aires it takes very little searching indeed to discover Englishmen as dishonest and unworthy of trust as any scoundrelly native." Furthermore, he admits that he found among the native population a high percentage of men of the strictest commercial integrity, even though feeling bound to confess that "the business world teems with minor employees who have been guilty of all sorts of thefts and dishonest practices, but whom employers have not prosecuted because conviction is so difficult to secure and legal expenses are so heavy." This Mr. Hammerton thinks is the real reason for the feeling of low morality in business; namely, the laxness of the law and the difficulty of obtaining justice.

Just at the present time, when we are

hearing so much about the necessity for increasing our trade with South America and the importance and necessity of extending long and liberal credits, when we find statesmen like ex-Senator Burton urging us to make investments in South America and give liberal assistance in the matter of loans, it is most important that our business men should read carefully the fearless opinions of this Englishman who knows so well the chief business centre of South America.

Mr. Hammerton has a clear perception of two of the difficulties in the way of our increasing our trade in Latin America. He tells us truly that:

It is the misfortune of the United States that not a few of its citizens who have gone south in search of "Spanish gold" have not always been noted for their business rectitude. The result is that, while *palabra inglésa* has become an accepted phrase in the language of the country, so has *yanqui bluff*, which may be said to stand for any sort of crookedness.

Finally, he emphasizes the necessity in our international acts of proving to the business men of the southern continent that we "are actuated by nothing but the strongest desire to cultivate a friendly commercial intercourse and an increasing exchange of commodities between the North and the South."

Altogether this is the best book on the Argentine, and in particular on Buenos Aires, that has appeared in recent years.

Notes

"Vive La France," by E. Alexander Powell, will be published shortly by Charles Scribner's Sons.

Houghton Mifflin Co. publishes this month "David Penstephen," by Richard Pryce.

The following volumes are announced for publication to-day by the Macmillan Co.: "Women at The Hague," by Jane Addams and others; "Making the Movies," by Ernest Dench; "Six French Poets," by Amy Lowell; "A Handbook of Weaves," by G. H. Oelsner and Samuel S. Dale.

A representative committee, headed by ex-President Taft, has been formed for the purpose of erecting a suitable memorial to the late Robert C. Ogden in commemoration of the unique services which he rendered to the cause of education in the South. The Southern Education Board, which has done so much for the advancement of Southern schools, was constituted under Mr. Ogden's leadership, and he was for forty years a trustee of Hampton Institute, for twenty years president of its board. It is proposed that the memorial shall fittingly take the form of an auditorium at this institute. The sum required is $100,000, of which, we are informed, one-third has already been contributed by a few of Mr. Ogden's friends. The committee now appeals to the public to subscribe the balance. Inquiries and subscriptions should be addressed to the Executive Secretary of the Robert C. Ogden Memorial Committee, Mr. Sydney Dodd Frissell, 530 Fifth Avenue, New York city.

William S. Walsh has supplemented his former convenient volume of reference on "Heroes and Heroines of Fiction" found in modern prose and poetry with one bearing the same title, but dealing with classical, mediæval, and legendary heroes (Philadelphia: Lippincott). The dividing line between the two volumes, the author tells us in his preface, is, "roughly speaking," the year 1500, but there are inevitable instances of overlapping, as in the case of Captain Kidd, who belongs historically to the former volume, but, as a legendary character of piracy, is included in the present one. Are we wrong in assuming that similar reasons, legendary and piratical, account for the inclusion of so up-to-date a saint as Tammany, "a corruption of Tamenund, the tutelary patron of a branch of the Democratic party in New York politics"? "Tradition," continues our author cautiously, "represents him as a wise and just ruler over his tribe." Within the defined limits of the book it is not easy to see what principle of inclusion or exclusion is employed. Obviously some standard of selection was necessary if the book was to be kept within reasonable bounds, but why, for instance, of the Virgilian heroes, is Anchises included, but not Ascanius? Cross-references could be used to better advantage: Numa Pompilius is mentioned under the heading Egeria, but is not to be found under either Numa or Pompilius. This matter of cross-reference is important; a book of this kind is intended particularly for those of treacherous memory, and such a memory, recalling Numa Pompilius, might easily find itself eluded by the name of the nymph with whom he consorted, or of the grove in which the two met. These instances are revealed in a cursory testing of the volume. Apart from blemishes of this kind—and we readily concede that some imperfections are bound to occur in a volume of this nature—Mr. Walsh's book will be found exceedingly convenient for reference. We have discovered only one serious misprint, Stetsichorus for Stesichorus, on page 296.

One need not be an admirer of John Muir to be thoroughly entertained by the lively pages of "Alaska Days with John Muir" (Revell; $1 net), by S. Hall Young. The author is a minister who, as a close friend, accompanied Muir on some of his canoe trips of exploration in Alaska: he will be endeared to the sentimental as the owner of "Stickeen." This little book, the record of these trips, is written in a style animated and vivid without being journalistic—a style not unlike that of the lover of glaciers himself. Exciting narratives abound; apt description of Nature in her forlornly beautiful aspects—description never unduly protracted—is usually capped with Muir's "Praise God from whom all blessings flow!" or the more cogent "My God!" The Muir of this book is the familiar vibrant personality; one day, for example, he was away from camp, alone, for seventeen hours, "with only a bite of bread to eat, and never rested a minute of that time, but was battling with the storm all day and often racing at full speed across the glacier, yet he got up at daylight the next morning, breakfasted with me, and was gone all day again." There is a genuinely thrilling account of the author's all but losing his life by dislocating both shoulders and almost sliding over a precipice. Muir, the superhuman, rescued him: "holding me by his teeth as a panther her cub and clinging like a squirrel to a tree, he climbed with me straight up ten or twelve feet, with only the help of my iron-shod feet scrambling on the rock. It was utterly impossible, yet he did it!"

In "The Soul of Europe," (Dodd, Mead; $3 net), Dr. Joseph McCabe studies carefully the historical growth of the national temper of the several belligerent states. He scouts the notion of race—as advanced by Gobineau and Houston Stewart Chamberlain—as a chief factor in national psychology. He has little difficulty in showing that as regards all the warring nations the idea of race has no biological validity. Nationality rests not on blood but on common moral environment and common political training. "The Slav and the Teuton are not born, but made; or, to be accurate, the preponderating influence is that of the moral and mental environment into which they are born." Physical environment is, in Dr. McCabe's opinion, a relatively unimportant factor in national character; "climatic psychology, as one may call it, is in the main a piece of superficial nonsense. The fact that the work of civilization was conducted for thousands of years in a latitude far south of Europe, and that the more vigorous nations of the north of Europe were the last to be civilized, ought to impose a check on these superficial speculations." The case is cogently argued, and the book should do much good in weakening the racial and deterministic theories of national destiny. Dr. McCabe brings to his task not merely learning, but hard sense. His destructive analysis of the easy theory that Europe can readily be divided along lines of race and speech is exemplary. The tendency of this useful and able book may be summed up in the following extract: "We may discard as foolish and mischievous superstitions all the claims of particular races to innate superiority over others. It will be found in every case that a series of definitely assignable external circumstances have permitted or impelled certain races to advance more than others."

A publication far more important than its brevity would indicate is "La guerre et ses principaux facteurs sociologiques" of Prof. Vilfredo Pareto, of Lausanne (Bologna: Zanichelli, in Italian and French). It is an extract from *Scientia*, an Italian review which sets as its major programme "the counterbalancing of the evil effects of exaggerated specialization in science." It may be unjust perhaps to label Professor Pareto and his colleagues as anti-intellectualists. It is certain only that, with some justice, they emphasize the subordination of certain rational processes to a fundamental emotion which is blind to opposing reasons and controls will despite the dictates of logic. One might suggest that this method, if followed with sincerity of purpose, might lead to a poise of mind, a sort of academic "neutrality" quite futile in the present crisis, where the man behind the gun has a definite advantage over the man armed solely with an unbiassed intellect. But this is not the conclusion of this article, which attempts rather to call attention to the fact that none of the belligerents "are guided by an abstract love of the right, but by considerations of

sympathy for some individuals, or antipathy for others." There is no harm surely in their understanding the real motives of their conduct. By this method the Freudian psychopaths attack common cases of insanity. Who knows but that the same method might bear fruit even when applied to the insanity of the world war? Professor Pareto does not examine the causes and formation of these sympathies and antipathies. Disposing summarily and trenchantly of the principal captions in the hypocritical propagandas of both sides, he passes rather to describe, in some remarkable pages, what these sympathies and antipathies are. In England, France, Italy, and America, he finds a dominant "democratic plutocracy on the way to becoming demagogic plutocracy," a plutocracy, that is, which is hampered, or, if you wish, sustained by the proletarian electorate. In Germany, on the other hand, we have an aristocracy which has subjugated both the sovereign and the plutocracy. The solidarity of Russian despotism with the democratic powers is explained because "Russia is really governed by a bureaucracy, which has more in common with the democratic plutocracies than with the military and aristocratic bureaucracies of Germany and Austria, for in Russia the aristocracy derives its power from the sovereign, whereas in Germany the sovereign depends on the aristocracy, a fundamental difference." Around these differences in social and governmental structure differing types of "faiths" or "emotion" have sprung up, rising from divergent "plutocratic" interests, but also from differing systems of emotional education, or social ideals. Interesting particularly is the author's review of the internal struggles between these dominant "faiths" and opposing "creeds," such as the socialistic, the pacifistic, the humanitarian, all destined, he believes, for ever to be swept away in the rush of the stronger passions of patriotism which have deeper springs in economic interest.

A subsidiary effect of this method of studying the war is to bring the vast production of war literature into true perspective, by showing that it has precisely and only a literary or "metaphysical" value, contributing indeed to sustain the enthusiasms necessary for successful combat, but without scientific or "experimental" worth. But especially it permits us "to see more or less correctly the future course of events." Here the outlook is rather gloomy. "It is an illusion to believe that the present conflict can bring a firm and stable peace. . . . Scarcely a half-century ago (especially after Waterloo) prophets tried to persuade the world that war had become impossible . . . they pointed out its enormous financial cost . . . its terrible destructive effects . . . that current wars appeared only on the confines of civilization against the barbarians . . . that the popular electorate, faithful to the Marxian doctrine, would refuse to fight, acting through ballot, general strike, or sabotage; all this chatter led up to the present slaughter." The author concludes that if the war proves a draw, it will be but a truce; if Germany wins, she will not be able to destroy her foes, but will simply throw them into an alliance with the United States to prepare a future revenge; if the Allies win, they will be no more able to prevent the reconstitution of German militarism than they were after the downfall of Napoleon. A ray of hope appears from the democratic strength in Germany: "Human feelings change but little and that but gradually . . . however, it is by no means impossible that between the Germany of to-day and that of the end of this century there may not be as much difference as between the England of Wellington and the England of Lloyd George. It is probable that the evolution of the democratic and plutocratic régime in the civilized countries will go on, coming to an end only by virtue of its own development and as a result of forces and obstacles arising within from its own nature." Professor Pareto is quite certain that the humanitarian idealism of our progressives is as superficial "emotionally" as socialistic sentiment, the impulse to proletarian solidarity in syndicalism, and so on, no one of which is ever likely to sweep the will of all humanity before it. Is he right? The reviewer, at any rate, while admitting the posteriority of much of our reasoning to emotion and interest, is still inclined to think that that passion has the best chance of becoming dominant which can present the best intellectual defence; and that in the growth of the anti-militarist spirit we find not only materialistic and emotional factors, but also a deal of common-sense.

In the midst of war's alarums, a new edition of Izaak Walton's "Compleat Angler" should prove not unwelcome reading; of its magic effect one should recall Lamb's remark that a reading is enough to sweeten any man's temper. Apart from the perennial appeal to lovers of the sport, and the interest provoked even at this day by checking up Charles Cotton's classic notes on Fly-fishing, Mr. Marston's attractive edition (Oxford University Press; 1s. 6d. net) is of use to bibliophiles interested in the various editions that have appeared since 1653 of this classic by Byron's "sentimental savage." Mr. Marston estimates these at about 162 editions. The first American reprint appeared at Philadelphia about 1844, inedited, and bearing the imprint of Lippincott. In 1847 Wiley & Putnam, of New York, issued an edition with notes by Bethune, which Mr. Marston considers "one of the best of any." The following year Bethune put forth another New York edition. In 1825 the famous London publisher Pickering, also an ardent angler, issued a watch-pocket edition, the smallest complete edition ever issued, bound in full morocco, 3½ inches in length, and 2 in width, and ⅝ of an inch in thickness. Of interesting editions not the least, says Mr. Marston, is that owned by the well-known American collector of Waltoniana, Daniel B. Fearing, of Newport, which is not mentioned in any bibliography of Walton, and is supposed to be the only known copy. It is inedited, and was published in London by Septimus Powlett in 1826. Mr. Marston's painstaking task is to be welcomed by bibliophiles, and he appeals for any information on reprints that may have escaped his attention.

In the department of theological doctrine, Dr. Charles Harris, in his "Pro Fide" (Dutton; $3.50), offers a defence of natural and revealed religion, the material of which may be described as respectable commonplace. In a more restricted field the appearance of a new edition of Dr. George Salmon's "Infallibility of the Church" (Dutton; $1.25) shows that the interest in this subject has not died out in Protestant circles. There is much good historical matter in this volume, but a full discussion of the subject would show that the assumption of infallibility is not confined to any one religious body, and that the acceptance of the dogma has a constantly diminishing effect on the actual beliefs and life of the religious world. A. S. Hobart's "Transplanted Truths" (Philadelphia: The Griffith & Rowland Press; 75 cents), consists of expository addresses on the Epistle to the Ephesians. The Rev. G. G. Berry's "Commentary on the Psalms" (Ps. 1-50), with the imprimatur of Cardinal Farley (New York: Benziger Bros.; $2), adopts the text of the Latin Vulgate, which, however, is modified here and there in accordance with other ancient versions and modern critical research.

An attractive picture of life in Palestine is given in "The Spell of the Holy Land," by Archie Bell (Boston: The Page Company; $2.50). The author saw many things and observed them closely, and his descriptions may be taken to be generally correct. The style of the narrative is pleasantly familiar and the illustrations are numerous and good. The author has avoided most of the identifications of Bible sites so freely furnished by the guides. The reading of such books of travel should be accompanied by a reference to trustworthy work on the geography of Palestine and the historical material in the Old and New Testaments and the Apocrypha. The following brief compendiums may be mentioned as useful in this regard: "Testing a Nation's Ideals" (a history of Israel to the Assyrian period), by Profs. C. F. Kent and J. W. Jenks; "How to Study the Old Testament," by President F. K. Sanders and H. A. Herman; and an Historical Atlas of Bible Lands, by R. M. Hodge—all published by Scribner.

He who would watch the archæologist at work unearthing and interpreting those relics of bygone civilizations by whose help we are to-day remaking much history, cannot do better than accompany R. Campbell Thompson ("A Pilgrim's Scrip"; Lane; $3.50 net), as, with pick and shovel, his merry men bring to light the long-buried past of nations that strove for mastery in Babylonia, Persia, Egypt, and Arabia, some now in process of reconstitution under the British Raj, some still under the deadening influence of Turkish misrule, and some vanished beneath the sands of the desert. Nor is it only with the past that our author concerns himself. As we follow him on his travels from city to city and from "site" to "site," we meet with the descendants of the mighty dead, fallen, alas, from their high estate, yet strangely like their forebears whom we have known in the pages of Greek and Hebrew historians. There is a weird modernity in the "ancient Babylonian's letter home to his family . . . an inch or two of baked clay impressed with minute characters, enclosed in a clay envelope, scrawled with homesick pleading for news. 'In the name of the gods,' cries one, in a letter to his wife, written about the time of Darius, 'why has news of thee to me been delayed?' And again, 'Why have I not seen a single letter from thee for a whole month?' Or another to his wife called Mouse: 'Be not remiss in the housework, be observant; pray the gods on my behalf and let me speedily have news of thee by some traveller.'" A for history, there is food for thought in th author's moralizing on the great Behistu

inscription that "ends long before the Persian troops fought at Marathon, so that posterity must be satisfied with the one-sided account of the Greeks until some new record comes to light from Jamshyd's courts. . . . Some day this great nation of Persia, where youth was taught to ride and shoot and speak the truth, will be accorded a fairer portion of praise among the comity of proud, ancient peoples." The book is adequately, if not impressively, illustrated.

Mr. Norman Douglas's "Old Calabria" (Houghton Mifflin; $4 net) gives ample evidence that the author has a knowledge of southern Italy both broad and deep. He has traversed all parts of it, has read widely in its earlier and later legends and in its authentic history, and seems to be at home in the original texts of the Greek and Latin authors whose paths he has occasion to cross. One may draw from his pages a vast amount of information on the vicissitudes of Calabria in the past, as well as its present condition. The book is full of descriptive passages effectively drawn, leaving definite and lasting images upon the memory. And yet with all these good points and others that might be enumerated, many a reader will peruse these chapters with a growing sense of irritation. The source of this irritation can perhaps best be indicated by quoting a paragraph from the closing page, referring to the region about Cotrone:

> This corner of Magna Graecia is a severely parsimonious manifestation of nature. Rocks and waters! But these rocks and waters are actualities; the stuff whereof man is made. A landscape so luminous, so resolutely scornful of accessories, hints at brave and simple forms of expression; it brings us to the ground, where we belong; it medicines to the disease of introspection and stimulates a capacity which we (Englishmen) are in danger of unlearning amid our morbid hyperborean gloom—the capacity for honest contempt; contempt of that scarecrow of a theory which would have us neglect what is earthly, tangible.

This might pass as unobjectionable in itself, but standing at the close of the volume it will firmly clinch for many readers the impression formed and strengthened by scores of passages that the capacity of Mr. Douglas for contempt has been stimulated, whether by Calabrian rocks and waters or otherwise, out of due proportion to his other faculties. Pythagoras is to him "a glorified marabout," whose speculative vigor adventitiously hit upon one or two good things, but whose chief occupation was to talk bland balderdash to a generation of Crotoniates who had become so highly civilized as to appreciate the charm of being regenerated and to find a new and subtle form of pleasure in repenting of their sins. And thus was introduced "that oriental introspectiveness which culminated in the idly-splendid yearnings of Plato, paved the way for the quaint Alexandrian *tutti-frutti* known as Christianity, and tainted the well-springs of honest research for two thousand years." Calabria is not a region of rapid change, and yet the reader would be glad to have more light on the chronology of the author's travels. Here and there one learns that he is dealing with a period before or after the Reggio-Messina earthquake, or some other definite event, but in general there is an annoying absence of temporal indication. A chapter on Milton in Calabria is with but slight change a reprint of an article which appeared in the *Atlantic* a few years ago, asserting a considerable indebtedness of "Paradise Lost" to the "Adamo Caduto" of Serafino della Salandra, a sacred tragedy printed at Cosenza in 1647, but so rare that its very existence could probably be plausibly disputed were it not for a copy in the Biblioteca Nazionale at Naples. The substance, at least, of another part of the book, the story of the flying monk, Joseph of Copertino, appeared a few years ago in the *North American Review*. There are about thirty inset photographic illustrations, well reproduced.

Science

THE NATIONAL ACADEMY OF SCIENCES

IMPORTANT PAPERS ON AERIAL TRANSMISSION, EVOLUTION, HEREDITY, AND OTHER SUBJECTS.

The National Academy of Sciences held its regular autumn meeting at the American Museum of Natural History, New York city, on November 15, 16, and 17. A large and varied programme of papers had been provided, mainly through the exertions of the efficient local committee, but the exigencies of time permitted the reading of only twenty-two, which were happily grouped so that the biological papers came on the second day, while those having to do with the physical sciences came on the third.

The meeting was introduced by a reception, preceded by a lecture by Prof. M. I. Pupin, of Columbia University, on "The Problem of Aerial Transmission," in which the lecturer, with a happy avoidance of technicalities, and by the employment of homely and simple analogies, was able, without the use of experiment, or any but the simplest diagrams, to explain the mysteries and difficulties of wireless transmission. A feature of the lecture, in spite of its title, was the concentration of the attention on the function of the conducting earth in the case of wireless, similar to that of the wire in ordinary transmission. After sketching the history of the development of wireless, from the experiments of Joseph Henry, made in this country eighty years ago, the theoretical prediction by Clerk Maxwell of electric waves fifty-one years ago, their production by Heinrich Hertz in 1888, and their application to telegraphy nine years later by Marconi, the lecturer described the recent great achievement of telephonic transmission from Washington to Hawaii, and finally his own recently announced invention for overcoming the difficulties caused by the "static," or disturbance, due to atmospheric electricity. While Mr. Pupin did not give the details of this invention, which the German Government is extremely anxious to get for the station at Sayville, enough was said to show that it depends upon a very ingeniously devised electro-magnetic structure arranged to let through vibrations of a definite wave length, and to exclude all others. This invention, if successful, is undoubtedly an advance of the first order for wireless, and of an importance comparable with Pupin's great improvement in telephone lines.

W. E. Castle, of Harvard University, presented a paper on the fundamental question, "Is Selection or Mutation the More Important Agency in Evolution?" Evolution, like geological change, is very slow. About fifteen years ago there came a change of opinion, and a reversion to the belief in sudden changes and creation of species. According to this view, the question of natural selection was now limited to inquiring what species shall survive. The idea of sudden and spontaneous origin of species, the so-called mutation theory, has much in common with the catastrophic theories in geology and astronomy. It owes its present popularity to De Vries and Johannsen, who have attempted to show the inability of selection to produce new species. Mendelian studies on discontinuous variation show that several factors may produce continuous variation, but if these factors are constant it is possible to alter the character only in a limited degree. Professor Castle's experiments on over 16,000 black and white rats tend to show that these factors are not constant, and thus that new species can be actually produced during the experimentation. The experiments were made on inbreeding, attended by selection, beginning with piebald or hooded rats, white with black heads. The blackest rats being chosen to start a positive series, and the whitest rats to start a negative series, after seventeen generations the positive series became darker, and the negative series whiter, so that finally a race of rats was developed blacker than any of those at the start, the hooded character having disappeared altogether. The changes had come in gradually so that the selection was progressively evolved. Accordingly, selection must be restored to the position it had in Darwin's estimation.

A. E. Verrill, in a paper on "Inheritance of Clubbed Feet through Five Known Generations; Inheritance of Abnormal or Defective Thumbs through Four Known Generations," described the inheritance from a father and mother who lived to be one hundred years old of five clubfooted generations known to the author. The diagrams showed the remarkable persistence of both sorts of deformities.

E. C. MacDowell, of the Station for Experimental Evolution, Cold Spring Harbor, presented the results of an interesting study on "Parental Alcoholism and Mental Ability," the subjects studied being rats. These rats themselves were not alcoholic, but were descended from alcoholic parents, and compared with normal rats as to their ability to form mental habits. The habit to be learned consists of a trip around a puzzle box, breaking an electric circuit, and opening a door, and then returning and entering the box for a reward of food. The data were summarized by graphs, which, in the opinion of the present writer, showed chiefly the increased regularity as to the times required to perform the trick with increased practice, but also in some degree that alcohol was less harmful to males than to females.

A paper was presented by James B. Murphy, of the Rockefeller Institute, on the "Rôle of the Lymphocytes in Resistance to Cancer." When foreign tissue is grafted into an animal, there is during the period of absorption an accumulation of small, round cells called lymphocytes around the edge of the graft. In animals exposed to X-rays the lymphoid tissue is first affected. Thus it is possible to make experiments on the effect on animals immune to cancer of the destruction of the lymphocytes, and it is found that their removal causes complete destruction of immunity.

Graham Lusk, of Cornell Medical College,

in a paper on "The Calorimeter as an Interpreter of Life Processes," pointed out that the production of heat in an adult man is closely proportional to surface area. In only a few conditions of disease is the heat production decidedly changed. In conditions such as fever and exophthalmic goitre, there is a largely increased heat production, but, fortunately, the ingestion of food under these circumstances does not cause a greater production of heat than such food would effect in a normal man. This is true in all diseased conditions, with the striking exception of diabetes.

Herbert S. Jennings, of Johns Hopkins University, has been among those whose experiments have led them to doubt whether evolution can be observed in progress. All the more interesting was, accordingly, his paper on the question, "Can We Observe Organic Evolution in Progress?" Since experiments on biparental reproduction had led to negative results, Jennings undertook an examination of a simple case of uniparental inheritance. The subject chosen was Difflugia Corona, a small, globular animal with a shell, having spines and teeth of definite sizes, upon which the attention was concentrated. Photographs of many parents and descendants were shown, and the correlation noted. Experiments were made upon over thirty-five generations, with selection according to various characteristics. As a result, it was shown that in all cases racial differentiation is occurring, giving rise to diverse stocks. In other words, evolution is a visible fact. Thus the conclusions of Jennings and Castle confirm each other, and make this meeting notable for its contributions to evolutionary theory and experiment.

Theodore W. Richards, of Harvard University, to whom the award of the Nobel prize in chemistry has just been announced, described "Investigations Recently Conducted in the Wolcott Gibbs Memorial Laboratory." This laboratory, which with the Faraday Davy Laboratory in London, the Van't Hoff Laboratory in Utrecht, and the Hoffmann Haus in Berlin, enjoys the distinction of being devoted entirely to chemical research, was due to the generous initiative of the late Dr. Morris Loeb and his brother James, and during the last three years has been generously subsidized by the Carnegie Institution. Under the direction of Professor Richards, twenty-four young men from half a dozen countries have printed twenty-four papers, and prepared still others. These are all for the common object of finding correlations among the fundamental properties of the elements. Of these the most important is the atomic weight. This has been determined for carbon, sulphur, and radioactive lead, the last giving the number 206.3, compared with 207.18 for ordinary lead. Although the ultra-violet spectrum is exactly like that of ordinary lead, and no other substance could be separated out, it is probable that there is some distinct substance in the radioactive lead, which furnishes a problem for the chemist still to solve. The question of the compressibility of the elements is one that has interested Professor Richards the most, and he has made the most accurate determinations that have been made in the case of over thirty elements. This has led him to his hypothesis of compressible atoms, and to a remarkable presentation in graphic form of parallel relations among the reciprocals of the absolute temperatures of melting points, the coefficients of expansion, the atomic volumes, and the compressibilities of the commonly solid and liquid elements. Such a table is a monument, not only for one man, but for a laboratory.

B. B. Boltwood, of Yale University, presented a paper on "The Life of Radium," meaning by that term the length of time in which a radioactive element will lose half its amount by transformation into something else. After describing the several independent ways by which Sir Ernest Rutherford had, with remarkable intuition, determined this important constant, Mr. Boltwood described his own experiments made by an original method depending upon the growth of radium from its grandparent, uranium, through its parent, ionium, discovered by Boltwood himself. The amount of ionium changing into radium can be accurately determined, and by recent improved chemical methods of purifying the material, Miss Ellen Gleditch has carried out Boltwood's method with an accuracy hitherto not obtained, arriving at the time of about 1700 years, in striking agreement with Rutherford's best value.

G. C. Abbot, of the Smithsonian Astrophysical Observatory, gave a further report upon his classical determinations of "The Solar Radiation and its Variability." The experiments have been made with the spectrobolometer of Langley, which measures the amount of heating of a thin strip of platinum exposed in various parts of the sun's spectrum, and by various ingenious pyrheliometers, or instruments for measuring the whole amount of heat received from the sun, devised by Abbot himself. Experiments have been made at Washington, at Mt. Wilson, Cal., at Mt. Whitney in the Rockies, and at Bassour in Algeria. In addition, pyrheliometers have now been sent up with free balloons, which have reached heights entirely inaccessible to man, so that only one-twenty-fifth of the whole amount of air remains above. It is the absorption of the radiation by the air that makes the chief difficulty of the determination. Suffice it to say that the agreement in the results obtained by the various methods and at these most diverse stations is most satisfactory, and leads to the important result that 690 observations give for the number of small calories received per square centimetre of the earth's surface per minute 1.933, a value much below that formerly held.

A. G. Webster, of Clark University, presented together three papers on "Experiments and Theory of Conical Horns; Instruments for Measurements of Sound; An Instrument for Finding the Direction of a Fog-Signal." As horns are used in so many acoustic instruments, as megaphones, phonographs, telephones, etc., and as there is at present no mathematical theory for an open horn, the author attempted a simple hypothesis, which was amply verified by experiment, and was utilized in his apparatus. The apparatus shown consisted of a standard or sound or "phone" for producing a sound of measurable intensity measured in absolute measure, that is, independent of any instrument, so that a sound might be reproduced from specification. The other instrument, the "phonometer," is for the purpose of measuring the sound at any point in space produced by a constant source of sound, also in absoluto measure. By the aid of these two instruments, both of which depend on the principle of resonance, and the invention of a tunable diaphragm of extremely small damping, nearly all questions that may be asked concerning sound can be investigated. An application was shown for the purpose of determining the direction from which a sound comes, such as a fog-signal, the apparatus to be used aboard ship.

H. R. Russell, of Princeton University, presented a paper entitled "On the Albedo of the Moon and Planets," that is the fraction of the whole light falling upon a body to that reflected. Mr. Russell possesses in a high degree the faculty of using results obtained by the observations of others to reach the most illuminating conclusions, as was shown in this paper. Certain inconsistencies of various observers were reconciled by the simple observation that cracks in a surface such as that of the moon would make a great difference in the amount of light reflected vertically and in other directions. Venus being smooth and the moon rough, it is possible to account for the observed fact that the half-moon is only one-tenth as bright as the full moon, while in the case of similar phases of Venus, the fraction is one-fourth.

George F. Becker, of the U. S. Geological Survey, in a paper on "A Possible Origin for some Spiral Nebulæ," after calling attention to the fact that Laplace never used the word *gas*, of which nebulæ are generally supposed to consist, returned to the notion as old as Kant, and now in vogue, that nebulæ are formed of small solids moving about and colliding like the molecules of a gas. By a simple application of Kepler's law of areas, Mr. Becker is able to arrive at the equation of a spiral, the comparison of which with the photograph of a certain nebula gave a most striking agreement.

L. A. Bauer, of the Department of Terrestrial Magnetism of the Carnegie Institution, read a paper on "Concomitant Changes in the Earth's Magnetism and Solar Radiation," in which he was able to show that a time of decreased solar radiation is a time when the earth is a stronger magnet, and thus studies of terrestrial magnetism confirm Abbot's studies on the variability of the sun's heat.

Edward C. Pickering, of the Harvard College Observatory, described "The New Draper Catalogue," whose object is to furnish the classification of the spectra of all the stars so far as they can be determined from existing photographs. In four years Miss Annie J. Cannon has classified 233,050 spectra, thus covering the whole sky. The work will fill nine quarto volumes, and will also give photometric and photographic magnitudes of all the stars on the same scale.

Fred E. Wright and J. C. Hostetter, of the Geophysical Laboratory of the Carnegie Institution, in a paper on "Experiments on the Mean Free Path of Gases; Observations on Wood's One-Dimensional Gas," showed that Wood's production of a gas in which all the molecules move parallel to a given direction was illusory, and that the phenomena are to be accounted for by the ordinary kinetic theory. Reflection of molecules of mercury from a plate of crystal did not lead to a dependence on the crystalline structure.

Henry Fairfield Osborn, president of the American Museum of Natural History, ended the session with a paper on "Extremes of Adaptation in Carnivorous Dinosaurs, Tyrannosaurs, and Ornithomiums"—the last so-called from its resemblance to a bird—describing two of the most remarkable types of these gigantic lizards, which were mounted and specially exhibited at this session of the academy.

ARTHUR GORDON WEBSTER.

Drama

MISS CALHOUN'S MEMOIRS.

Pleasures and Palaces: Memoirs of Princess Lazarovich-Hrebelianovich. New York: The Century Co. $3 net.

These extracts from the memoirs of the Princess Lazarovich, more widely known as Eleanor Calhoun, constitute an exceedingly interesting, naïve, and self-revelatory book. A little extravagant at times in their girlish enthusiasm over the new and strange, they are the work of a highly accomplished and capable woman, with uncommon powers of keen and humorous observation and sound reflection. Incidentally, they excite profound regret that an American actress of such notable achievement and promise should have won her chief triumphs abroad and been lost so early to the stage. The fact that she was launched upon her public career with all the advantages conferred by powerful social support, does not detract from her personal talent, much as it may have contributed to its speedy recognition. Fortune smiled upon her from the first. The daughter of a distinguished American family, gently reared, and with a full measure of natural ability, she went to England under conditions which insured her ready admission into the choicest circles of political, literary, artistic, and social life. Her pages are occasionally suggestive of clippings from the Court Circular, and if she seems, now and again, a trifle dazzled in the more exalted regions in which she found herself, it must be set down to her credit that her shrewd comments show a sturdy fidelity to her democratic instincts and training. If her estimate of the generally benevolent and altruistic attitude of the English upper classes towards the less fortunate masses is founded upon a too limited and singularly happy experience, her remarks upon the urgent problems presented by the vivid contrasts between great wealth and cruel poverty show clear vision and unspoiled humanity.

With two American Ambassadors, Phelps and Lowell, and two such women as Lady Jeune and Lady Dorothy Nevill, as her friends and sponsors, Miss Calhoun was brought into more or less intimate contact with a vast number of celebrities. She gives interesting and tantalizing glimpses of W. G. Gladstone, A. J. Balfour, Robert Browning, Whistler, "Barry Cornwall," Edmund Gosse, Henry James, Israel Zangwill, Margot Tennant (Mrs. Asquith), Herkomer, W. T. Stead, W. Story, and hosts of titled but lesser lights. She writes with admirable but provoking discretion. Mr. Balfour, discussing John Stuart Mill, said that he feared that his teaching had not availed much. Browning told her that the one thing he could not understand was a Browning Society, and that he heard that America was full of them. He did not relish the notion of needing so many interpreters. Lord Wolseley, at Fonthill, speaking of the burning by the British of the Summer Palace at Peking and the loot of the priceless porcelains, said: "I tried to prevent the carrying off of these things, but control was impossible." Henry Irving confessed that the part of Romeo did not suit him, and that he had never been able to project his ideal of Macbeth. Boughton, the Royal Academician, told her how Whistler, after a supper party, had fallen down stairs with a tremendous crash. When picked up he asked angrily: "Who built your house?" "Cubitt," was the reply. "The damned teetotaller!" said he. When Mark Twain, clad in speckless white, was entertained at Windsor, King Edward, laughing with him, blazed with all the colors of the rainbow. A princess, greatly daring, said: "I am looking, sir, at your purple waistcoat. Your coat is a kind of—pea-green, and your—h'm—upon my word! Really! How did it happen?" The good-humored King laughingly replied that different tailors had sent him the garments at different times and he had put them on all at once, "to do them a good turn." The tale has its value. It was Joseph Chamberlain who uttered the most significant sentence. He believed, he said, that all ambition could be fulfilled by unremitting effort. Why, then, she asked, did so many fail? "They come," he said, "to the place, when they turn back. They may have killed the dragon at the first, second, or even third bridge; very few will meet the monsters to the end. Almost none is willing to meet the dragon at the last bridge. If he does, he has won for ever."

Miss Calhoun has many bright and illuminative pages on social life in Kissengen—where she had a glimpse of Bismarck—Monte Carlo, Paris, and elsewhere, well worth the reading; but it is time to revert to her theatrical career, which, in its brevity, solid accomplishment, and especially in its golden opportunities, may well be called extraordinary. It is not necessary to take at their face value all the encomiums of which she was the object, but there can be no question of her uncommon intelligence and marked histrionic capacity. These are attested by her analyses of the characters she essayed and her success in them. Her Rosalind won the cordial praise of the most competent critics, and she set the seal upon her triumph by organizing, with the potent aid of the Princess Louise and Lady Archibald Campbell, the first open-air performance of "As You Like It" ever given in England—at all events in modern times. This representation, given by carefully selected professionals and amateurs, was witnessed by one of the most brilliant audiences ever assembled upon such an occasion, and was the original inspiration of all the open-air masques and pageants which since have been so popular in England and this country. Here, certainly, was a memorable achievement, and it is pleasant to record Miss Calhoun's assertion of her absolute faith in the capacity of the masses to appreciate the noblest poetic works when fitly presented. Perhaps the finest compliment to her individual acting was paid by Coquelin when he asked her to play with him in Paris. And her account of her studies in that city, preparatory to the event, the methods of instruction, system of rehearsals, the wonderful care bestowed upon intonation, artistic coöperation, etc.—with sketches of Sardou, Leconte de l'Isle, Mounet Sully, Victor Hugo, and innumerable other celebrities—is of exceeding interest and value. She acted with Coquelin in "The Taming of the Shrew," but her most ambitious essay was Hermione in Racine's "Andromaque," at the Odéon, where she challenged comparison with Rachel and did not fail. Considering the audience, no stronger testimony to her ability could be desired. As in England, so in France, there were many elements of romance in Miss Calhoun's daily life, but it is impossible to dwell upon them here. Hers was a crowded existence.

Soon she recrossed the Channel to play Lady Macbeth at a Shakespearean Festival at Stratford-on-Avon. There, too, she achieved indisputable success with choice critical commendation. Judicious selection would have excluded the tributes of Clement Scott and Marie Corelli, but her own analysis of the character evinces full and subtle understanding. The same qualities and a glowing artistic imagination are revealed in a scheme, in which she next engaged, for a sumptuous revival of "Romeo and Juliet" in the spirit of the Italian Renaissance. With the influences at her command there is no reason to doubt that she might have brought it to realization, with memorable consequences, but fate ordained otherwise, and she abandoned her theatrical ambitions to identify herself with the life work of Prince Lazarovich, whom she married. The pages which relate to her courtship, and the arousal of her deepest sympathies with the victims of generations of Turkish tyranny in the Balkans, are by no means the least interesting in this singularly fascinating book. To many readers, unfamiliar with the ancient history of the races in those troubled regions they will show the inhabitants of Servia, Bulgaria, and Macedonia in an entirely new light. Especially illuminative is her animated description of the character and aspirations of the political refugees in London, into whose inner circles, totally unknown to the great world about them, she was admitted with her husband, for years their hope and champion. Those aspirations which, when she wrote, seemed to be on the brink of fruition, now hang upon the issues of the present appalling conflict. Every advocate of national freedom and moral right will pray that the legendary prophecy of the Servian seer, Mata, uttered five centuries ago, and curiously justified by past events, may find its perfect fulfilment when the prescribed period of five hundred years, now close at hand, has been completed. Few readers who take up Miss Calhoun's book will lay it aside before finishing it.

J. Ranken Towse.

"WHEN THE YOUNG VINE BLOOMS."

Emanuel Reicher's first production for the second season of The Modern Stage, Björnstjerne Björnson's "When the Young Vine Blooms," may be taken as indicating the nature of the dramas with which Mr. Reicher intends to vary the dramatic fare of New York this winter. It is assuredly a play which no Broadway producer would ever have chosen. Yet it is one of considerable literary charm, if of dramatic weakness; it serves to introduce us to the spirit of Scandinavian life, and its exotic qualities are well adapted to presentation through Herr Reicher's expert but decidedly foreign stage interpretation. The story is an elaboration of a popular Norwegian proverb—"When the young vine blooms, the old wine ferments." The old Norwegian farmer and forester, Mr. Arvik, has lived for some years upon the most cordial terms with his wife, but is in a state of virtual separation from her, as she is engrossed in business. Still a man of great vital force, he is insensibly wrought upon by the spectacle of love-making which his three daughters and their suitors present. Upon some whimsy which he himself perhaps hardly understands, he leaves home, and takes steamer for England—the same steamer on which is a young girl whom he has long befriended. He disembarks, however, at the first Norwegian stopping place, and returns to his wife, whom his absence has shocked into realization of her duties towards him; and the closing scene is an amusing one of reconciliation. This action is enriched by the vicissitudes of the minor love affairs of the daughters, and the return of a third child estranged from her husband. Together with some inane dialogue, there are several capital scenes of comedy and satire, principally reflecting upon the attitude of women towards married life; and the glimpses we have of Norwegian home economy give the whole a quaint and semi-pastoral atmosphere. A. N.

"ABE AND MAWRUSS."

It was hardly to be expected that another play written around the two amusing characters of Mr. Glass's creation should equal the high standard of entertainment set by "Potash & Perlmutter." That piece, slight as it was, was so brightly written that it was played to the accompaniment of an almost continuous gale of laughter from the audience. In the present production, made by A. H. Woods at the Lyric Theatre, the laughter comes only in gusts. It illustrates the familiar danger of attempting to repeat a great popular success. "Abe and Mawruss," sufficiently amusing in itself, suffers by the inevitable comparison with the other play.

This time we see the two partners in the cloak and suit establishment of Potash & Perlmutter at odds over the conversion of the firm into a large and over-capitalized company, The Cloak & Suit Company of North America. Mawruss, ambitious and anxious to be up to date, is all for the change; Abe, conservative and fundamentally honest, is unable to put his finger precisely on the weak spot in the proposed enterprise, but is convinced that the business that gives the partners a modest income is not worth the million dollars at which it is proposed to capitalize it. When he learns that Mr. B. Gans, who is promoting the company, is to receive $50,000 a year as president, the weak spot is revealed to him, and the break in partnership between Potash and Perlmutter, threatened several times a day during twenty years, at last is accomplished. The new corporation, of course, comes to grief; the great B. Gans is a rascal, and Mawruss is only saved from jail by the intervention of his ex-partner. In the last act we find Abe and Mawruss reconciled and starting life again in a humble way, but extremely content.

In the story, as told by Montague Glass and Roi Cooper Megrue, there are many amusing incidents and some good dialogue, but it is only occasionally that the lines are as effective as they were in "Potash & Perlmutter." Barney Bernard, as Abe, makes the most of his opportunities, but he is not so fortunate in his partner as he was in the former production. The Morris Perlmutter of Julius Tannen in the present play is not to be compared with the performance given by Alexander Carr in "Potash & Perlmutter." Miss Louise Dresser is better cast than last time, as Ruth Perlmutter. Marks Pasinsky, the irrepressible salesman, reappears with the same amusing interpreter, Lee Kohlmar, and Leo Donelly is an excellent Mozart Rabiner. S. W.

Even the best translation needs some apology; for a poor translation there is no possible excuse. It is difficult to judge von Hoffmannsthal's "Death and the Fool" through the medium of Elizabeth Walter's verse (Badger; 75 cents). The play is, at the best, a youthful effort, a fairly obvious presentation of a symbolic idea. It lacks dramatic power and must have depended in large measure, one feels, on its poetic merit for the twelve editions attributed to it in the introduction. No reader of von Hoffmannsthal's maturer work will dispute his poetic power. In the translator's preface to this little volume we are told that "he weaves symbolic dreams, unutterably rich in color and melody." They seem, indeed, unutterable to the translator, for instead of "the perfection of rhymes," "the phrases . . . pregnant with meaning and of piercing sweetness," we get lines like

> With jealous pangs my yearning soul regards
> The fortunate who golden fields have planted,
> The earth their weary, fulsome toil rewards,
> Them happy weariness of limb is granted.

This is not a single blunder chosen with malice. The pages abound with such lines as,

> It rouses thoughts round good things cent'ring,

or

> What meaningfulness all things then acquired.

Indeed, the verse is so glaringly bad it is only by a distinct effort one can focus one's attention on the play itself. One Claudio, an intellectual and self-conscious Tomlinson, is discovered at his study window, brooding over the fact that, for all his sophistication, he has been a mere spectator at life's show. To him comes Death with the inevitable message, and, upon Claudio's plea that he has never really lived, Death summons his lost opportunities to prove that he himself and not life has been to blame. The mother to whom he was indifferent, the woman he threw aside, the friend he betrayed, appear in succession to tell their story of unappreciated love, and Claudio, moved at last by emotion, sinks to the ground, exclaiming that in this, the hour of his death, he has for the first time lived. There is no attempt at suspense, characterization, or any of the usual tools of modern drama. The story is told with the simple mechanism of the old morality and the imaginative atmosphere, the symbolic suggestion, necessary to make the idea effective.

Music

THE MUSICAL MESSIAH—OR SATAN?

Is Arnold Schönberg the musical Satan, or is he the Messiah of modern music? He has been called both. Fritz Kreisler is reported to have said: "What I have heard of his is not music to me; that is, it has no relation to what I consider music to be." Leopold Godowski, who has done some bold things himself, declared that "If you were to sit on the keyboard you would produce as much harmony as his music possesses." The critics, with a few exceptions, have generally condemned his music. On the other hand, Percy Grainger is much interested in Schönberg, and so is his former teacher, Busoni, who helped Schönberg to secure a publisher for his works; while the late Gustav Mahler stipulated in his last will that the stipend for needy musicians which bears his name should be first given to this iconoclastic composer as the one most deserving of it.

Last year the Flonzaley Quartet played his quartet in D minor in New York; but, as this is only his opus 7, it did not represent his later tendencies fully. None of his orchestral works was heard here till last week, when two of them were produced—the "Kammersymphonie" at the Ritz-Carlton by musicians chosen from the Philadelphia Orchestra, under its conductor, Leopold Stokowsky; and the "Pelléas et Mélisande" in Carnegie Hall, by the New York Philharmonic, under Josef Stransky. The latter does not represent this composer at his worst—or best, as his admirers call it—the "Pelléas" being, indeed, an earlier work even than the quartet played by the Flonzaleys. There are some agonizing dissonantal outbursts in it, but much of it is in the style of ordinary music, or else that of Richard Strauss. The work lasts nearly forty minutes and is fearfully boresome, because of the poverty of invention, which makes one suspect that it may have been composed in collaboration with Max Reger—for surely one man alone—as an Irishman might say—could not have such a plentiful lack of ideas! The Philharmonic played it superbly, but it was not worth playing; neither was the "Kammersymphonie," which bears a somewhat later date and sounds already like Schönberg's most "mature" works; that is, as if all the players were improvising, regardless of the others, and each one trying to play the wrongest notes he could think of. The audiences, both at the Ritz-Carlton and in Carnegie Hall, applauded at the end—but that may have been for the splendid performances of the difficult pieces.

It is of interest to recall what happened in Boston last year, when Dr. Muck, yielding to newspaper pressure, unwillingly conducted Schönberg's "Five Little Pieces." According to the Harvard *Musical Review*, the work "was received partly with giggles and partly in dignified silence. After the first piece, which is, to be sure, a rather stiff problem, there were at least ten seconds of

bewilderment, and then a thin scattering of applause. There was endless discussion in the lobbies. Is Schönberg a real composer, or a decomposer, or just a poser? The critics violently took sides. The *Globe* spoke of 'nerve-racking caterwaulings,' and the *Transcript* went into ecstasies about 'whirling, warring, wailing wraiths." It was the *Transcript* that had bullied Dr. Muck into producing this "futuristic" work.

It is not likely that the extreme Schönberg (of whose latest works even Richard Strauss is reported to have said that he "could not make head or tail of them"—which reminds one of Hegel's remark on his death-bed: "Only one man has understood me—and even he hasn't") will soon trouble American waters. Representatives of what Fritz Kreisler and the rest of us have heretofore regarded as music, are too numerous to be easily routed by this representative of German musical frightfulness. The nearest thing to his music to be heard in the metropolis last week was Strauss's "Rosenkavalier," which, however, as is well known, is not nearly so extreme as his "Elektra" in its deliberate avoidance of musical euphony and beauty. This opera was under the direction of Arthur Bodanzky, the successor of Alfred Hertz at the Metropolitan; and it must be admitted that, in this score, he improved on his predecessor, who had always laid on it a somewhat too heavy hand. Mr. Bodanzky made his début with "Götterdämmerung," and though quite a young man, proved himself an experienced, authoritative conductor. Two points, especially, are to be noted in his favor: he kept the orchestra subdued, as Wagner wished it to be, so that the singers could properly assert themselves; and he mercifully made some cuts, all of which, however, were not judicious. He is said to have followed Hans Richter's example, but if he can yet get access to Anton Seidl's scores, he will find them better models to follow. Seidl had a genius for making Wagner's operas more compact without sacrificing essentials. A new Italian conductor also made his appearance last week in Puccini's "La Bohême" and Verdi's "Aïda." He had good control of his forces, but did not give any new readings or revelations of hidden beauties in these scores.

Pianists were again to the fore last week—five of them: Fannie Bloomfield Zeisler, Ernest Schelling, John Powell, Percy Grainger, and Harold Bauer. It is worthy of note that the three first-named are Americans. The late Theodor Leschetizky called Miss Bloomfield his "electric wonder," and to-day she can, if in the mood for it, still electrify her audience, as she did particularly with Chopin's sonata, opus 58. Ernest Schelling's Chopin-playing was also much relished, as were two Spanish dances and a military march by Granados, "the Spanish Chopin," whom Mr. Schelling discovered, so far as America is concerned. Mr. Grainger delighted the audience at Damrosch's Concert for Young People by playing Liszt's "Hungarian Fantasy," while John Powell gave a splendidly virile as well as poetic performance of MacDowell's second piano concerto, at the New York Symphony Orchestra's concert. Harold Bauer did not play alone, but with Pablo Casals. The joint recitals of these two artists were among last year's sensations (five of them were given in New York alone), and they are likely to prove no less attractive this season, despite the superabundance of entertainments. HENRY T. FINCK.

Finance

BAD MOMENTS OF A WAR.

To the advance of the Austro-German army into Servia, the declaration of Bulgaria on the Teutonic side, the crafty struggle of the Greek King to checkmate the Parliamentary majority and keep Greece from living up to her treaty and joining Servia, the pursuit of the outnumbered Servians while the belated Allied armies were fighting in the south—to all these events, the world's financial markets have given no response whatever. No Stock Exchange has passed judgment on the ultimate meaning of this chapter of diplomatic and military events. Money has risen at London, but that was an outcome of the deliberate tactics of the Bank of England. The foreign exchanges might possibly have been expected to reflect the news; but rates at New York have moved sharply in favor of London and against Berlin.

The question is still left open, whether or not the markets believe the Balkan news to foreshadow a desperate situation for the Allies, or whether, if they did, they would not give some tangible and violent response. On general principles and in the light of experience, it is not unreasonable to interpret their present attitude as meaning that they do not so regard it. They may infer a longer duration to the war than had been hoped for; yet even for that, it is hard to find tangible evidence in the markets.

But financial markets have acted in this way before, at bad moments of other great wars. Even with to-day's full knowledge of the political and military sequel to those older episodes, it is not possible to say whether the apathy of the markets was due to peculiar conditions in the financial machinery of the day, or to a far-reaching view which inspired belief, in the subconscious mind of finance, that what people then described as an appalling and hopeless situation was merely an episode. Nothing in the present situation of the Allies approaches in sinister foreboding the circumstances with which the United States Government was confronted during 1862. In June, McClellan had been driven out of the Peninsula by Lee; in August, Pope had been disastrously beaten by Jackson. The Union troops were outmanœuvred, their generals outclassed by the enemy. In September, Lee invaded Maryland. The Northern Government changed its commanding general, and Burnside sustained the overwhelming defeat of Fredericksburg. Generals were changed again, and Hooker was beaten at Chancellorsville. Not until Gettysburg, thirteen months after the series of disasters began, did the Union's fortunes change.

During the six months in which this succession of Union disasters occurred, Europe was on the verge of intervention; the Alabama had been equipped for the Confederates in England; Gladstone had made the speech (which he preferred to forget in later years), declaring that "we may anticipate with certainty the success of the Southern States," and our Minister at London, warning the British Foreign Secretary of the consequences, if he allowed another ironclad to be delivered to the South, had remarked, "it would be superfluous to point out to your Lordship that this is war."

Yet Northern markets gave the slightest response to this formidable situation. If the stock market broke, it recovered again. Cotton, which ought to have declined on evidence of the Confederacy's success, went up from 38 to 72 cents a pound between McClellan's retreat from the Chickahominy and the Battle of Chancellorsville. The price of gold, it is true, rose from 110 to 154; but a high price of gold should naturally have reflected expectation, not of early peace on the basis of final Southern victory, but of a long and exhausting war.

England has had her own experience of the sort. On top of Bonaparte's great victories of 1805 and 1806, and Russia's desertion of the English alliance in 1807, the campaigns of 1809 witnessed the crushing of England's remaining ally, Austria, and the experience of an English expeditionary army, sent to protect the Spanish people against the French invaders, being beaten, driven to its ships, and forced to sea again. The present case of the Allies is a cheerful situation compared with that of England in 1809. Yet British consols did not in all that year go so low as in 1805 or 1806 or 1807, and they were higher in November, after the surrender of Austria to France, than they were in January.

No doubt the suspension of gold payments, in the United States of 1862 and in the England of 1809, had something to do with imparting an artificial stimulus to financial values. The emergency credit devices and the Stock Exchange restrictions may be having the same effect on the European markets to-day. Yet the fact is not without interest that the markets of 1862 and 1809, in refusing to break violently on the formidable war news, must at least be said to have judged the final outcome more correctly than the newspapers and the public sentiment of the day.

This certainly does not prove that financial apathy means financial confidence, or that the markets are indifferent to the Balkan news. But it is possible that the markets of those two earlier years recognized a familiar tradition, fulfilled in nearly all wars in which English-speaking nations have engaged, that such a belligerent begins a war

with blunders, is over-confident and dilatory, and has to take the consequences; that it becomes really dangerous only after everything has gone wrong, and that it achieves its great results after its people have passed through and out of the period of hopeless despondency.

The Ethics of Confucius
The Sayings of the Master and His Disciples upon the Conduct of
"The Superior Man"
By Miles Menander Dawson
With a Foreword by Wu Ting Fang.
12o. $1.50 net.
The aim in preparing this book has been to put before Occidental readers in the words of the Chinese sage and his followers, as translated, everything concerning ethics and statecraft contained in the Confucian classics which is likely to interest such readers, omitting nothing of importance.
The passages quoted, arranged by topics, in accordance with a scheme laid down as that of Confucius himself in *The Great Learning*, are connected by a running narrative, showing briefly the relationship of one passage with the other, stating from what book taken and by whom enunciated, and most sparingly accompanied by quotations from other moralists, ancient or modern.

This week's issue of THE NATION comprises 14,892 copies: of this 8,292 go to paid subscribers and 1,076 go to exchanges or are sent out as free copies. The average weekly newsstand sales during the first ten months of the year 1915 were 801. October average, 797 copies.

In view of the large library and college and family circulation of THE NATION, it is safe to assume that not less than 30,000 people read it each week.

BOOKS FOR PARENTS, TEACHERS, AND SOCIAL WORKERS

By WINIFRED SACKVILLE STONER
NATURAL EDUCATION

An interesting presentation of the methods of teaching by play used by Mrs. Stoner in the education of her daughter, Winifred, who, as a child, has attracted attention everywhere because of her remarkable development, mentally and physically. *Price* $1.00 *net.*

By ARTHUR HOLMES
Dean, Pennsylvania State College
BACKWARD CHILDREN

Written in popular style out of great scientific knowledge to help those who are striving to help slow boys and girls and reclaim the mentally arrested. Discusses the causes and determination of backwardness, and practical methods of treatment in home and school. *Price* $1.00 *net.*

By MRS. FREDERIC SCHOFF
President of National Congress of Mothers and Parent-Teacher Association.
THE WAYWARD CHILD

Mrs. Schoff has investigated the cases of thousands of children and from this deep basis of practical knowledge has written this message to parents to help children to a better chance for useful and successful lives. *Price* $1.00 *net.*

By EDGAR JAMES SWIFT
Author of Mind in the Making, etc.
LEARNING BY DOING

A book written to take hard and fast rules out of child-training and give each child a glad, good chance for the free, individual development of his native talent, his best inducement. *Price* $1.00 *net*

By MARY G. HOOD, M.D.
For Girls and the Mothers of Girls

"A marvelous and valuable work; a compend of all that the mother should teach her girl as a sacred duty. I should like to put it in every home, to be studied seriously and reverently by mother and daughter."—*Marion Harland. Illustrated.* $1.00 *net.*

By GEORGE HERBERT BETTS
FATHERS AND MOTHERS

A book written not so much to remind parents of their responsibilities and obligations—though these are not lost sight of—as to inspire them with the beauty and privilege of training their children to be noble and useful men and women, a joy to themselves and the world.
With frontispiece. Price 75 cents net.

By MICHAEL F. GUYER
Professor of Zoölogy, University of Wisconsin.
BEING WELL-BORN

An authoritative presentation of present-day views regarding the rôle of heredity in our life. This volume treats helpfully the problems of eugenics which are engaging attention to-day. *Price* $1.00 *net.*

By WILLIAM HEALY
Director Juvenile Psychopathic Institute, Chicago
HONESTY

A study of the various causes of stealing and practical remedies which can be applied in home, school and community. *Price* $1.00 *net.*

By E. A. KIRKPATRICK
State Normal School, Fitchburg, Mass.
THE USE OF MONEY

Sound advice to parents and educators on teaching children how to save, how to spend, and how to equip themselves for business and the conduct of household affairs. *Price* $1.00 *net.*

By IRVING KING
Assistant Professor of Education, University of Iowa
THE HIGH SCHOOL AGE

Professor King undertakes in this book to give the parent the best modern knowledge of the "teen age," the all-important age of adolescence—the approved results of scientific study and experiment.
Price $1.00 *net.*

By WILLIAM A. COOK
Assistant Professor of Education, University of Colorado, and M. V. O'SHEA, *Professor of Education, University of Wisconsin.*
THE CHILD AND HIS SPELLING

Knowing how to spell is a business asset and a social necessity. Learning how to spell is a difficult matter. These authors have investigated the whole spelling question, devised a method that is simple and scientific, and made a list of all the words the average American uses and need know.
Price $1.00 *net.*

By FRANCIS TWEDDELL, M.D.
HOW TO TAKE CARE OF THE BABY

Brief, concise, and authoritative manual, giving most approved principles and practice in the care, nursing, artificial feeding, common diseases, and digestive disorders of children.
A. L. A. Booklist. New edition completely rewritten.
Price 75 cents net.

The publishers will send on approval any of the above books to any reader of this magazine

JAMES WHITCOMB RILEY'S NEW BOOK
THE RILEY READER

Miss Charity Dye, widely known for her unusual work in the teaching of English, has made a careful study of the entire collection of Riley's poetry, and has chosen from it those poems that will most appeal to children. There is a delightful variety, including poems of reflection, of philosophy, of patriotism, of description, of tender home feeling.
With frontispiece in color by Ethel Franklin Betts, and many illustrations by Will Vawter. Cloth, 60c. net.

New York THE BOBBS-MERRILL COMPANY, Publishers Indianapolis

A little known period of Spanish Colonial history is interestingly and authoritatively treated in

Texas in the Middle Eighteenth Century

by HERBERT EUGENE BOLTON, *Professor of American History in the University of California.*

Not only a scholar's contribution to a hitherto almost unknown period in the history of Spanish colonization, but also an extremely interesting narrative of frontier life as experienced by Spanish pioneers—priest, soldiers, and adventurers. These studies are based almost entirely on unpublished manuscript sources, many of them in themselves documents of great "human interest."

8vo, 458 *pages, cloth, illustrated.* $3.50.

NEW YORK, THURSDAY, DECEMBER 2, 1915.

Summary of the News

Congress reassembles next Tuesday. In his message, as is indicated by dispatches from Washington, the President will doubtless largely concern himself with the question of national defence. It is also expected that he will suggest to Congress the adoption of legislation giving to the Federal authorities powers which they do not at present possess to enable them to deal effectively with cases of disloyalty and conspiracy. The President is also expected to make recommendations in connection with a new Ship Purchase bill, and to suggest means for raising the revenue which will be required to meet the expenses of the plan for national defence. In a statement issued on November 25 Secretary McAdoo presented an outline of the financial measures he suggests.

The situation in Greece has become considerably less acute, but, as we write, remains uncertain. It was reported last week that the Greek Government had acceded to the demands of the Allied Powers, and an official announcement issued from Athens on November 25 seemed to give confirmation to the statement. The wording of the announcement was, however, somewhat vague, and it was never regarded as conclusive. A second note, outlining the measures which the Powers desired Greece to take, in conformity with the preliminary agreement that had been reached, was presented on Friday of last week. It is understood that the Allied Powers recognize the right of Greece to continue neutral, but demand, as a guarantee of the safety and unhampered action of their forces, the withdrawal of Greek troops from the vicinity of Saionica. It is also supposed that they have demanded that they themselves shall police the territorial waters of Greece as a protection to their navies against the menace of German and Austrian submarines.

Rumanian diplomacy is so agile that it is hazardous to prognosticate anything as to its intentions, but it looks as though a crisis in the fortunes of the country were imminent. The dispatches of the week, recording alleged expressions of opinion by Rumanian statesmen, on which little reliance can be put, have slightly favored the Allies. From the King's speech at the opening of Parliament on Monday, advocating preparedness for defence, no conclusion naturally can be formed. The most important factor in the situation is the presence of large Russian forces on the Rumanian frontier in the neighborhood of the Danube. According to dispatches from Saionica of November 24, the Czar, in a personal telegram to Premier Paschitch, of Servia, promised that the invasion of Bulgaria by these troops would be undertaken in one week. Side by side with this report we may place the statement from London last Saturday that the Rumanian Government had refused a request of the Austrian and German Governments for permission for their warships to proceed along the Danube towards Galatz and the Black Sea.

Probably the German statement published on Monday, on which we comment more fully elsewhere, that the campaign in Servia may be regarded as concluded, is to be read in connection with the Russian threat on the Rumanian frontier. The statement itself, so far as the facts asserted go, is true enough. Servia, like Belgium, except for a small strip of territory, is in the occupation of the Teutonic forces and their Bulgarian allies. The Servian Government betook itself to Albania in the middle of last week, while the northern army has retired across the Albanian and Montenegrin frontiers, followed by Austrian forces.

The most interesting news from other fronts is that relating to the British expedition in Mesopotamia, which has apparently won a success of considerable importance at Ctesiphon, thus bringing the objective of the expedition, Bagdad, within measurable distance of achievement. The victory, judging from dispatches of Monday's date, was not so complete as was at first assumed, the British forces having again withdrawn to a position lower down the Tigris; but this retirement is probably due to the necessity of keeping the army, until the season is further advanced and the supply of water becomes more plentiful, in close touch with the river and the fleet of supply ships.

The roving commission entrusted to Lord Kitchener was evidently undertaken not only for the purpose of reviewing the Balkan situation and bringing pressure to bear on King Constantine, but also for the wider purpose of securing a greater measure of coordination in the operations of the various Allied Powers. From Athens Lord Kitchener went to Rome, and from there to Paris.

There have been two reports from Russian sources during the past week of the torpedoing of German cruisers, both of which have been denied from Berlin. German submarines have had a somewhat unsatisfactory week. A Norwegian vessel has been sunk in the North Sea, and two French and one British boats in the Mediterranean. In an official statement issued in Berlin on November 28 a summary was given of the achievements of submarines in the Mediterranean. According to this, during the first half of November eighteen ships were sunk in those waters, while during the same period in the Baltic only one vessel was sunk by British submarines. A possible explanation of the disparity in results may be obtained from other sources. Reports from Sweden seem to agree that German commerce in the Baltic is virtually at an end and that German ships are huddled in the safe haven of Swedish ports.

Dispatches from Washington early last week asserted that conferences between Secretary Lansing and Count von Bernstorff had been unproductive of results in regard to any settlement of the Lusitania case. Nothing further has been heard of the Ancona.

The case of the Zealandia, which was searched by a British cruiser when, according to one version, she was inside Mexican territorial waters, appears to have resolved itself into a question of measurement. According to dispatches from Washington on Monday, the Mexican port authorities measured by the sextant, the British captain by his range-finder. Hence the discrepancy of some fraction of a mile in the respective estimates of distance. It is probable that the case will be dropped.

A good deal of attention during the past week has been aroused by the scheme of a Mr. Ford, an automobile manufacturer of Detroit, to charter a ship on which he proposes to take a number of unofficial emissaries of peace to Europe. The object of the expedition, as declared by its originator, is "to get the troops out of the trenches by Christmas."

The case against Dr. Karl Buenz and other officials of the Hamburg-American Line on charges of conspiring to defraud the Government was rested by the prosecution on Monday. Capt. Boy-Ed's name has been freely mentioned in the evidence introduced in the trial, and there have been reports that the German Government contemplates lodging a protest against implicating its representative in the unsavory business. Investigations into alleged Teutonic conspiracies are now being conducted in San Francisco.

In a period of gigantic loans the instantaneous success of the new French "Victory" loan stands out as a striking achievement. Estimates made by Paul Leroy-Beaulieu, the economist, at the end of last week, were that the total figures might amount to $4,000,000,000, half being conversions of old issues.

News came from Ottawa on Monday that the Canadian Government had commandeered all high-grade wheat in elevators from Fort William, on Lake Superior, to the Atlantic Coast.

Dispatches on Tuesday announced the arrival of the Kaiser in Vienna and his meeting with the Emperor Francis Joseph. There were also reports of dissension in the Austro-Hungarian Cabinet, and in connection with these the inevitable rumors of a separate peace on the part of Austria-Hungary were revived.

The German Reichstag reassembled for its sixth war session on Tuesday. We have no detailed reports of its meeting as we write, but there is every indication that the question of food will figure prominently in its discussions. It is thought also that the Socialists will endeavor to obtain from the Chancellor some definite statement regarding Germany's aims in the war. There have been more reports of food riots in Germany during the past week, and dispatches from Amsterdam on Tuesday drew attention to the fact that for four days the circulation of certain newspapers outside of Germany appeared to have been prohibited.

A further statement by Lord Bryce of atrocities perpetrated on the Armenians was published in the morning papers of last Saturday.

The Week

The result of the first important bye-election for Parliament since the beginning of the war has unmistakable significance. Two candidates stood for Keir Hardie's vacant seat. Both were Laborites, one being the "official," the other the "unofficial," candidate. Both supported the Government. Between two such men there would seem to have been little choice. Yet the candidate who had the backing of the South Wales Miners' Federation was beaten by the sizable majority of 4,000 votes. The explanation of this result is partly that the "unofficial" candidate made his campaign upon the issue of the energetic prosecution of the war, while his opponent contented himself with a more moderate tone. But it is pointed out that the unsuccessful candidate had been connected with the Independent Labor party and its anti-war doctrines, and that this heavily handicapped him in the contest. Such a result would be significant in any election district in England, but in the district which had sent to Westminster the leader of the peace element in the British Socialists, a man some of whose utterances regarding the war had led a London newspaper to call his attention to an Order in Council prescribing penalties for giving aid to the enemy, it is conclusive upon the point of Britain's determination to see the war through.

The story told by Mrs. Eleanor Franklin Egan, of the attack on a British passenger ship in the Mediterranean by a submarine flying the Turkish flag, has a most important bearing on the whole subject of the killing of non-combatants upon merchant ships by submarine attack. In this particular case of the Barulos, twenty-five lives were lost through panic, and this was unjustified, since the commander of the submarine had no intention of committing such an outrage upon humanity, and such a violation of the laws of war, as has been committed again and again by the commanders of German submarines. The submarine fired a warning shot, but most of the passengers were instantly seized with panic terror; Mrs. Egan herself was "caught in the rush and literally forced over the side into the sea." The conduct of the submarine she describes as follows:

> The underwater craft had her collapsible lifeboat out, and the crew were pulling people out of the water onto her deck. The officer was holding up his hands shouting to the people in the water to be calm. I heard him say in perfect English: "For God's sake, go back to your ship. We are not murderers."

This is most creditable to the captain of this submarine; but it brings out in all the stronger relief the criminality of that policy —a policy which, so far as the principle of it is concerned, Germany has not as yet given the slightest sign of repudiating—which was put into force in the case of the Lusitania, the Arabic, and in all probability of the Ancona. And how could the poor women and children on the Barulos know that the commander of this warship flying the Turkish flag would be less inhuman than the man who ordered the Lusitania butchery? The blame for the deaths of these twenty-five victims is to be placed not on the panic, but on the cause behind the panic —the murderous and lawless policy of von Tirpitz and his Government.

When the Kaiser enters Constantinople, to greet his exalted brother-in-arms, the Sultan, he will have to take pains to forget what Germans have written of the Turks. For example, there is the letter which Bismarck wrote to the old Emperor on August 11, 1877. It was at the time of the first Russian reverses in the war with Turkey, and Bismarck associated himself with Wilhelm I in regretting the misfortune. He did not think that Germany would need to face a change of policy, but he went on to say:

> It is impossible without deep sympathy to read of the misfortunes of these brave and friendly soldiers, or without indignation to learn of the shameless outrages committed by the Turks upon the wounded and helpless. *With such barbarians it is difficult to be on good terms diplomatically, and I think that all Christian Powers must be indignant.* . . . For the Russians, there lies in these events evidence that, in this war, they are the champions of Christian civilization against heathenish barbarism.

This letter was first printed in the "Anhang" to Bismarck's "Erinnerungen," and may be found at p. 273 of Vol. I. It shows what a lot of water has flowed under the bridge since the great Chancellor made friendship with Russia a cardinal point in the true policy of Germany. But, of course, when he said that it was difficult to keep up even diplomatic relations with Turkey, he did not dream that a German Kaiser would one day be in alliance with a blood-stained Sultan, and entirely ready to overlook those Turkish *Greuelthaten* against which humane men all over the world, except in Germany, are crying out as Bismarck cried out against them in the Germany of 1877.

The official German press warns the Socialist and Radical newspapers against lending aid and comfort to the enemy by harping on the scarcity of food and the high prices. To this *Vorwärts* retorts that it is for the Government to remove the cause of complaint. It is not the Socialist press alone that needs admonition from the Government. Quite as bad is the impression created abroad by the patriotic organs which attempt to show that Germany never can be starved so long as German science can find substitutes for bread and meat; wood-pulp, for instance. The *Vossische Zeitung* praises the "masterly" address of one expert dealing with the digestibility and nourishing properties of wood. Another scientist shows how all that is needed is to boil lumber in lactic acid; "the whole mass becomes appetizing and highly nourishing," and it is thus revealed that "German forests contain enormous treasures of food material." We need not take such statements too seriously. A year ago one German professor had found that straw, by judicious scientific handling, could be rendered palatable and life-sustaining, but Germany to-day is not living on straw. Yet what a commentary this discussion does offer on German prospects of "victory." Nations may stave off disastrous defeat and annihilation by extraordinary self-sacrifice, but it is hard to think of armies marching triumphantly on Suez and India, while at home the nation speaks of the nutritive qualities of straw and lumber.

Yet no true conception of conditions in Germany can be framed if we insist on reading into German newspaper opinion a deeper significance than we read into Allied newspaper opinion of the same tenor, or emphasize internal conditions in Germany to the neglect of similar conditions elsewhere. If, for instance, a large section of the German press is calling upon the Government to state the terms upon which it is willing to make peace, it is also true that a paper of the standing of the London *Morning Post* is calling upon the Allied Governments to state what kind of peace they are striving for. If there are dissensions in Germany on the question of the desirability of peace, we must remember that in London the crowds are breaking up peace meetings held under the auspices of members of Parliament. We do not mean to say that conditions in Germany and England are similar. The very fact, for example, that there should be dissension in Germany shows how far we are from the unity and spirit of determination which were supposed to characterize the German people; whereas in England the free expression

of opinion is a normal thing. Nevertheless, the necessity does exist for reading Berlin dispatches and London dispatches with the same desire to get at the truth.

Secretary McAdoo has issued a statement as to the condition of the Treasury, its prospects, and the means for obtaining the additional revenue needed if the preparedness programme is adopted. Concerning the actual state of the nation's finances, and especially their condition in comparison with recent years, there promises to be a good deal of controversy, though in the end there can hardly be any difficulty in establishing the truth of the case. As to the Secretary's chief suggestions concerning sources of revenue, on the other hand, there is likely to be fairly general agreement. The retention of what remains of the sugar tariff, through repeal of the provision of the present law which provided for its gradual automatic extinction, will meet, we suppose, with almost no opposition at all; it should suit protectionists as a matter of course, and anti-protectionists, as being that tariff measure which can best be justified from a revenue standpoint and which produces a minimum of disturbance in the general tariff situation. An increase of the income tax will be much less welcome, but doubtless everybody is expecting it; and if it is to come, it is most desirable that there be a lowering of the exemption limit (as Mr. McAdoo suggests) along with a raising of the rate. As to the miscellaneous taxes, there is here room for any amount of variation; but the automobile is a shining mark, and is scarcely likely to escape. Still, with so many other sources open to the Federal Government, it may well be asked whether it would not be better to leave the automobilist to the States and municipalities. Their needs are constantly growing, and they are far more hampered than is the nation in the choice of subjects of taxation.

The Supreme Court's decision upholding the validity of the New York law—recently amended by the Legislature so as to ward off its worst effects—directed against the employment of alien labor on public works is not in the slightest degree inconsistent with its recent decision declaring the Arizona Anti-Alien Labor law unconstitutional. On the contrary, in the opinion handed down in the Arizona case, the Court not only took pains to point out that the question involved in it had reference to regulation of private employment only, but made explicit reference, at two points, to the question of public works, or the paying out of public moneys, in a manner that was doubtless intended more or less to foreshadow the conclusion that has been announced in the New York case. The Arizona law, it was pointed out in the earlier decision, "is not limited to persons who are engaged on public work or receive the benefit of public moneys"; and again:

> The discrimination defined by the act does not pertain to the regulation or distribution of the public domain, or of the common property or resources of the people of the State, the enjoyment of which may be limited to its citizens as against both aliens and the citizens of other States.

To say, in the face of this, as the New York *World* does, that the "Supreme Court in a way reversed itself in less than thirty days," is preposterous. As for the idea that the New York decision means that while "States are powerless to confer upon their citizens the right to violate treaties," yet they "may do so themselves with impunity," that is mere moonshine. The Court declared the Arizona law invalid because it violates rights guaranteed by the Fourteenth Amendment; and it declares the New York law valid because, in its opinion, it violates neither these rights nor any rights conferred by treaty.

The project of a "permanent non-partisan Tariff Commission" has, in the form in which it is put forward by the Merchants' Association of New York, the merit of great clearness:

> The Commission favored by the Association would have authority to gather, investigate, and tabulate technical and statistical facts of all kinds pertinent to the tariff schedules, both in this country and abroad, and its reports would be confined to ascertained facts *without recommendations,* unless recommendations should be asked for by Congress or the President.

The words which we have put in italics suggest a vital difference between what the movement of the New York organization contemplates and what has often—perhaps usually—been in the minds of the advocates of a permanent Tariff Commission. The device has been urged as a solution of the tariff problem—a means of automatically getting the tariff "out of politics." To be sure, few, if any, have ventured to propose that Congress should delegate its powers to a Commission; but what *has* been expected is that a Commission might be charged with the duty of framing a "scientific" tariff, subject to the approval of Congress, and that in practice this would result in the actual substitution of science for politics in the framing of our tariff laws.

That such a substitution of authoritative scientific conclusions for the pulling and hauling, the give and take, of political struggle is impossible in a field in which opposing opinions upon fundamentals are tenaciously held by somewhat equal portions of the population, is recognized not only in the statement we have quoted, but also in an extract from a book by Mr. Henry R. Towne, chairman of the Association's committee on the subject, which is presented as further defining its position. In this the distinction is sharply drawn between the determination of a policy on the tariff and the settlement of all the details. Whatever the policy may be, it is, of course, desirable, as Mr. Towne says, that it be applied with the fullest attainable knowledge of the facts concerned. "The function of a Tariff Commission," he says, "is to ascertain, record, and report these facts, leaving Congress free to deal with them as it may see fit." Even with this reasonable and modest view of a Tariff Commission's function, however, it is well to bear in mind the limitations and difficulties with which its undertaking would be beset; how serious these are, the experience of the able Board which, in President Taft's Administration, struggled with the question of difference of cost of production suffices to show.

It was Pennsylvania manufacturers who spoke of business as "trembling in the presence of the Democratic party." Now Senator Penrose, observing the same sensitive barometer, and compelled to admit a certain general prosperity, remarks that "much of the hopefulness is based upon the assumption that the Wilson Administration and its policies will be defeated and protection will be restored to the nation." So used is Senator Penrose, like Representative Mann and others, to whistling to keep up his courage, that when he perceives business in a whistling frame of mind he can think of no other explanation. The psychology of business, according to these Republican diagnosticians, is a fearful and wonderful thing. In 1907, beyond any doubt, it was some prevision of 1912 that caused a panic. The depression of the last two years arose from the consciousness that, whatever happened, business was in for Democratic misrule till 1917. But business can reach an almost unparalleled pitch of prosperity upon the mere hope that such misrule will not extend beyond that year. One puzzling aspect of these "explanations" is that their authors should admit so much virtue in a mere frame of mind—virtue able to triumph over the hard facts

presented by Democratic measures. Another lies in the circumstance that a multitude of manufacturers confess to doing well at the same time that they contemplate the probable reëlection of President Wilson.

Iowa reminds the country that there is to be a Republican Convention next year by an impressive launching of the Cummins Presidential boom. "Impressive," because the gathering of Republican leaders from all over the State included standpatters who fought Cummins in that dim past when he was running for Governor, and Progressives who did not quite know whether to fight him or not in the more recent times. Not in fifteen years, if we may trust the dispatches, has there been such an assembling of the clans in the State which may fairly claim to have done its best to introduce progressivism into the Republican party in a safe and sane way. Everybody was welcome, and no questions asked, to enroll in the Iowa Cummins Club, which has set out to give the State its first President. One thing in the Senator's favor is the geography of the situation. Like his rival, Burton, Cummins lives in the belt where the nomination lightning has a fondness for striking. Weeks may be an excellent man, but why should a Middle Westerner go outside his own favored section for a candidate for the White House?

These persons, for the sake of profits alone, deliberately encourage the workers to have large families, that their little ones may be driven to labor, that the factories shall have them.—[Helen Keller in the New York *Call*.

It was inevitable that Chicago's defective baby should be seized upon as a text for a "social" lesson; not simply as a text for eugenics, where the application would be fair enough, but as only another instance in the argument which traces all the ills of the world to our social and industrial system. It may be that the unscrupulous "profiteer" wants more poor children, but if so he has been singularly unsuccessful in having his wish. If one were asked to name any two great social forces that mark the history of the last fifty years, one could properly cite the rise of the factory system and the decline of the world's birth-rate. Germany, which industrialized herself after 1860, has witnessed a birth decline which her militarists now regard as a public menace. The same is true of industrialized England and this country. But Russia, which has hardly been scratched by the factory system, continues to pour forth an enormous increase of young life. Life, after all, is not entirely shaped by the conscious ambitions of the economic masters of society.

In the present issue of the *Nation* we publish the second of a series of articles, announced last summer, on the subject of the New Realism. Following upon Professor Firkins's paper, which laid bare the lack of truth in the fashionable poetry of the moment, Professor Sherman deals with a prominent representative of present-day realism in fiction. It appears that settling hoti's business is not the easy matter which many have been led to believe. Though the cry has been persistent of late that only facts are wanted, whether the medium be a poem, a novel, or the report of a factory superintendent, there is no escape from the conviction that true art is not a vehicle into which life raw and crude can be dumped with good effect. Art has its rules which require that life shall be presented in typical instances, and typical instances imply the exercise on the part of the artist of a sturdy judgment of what is representative as distinct from what is isolated. Facts are facts, it is true, but for art the interpretation of facts is the main thing. Interpretation, in turn, depends upon a philosophy of life. Without this a novelist is in no better case than a newspaper reporter. Not that our young writers of fiction are without this philosophy. It is because they have it, and must have it in order to build up their stories, that it is possible to convict out of their own mouths most of those who are posing as realists of not being realists at all. At the risk of committing a "never," we are tempted to say that never before has so much sheer naturalism masqueraded in the guise of authentic realism.

Years ago editions of Baedeker spoke of a movement in Philadelphia to unite the private art collections of Mr. Widener, Mr. Elkins, and Mr. Johnson in a suitable permanent building open to the public. In the city in which more than a century ago the painter Peale was head of one of the most flourishing academies of fine arts in the New World, this project for a substantial public museum still hangs fire. Comparatively new Western cities, like Cleveland and Minneapolis, have seen splendid buildings go up in the last few years, but Philadelphians have been unable to agree on a bond issue or other provision. In the option which his father's will has left Mr. Joseph Widener, to retain the Widener art collection or to present it to New York, Washington, or Philadelphia, the city ought now to find inspiration to build a gallery that would afford suitable protection to such an exhibit.

The rapid growth of Princeton University in the last ten years is set forth in a bulletin issued by the Princeton University Press Club. A decade ago the estimated value of the buildings at Princeton was $3,238,840. Since then nineteen new structures have been erected at a cost of $4,157,480. The teaching faculty has been increased from 100 to 195, and the salary budget from $195,135 yearly to $401,310. While costs have thus been multiplied by two, the increase of students has been slightly less than 20 per cent. The students pay but little more in tuition for the enlarged facilities. These have been made possible by special gifts, like that of Mr. Procter, and bequests like that of Mrs. Swann. The professors have gained but little in salary, a fact to which the authorities "point with regret." Princeton's development from 1905 to 1915 has been truly remarkable. But so has been the expansion of many another university. Undergraduates are the beneficiaries of a fast-mounting expenditure.

It took half a century and the efforts of educators like Barnard and Mann to persuade Americans to substitute State control for local and private control of schools. It is only by losing sight of the great progress made by virtually all State systems in the last few decades that one can doubt their ability to maintain the work of improvement without Federal interference. Ex-President Taft's suggestion, that the Federal Bureau of Education be made a national university with power to examine teachers and issue Federal certificates, is objectionable as trenching on the functions of the commonwealths in a way that might lead to their neglect or atrophy. The betterment of the schools now depends primarily upon the general centralization of control at the State capitals—the abolition of district schools and their replacement by township schools, the exercise of increased authority over the townships by the county, and a firmer direction of county policies by the State superintendents and State boards. The national Government has every reason to avoid action that would weaken the hands of the State, while putting itself to useless expense and labor. At the same time, it is quite possible that in undertaking special investigations by State invitation, the Federal Bureau could—as ex-President Taft asserts—stimulate the backward States to progressive action.

MEXICO AND THE CATHOLICS.

The publication on Monday of the long letter of the President's private secretary, Mr. Tumulty, to a fellow-Catholic, with accompanying documents, is undoubtedly to be taken, first of all, as an effort of the Administration to allay Catholic feeling in this country. This has shown itself much inflamed by Mr. Wilson's course towards Mexico, and particularly by the stories of shocking cruelties to priests and nuns which have come across the border. The charge has been made that these outrages were committed by the soldiers of Carranza's armies, if not under direct orders of the military authorities, at least with their wicked acquiescence. Hence, it has been alleged, to recognize Carranza as *de facto* President of Mexico is to make our Government tolerant of monstrous crimes, and to offer a deadly insult to the Catholic Church. It is not only Catholic citizens and newspapers that have taken up the cry. Mr. Roosevelt has, in pursuance of his avowed purpose to "tear Wilson to pieces," caught up the reports from Mexico, given them full credit, and made them the basis of railing accusations. It must be to such assertions as his that Mr. Tumulty's letter refers when it says: "Any effort to drag out all the horrors of a fratricidal war and put them on parade, to paint only the dark side, to keep open wounds when that country is prostrate in sorrow and its people praying for peace, is scarcely a labor which any friend of Mexico would undertake, or in which any man could find pride."

The question of fact is admittedly difficult. It will not be disposed of by this official publication. Indeed, Mr. Tumulty frankly concedes that in the turmoil of civil war in Mexico, with guerrilla bands operating in various parts of the republic, horrible things have been done. But he contends that the Washington Administration has done all that it could to safeguard Catholics in Mexico. He also asserts that there has been a vast exaggeration of the actual outrages, and, in particular, that the accounts of widespread violation of nuns by a ruthless soldiery have been without warrant in fact. After careful official inquiry, not one authentic case of this infamy has been brought to the knowledge of our State Department. It is hard, if not impossible, to prove a negative in such a matter. We presume it to be highly probable that there have been a few cases of outraged nuns. But it is certain that there have not been nearly so many as freely charged. And to some specific allegations Mr. Tumulty's letter gives a quietus. For example, in "The Book of Red and Yellow," printed by the Catholic Church Extension Society of America, there is a chapter dealing with "The Persecution of the Sisters." One of the latter makes a sworn statement about what she saw with her own eyes, in which occurs the following:

> In Mexico City I have seen with the utmost regret many religious who have been victims of the unbridled passions of the soldiers. Many I found bemoaning their misfortune, being about to become mothers, some in their own homes and others in maternity hospitals. Others have allowed themselves to be carried away by their misfortune and have given up all, filled with desperation and shame. They complain against God, saying that they have been abandoned by Him.

To this, Mr. Tumulty is able to oppose the testimony of the Vicar-General of the Archbishopric of Mexico City, Antonio J. Paredes. In a report dated January 22, 1915, he says:

> With reference to the violation of nuns (*señoras religiosas*), I am positive that no one of them within the archbishopric has suffered an attack upon her honor, and I have been unable to confirm the rumors that violated nuns have arrived in this capital from other places. Inasmuch as all religious affairs come to the office of which I am in charge, I consider the above rumors as entirely false.

This is authoritative for these particular charges, and ought to make even Mr. Roosevelt hesitate before believing every story of the kind that comes to him.

If the Mexican Government of to-day is severe in its attitude towards the Catholic Church, this is no more than all Mexican Governments have been for the past sixty years. There can be no understanding of the Catholic question in Mexico to-day which does not take into account what has gone before. Mexico has a body of anti-Clerical legislation so drastic as to make the most extreme measures of France in recent years seem mild by comparison. The so-called "Laws of Reform," worked out by Lerdo and Juárez and Comonfort during the struggles of many years, were an attack upon the ancient privileges of the Mexican Church more sweeping than anything which Carranza has done or proposed. Whether those anti-Clerical laws were justified or not, we do not here discuss. Our sole point is that they, and the treatment of priests and nuns that went along with them, were never alleged as a reason why the United States should not recognize those earlier Mexican Presidents. But now we are told that Carranza ought not to be recognized because he is anti-Clerical, and because crimes such as used to stain former revolutions in Mexico have again been committed during the past three years. Nowhere is there any proof that Carranza himself is personally responsible; but everything that drunken soldiers or roving bandits have done is laid upon his shoulders. This is manifestly unfair.

We must try to keep distinct the question of outrages in Mexico and the question who bids fair soonest to restore peace and order in Mexico. Abhorrence of the crimes cannot be too great. If the criminals are caught, their punishment cannot be too severe. But we submit that all this is beside the point of what is to be done by outside nations to help Mexico to her feet. It is a neat point which Mr. Tumulty scores when he remarks that the other countries which joined the United States in deciding that Carranza was the man for the great Mexican work are all Catholic countries.

THE SERVIAN CAMPAIGN.

The German General Staff announces the close of its campaign against the Servian army. That army has now been driven beyond the national frontiers and the object of the German operations—an open road to Constantinople—has been attained. It is rather unusual for a war staff to inform its opponents that it has gone as far as it expects to and so relieve the enemy of undue anxiety. The Berlin statement is intended primarily, of course, for the people at home. The irresistible onset of the German arms has been proved in another theatre of war. Servia is now at one with Poland and with Belgium as a sign of victory if the war is to be decided by the clash of armies, as another trump card in the hands of the German diplomatist if peace is to come through weariness and a matching of gains and losses. Possibly, the announcement of the "close" of Teutonic operations in the Balkans is not intended for the German people alone. Among the Allies the query will arise where Germany may strike next. In Italy, for example, the question might well be the cause of some anxiety.

In the Balkan campaign the Central Powers set out to accomplish the very same object that the Allies aimed at six months ago, and they have succeeded where the Allies have failed. Great Britain, in beginning the Dardanelles campaign, had a double purpose. By forcing the straits she hoped to bring aid to a beleaguered ally—Russia—

which was badly in need of war supplies and which needed in turn an outlet for her food supplies upon which her economic standing in the international markets was largely based. A greater potential result was the effect which the fall of Constantinople would have exercised upon the attitude of the Balkan peoples. Bulgaria, Greece, Rumania, without question, would now be fighting on the side of the Allies. The Germanic Powers would never have executed their march into the heart of Russia. Instead, it is not unlikely that the Czar might have broken through the Carpathian barrier, and the end of the war would have been in sight. It has turned out the other way. Germany, in turn, faced the necessity of bringing aid to a beleaguered ally—Turkey—from whom in turn she might draw food supplies, in moderate quantity, for her own people. This she has accomplished. Germany, in the second place, faced the problem of swinging the Balkan balance in her favor. This, too, she has accomplished. Bulgaria is her ally, Servia is out of it. Greece is friendly. Rumania, in spite of all rumors about Russian armies preparing to march through her territory against Bulgaria, desires to remain neutral.

As a military achievement the conquest of the greater part of Servia does not rank particularly high. What is impressive is not the speed with which the task has been performed or the obstacles which have been overcome, but the smoothness with which the operation has been carried out. Suppose the campaign conducted under Austrian instead of German leadership, and there would probably have been temporary setbacks, delays, mistakes, even if the ultimate outcome were the same. It was the German machine at work. But the German machine, while working smoothly, did not perform miracles. We may compare the operations of the last two months with the progress of events during the first Balkan war of 1912. In that year the combined forces of Bulgaria, Servia, Greece, and Montenegro outnumbered the Turkish armies as 7 to 4. In the present campaign at least three-quarters of a million Teutons, Bulgars, and Turks were arrayed against 200,000 Serbs at most, and about as many Allies in Gallipoli, or nearly 2 to 1. The Germanic attack upon Servia began on October 6; and Belgrade was occupied on October 9, the very same day on which, three years ago, Montenegro gave the signal for war against Turkey. Just seven weeks after Belgrade, the Teutonic forces reached Mitrovitsa. But in 1912 the Bulgars had won the battle of Lule Burgas in less than three weeks after the outbreak of war, and were before the Chataldja lines in less than five weeks, covering a greater distance than from Belgrade to Mitrovitsa. In six weeks the Serbs in 1912 had occupied Monastir. In four weeks the Greeks were at Salonica.

Actually, the odds against the Servians were much greater than those faced by the Turks in 1912. The Allies in Gallipoli have not entered into the reckoning. With 200,000 men at most, Servia had to face an attack on three sides carried out by 200,000 Austro-Germans and probably a quarter of a million Bulgars. Against German leadership there was no chance of a dramatic *coup* such as shattered the Austrian army of invasion last December. The Servian army had the choice between retreating with forces intact into Albania and by a roundabout route back into southern Servia, or thinning its lines and fighting a delaying campaign. The first alternative would have given the Central Powers immediate control of the road to Constantinople, while the Bulgars, facing no resistance in the north, would have poured larger forces into Macedonia than they have done, and might now have been in possession of Monastir and all of Servia. A delaying campaign meant the loss of the greater part of the Servian army, but it furnished a respite for the bringing up of Allied reinforcements which might at least safeguard a remnant of the national territory. This is what has happened. The parallel with Belgium is complete. The Cerna River on which the French are established is the Yser of Servia. Monastir is Ypres.

Berlin's announcement of the "close" of the campaign against Servia is coincident with the arrival of winter. There is snow in the mountains. Operations can be conducted only with great difficulty. Yet Berlin's statement does not necessarily mean a suspension. The "end" may have been attained, but there is no reason why the victors should not press on to unforeseen advantages. Unless the rumored agreement between Bulgaria and Greece regarding Monastir is a fact, there is no reason why the Bulgars should not use their forces, released in the north, for exercising increased pressure against the Allies in the south. But even if a respite is granted to the Allies, the task which confronts them next spring is formidable. To match the forces of their enemies in the Balkans, they have now about 300,000 men in Gallipoli and Servia, with the remnants of the Serb army. Before spring they must double their forces, if they are to be on equal terms, and they must pour in half a million men if they are to assume the aggressive.

FOOD AND PEACE.

We may divide the war into three phases. In the first phase, victory was sought through the clash of armies. In the second phase, it became a test of munitions. In the present phase, there enters the factor of the possible endurance of the nations measured in terms of food. The problem is one that does not confront Germany alone. The cost of living has gone up in Great Britain. Prices have become burdensome in France. In Austria there is dire want. Russia has her great stocks of unsold grain, but the disorganization of industry and sharp depreciation of currency have undoubtedly played their part. France is preparing to follow Germany in fixing maximum prices. All Europe is suffering, and we can only strive at a rough estimate as to which nation suffers most. It is in Germany that the situation is being most vehemently discussed. The question is, therefore, whether conditions in Germany are faithfully portrayed in the public press, or whether the greater agitation there is due simply to the German habit of facing a problem squarely and taking measures to safeguard the future.

Such figures as are available unquestionably show a more serious state of affairs in Germany than in France or Great Britain. For Great Britain the London *Economist* estimates a rise of 25 per cent. in the price of commodities entering into the working-class budget. For Germany, according to the *Economist*, the official Prussian figures show an increase since the outbreak of the war of 75 per cent. The scarcity weighs in particular upon the children. The maximum price for butter was fixed at Berlin in October at 67 cents a pound, but in other parts of the country the price is from 80 to 90 cents. Milk for adult consumption has become prohibitive, and in many parts is hardly obtainable. By comparison, the figures for Paris, quoted in a recent number of the *Petit Parisien*, are much more favorable. Butter sells at 40 cents a pound, an increase of 40 per cent. since the beginning of the war. Milk has gone up one cent from seven to eight cents a quart. The increase in meat prices ranges from 16 per cent. for poultry down to scarcely any advance for pork. But fish has gone up 60 per cent., partly because of the increased demand, partly because of the drafting of the Breton fishermen; potatoes have gone up 25 per cent., and now sell at 2 cents a pound, or

nearly twice the maximum fixed in Germany, and cabbages for the workingman's soup have risen 133 per cent., from 6 cents to 14 cents per head. The pressure is sufficiently acute in France, but the children there suffer less than they do in Germany.

Conditions in Austria are reflected in a recent statement of a Vienna "Hausfrau" in the *Neue Freie Presse*, dealing with the problem from the standpoint of the lower middle classes. It is a question of feeding a family of five on an income of $1,200 a year. According to the writer, the common phrase about the housewife's ceaseless and painful "guerrilla warfare" for existence has become bitterly true. She gives very few figures, but the picture is a sad one. Of meat for the daily diet there is no use in speaking, and only the most painful economy will produce a roast for Sunday with something left over for the following day. "Given bread, flour, potatoes, fat, and a bit of rice, and a life-sustaining diet may be worked out on a semi-vegetarian basis." The whole secret of subsistence under present circumstances consists in a "ceaseless" study of ways and means, based on market reports, and personal intensive shopping. With all that, the hunt for butter and fat is a useless one. The children must be content with the comparatively cheap apple-butter. Milk for coffee is out of the question. The writer hopes that the scarcity in potatoes will disappear; "otherwise the nourishment of the family simply cannot be carried on." These are the conditions which confront what in ordinary times would be a fairly prosperous family. What conditions are for the working classes it is not hard to imagine.

For Germany and Austria the food problem has thus resolved itself into the simple factor of potatoes. The German authorities assert that there is no scarcity in that staple, and if regulation has become necessary, the greed of middlemen and speculators has made it so. More than that, the maximum for potatoes seems actually designed to force prices down below even the normal level in order to make up for the deficiency in pretty nearly everything else. Seventy-two cents a hundredweight has been set as the maximum price to the farmer, and retail prices must not exceed that by thirty cents, so that the consumer is supposed to pay a little over a cent a pound, which, as we have seen, would be only one-half the price in the Paris markets. The maximum, however, is not always adhered to. The Frankfort Town Council has been compelled to pay ten cents more a hundred for 200 tons. At any rate, this very emphasis on potatoes shows how largely the German masses are expected to do without nearly everything else that enters into their regular diet. If, with potatoes selling at one cent a pound, the cost of sustenance has nevertheless risen 75 per cent. since the outbreak of war, we can imagine what the increase has been in commodities that go beyond the mere need of keeping body and soul together.

Will Germany, therefore, be starved into submission? It does not follow in the least. We need only recall the South in the Civil War. But it does not need actual starvation to force German statesmen into considering peace. That is the significance of the clamor that rises not only from the Socialist organs like *Vorwärts*, but from moderate organs of the non-Imperialist type. Lack of food will not drive Germany to accept defeat, but it is bound to compel a revision of definitions. Victory, defeat, peace—they cannot mean now what they meant at the beginning of the war; that is true for all nations. But the problem is all the more pressing upon the German Government, for the very reason that German arms on land have been victorious. In France it will be a sufficient answer to the suffering masses that it is a question even of starving or going under as a nation. In Great Britain the sacrifices of the people are the price for the preservation of the Empire. But what does Germany understand by "victory"? Is it necessary for little children to go without sufficient nourishment in order that the eagles may be carried to Suez? That is the question before the Kaiser.

A FINE BENEFACTION.

In these days, when "thinking in millions" has become commonplace, and when, fortunately, giving and bequeathing in millions for beneficent purposes are of frequent occurrence, the fact that a million dollars has been devoted by an individual to a humane object does not in itself attract more than passing attention. But such an act as that of Mrs. Isaac L. Rice—already known for her public spirit through her fight against noise—whose plan of establishing a hospital for convalescents near New York in memory of her recently deceased husband has just been announced, is differentiated in several ways from the general run of gifts. In the first place, while public bequests by millionaires are quite the order of the day, gifts from the living that form a large part of the entire fortune of the giver are very rare. Moreover, even in leaving money after death, it is unusual for our millionaires, if they have children, to devote more than a comparatively small proportion to the general good; whereas Mrs. Rice not only makes this generous gift while she is living and not of an advanced age, but is diminishing by so much the inheritance of her six children.

In this circumstance there is ground not only for especial recognition of large-minded generosity, but for some reflections which the possessors of the enormous fortunes of the present time would do well to lay to heart. In the case of these fortunes, in which in many instances there are only two or three children, one might expect that persons of good will and of enlightened mind would devote to beneficent purposes a considerable portion of their wealth, either at death or sooner. And if this is very rarely done—as it is—we feel sure that the cause is to be found chiefly in want of thought. Persons of the type we have in mind do not deliberately weigh the question whether, before dividing up their millions among their two or three children, it would not be well first to devote a really substantial fraction to some large or noble end; if they spent a little time in earnestly considering this question, they could come to but one conclusion, unless they were wholly wanting in imagination. They would be sure to see that the children would suffer no diminution whatever of happiness through getting six million dollars each instead of ten, or two million instead of three; while thousands of their fellowmen would be incalculably benefited, generation after generation, by the mere stroke of a pen that would suffice to determine the surplus millions to a worthy and beautiful use. The failure lies not so much in the heart, or even in the mind, as in the mere mechanical following of a routine course. Even a single example ought to be worth much in stirring up the thought of doing likewise. Nothing is more certain than that it is to the force of example that we are chiefly indebted for that practice of philanthropic munificence which is far more general in our time than in the past, and in our country than in any other.

It happens that the choice made by Mrs. Rice of the object of her gift is as noteworthy as the generosity of it. Our resources are notably deficient in provision for convalescents. The accommodations of our hospitals are in such demand, and the expense of their maintenance so great, that patients are necessarily dismissed from them as soon as the stage of convalescence

is reached; and moreover, it is not in the hospital, but in surroundings of a very different character, that convalescents can receive the benefit of which they stand in special need. Plenty of room and fresh air, cheery and homelike surroundings, the absence of that sense of constant supervision and discipline which necessarily prevails in the ordinary hospital—these are some of the things which an establishment for convalescents can provide and, if properly managed, can provide at moderate expense. It is safe to say that in thousands of cases the benefits derived from the regular hospital treatment can be vastly augmented and made far more permanent through such care during the period of convalescence.

There is an extraordinary scarcity in the neighborhood of New York, and of our great cities generally, of desirable places where persons who do not need institutional care of any kind, but who do need quiet, country air, good food, and a well-ordered house, can rebuild their health. The number of places—whether hotels, boarding houses, or what may be called semi-sanatoria—that one's family physician can recommend to an ordinary invalid for this purpose is amazingly small. Here is a case not for charity, not even for "philanthropy and four per cent.," but for intelligent planning on purely business principles, if but the right person could be found to take hold of it. There is no difficulty whatever in finding such places in the neighborhood of any great city in Germany or France; but it must be remembered that it is also perfectly easy to find within these cities delightful *pensions* at prices to suit almost any purse, whereas in our American cities such establishments are almost as rare as white crows. The difficulty, therefore, is somewhat deep-seated; yet we are quite sure it is not insuperable. If there are left in such a city as New York any doctors of the old-fashioned type, doctors who have time to give to the homelier interests of their patients, they might do much worse than to cast about for ways and means of supplying this great deficiency. There must be numbers of persons, especially women, who have just the qualities necessary for conducting excellent homes, large or small, designed for the accommodation of convalescents. They might not make a fortune at the business, but they could certainly make it yield a very satisfactory income. And they would furnish to many persons what they sorely need, what they are willing and able to pay for, but what, as matters stand, it seems impossible to get for love or money.

Foreign Correspondence

THE AMERICAN NOTE—MR. CHURCHILL'S RESIGNATION—OXFORD DONS AS PORTERS.

By JAMES F. MUIRHEAD.

LONDON, November 16.

It is impossible to address a letter from England to America and ignore the one subject that leaps into every Englishman's mind when the word "America" is mentioned. The last American note is now dominant in the thoughts of every Briton who ever thinks about America at all. The discussion of it still lingers on in the daily press, and it is in full blast in the weekly and Sunday papers. There prevails undoubtedly a feeling of soreness at the somewhat brusque tone of the note, an uneasy sense that it ignores the higher justice for the sake of what is at most a minor illegality. We feel pretty strongly that the question involved is, at bottom, really one of policy rather than of law, though we do not doubt that our own jurists will be quite able to answer Mr. Lansing on his own chosen ground. We are, it is true, making a breach with the *practice* of the past, but we feel that this breach has to do with the letter rather than the spirit of the law. The contents of the note seem practically to amount to a demand that (for reasons that do not meet here with any immediate or universal assent) Great Britain and her allies should divest themselves of a very large part of the advantages they derive in this war from their superior naval force. And we find it almost inconceivable that any responsible American statesman is likely to press a point that will so inevitably and so seriously militate to the advantage of Germany. The real friendship and community of interests between the United States and Great Britain have foundations too deep to be seriously shaken by this passing divergence of opinion.

After all, this war must be regarded in its widest aspects. The question is, who ought to win, or rather (in this connection) who does America think ought to win? An absolute neutrality, in thought and speech as well as in action, based on merely technical grounds, seems to be becoming more and more impossible. The torpedoing of the Ancona and other passenger ships in the Mediterranean Sea is considered here to be utterly inconsistent with both the spirit and the letter of Germany's compact with the United States. The suggestion that any material difference exists because these acts were committed under the Austrian flag seems unworthy of consideration. *Qui facit per alium facit per se.* It is unreasonable to suppose that the enormously predominant member of the partnership of the Central States cannot and does not dictate the military and naval policy of her ally. Moreover, it is still less reasonable to argue that Germany could dodge her obligations to America simply by lowering her own flag and hoisting that of Austria on all her submarines, or by making over her entire submarine fleet to Austria. Germany is not yet "at war" with Italy; and her own doctrine of the freedom of the seas would logically demand a protest on her part against this treatment of a country that is still, so far as she is concerned, a neutral.

The not wholly unexpected resignation of Mr. Churchill has been received by many people with a certain sense of relief. They do not forget his ante-bellum services to the navy (nor the fact that he had a pretty good basis to start with when he took office), but they also remember that his name has, rightly or wrongly, been popularly associated with the most disastrous episodes of the war. Moreover, no man of decent taste ever really liked the somewhat intemperate epithets which Mr. Churchill applied to our opponents. His rash and luckless prophecies at Dundee and Manchester have also to be taken into account. All due weight has been attached to Mr. Asquith's generous defence of Mr. Churchill, but the assurances that anything that appears doubtful as to his influence on warlike operations will hereafter be amply vindicated rather tend to evoke a somewhat cynical attitude as to future rehabilitations of this kind. It is only fair to state that there are also many people, including some of great weight and judgment, who consider that the Ministry is distinctly weakened by the loss of Mr. Churchill. This is, for instance, the position of the *Observer*, which considers he would have been successful both at Antwerp and in the Dardanelles if he had been properly backed up by the Government and War Office. Perhaps the real truth is that his disappearance from the Cabinet has been received by the great body of the people with an indifference, or at least a composure, that a few months ago one would hardly have thought possible in the case of so insistent and enterprising a personality.

Since the above was written Mr. Churchill has addressed the House of Commons on the subject of his resignation. The speech was a good one, and may frankly be admitted as clearing Mr. Churchill from some of the baseless suspicions that had been hovering round his head. On the whole, however, it was not of a character to diminish the relief of those who felt that it was just as well he went; and the feeling of regret at his personal attacks on one or two of his colleagues seems fairly universal.

A striking little postscript to my recent letter on Oxford was witnessed the other day at Didcot, a busy but rather uninteresting railway junction about ten miles from the University. The War Office recently decided to station a large storage warehouse at Didcot, and acres of sheds were in due course erected. The amount of stores of all kinds that arrived to fill these sheds, however, soon attained dimensions that baffled the utmost efforts of the detachment of soldiers in charge, and long lines of loaded freight-cars blocked up all the adjacent tracks. In despair, the officer in command issued an appeal for help to the authorities of Oxford University. The immediate result was an influx of dons, citizens, and undergraduates, which, aided by contingents from neighboring villages, attained a maximum number of 3,000 willing, if somewhat amateurish, unloaders, porters, and packers. The episode is significant of the amount of useful voluntary work at the disposal of the Government, whenever the barriers of red tape are let down for a moment. It is interesting, too, as the *Times* points out, to notice the contrast between this outburst of academic hewing of wood and drawing of water with the somewhat artificial experiments in road-making by undergraduates, inaugurated by Ruskin in the early seventies. The orderly and effective character of the work

was mainly due to the fact that it was done by citizens organized as members of the Volunteer Training Corps, described in the *Nation* for November 4.

FRENCH SOCIALISM AND PEACE—REPUDIATION OF THE BERNE CONFERENCE.

By STODDARD DEWEY.

PARIS, November 15.

One reason why French Socialists, in the present war, need watching—and explaining—is that many neutrals and some Frenchmen first overrate their importance, and then string their own legends to their label. The French Unified Socialists, that is, the organized political party of Jaurès, long since notified their sympathizers in other countries that they could consider any revival of Internationalism only after the war when peace should reign at last. From this decision German Socialists have more than once made a clamorous appeal, declaring that the International cause is an essential of Socialism and must and shall be taken up here and now, with war still on, in some neutral town, with Socialists of the belligerent nations sitting side by side in conference.

To each pressing invitation French Socialists have all along shown the same deliberate aversion as their brother Frenchmen who belonged to peace societies before the war show to repeated efforts to involve them in obscure intrigues for a disloyal peace, premature and "pro-German." When the new Government took power, the spokesman of Unified Socialists in Parliament, Renaudel, though exasperating his colleagues by what were thought unnecessary and out-of-place remarks about the conditions of final peace, declared earnestly his party's entire solidarity with Prime Minister Briand's formula that all must fight to the end for "Peace with Victory!" The Prime Minister, himself sitting in Parliament as an independent Socialist, remarked pleasantly that Socialists deserve all the more credit for their stalwart acceptance of war inasmuch as it is less in harmony with their principles.

It is certainly a gross mistake to suppose that French Socialists have manifested the least willingness even to confer with the invaders of their country or with neutrals concerning a hypothetical peace. Such errors may render the best-intentioned neutrals utterly inapt to talk of peace with those who are waging war to save their lives.

The latest pro-German intrigue of this kind, intended to compromise a responsible part of the French people by the irresponsible action of isolated individuals unsuspecting whither they are being led, has called forth this week the peremptory and unreserved condemnation of all the authorized representatives of French Socialism. With blood and life itself, the rank and file of Socialists are giving at the front the lie to such intrigues. It is the same with French women whom, after the failure of the Hague Conference, it is again sought to compromise in Switzerland.

Under the name of the Conference of Berne—it was really held at Zimmerwald—after "diplomatic missions," it was found possible to get together members of the Socialist Internationale, which existed before the war, from England, France, Germany, Italy, Russia, the Balkan states, Holland, and Switzerland, and to induce them to sign a declaration reproving the violation of the neutrality of Belgium and also any annexations when war shall be over—and to talk vaguely of peace, which all men and women desire, but not at the price which is worse than death. The delegate of the Italian "official" Socialists, while protesting the patriotism of his party, explained their action: "We have not lost our confidence in the Internationale. We wish it to take its way again with decision, and that it should be a living and influential force at the moment when the European conflict has an end." The two Frenchmen who signed were delegates of themselves only.

The authorized spokesmen of French Socialists—"French Section of the Labor Internationale"—have at once officially repudiated the whole proceeding by a unanimous vote. They are such men as Jules Guesde, the organizer of the Socialist party in France; Renaudel, who more or less takes the place of Jaurès; Vaillant, who is a patriarch of the old Internationale and Paris Commune; Gustave Hervé, independent; Bracke, Syndicalist, and so on. "The National Council has said and the permanent administrative commission repeats with it—The struggle imposed on the Allies by the leaders of Germany must be carried on to its natural end, that is, to the defeat of German militarism, to give the world the great and necessary lesson of attempted hegemony broken by the resistance of free peoples. And it invites all Socialist sections to avoid even the appearance of a propaganda to the contrary."

In the sudden transformation of national politics wrought by the war, it is clear that surprised politicians of every party will try to save what they can of their old union and power and will look out eagerly to keep what they can when war is over. Political faith and ambition equally demand this. No wonder that Socialists, like the rest, should try to rescue the fragments of their shattered Internationalism—for future use. In the same way, Radicals do their best to retain as much as possible of the political predominance which long years of bitter struggle had won them in France.

French pacifists of other days are now waging war as strenuously as the others—with the possible exception of Romain Rolland—that they may have true and final peace. Even Romain Rolland, from his doubtfully patriotic residence in neutral Switzerland, was one of the first to hurl the epithet of "Huns!" at the invaders of Belgium, just as the most International of Socialists unite in crying that there can be no peace until "Prussian militarism" is beaten out of existence. An event of the month has been Paul Hyacinthe-Loyson's appeal to Romain Rolland to come down from cold Tolstoyan Alpine peaks and show that he sides with his own flesh and blood in this war, where nations perhaps, but surely no human soul, can remain neutral.

If we take the rank and file of Socialist voters, those who do not speak but yield confidingly to the label because such is human nature, there is perhaps no more national part of the French people. Even the inner nucleus of Syndicalists have never, in spite of cruel legends to the contrary, separated themselves from their brother Frenchmen in the hour of need.

Three months ago I had occasion to put into plain English a few verses from the *Bataille Syndicaliste* (see *Nation* of August 26, "War Song of French Workmen"), as "giving an impression of the force beyond words which animates all classes in France." They concerned the dreaded winter campaign, which is now a reality.

The day that Germany opened up the abyss,
One and one only word, peaceful, sublime,
Was spoken by the one-minded people:
It must be.
. . . . . .
Dear workmen, put off your hope
To do away with hunger and suffering;
It must be.
. . . . . .
Yes, your flesh bleeds and your heart eats itself away,
But you will hold out one year more,
If it must be.

The author, Raphael Périé, volunteered forty-five years ago, on the fifth of September with the dawn of the new republic, in the army that fought through the dreary winter against the German invader of that day. He writes now to say: "I feel the need of telling you what satisfaction I have experienced to see the poem's intention so well understood. I assure you of my cordial sympathy as with those who are generous friends of France and of the universal people."

He who, in this war, recognizes Prussian militarism as the consistent enemy of the people of all countries, not of France alone, but of neutral nations and Germany, too, has the truth in him.

One of the most conspicuous foreign correspondents in Paris, before the war, whose letters in a Vienna paper had long made him obnoxious, has lately boasted from that city to which events have relegated him: "Two days after peace is proclaimed, I shall walk the Paris boulevards just as I did before!"

Time may tell if this is a survival of the illusion which made the German peoples dare to undertake this war. The military attaché of a neutral Power, who has seen the war at the front and among the French people at home, and who is many years younger than myself, spoke to me yesterday of such relations of man to man among the warring peoples when war shall be over: "It will not be in your time—and not in mine!"

Only time can tell, but it must not be taken for granted that so persistently hostile a feeling will be due to any desire of individual revenge for individual suffering. It is only human nature that such feeling should exist. Emile Verhaeren, through whose human poetry one would have thought the whole scale of emotion had already been run, says now sadly and with affright: "I had never known the feeling of hate before!"

In the old religion there was a formula by way of becoming antiquated—"Love your neighbor as yourself!"—even if he be a Samaritan. At the midnight mass of Christmas a year ago, in a French town held by the invaders, a lady of the place who had lost her all and seen her sons one after the other fall victims was disturbed where she was kneeling by a half-dozen Bavarian soldiers coming into the little chapel and kneeling awkwardly beside her. She did not draw aside her black skirts. It may be doubted if the new substitutes of religion, like Socialism and Pacifism, will work men and women up to another heroism, greater than that of the man who storms cities.

In any case, it would be a pity that words of French Socialists taken from their setting of place and time, and that feelings suspected in them by outsiders should be able to bolster up fallacious hopes of a peace which, to all Frenchmen, would be, indeed—

For the sake of life, to lose the reason of living!

The Naturalism of Mr. Dreiser

By STUART P. SHERMAN.

The layman who listens reverently to the reviewers discussing the new novels and to the novelists discussing themselves can hardly escape persuasion that a great change has rather recently taken place in the spirit of the age, in the literature which reflects it, and in the criticism which judges it. The nature of the supposed revolution may be briefly summarized.

The elder generation was in love with illusions, and looked at truth through a glass darkly and timorously. The artist, tonguetied by authority and trammelled by æsthetic and moral conventions, selected, suppressed, and rearranged the data of experience and observation. The critic, "morally subsidized," regularly professed his disdain for a work of art in which no light glimmered above "the good and the beautiful."

The present age is fearless and is freeing itself from illusions. Now, for the first time in history, men are facing unabashed the facts of life. "Death or life," we cry, "give us only reality!" Now, for the first time in the history of English literature, fiction is become a flawless mirror held up to the living world. Rejecting nothing, altering nothing, it presents to us—let us take our terms from the bright lexicon of the reviewer—a "transcript," a "cross-section," a "slice," a "photographic" or "cinematographic" reproduction of life. The critic who keeps pace with the movement no longer asks whether the artist has created beauty or glorified goodness, but merely whether he has told the truth.

Mr. Dreiser, in his latest novel, describes a canvas by a painter of this austere modern school: "Raw reds, raw greens, dirty gray paving stones—such faces! Why, this thing fairly shouted its facts. It seemed to say: 'I'm dirty, I am commonplace, I am grim, I am shabby, but I am life.' And there was no apologizing for anything in it, no glossing anything over. Bang! Smash! Crack! came the facts one after another, with a bitter, brutal insistence on their so-ness." If you do not like what is in the picture, you are to be crushed by the retort that perhaps you do not like what is in life. Perhaps you have not the courage to confront reality. Perhaps you had better read the chromatic fairy-tales with the children. Men of sterner stuff exclaim, like the critic in this novel, "Thank God for a realist!"

Mr. Dreiser is a novelist of the new school, for whom we have been invited off and on these fourteen years to thank God—a form of speech, by the way, which crept into the language before the dawn of modern realism. He has performed with words what his hero performed with paint. He has presented the facts of life "one after another with a bitter, brutal insistence on their so-ness," which marks him as a "man of the hour," a "portent"—the successor of Mr. Howells and Mr. James. In the case of a realist, biographical details are always relevant. Mr. Dreiser was born of German-American parents in Terre Haute, Indiana, in 1871. He was educated in the Indiana public schools and at the State University. He was engaged in newspaper work in Chicago, St. Louis, New York, and elsewhere, from 1892 to 1910. He has laid reality bare for us in five novels published as follows: "Sister Carrie," 1901; "Jennie Gerhardt," 1911; "The Financier," 1912; "The Titan," 1914; and "The Genius," 1915. These five works constitute a singularly homogeneous mass of fiction. I do not find any moral value in them, nor any memorable beauty—of their truth I shall speak later; but I am greatly impressed by them as serious representatives of a new note in American literature, coming from that "ethnic" element of our mixed population which, as we are assured by competent authorities, is to redeem us from Puritanism and insure our artistic salvation. They abundantly illustrate, furthermore, the methods and intentions of our recent courageous, veracious realism. Before we thank God for it, let us consider a little more closely what is offered us.

I.

The first step towards the definition of Mr. Dreiser's special contribution is to blow away the dust with which the exponents of the new realism seek to becloud the perceptions of our "reverent layman." In their main pretensions, there are large elements of conscious and unconscious sham.

It should clear the air to say that courage in facing and veracity in reporting the facts of life are no more characteristic of Theodore Dreiser than of John Bunyan. These moral traits are not the peculiar marks of the new school; they are marks common to every great movement of literature within the memory of man. Each literary generation detaching itself from its predecessor—whether it has called its own movement Classical or Romantic or what not—has revolted in the interest of what it took to be a more adequate representation of reality. No one who is not drunken with the egotism of the hour, no one who has penetrated with sober senses into the spirit of any historical period anterior to his own, will fall into the indecency of declaring his own age preëminent in the desire to see and to tell the truth. The real distinction between one generation and another is in the thing which each takes for its master truth—in the thing which each recognizes as the essential reality for it. The difference between Bunyan and Dreiser is in the order of facts which each reports.

It seems necessary also to declare at periodic intervals that there is no such thing as a "cross-section" or "slice" or "photograph" of life in art—least of all in the realistic novel. The use of these catchwords is but a clever hypnotizing pass of the artist, employed to win the assent of the reader to the reality of the show, and, in some cases, to evade moral responsibility for any questionable features of the exhibition. A realistic novel no more than any other kind of a novel can escape being a composition, involving preconception, imagination, and divination. Yet, hearing one of our new realists expound his doctrine, you might suppose that writing a novel was a process analogous to photographing wild animals in their habitat by trap and flashlight. He, if you will believe him, does not invite his subjects, nor group them, nor compose their features, nor furnish their setting. He but exposes the sensitized plate of his mind. The pomp of life goes by, and springs the trap. The picture, of course, does not teach nor preach nor moralize. It simply re-presents. The only serious objection to this figurative explanation of the artistic process is the utter dissimilarity between the blank impartial photographic plate, commemorating everything that confronts it, and the crowded inveterately selective human mind, which, like a magnet, snatches the facts of life that are subject to its influence out of their casual order and redisposes them in a pattern of its own.

In the case of any specified novelist, the facts chosen and the pattern assumed by them are determined by his central theory or "philosophy of life"; and this is precisely criticism's justification for inquiring into the adequacy of any novelist's general ideas. In vain, the new realist throws up his hands with protestations of innocence, and cries: "Search me. I carry no concealed weapons. I run life into no preconceived mould. I have no philosophy. My business is only to observe, like a man of science, and to record what I have seen." He cannot observe without a theory, nor record his observations without betraying it to any critical eye.

As it happens, the man of science who most profoundly influenced the development of the new realistic novel—Charles Darwin—more candid than the writers of "scientific" fiction—frankly declared that he could not observe without a theory. When he had tentatively formulated a general law, and had begun definitely to look for evidence of its operation, then first the substantiating facts leaped abundantly into his vision. His "Origin of Species" has the unity of a work of art, because the recorded observations support a thesis. The French novelists who in the last century developed the novel of contemporary life learned as much, perhaps, from Darwin's art as from his science. Balzac emphasized the relation between man and his social *milieu;* the Goncourts emphasized the importance of extensive collection of "human documents"; Zola emphasized the value of scientific hypotheses. He deliberately adopted the materialistic philosophy of the period as his guide in observation and as his unifying principle in composition. His theory of the causes of social phenomena, which was derived largely from medical treatises, operated like a powerful magnet among the chaotic facts of life, rejecting some, selecting others, and redisposing them in the pattern of the

roman naturaliste. Judicious French critics said: "My dear man," or words to that effect, "your representations of life are inadequate. This which you are offering us with so earnest an air is not reality. It is your own private nightmare." When they had exposed his theory, they had condemned his art.

Let us, then, dismiss Mr. Dreiser's untenable claims to superior courage and veracity of intention, the photographic transcript, and the unbiassed service of truth; and let us seek for his definition in his general theory of life, in the order of facts which he records, and in the pattern of his representations.

II.

The impressive unity of effect produced by Mr. Dreiser's five novels is due to the fact that they are all illustrations of a crude and naïvely simple naturalistic philosophy, such as we find in the mouths of exponents of the new *Real-Politik*. Each book, with its bewildering masses of detail, is a ferocious argument in behalf of a few brutal generalizations. To the eye cleared of illusions it appears that the ordered life which we call civilization does not really exist except on paper. In reality our so-called society is a jungle in which the struggle for existence continues, and must continue, on terms substantially unaltered by legal, moral, or social conventions. The central truth about man is that he is an animal amenable to no law but the law of his own temperament, doing as he desires, subject only to the limitations of his power. The male of the species is characterized by cupidity, pugnacity, and a simian inclination for the other sex. The female is a soft, vain, pleasure-seeking creature, devoted to personal adornment, and quite helplessly susceptible to the flattery of the male. In the struggles which arise in the jungle through the conflicting appetites of its denizens, the victory goes to the animal most physically fit and mentally ruthless, unless the weaklings, resisting absorption, combine against him and crush him by sheer force of numbers.

The idea that civilization is a sham Mr. Dreiser sometimes sets forth explicitly, and sometimes he conveys it by the process known among journalists as "coloring the news." When Sister Carrie yields to the seductive drummer, Drouet, Mr. Dreiser judicially weighs the advantages and disadvantages attendant on the condition of being a well-kept mistress. When the institution of marriage is brushed aside by the heroine of "The Financier," he comments "editorially" as follows: "Before Christianity was man, and after it will also be. A metaphysical idealism will always tell him that it is better to preserve a cleanly balance, and the storms of circumstance will teach him a noble stoicism. Beyond this there is nothing which can reasonably be imposed upon the conscience of man." A little later in the same book he says: "Is there no law outside of the subtle will and the power to achieve? If not, it is surely high time that we knew it—one and all. We might then agree to do as we do; but there would be no silly illusion as to divine regulation." His own answer to the question, his own valuation of regulation, both divine and human, may be found in the innumerable contemptuous epithets which fall from his pen whenever he has occasion to mention any power set up against the urge of instinct and the indefinite expansion of desire. Righteousness is always "legal"; conventions are always "current"; routine is always "dull"; respectability is always "unctuous"; an institution for transforming schoolgirls into young ladies is presided over by "owl-like conventionalists"; families in which parents are faithful to each other lead an "apple-pie order of existence"; a man who yields to his impulses yet condemns himself for yielding is a "rag-bag moralistic ass." Jennie Gerhardt, by a facile surrender of her chastity, shows that "*she could not be readily corrupted by the world's selfish lessons* on how to preserve oneself from the evil to come." Surely, this is "coloring the news."

By similar devices Mr. Dreiser drives home the great truth that man is essentially an animal, impelled by temperament, instinct, physics, chemistry—anything you please that is irrational and uncontrollable. Sometimes he writes an "editorial" paragraph in which the laws of human life are explained by reference to the behavior of certain protozoa or by reference to a squid and a lobster fighting in an aquarium. His heroes and heroines have "cat-like eyes," "feline grace," "sinuous strides," eyes and jaws which vary "from those of the tiger, lynx, and bear to those of the fox, the tolerant mastiff, and the surly bulldog." One hero and his mistress are said to "have run together temperamentally like two leopards." The lady in question, admiring the large rapacity of her mate, exclaims playfully: "Oh, you big tiger! You great, big lion! Boo!" Courtship as presented in these novels is after the manner of beasts in the jungle. Mr. Dreiser's leonine men but circle once or twice about their prey, and spring, and pounce; and the struggle is over. A pure-minded serving-maid, who is suddenly held up in the hall by a "hairy, axiomatic" guest and "masterfully" kissed upon the lips, may for an instant be "horrified, stunned, *like a bird in the grasp of a cat.*" But we are always assured that "through it all something tremendously vital and insistent" will be speaking to her, and that in the end she will not resist the urge of the *élan vital.* I recall no one of all the dozens of obliging women in these books who makes any effective resistance when summoned to capitulate. "The *psychology of the human animal,* when confronted by these tangles, these ripping tides of the heart," says the author of "The Titan," "has little to do with so-called reason or logic." No; as he informs us elsewhere with endless iteration, it is a question of chemistry. It is the "chemistry of her being" which rouses to blazing the ordinarily dormant forces of Eugene Witla's sympathies in "The Genius." If Stephanie Platow is disloyal to her married lover in "The Titan," "let no one quarrel" with her. Reason: "She was an unstable chemical compound."

Such is the Dreiserian philosophy.

III.

By thus eliminating distinctively human motives and making animal instincts the supreme factors in human life, Mr. Dreiser reduces the problem of the novelist to the lowest possible terms. I find myself unable to go with those who admire the powerful reality of his art while deploring the puerility of his philosophy. His philosophy quite excludes him from the field in which a great realist must work. He has deliberately rejected the novelist's supreme task—understanding and presenting the development of character; he has chosen only to illustrate the unrestricted flow of temperament. He has evaded the enterprise of representing human conduct; he has confined himself to a representation of animal behavior. He demands for the demonstration of his theory a moral vacuum from which the obligations of parenthood, marriage, chivalry, and citizenship have been quite withdrawn or locked in a twilight sleep. At each critical moment in his narrative, where a realist like George Eliot or Thackeray or Trollope or Meredith would be asking how a given individual would feel, think, and act under the manifold combined stresses of organized society, Mr. Dreiser sinks supinely back upon the law of the jungle or mutters his mystical gibberish about an alteration of the chemical formula.

The possibility of making the unvarying victoriousness of jungle-motive plausible depends directly upon the suppression of the evidence of other motives. In this work of suppression Mr. Dreiser simplifies American life almost beyond recognition. Whether it is because he comes from Indiana, or whether it is because he steadily envisages the human animal, I cannot say; I can only note that he never speaks of his men and women as "educated" or "brought up." Whatever their social status, they are invariably "raised." Raising human stock in America evidently includes feeding and clothing it, but does not include the inculcation of even the most elementary moral ideas. Hence Mr. Dreiser's field seems curiously outside American society. Yet he repeatedly informs us that his persons are typical of the American middle class, and three of the leading figures, to judge from their names—Carrie Meeber, Jennie Gerhardt, and Eugene Witla—are of our most highly "cultured" race. Frank Cowperwood, the hero of two novels, is a hawk of finance and a rake almost from the cradle; but of the powers which presided over his cradle we know nothing save that his father was a competent official in a Philadelphia bank. What, if anything, Carrie Meeber's tyical American parents taught her about the conduct of life is suppressed; for we meet the girl in a train to Chicago, on which she falls to the

first drummer who accosts her. Eugene Witla emerges in his teens from the bosom of a typical middle-class American family—with a knowledge of the game called "post office," takes the train for Chicago, and without hesitation enters upon his long career of seduction. Jennie Gerhardt, of course, succumbs to the first man who puts his arm around her; but, in certain respects, her case is exceptional.

In the novel "Jennie Gerhardt" Mr. Dreiser ventures a disastrous experiment at making the jungle-motive plausible without suppressing the evidence of other motives. He provides the girl with pious Lutheran parents, of fallen fortune, but alleged to be of sterling character, who "raise" her with the utmost strictness. He even admits that the family were church-goers, and he outlines the doctrine preached by Pastor Wundt: right conduct in marriage and absolute innocence before that state, essentials of Christian living; no salvation for a daughter who failed to keep her chastity unstained or for the parents who permitted her to fall; Hell yawning for all such; God angry with sinners every day. "Gerhardt and his wife, and also Jennie," says Mr. Dreiser, "accepted the doctrines of their church without reserve." Twenty pages later Jennie is represented as yielding her virtue in pure gratitude to a man of fifty, Senator Brander, who has let her do his laundry and in other ways has been kind to her and to her family. The Senator suddenly dies; Jennie expects to become a mother; Father Gerhardt is broken-hearted, and the family moves from Columbus to Cleveland. This first episode is not incredibly presented as a momentary triumph of emotional impulse over training—as an "accident." The incredible appears when Mr. Dreiser insists that an accident of this sort to a girl brought up *under the conditions stated* is not necessarily followed by any sense of sin or shame or regret. Upon this simple pious Lutheran he imposes his own naturalistic philosophy, and, in analyzing her psychology before the birth of her illegitimate child, pretends that she looks forward to the event "without a murmur," with "serene, unfaltering courage," "the marvel of life holding her in trance," with "joy and satisfaction," seeing in her state "the immense possibilities of racial fulfilment." This juggling is probably expected to prepare us for her instantaneous assent, perhaps a year later, when a healthy, magnetic manufacturer, who has seen her perhaps a dozen times, claps his paw upon her and says, "You belong to me," and in a perfectly cold-blooded interview proposes the terms on which he will set her up in New York as his mistress. Jennie, who is a fond mother and a dutiful daughter, goes to her pious Lutheran mother and talks the whole matter over with her quite candidly. The mother hesitates—not on Jennie's account, gentle reader, but because she will be obliged to deceive old Gerhardt; "the difficulty of telling this lie was very great for Mrs. Gerhardt"! But she acquiesces at last. "I'll help you out with it," she concludes—"with a little sigh." The unreality of the whole transaction shrieks.

Mr. Dreiser's stubborn insistence upon the jungle-motive results in a dreary monotony in the form and substance of his novels. Interested only in the description of animal behavior, he constructs his plot in such a way as to exhibit the persistence of two or three elementary instincts through every kind of situation. He finds, for example, a subject in the career of an American captain of industry, thinly disguised under the name of Frank Cowperwood. He has just two things to tell us about Cowperwood: that he has a rapacious appetite for money, and that he has a rapacious appetite for women. In "The Financier" he "documents" those two truths about Cowperwood in seventy-four chapters, in each one of which he shows us how his hero made money or how he captivated women in Philadelphia. Not satisfied with the demonstration, he returns to the same theses in "The Titan," and shows us in sixty-two chapters how the same hero made money and captivated women in Chicago and New York. He promises us a third volume, in which we shall no doubt learn in a work of sixty or seventy chapters—a sort of huge club-sandwich composed of slices of business alternating with erotic episodes—how Frank Cowperwood made money and captivated women in London. Meanwhile Mr. Dreiser has turned aside from his great "trilogy of desire" to give us "The Genius," in which the hero, Witla, alleged to be a great realistic painter, exhibits in 101 chapters, similarly "sandwiched" together, an appetite for women and money indistinguishable from that of Cowperwood. Read one of these novels, and you have read them all. What the hero is in the first chapter, he remains in the hundred-and-first or the hundred-and-thirty-sixth. He acquires naught from his experience but sensations. In the sum of his experiences there is nothing of the impressive mass and coherence of activities bound together by principles and integrated in character, for all his days have been but as isolated beads loosely strung on the thread of his desire. And so after the production of the hundredth document in the case of Frank Cowperwood, one is ready to cry with fatigue: "Hold! Enough! We believe you. Yes, it is very clear that Frank Cowperwood had a rapacious appetite for women and for money."

If at this point you stop and inquire why Mr. Dreiser goes to such great lengths to establish so little, you find yourself once more confronting the jungle-motive. Mr. Dreiser, with a problem similar to De Foe's in "The Apparition of Mrs. Veal," has availed himself of De Foe's method for creating the illusion of reality. The essence of the problem and of the method for both these authors is the certification of the unreal by the irrelevant. If you wish to make acceptable to your reader the incredible notion that Mrs. Veal's ghost appeared to Mrs. Bargrave, divert his incredulity from the precise point at issue by telling him all sorts of detailed credible things about the poverty of Mrs. Veal's early life, the sobriety of her brother, her father's neglect, and the bad temper of Mrs. Bargrave's husband. If you wish to make acceptable to your reader the incredible notion that Aileen Butler's first breach of the seventh article in the decalogue was "a happy event," taking place "much as a marriage might have," divert his incredulity by describing with the technical accuracy of a fashion magazine not merely the gown that she wore on the night of Cowperwood's reception, but also with equal detail the half-dozen other gowns that she thought she might wear, but did not. If you have been for three years editor-in-chief of the Butterick Publications, you can probably perform this feat with unimpeachable verisimilitude; and having acquired credit for expert knowledge in matters of dress and millinery, you can now and then emit unchallenged a bit of philosophy such as "Life cannot be put in any one mould, and the attempt may as well be abandoned at once. . . . Besides, whether we will or no, theory or no theory, the large basic facts of chemistry and physics remain." None the less, if you expect to gain credence for the notion that your hero can have any woman in Chicago or New York that he puts his paw upon, you had probably better lead up to it by a detailed account of the street-railway system in those cities. It will necessitate the loading of your pages with a tremendous baggage of irrelevant detail. It will not sound much like art. It will sound more like one of Lincoln Steffens's special articles. But it will produce an overwhelming impression of reality, which the reader will carry with him into the next chapter where you are laying bare the "chemistry" of the human animal.

IV.

It would make for clearness in our discussions of contemporary fiction if we withheld the title of "realist" from a writer like Mr. Dreiser, and called him, as Zola called himself, a "naturalist." While asserting that all great art in every period intends a representation of reality, I have tried to indicate the basis for a working distinction between the realistic novel and the naturalistic novel of the present day. Both are representations of the life of man in contemporary or nearly contemporary society, and both are presumably composed of materials within the experience and observation of the author. But a realistic novel is a representation based upon a theory of human conduct. If the theory of human conduct is adequate, the representation constitutes an addition to literature and to social history. A naturalistic novel is a representation based upon a theory of animal behavior. Since a theory of animal behavior can never be an adequate basis for a representation of the life of man in contemporary society, such a representation is an artistic blunder. When half the world attempts to assert such a theory, the other half rises in battle. And so one turns with relief from Mr. Dreiser's novels to the morning papers.

Children's Books

By P. E. M.

The editor of the *Nation* has asked me to write something about children's books, and I, in childlike simplicity (a qualification for the task, I submit), have accepted the proposal! Now, pen in hand, I am tempted to fulfil my obligation by imitating the too famous chapter on snakes in Iceland. For, really, the truth of the matter is about this: that no story is worthy of the child which has not stuff and art enough in it to make it interesting to the adult; and it might not be difficult to show that those have received the best preparation for the great and lasting delights of bookishness who passed their innocent years in a library where no special provision was made for them at all—like Mary and Charles Lamb, "tumbled early, by accident or design, into a spacious closet of good old English reading," or like others who were introduced to the wonderful superworld of the imagination by Pope and Defoe and Spenser.

To confirm my suspicion of current juvenile literature—a suspicion gained from some previous experience—I turned over the books issued for this year's market and picked out the most promising specimen of its class. I took a volume attractive in appearance, written by an author of standing, and published by one of the great houses of the city, a house that lists so few children's books that any such production bearing their imprint may be assumed to have undergone a rigid scrutiny. And this is the sort of thing that I stumbled into:

He sniffed luxuriously. "That's a bully stink!" he said to his companion, with a boy's carelessness to adapt his language to the nature of his thought.

"I'm for a dip right off."

"To heck with swimming!" was Ormonde's irritable reply. "You want to fool at some darn thing every blessed day; we've not got around the traps for a week."

"What if we haven't?" Orofino rejoined. "I don't give a rip for the blamed old skins. I'm in this for the fun of it. I'm for a swim, and what's more, I'm going to have one. Don't be yellow. Come along."

"Hanged if I will!"

"Hanged if I won't!" was the gracious reply. "I'll be with you in a jiffy."

So far I read—to the second page—and was about to throw the book aside, when my training as an old reviewer bade me go on to the end. Well, I found that the story was not entirely composed of this cheap slang; towards the close it really began to look at some of the sober things of life and to speak English—though the author and publisher between them had not literary conscience enough to make any distinction between "will" and "shall." But I could not get those first chapters out of my mind; they were so typical of the kind of pabulum we think it fitting to feed our young people on. I remembered, for example, Mr. Owen Johnson's stories of Lawrenceville, which have been sold in large numbers, and read, and extravagantly praised. Now, I don't know much about Lawrenceville, but I have not altogether forgotten my own school days nor lost all the knowledge of boys that I acquired painfully by trying to teach them, and I have a conviction that the Lawrenceville lads are not quite so thoroughly steeped in vulgarity as Mr. Johnson represents them to be. Certainly, if his is a true picture of school manners and talk to-day, a father who wishes his son to learn the rudiments of decent speech or to acquire any serious sense of responsibility, had better put him into a bank or factory at the earliest possible moment. The boy will get some sort of education knocked into him there; whereas at the Lawrenceville of Mr. Johnson—though I refuse to believe it anything but a parody of the real place—he will learn only to value what he will have to unlearn in the world, if he is lucky, as worse than valueless.

But suppose that boys—and the literature for girls is no better, though its faults may be somewhat different—do actually and habitually use the impoverished language that is given to them in the ruck of books written for their consumption, suppose that their only ideal of existence is the swaggering athlete who adorns so many covers, suppose all you will—and, indeed, I am not regarding priggishness as a common or desirable virtue of youth—I cannot see that this is any justification for contracting their intellectual outlook to these narrow bounds. A certain degree of realism is no doubt necessary. The life portrayed must appear sufficiently close to the facts to create the artistic illusion of reality; the problem of juvenile literature is no different in this respect from that of adult literature. But if the language of the child's reading is not a little raised above his own daily habit, and perhaps above the level of his home, where is he to learn to talk as gentlemen and ladies were once, and really still are, expected to talk? His Latin and algebra are not going to prevail against the vulgarizing influence of his pleasures. He will come to college, as every instructor in English tells us our boys are coming, with a grotesquely impoverished vocabulary, with no sense of style for practical or æsthetic purposes, and no power of self-expression. At college you will see him in his club before a table spread with all the cheap magazines, but you will be lucky if you ever see a book in his hands except for required reading; and he will leave college in about the same state of innocence.

This whole practice of writing down to the supposed level of the child or youth is mistaken. The fact is that boys and girls, like their parents, will, if left to themselves, probably take the line of least resistance; in most cases they will, if the book that requires no effort is laid before them, read it, and let the volume that demands some tightening up of the mind lie unopened. But that is the very reason such books should, so far as possible, be kept out of their way. And, this done, it is not, as one might suppose, so difficult to stir their interest in better things; they are, in the average, fairly keen to seize and appropriate any real idea that is presented to them in living form. I cannot forget my own experience as teacher in an academy. I had a class of young boys in a subject which seemed to me and them little better than a waste of time, and so I used to take that hour to talk with them about all sorts of extraneous matters, being then readier to expound the *omne scibile* than I should be now. Well, it is like enough the information they got from me was more curious than useful; but I at least learned a truth I shall never forget. I learned the capacity of the boy's intellect, his eagerness to think, his willingness to search encyclopædias and other reference books for knowledge if his taste is once fairly whetted. And so I am persuaded—indeed, I have the knowledge from direct experience—that a boy of average parts will read good books with very little provocation, provided only the trash is kept away from him.

And there is another class of children's books which are not only enfeebling in their effect on the mind, but actually perverting in their effect on character. Of this class the most notable example is "Tom Sawyer." Now, again, I am making no claim for the goody-goody style of the old Sunday-school library, and nobody wishes to see boys combed into prigs. But there is a happy medium in these things, as in all others; and I see no reason in going to the other extreme and praising stories that draw their interest from a contrast between the obedient sneak and coward on the one hand, and on the other the victorious liar, lucky vagabond, cunning rebel to authority, which sums up the character of Mark Twain's hero. I can laugh at the exploits of Tom with anybody, but I do not see any profit—in fact, I see the danger of real mischief—in feeding youth with such an inversion of the facts of life. Why should we go out of our way to encourage traits which are likely to be overstrong without our aid? It is perfectly possible to portray a genuine boy, full of invention, quick with the natural restiveness of youth, yet to lay emphasis on the duty of finding one's self in the obligations of home and the advantages of school. It has been done in the case of another "Tom," who was no milksop, but a vigorous young animal struggling up to the large responsibilities of life.

If I am correct in my belief that the vast bulk of the books published for children are feeble things written by persons with a certain touch of cleverness, but with no style or art or serious knowledge of the world, or, if not silly, then actually pernicious, what shall the prospective buyer of presents, whether parent or aunt or sister or cousin, do at this season? Well, there are a few admirable and well-tried books for children—the famous "Tom Brown," "Ranald Bannerman" (an exquisitely beautiful story, which can be read a hundred times), Lamb's "Tales," Miss Mulock's "Fairy Tales" (incomparably the best of that class), Miss Edgeworth's stories (old-fashioned, per-

haps, and needing a little persuasion at the start, but essentially sound and fine), Miss Alcott's "Little Women" and its companions, and others, not many, which are known to everybody. The child who misses these, as his age prepares him for one and the other, has been cheated of one of his prescriptive rights. But of any new volumes flaming on the counter with extravagantly pictured covers, it is pretty safe to go on the basis that they are rubbish, or worse. There could be no harm done in keeping the whole lot of these productions out of the house. Unless one has certain knowledge of the quality of a particular book, one buys at a risk. If the good books designed primarily for children are few in number and soon read, so much the better. Then, with a little sacrifice of time on the parent's part, the boy or girl might be tempted by the great things written for men and women, the things so great and pure and comprehensive that the young reader will find himself, the better part of himself, in them, as surely as will the mature mind. And, if a child could not be brought to enjoy the real books, there would at least be a hundred employments better for him than the debauchery of foolish reading.

All this, I admit, is counsel of perfection. Do what we will, the rubbish will drift into the house from every side; but, at least, we need not add to the stream, and we can, by checking here a little and balancing it there, do what is possible to minimize its debilitating influence.

Poetry

HADRIAN'S LAMENT.

By WILLIS BOYD ALLEN.

"Animula, vagula, blandula,
Hospes comesque corporis,
Quæ nunc abibis in loca,
Pallidula, rigida, nudula,
*Nec, ut soles, dabis jocos?"**

Thus the haughty Emperor wrote.
Fear had clutched him by the throat
As he viewed his coming change,
Faced the journey long and strange
Into unknown realms afar,
Gloom beyond the utmost star;
Where, perchance, with waters dun,
Rolled the Styx and Phlegethon;
Where the shades of foe and friend
Waited dumbly to extend
Ghastly hands, to greet or rend:
Or where, exiled from his throne,
Grim, unsceptred and alone,
He should glide, a wraith unknown.

"Speak, thou vagrant soul of mine,
Guest and comrade so benign
On this body once bestowed:
As thou seek'st a new abode,
Sombre, desolate and drear,
Hast thou lost thy wonted cheer?"

Thus, his tablet loosely clasping,
Thus, his stylus feebly grasping,
Emperor but till set of sun,
Wrote the dying Hadrian.

*This fragment is all that remains, positively identified, of the purely literary writings of the Emperor Hadrian.

Cormorant Fishing

Several cormorants have recently been received at the New York Zoölogical Park, of the species which is widely spread over Europe and northern Asia, and which the Chinese have trained to fish for them. Onions and peanuts are admirable as direct sustenance, and fish is an item which we should sorely miss from our bills of fare. But an eater of fish—or of onions or peanuts—is a thing apart, something not to be discussed. I have eaten cormorant when hunger was extreme and nothing else offered, and parboiled for many hours, it proved edible; but so would bark or shoe leather. The flesh and the eggs of the cormorant possess all the unpleasant qualities of piscine memories, the result of untold generations of a fish diet.

It has remained for the patient devising of the Chinese to render this association of a cormorant and its prey of the utmost use to themselves. Their method is ingenious. It is an *à priori* analysis of the bird and its food; a segregation of the still living diet; a dissociation effected just at the moment before the accomplishment of the age-old synthesis of bird and fish.

The cormorant, Yu ying, is robbed of its greenish, ill-flavored eggs, six of them being placed beneath a long suffering hen. For a month thereafter Nature performs her ever more wonderful trick of changing a formless mass of fishy yolk into a living, breathing cormorant. This newly hatched cormorant deserves its name, however, only by courtesy of our certain knowledge of its parents. It brings strongly to mind not the reptilian, but the infinitely more distant vermian ancestry of birds. Before the shock of discovery has unsettled the mind of the foster parent, the naked squirming things are removed to baskets of cotton wool and the care of a China woman. For another month these changelings are fed to repletion on bean curd and the chopped up raw flesh of eels, a diet which appears to contain surprising qualities, for the alchemy of the little stomach transforms it into flesh and feathers. After two months of care and food the birds are taken to market, where they bring a dollar apiece if they are males, the weaker sex commanding only half this price.

Tucked under the arm of the purchaser, the half-grown cormorant is carried wonderingly to its new home, where its training is at once begun. A string is tied to one leg, and in company with its fellows it is fastened to a peg on the bank of a stream. At the sound of a peculiar whistle the birds are rudely pushed off into the water by means of a bamboo pole. Small fish are thrown to them, which they eagerly devour, as they have been kept upon short rations. They are now recalled by a different whistle, their ignorance and desire for more fish being overcome by a vigorous hauling in of the line. As the days pass, the bamboo and the tether are less needed, and within a month the line of comical birds will plunge instantly at the sound of the first whistle, and clamber out with all awkward speed when they hear the recall. They are now taken out on boats and the training continued for another month. Life moves slowly in the Celestial Land, and a month, more or less, means as little to the master as to the birds.

As the period of training wanes, the individuality of the cormorants becomes apparent. At first, sitting side by side upon the gunwale of the punt, black of feather, with yellow beaks and jewelled emerald eyes, they might well be one bird and a dozen shadows. In every plume, in every motion, they appear identical. But the teaching denies this democracy. One or two are stupid and slow. They either are overmastered by their love of the water, or they may not have a good ear and so fail to differentiate the whistles. Their stupidity gains them freedom, and they are carried far away and liberated. But, as at times in human life, the excellence of the others makes assured their shackles. If one or more well-trained birds are kept at work with the young ones, the period of education is shortened one-half.

At last they are ready for their destined work. They are docile as dogs and flutter with eagerness as they are allowed to scramble up the side of the punt. Each neck is encircled with a hempen necklace, the only proof that they are not at full liberty. This is to remove further temptation in case a cormorant's memory of his duty becomes clouded by the desire to swallow his catch. Twelve pairs of wonderful eyes watch the master as he poles out to the fishing grounds. Fish may swim past on the very surface, and the birds will fairly quiver with eagerness, but not one dives until he hears the whistle. Then all disappear as one bird, amid a frantic splashing. A minute passes and a cormorant bobs up to the surface with a big fish twisting and wriggling in its hooked beak. Sturdily the bird swims towards the boat, low in the water from the weight of his catch, and reaching the shadow of the punt, he raises his beak as high as he can and delivers up his prey to his master. Then, with a flutter of wings and swift preening of feathers, down he dives again. Now and then two birds have to unite in holding a fish of unusually large size. The coöperation is automatic and effective.

After two or three hours of fishing, the birds are allowed to rest. The master helps them to come on board and removes their hempen band. Then he feeds them gener-

ously with small fish and bean curd, and caresses them. For there seems to exist a real attachment between the two, aside from the material bond which has thrown their lives together. At night the birds are carefully caged in or near the master's house. Birds which are not overworked and which are well-fed render efficient service for five years, at the end of which time they cease to moult and death soon follows. A strong, well-trained bird is valued at six or seven dollars, but owing to the difficulty and the length of time for training it is seldom that a cormorant fisherman can be persuaded to part with any of his birds.

In his daily dress and life the Chinaman is detached from all the world. He demands as little from his fellow-men as he distantly resembles them. But when, in the dim light of late afternoon, we see a cormorant fisher in the distance—a quaint, blue-robed being, surrounded, obeyed, obsessed by his swarthy feathered servants—he indeed seems the figment of a Gulliver's brain; a symbol of originality, of infinite patience, of complete worldly detachment.

WILL BEEBE.

With the Poets

OSCAR WILDE, CAMMAERTS, VERHAEREN, AND OTHERS.

The Works of Oscar Wilde. Ravenna Edition. 13 vols. New York: G. P. Putnam's Sons. $1.25 per volume.

War Poems and Other Translations. By Lord Curzon of Kedleston. New York: John Lane Co. $1.50 net.

Belgian Poems. By Emile Cammaerts. Translated by Tita Brand-Cammaerts. New York: John Lane Co. $1.50 net.

Belgium's Agony. By Emile Verhaeren. Translated by M. T. H. Sadler. Boston: Houghton Mifflin Co. $1.25 net.

The Witch-Maid and Other Verses. By Dorothea MacKellar. New York: E. P. Dutton & Co. $1 net.

Dreams and Realities. By W. K. Fleming. London: Erskine Macdonald.

Peace Sonnets. By Jessie Wiseman Gibbs. Published by the Author: Villisca, Iowa.

Visions of the Dusk. By Fenton Johnson. Published by the Author: New York.

Proccssionals. By John Curtis Underwood. New York: Mitchell Kennerley. $1 net.

The praiseworthy enterprise of the Messrs. Putnam in supplying America with an edition of the works of Oscar Wilde apt for the hand and accessible to the purse has furnished the reviewer with an excuse for the re-perusal of the verse-compositions of that unforgettable and ill-starred man. From the later and cooler survey, three impressions emerge: that Wilde in poetry was little but a metrist, that his metre was superb, and that its orthodoxy paralleled its merit.

The matter of these poems is tenuous; on that point one's early judgment is inexorably firm. Wilde grew in his way, underwent an evolution of a kind, the profile of an evolution, a development in silhouette, if the terms may be allowed. From his juvenile experiments he rose to narrative (of a sort) in "Charmides," to philosophy (of a sort) in "Humanitad," to passion and realism (of a sort) in "Reading Gaol." But until the last crisis, this evolution of a literary faculty is itself hardly more than literature, and even the famous "Reading Gaol" does not quite silence the persistent question whether the *danseuse* has really turned Plagnone or whether her conversion is only the culminating stroke in the last wild act of her enthralling vaudeville. It is a most significant circumstance that the most far-sought and artificial of Wilde's poems, "The Sphinx," should be the most poetically genuine. The air once exhausted, the poet actually breathes.

With Wilde, as with D'Annunzio, sex might seem, at the first blush, to contest with art for the domination of his intelligence. That sex is placarded broadcast on the poems of Oscar Wilde is undeniable, but the exhibit does not tally with the advertisement. The passion is represented under forms whose fantasticality is at once subversive of its power and corrective of its license. We have a carouse, as it were, in bric-à-brac: the most fragile morals are not likely to be deeply imperilled by the glorification of debauchery in a statuette. This last undertaking is not figurative, but literal, in "The Sphinx." One is led to suspect that the exotic preponderated over the carnal in the impulsions which urged this unfortunate man to the sources of his ultimate disaster.

Even as artist, his deficiencies are considerable. He had a singular incapacity for giving his poems shape and contour, solidarity and definition. He hardly wrote a song. In prose he was dramatist, narrator, satirist; yet in poetry we find not drama (unless "Salome" be classed as poetry), nor satire, nor crisp narrative. The poems are inorganic; they are dispensed in "bulk," as a merchant would say. They are a mere unchecked exuberance of stanzas: they prolong the mood which they celebrate in expansive, monotonous forms, as devoid of solidarity as they are notable for adhesiveness.

This indigence of material and formal interest redoubles our admiration for that metrical gift which could animate even these sterilities. Wilde, it is true, never became unimpeachable even in his specialty. He was proud of the ease that could approach the pinnacle at a leap, and proud of the unconcern that forebore the consummating step, that placed the index of mastership in the disdain of perfection. I will pass by the suavity and suppleness of the seductive "Charmides" to call attention to the admirable foreshortening exhibited in poems like "Theocritus: A Villanelle," or the incomparable "Sphinx." I scarcely know of an English poet who equalled Wilde in the power to divide a stanza into background and foreground, or, shall we say, to make the earlier lines the plate or tablet upon which the syllables of the concluding period are not so much imprinted as incised. Take two examples of this engraving on metal from the "Sphinx":

Dawn follows Dawn and Nights grow old and
all the while this curious cat
Lies crouching on the Chinese mat with eyes
of satin rimmed with gold . . .

And on the summit of the pile the blue-faced
ape of Horus sits
And gibbers while the fig-tree splits the pillars
of the peristyle.

Intellectually, Wilde anticipated our modernist heterodoxies in some points. The tangential view of things, the propensity to stand the universe on its edge rather than its bottom, is a trait owned in common, though the edge on which Wilde sought to balance the tottering cosmos was not symbolic or naturalistic, but classical. It becomes doubly curious, therefore, that this half-precursor of our own tendencies should have united the highest success in metre with the most incontestable metrical orthodoxy. In "Charmides," "Panthea," and the like, Wilde permits himself a closing line of extraordinary length, but, apart from this modest innovation, he displays an almost Pharisaic rigor in his adhesion to the inherited dogmas of the straitest sect of the metrical religion. In prosody he is not only orthodox among the sectaries: he is puritan among the orthodox. His metre is rectilinear; he employs old stanzas and established feet; he scarcely permits himself even those substitutions and licenses within the line in behalf of which such principalities and powers as Milton, Tennyson, and Swinburne might have been so easily and triumphantly invoked. The moral is manifest enough. The attitude of power towards instruments is not anxious, but serene; not obsequious, but condescending: it is weakness that glorifies its tools.

I should add that the two new poems, "Désespoir" and "Pan," unlike most posthumous discoveries, are incontestably worthy of publication. Three lines from "Désespoir" cry aloud to be quoted:

Wherefore yon leafless trees will bloom again
And this grey land grow green with summer
rain
And send up cowslips for some boy to mow.

The various translations which have broidered the leisure of a noteworthy career have been collected by Lord Curzon into a volume which he seasonably opens by a handful of English reproductions of contemporary war-verse from the Belgian singer, Emile Cammaerts. With scattered exceptions, the English renderings will cause no reader to bemoan the fact that Lord Curzon has devoted his life to politics; much is mechanical and second-rate, and there are here and there infelicities which a poet in the post of governor-general could hardly have outdone. The range, French, Italian, Latin, Greek, Oriental, would be honorable to the translator, if range in these

matters were an asset separable from quality. The translations of English verse or prose into Latin are impressive in their way; in our unclassical and uncritical America the wonder of doing such things well is hardly distinguishable from the wonder of doing them at all. At the close of this amiable and agile volume, the admirers of Lord Curzon will congratulate themselves that it is his fame which bears up these recreations rather than they his fame.

A translation of a more varied selection from the poems of M. Cammaerts from the pen of his English wife might almost be characterized as the very worst translation that ever deceived a trusting husband or misled a guileless publisher. I have known translations that sacrificed exactness to rhythm, and I have also known translations that sacrificed rhythm to exactness: Madame Cammaerts's volume is the first instance in my experience in which exactness and rhythm have been immolated to each other. M. Cammaerts writes: "Ma lyre tinte d'une corde, mon vers cloche d'un pied." Madame Cammaerts, whose "only purpose has been to follow, as closely as possible, the swing of the French verse," translates with equal faithfulness to prosody and language: "My harp is weak and faintly sings." She adds, with involuntary point: "My verse is uninspired." I will not affirm that the verse of Madame Cammaerts never rises to mediocrity, but, remembering that the proceeds of the volume are to be applied to the purchase of tobacco for the Belgian combatants in the trenches, I cannot but feel that the brand of English translation which Madame Cammaerts supplies to her husband corresponds to those grades of tobacco which ladies are supposed to purchase for the delectation of ungrateful consorts.

Meanwhile, what of M. Cammaerts himself? His poems, in their unviolated state, before they were overrun by Lord Curzon and devastated by his wife, were a sort of Flanders themselves in their rich exuberance and smiling plenty. It is a plenitude characteristic not only of Belgium itself, but of Belgium's two other great prolocutors, Verhaeren and Maeterlinck. The love poems and the Noel verses might be defined as play, charming play, it is true, but illustrative mainly of the gayety and nimbleness of an imagination not yet bonded to the utterance of the rigid truth. In the "Chants Patriotiques" the deeper sincerity is felt, and it is part of the charm of M. Cammaerts and his type that the attainment of seriousness does not involve the relinquishment of gayety. Even after Antwerp, his pride and grief find voice in the scornful "Dansons." It is only just to Lord Curzon and to Madame Cammaerts to record that their remorse finds appropriate expression in the printing of the originals *vis-à-vis* with the English versions—an act which identifies expiation with redress.

I have this month a difficulty in escaping from Belgium, the just retribution possibly of too warm a sympathy with France. The person who bars my departure at this moment is M. Emile Verhaeren, by right of three original (untranslated) poems inserted in the prose volume, "Belgium's Agony," which a certain M. T. H. Sadler, who veils her sex in the ambiguity of initials, has translated into an English which surprises me alternately by its crudity and its vigor. Exactly who the people are who can read French verse in the original but require help in the elucidation of the simplest French prose, I am somewhat puzzled to imagine. The poems are declamatory, fulminant, and at times powerful; and there is much that is eloquent, pathetic, and cogent in the impassioned prose in which M. Verhaeren has happily demonstrated that anger may exalt the patriot without unseating the gentleman. The essay is half-pamphlet, half-lyric, a combination which recalls Milton, and I have a feeling at times that the two forms are neither completely distinguished nor ideally combined. The supply of arguments and facts is at the same time a little lavish for rhetoric and a little meagre for argumentation.

The first part of the essay depicts the sufferings of Belgium in a series of pictures in which, as so often happens, the most affecting passages are neither the most pronounced nor the most revolting. The second part arraigns German purpose and policy in a hurried and breathless succession of stirring indictments to which the hailstorm of pattering sentences is the fitting vehicle and counterpart. Germany is uncivilizable, is mediæval Catholicism reëmbodied, is Asia renascent in Europe, is feudalism born anew. M. Verhaeren aims rather to hearten the sympathizer than to convert the antagonist, and reveals the combination of power and laxity which marks the able fulfilment of a not too exigent design.

> Had I been Adam in Eden-glade
> *I* should have climbed the wall
> Or ever the Woman found the fruit,
> Crimson and ripe to fall. . . .
>
> *Had I been Adam in Paradise*
> *I should ha' climbed the wall,*
> *I want not only the sweet of life,*
> *But all—all—all!*

Miss MacKellar's "Witch-Maid," from which the above stanzas are extracted, is a real success on a modest level in a quiet way. The treatment is feminine, but the sugar has the tingle of salt and litheness has supplanted grace. Australia supplies breadth and gusto to the landscapes.

An attitude of toleration towards established standards in prosody and religions is a prerequisite to the enjoyment of the "Dreams and Realities" of Mr. W. K. Fleming. The possessors of such tolerance will be requited by contact with a piquant fancy and a lyricism rising here and there to delectable sweetness.

In the "Peace Sonnets" of Miss Jessie Gibbs—sonnets militantly pacific and leoninely Christian—there is a rude sincerity and energy which sometimes hushes our discontent with their frequent and startling crudities of form.

The negro whom Mr. Fenton Johnson has depicted in his not unreadable dialect idyls is unmistakably the white man's negro. The borrowers of an alien culture are doomed to borrow eventually even their conception of themselves. It is curious that the one poem of documental significance in Mr. Johnson's volume, "De Mule," should express a psychology that antedates his culture.

For Mr. John Curtis Underwood and his cosmical and cyclical "Processionals" I feel much the same concern that Mr. Underwood himself, radical though he may be, may often have felt for the busy and troubled piety of some godly minister of the Calvinistic dispensation. I would not have him less earnest; I would have him take his earnestness more pliantly, humanly, genially. Spaces and æons and responsibilities—this is life for Mr. John Curtis Underwood. He will not only, like Benedick, fetch us "a tooth-picker now from the farthest inch of Asia": he will fetch back Asia itself. His mind scampers from cycle to cycle with the speed with which his hand might sweep the keyboard of a piano. I am sorry that he feels bound to poise the universe upon his shoulders: I could wish for the universe a firmer support and for Mr. John Curtis Underwood a lighter burden.

O. W. Firkins.

Notes from the Capital

WILLIAM V. ALLEN.

A former public character in Washington took a walk through the main floor of the Capitol a few days ago, after an absence practically of half a generation. He would have attracted attention anywhere with his six feet three inches of height and his proportional breadth of shoulders and chest, his weight of more than 200 pounds, his big face, with its forward-looking brows and its square jaw, and the gleaming gold-mounted spectacles, which added just a hint of Pickwickian blandness to an otherwise slightly sombre expression. When he walked, he strode. When he stood still, he looked like a heavy foundation spile. When he reached out his hand to gesture or extend a greeting, it was Jovian in its mass and motion.

Although time had dealt rather gently with him since he quitted his familiar haunts on Capitol Hill, few of the persons who encountered the visitor in the corridors seemed to have any idea of his identity; nearly all looked back at him after they had passed, nevertheless, in involuntary tribute to his exceptional personality, and sometimes with a vaguely reminiscent air, as if they were ransacking their memories to name and place him. He had some professional business before the Supreme Court, but most of the Justices had been changed since he was last in the chamber, and the new men, at least, failed to shudder as they might had they realized that this was William V. Allen, of Nebraska, the champion long-distance talker of the Senate back in the days when President Cleveland was struggling to procure the repeal of the Sherman silver-purchase act.

His outer man is by no means the only odd thing about Allen. He fairly bristles with uniqueness everywhere—in his methods, his career, his mental and moral make-up. Members of Congress had filibustered before the great silver fight of 1893, and many times; but his single-handed defiance of the inevitable, his unrelieved speech of almost fifteen hours, without once losing the thread of his argument or being at a loss for a word through the dreary night, and the perfect condition of his body and voice at its close, made a record unmatched in its line. Add to that the facts that he was a newcomer in the Senate, that he had been translated thither from the bench, that he represented a political party only two years old, and that he owed his election to Julius Sterling Morton, a conspicuous member of the very Administration he was working to wreck, and we find in him one of the most picturesque figures of a particularly picturesque era in American politics. Finally, his quaint mixture of bitterness and benevolence of disposition was shown once when, in retorting upon a newspaper correspondent who had published a scandalous story about him, he assured his fellow-Senators that the tale was wholly untrue, and without so much as a shadow of excuse, and that the circulator of it was an assassin of character, an enemy of society, a human ghoul. "I would not," he went on, "speak unkindly of the man; I entertain for him no unkind feeling whatever. I denounce him, however, as unworthy of the confidence and respect of good men. I denounce him as one who merits the condemnation of every honest citizen."

The People's party, to which Allen belonged, was the greatest consumer of oratory of any organization in American history. It simply revelled in what Speaker Reed used to call "langwidge." Its conventions were all speeches and resolutions, and half the assembled multitude had no idea what they were discussing or voting on, beyond the broad proposition that whatever was already in existence was bad, and that the latest nostrum-vender had found an infallible specific which could not be given in too big doses. Allen was its great man. Bryan was all right, of course, but Bryan was a Democrat, in name at least, and had little use for the People's party, except as an endorser. Allen, on the other hand, was one of themselves, an out-and-outer. Allen did not do so much speech-making directly to them as they wished he would, but he could sit in gigantic dignity in the centre of the platform, make an opening and a closing address, submit such of their resolves and motions as he thought ought to be submitted, declare one carried and another lost as he deemed best for the future of the party, and generally take charge of the proceedings. I asked him once, after watching his handling of a national convention, if this was strictly a "popular" deliberative body. "Oh, well," he answered, amiably, with what in other men we should take for a half-apologetic air, "these good people come from farms and remote places where they get little chance to learn anything about parliamentary law. This makes it necessary at times to take a short cut."

Many of his fellow-Senators regarded Allen, or affected to regard him, as a joke. While he may have given them reason for such a judgment now and then, he had a dangerous explosive quality which might have put him into quite another category. He was unhesitating in his condemnation of the careless, easy-going way in which most of the Senators transacted business; and one day, during the South African War, he took advantage of their drowsiness to spring a resolution which was put and passed—as they did not discover till they read it in the morrow's *Record*—committing their body to a declaration of sympathy with the Boers and an offer of mediation. He was induced to consent to its reconsideration, but not till he had had his quiet sport with those who had found him so merely amusing. TATTLER.

Correspondence.

"NAGGING REMONSTRANCES."

TO THE EDITOR OF THE NATION:

SIR: I read your paper with interest for a well-poised outside view of European politics, and I shall be curious to see whether you endorse the recent American note to England on the subject of contraband. It has been treated with extraordinary restraint by our press, possibly because it is understood that it will meet with polite contempt.

In effect, President Wilson complains that we have modified the hitherto accepted rules of naval blockade to suit our military needs. Is not that precisely what America did in the Civil War? Did she not reduce the population of Lancashire to squalid poverty and even starvation, and did they not endure it with a patience to which Lincoln paid a noble tribute?

The States have been making enormous profits on the supply of munitions to the Allies, yet because certain classes have had their profits diminished, the President is continually addressing nagging remonstrances to our Foreign Office at a time when its faculties are stretched to full tension in grapple with this ruffianly outlaw among the nations, and while it is being denounced by a large section of our people for its tenderness towards American interests and indifference to our own.

But I beg pardon. It is not a question of injured commerce! "The United States unhesitatingly assumes this task of championing the integrity of neutral rights which have received the sanction of the civilized world."

The United States can hardly be congratulated on her discharge of this high task. The integrity of neutral rights has been outraged by Germany in this war as never before in history. She bludgeoned and trampled over Belgium, and America uttered no word, but a week after the Lusitania outrage she assured Germany that America had "learned to recognize German influence in the field of international obligations as always engaged upon the side of justice and humanity."

Let me suggest a parallel to the attitude of America. Coming in the street on a ruffian who has just murdered a woman, I pursue him into the garden of a wealthy householder who has been watching the scuffle from the top of his flight of steps. He comes down indignantly to where I have pinned the murderer to earth on his flower bed and he snatches my elbow. "Sir, are you aware that you are injuring my property and infringing 'rights which have received the sanction of the civilized world'?"

President Wilson "is contending for nothing less high and sacred than the rights of humanity," but he threw over humanity in return for a promise not to drown any more Americans. He is still waiting for disavowal and compensation for the Lusitania, so he takes it out of us, being a people famed for profound patience under provocation. Is it necessary to nauseate us with buncombe about human rights when he is really thinking about pro-German votes and the clamor of greedy commercialists, and while he turns a cold and fishlike eye on two thousand miles of human agony?

Of course, if I were a person of international note, I would not write thus, for fear of causing international bitterness, but as an unknown Englishman and well aware that the bulk of Americans are on our side, I hope you will indulge this expression of what some people are feeling here. Hardly one of us but has lost a dear friend or relative in this bloody welter. E. B. MCCORMICK.

London, November 10.

AID FOR FRENCH WOUNDED.

TO THE EDITOR OF THE NATION:

SIR: Knowing the great admiration felt among Americans for France—admiration for all that the civilized world owes to her, heightened by the sense of her incomparable greatness of spirit, dignity, and fortitude throughout the present war—may I be allowed, through your courtesy, to make known the work of an English hospital for French wounded, and appeal for help to continue it?

The hospital at Arc-en-Barrois, installed at the end of last year in the château of the Duc de Penthièvre (Department of Haute Marne), is one of those which serve the Army of the Argonne, the region where fierce fighting has been perhaps more continuous than anywhere along the line. The need of it was proved by the fact that as early as February it was found necessary to provide an auxiliary hospital of seventy beds in addition to the hundred-odd in the château itself. This annex has been used for convalescents; but the French Government has recently decided to have no convalescents any longer so near the front; and the taking over of the annex for serious cases has meant a large increase of expenditure. Funds are now urgently needed.

Having had the privilege of serving for a short time in this hospital, I can testify to the need and the value of its work, as well as to the singularly sympathetic relations between the patients and staff. French officers have told me how greatly it has been appreciated; above all, the touching gratitude of the wounded soldiers themselves is an ineffaceable memory.

Only those who have been in the country can, I think, realize at all fully the bitter cost of the war to France; it is not cried abroad, but the statistics alone of the maimed and permanently injured are quite appalling. Modern surgery and skilful nursing can do wonders, and for this reason there cannot be too ample provision for the prompt and careful treatment of the wounded. I feel that if my American friends could see these wounded Frenchmen, some mere lads, others bearded fathers of families, all taken from their homes and peaceful occupations to fight, not with any desire of fighting, but with a deep determination to rid their country of the invader; if they could see their sufferings from the most horrible wounds, their patience, their cheerfulness, always ready for a smile or a joke; if they could talk with them and hear

how they speak of the devotion of their English nurses, they would understand how a hospital like this, above and beyond its actual work, makes for that comradeship and good will among nations which we desire, and is a springing seed of fraternal sympathy which will bear flower and fruit in the future.

Frenchmen have told me how deeply they have been touched by messages of sympathy which have reached them from across the Atlantic. And I think that some of the many Americans to whom France is dear may be glad to help this hospital, even though so many calls have been made on their generosity for the sufferings of the war, and so generously, as we well know, responded to. Twenty-five dollars will maintain a bed for a month, but any donations will be gratefully received and should be sent to: The Hon. Treasurer, R. Martin-Holland, Esq., C.B., 68, Lombard Street, London, E. C., England.

LAWRENCE BINYON.

London, November 16.

"SOULS IN THE TRENCHES."

TO THE EDITOR OF THE NATION:

SIR: Was not the customary moral discrimination of the *Nation* for once at fault in passing to print the editorial under the above caption in its issue of November 4? It needs only to be remembered that no such feeling of war weariness as the article suggests has found expression among the occupants of the trenches on the Allied side, though Servian women by the thousand are standing shoulder to shoulder with Servian men in the defence of their country, though the Belgian people are virtually without a land that they can call their own, and though French priests to the number of something like thirty battalions are fighting at the front. For my part, I am persuaded, alike from the statements of the press, the utterances of professional and public men, and the communications of private correspondents, that not in Great Britain or in the colonies, not in France or in what remains of Belgium, not in Russia, in Italy, or in Servia, is there the slightest weakening of the determination to put an end to the unholy thing which has brought the war about or to perish in the effort. Were the men and the women who are fighting on *that* side asked their will as to the continuance of the combat, though from the lips of the latter it might come to us as a sob, yet it would still shape itself into the words "Set on!"

It is not, I think, the contrast between the condition of troops established on an enemy's soil and troops driven in beyond the limits of their own frontier that really explains this situation; it is rather the disparity in the moral and spiritual aims which on the two sides are at stake. May I quote to you some words of Bergson? In the first, he is speaking of the aims and the character of Germany: "She will not," he says, "strike at combatants only; she will massacre women, children, old men; she will pillage and burn; her ideal will be to destroy towns, villages, the whole population." Again: "It is necessary to remind her [Germany] that her philosophy is simply a translation into intellectual terms of her brutality, her appetites, and her vices." Still again of the situation as a whole: "On the one side there is force spread out on the surface; on the other there is force in the depths. On the one side mechanism, the manufactured article which cannot repair its own injuries; on the other side life, the power of creation which makes and remakes itself at every instant. . . . Whatever be the price of victory, it will not have been too dearly bought if humanity is finally delivered from the nightmare which weighs upon it."

WILLIAM HIGGS.

Gilroy, Cal., November 12.

THE NATION'S WAR-RELIEF FUND.

TO THE EDITOR OF THE NATION:

SIR: With regard to the "Word to the Moderately Rich," published in your issue of September 16, in which I offered to be one of ten to give $2,000 to any of the European relief funds, the returns seem to be all in, and only three or four have responded to the call. The result of this appeal is not especially disillusioning. It is no more surprising that people refuse to give up luxuries in order to prevent starvation in Servia and Belgium than that they should cling to them in the face of bitter though not so extreme poverty right at home. Our daily experience accustoms us to the porcine life. This is not meant to be any indictment of the natural impulses of our class. Effective sympathy diminishes with the square of the distance between the observer and the sufferer. Probably the vast majority of us, if we were living in Belgium, would be as ready to sacrifice our last dollars as they are. If we were lost in the desert, we would not hesitate to share our last drink of water; or if any one of us were adrift on a log, with a woman, it would not seem at all remarkable, if the occasion required it, for us to slip off and take our chances with the sharks. The trouble, as you have pointed out in one of your editorials, is largely a defect of the imagination. If we would make a real effort to put ourselves in the position of a Servian mother, trudging through the snow with a hungry, homeless, and fatherless family, it might help somewhat. Without some definite attempt of the sort, the morning news of atrocities and sufferings makes no dent in our panoply; and we proceed to order casaba melon at a price that would furnish a refugee with food for a week.

One of the other contributors has asked why, if I feel so badly about it, I do not give the money anyway, without waiting for nine others to come in. This is quite pertinent, and I accept his suggestion, and herewith send New York exchange for $2,000, payable to the Servian Relief Committee. O.

THE PANAMA CANAL FORESHADOWED.

TO THE EDITOR OF THE NATION:

SIR: In view of the coming celebration of the completion of the Panama Canal (temporarily closed for repairs), the following lines may be of interest to your readers. They are found in Book IV of John Dyer's "Fleece" (1757):

> Must it ever be thus? or may the band
> Of mighty labor drain their gusty lakes,
> Enlarge the brightening sky, and, peopling, warm
> The opening valleys and the yellowing plains?
> Or rather shall we burst strong Darien's chain,
> Steer our bold fleets between the cloven rocks,
> And through the great Pacific every joy
> Of civil life diffuse? . .

It is interesting to note Dyer's belief in the theory that the climate of a new country may be modified by settlement.

HORACE W. O'CONNOR.

Literature

A WOMAN SOLDIER OF FORTUNE.

The Story of a Pioneer. By Anna Howard Shaw. Illustrated from photographs. New York: Harper & Bros. $2 net.

Three things combine to give unusual interest to Dr. Shaw's autobiography. First, it is the story of one who from obscurity and the bitterest poverty rose through her own efforts to wide influence and fame; what we like to call a typically American story. In the second place, it is the story of a born adventurer and fighter; and all the world loves a good fighter. The fact that the author has become best known as a champion of equal suffrage seems scarcely more than an accident. She went into the struggle for suffrage in much the same spirit as that with which one of the Garibaldis goes into a revolution; it does not matter in what country the revolution is taking place, so long as it offers a chance for a glorious fight in the name of liberty. Lastly, the story is told with a fine gusto, as of one who has taken a keen delight in hardship, struggle, and adventure, and takes equal delight in remembering them and setting them down. One cannot help thinking what an admirable heroine of a picaresque novel Dr. Shaw would have made, if she had had a different bringing up and another social background.

Of a family Scotch on the mother's side and remotely Scotch on the father's, Anna Howard Shaw was born in 1847, the sixth of a family of seven children. Her father was a skilful artisan, something of an inventor, and more of a dreamer. "Like most men," says his daughter, generalizing rather sweepingly, "my dear father should never have married. . . . To him an acorn was not an acorn, but a forest of young oaks." In 1851 the family emigrated to America in the hope of bettering their fortunes. For a short time they lived in New Bedford; then for seven years in Lawrence, Mass. Here Mr. Shaw made a fairly comfortable living, and the family became deeply interested in the Abolitionist movement. Dr. Shaw remembers her excitement when, after reading "Uncle Tom's Cabin," she discovered a negro woman in the cellar. She recalls, too, the departure from the town of the group of men who were to found a new Lawrence in Kansas. One of the attractive pictures of those childhood years is that of a remarkable friendship with a beautiful and mysterious woman of bad reputation who lived near the Shaws. "To me she was a princess in a fairy tale, for she rode a white horse and wore a blue velvet riding-habit, with a blue velvet hat and a picturesquely drooping white plume. . . . One day the mysterious lady bent and kissed me. Then, straightening up, she looked at me queerly and said: 'Go and tell your mother I did that.'" Mrs. Shaw was wise enough not to object to the odd association, and on

the little girl it made a lasting impression.

But the real adventures of the "pioneer" began when she was twelve. Her father had taken up a claim in the forests of northern Michigan, and, after building a log cabin on it, he returned to Lawrence and sent his wife with five children to live there till he could join them a year and a half later. "That we were a hundred miles from a railroad, forty miles from the nearest post office, and half a dozen miles from any neighbors save Indians, wolves, and wildcats; that we were wholly unlearned in the ways of the woods, as well as in the most primitive methods of farming . . . these facts had no weight in my father's mind." The cabin had no floor, doors, windows, or partitions; it contained no furniture, and they had brought none with them. Water had to be carried from a creek at a considerable distance. Mrs. Shaw was a semi-invalid, unable to stand up alone. Her oldest son, James, was twenty; the next two sons Mr. Shaw kept with him in the East. The nearest stores were forty miles away. After a few months James fell ill, and had to go East for an operation; this left the hard work of the pioneer homestead in winter to be done by three young girls and a small boy. That first winter was full of hardship and adventure. On one occasion the household was visited by a company of Indians, who brought with them jugs of bad whiskey and spent the night in quarrelling and drinking.

There were no schools in the region, but the family had some good books, and Mr. Shaw brought more when he came from the East. Anna's informal education qualified her at fifteen to become a school-teacher at two dollars a week. Later she was paid a little more, and was able to help the family through the bitter poverty of the Civil War years, when prices rose to hitherto unknown levels, and her father and two brothers were in the army. Meanwhile, she had developed the ambition to go to college and become a preacher, and the end of the war made it possible for her to devote her energies to this purpose. We must pass over her struggle for an education at Albion College and Boston University, where she found it much harder to earn her way than at Albion, and actually suffered the pangs of starvation. Before this, to the horror and estrangement of her family, she had preached a number of times in the vicinity of her Michigan home. It was years before her family became reconciled to her preaching, and they gave her no help in what they regarded as her perverse ambition. More serious contests were ahead of her. After she had preached two years, she was refused ordination by the Methodist Episcopal Church, and gained it only after a sharp struggle in the Methodist Protestant organization. Her account of the discussion in the conference is vivid and humorous:

> One old gentleman I can see as I write. He was greatly excited, and he led the opposition by racing up and down the aisle, quoting from the Scriptures to prove his case against women ministers. As he ran about, he had a trick of putting his arms under the back of his coat, making his coat-tails stand out, and incidentally revealing two long white tape-strings belonging to a flannel undergarment. Even in the painful stress of those hours I observed with interest how beautifully those tape-strings were ironed!

It is clear that the candidate keenly enjoyed the contest of which she was the centre. Already she had been engaged in three distinct and lively combats in her own parish on Cape Cod; the first to settle an ancient and bitter church feud, the second to force her Methodist parishioners to consent to her exchanging pulpits with a Unitarian, the third to root out illegal liquor-selling. The story of these affairs is told with the keenest relish, and is one of the best bits of narrative in the book. So long as these battles lasted, Dr. Shaw's energies were tolerably occupied; but when she had thoroughly subdued her adversaries, the restlessness of the adventurer came upon her. "My soul sent forth a sudden call to arms. . . . I was in danger of settling into an agreeable routine." She undertook the study of medicine along with the work of her two parishes—she had annexed a second one—and at the same time gave occasional lectures. When she had obtained her degree of M.D. she resigned her charges; but she had no intention of settling down to the routine practice of medicine. She spent some time looking about for a struggle big enough and exciting enough to absorb her energy. She gave suffrage a trial, working for a time in the service of the Massachusetts association, but left their employ on their refusal to give her a moderate advance in pay. She then entered the lecture field as a free lance, speaking on various subjects, and at once making more than twice as much money as she had asked for. Lecturing involved many exciting experiences. "All-night journeys in freight cars, engines, and cabooses were casual commonplaces, while thirty- and forty-mile drives across the country in blizzards and bitter cold were equally inevitable. . . . They were high adventures which I enjoyed at the time, and afterward loved to recall." With a group of cattlemen she was snowed in by a blizzard in a tiny railway station in Minnesota; in Kansas her sleigh was pursued by wolves across the prairie; once the crowded hall in which she was beginning to lecture was maliciously set on fire.

Apparently she was recalled to organized work for suffrage largely through the influence of Susan B. Anthony, whom she met in 1888. Of this remarkable woman, with whom she was closely associated for many years, Dr. Shaw draws a vivid and striking portrait. The latter portion of the book, which describes the suffrage campaigns, is to the general reader less interesting than the first half. But this is true of nearly all autobiographies, and the author's unconquerable zest and spirit give the narrative life to its end. Her long experience in public speaking has made her mistress of a style plain and vigorous; her narrative moves rapidly, and is enlivened by a sense of humor not inconsistent with a frankness amounting sometimes to naïveté. On the whole, the author impresses one as a gallant soldier of fortune of the nobler class, who need to believe in the causes they fight for.

CURRENT FICTION.

OLD QUESTS AND NEW.

Beltane the Smith. By Jeffery Farnol. Boston: Little, Brown & Co.

The Fortunes of Garin. By Mary Johnston. Boston: Houghton Mifflin Co.

Aladore. By Henry Newbolt. New York: E. P. Dutton & Co.

Despite sundry physical squalors revealed by the cold eye of history, and certain mental and moral puerilities laughed at in satire from the immortal Don among his windmills to the Yankee at King Arthur's court, the tradition of chivalry holds its glamour for makers and readers of romance. Popular novelists still find profitable account in that world which did its praying and its sinning, its love-making and its swashbuckling, under patently superior conditions of atmosphere, scenery, and costume. And serious poets are by no means done with a tradition embodying, at least, the enchanted quests of Cross and Grail.

It is true that vulgar writers have done their best to vulgarize the tradition; and that the romancer with a kept audience has trifled with it, as he may well afford. Nothing lends itself more readily to cheap effects than the mediæval machinery. It is easier to "put across" a telling portrait of a caitiff with a glaive and a buckler than one of a gunman with a black derby and a Colt automatic. The more "timely" material has been tried out pretty thoroughly of late, and it is clear that the glaive will retain the honors of the property-room. The author of "Beltane the Smith," having labored with the relatively difficult materials of modern or nearly-modern life, now, it is evident, settles back with a sigh of relief upon the romantic cushion of the Middle Ages.

To begin with, the patter could offer no serious difficulties to a phrase-maker who has so featly imitated Borrow. Mr. Farnol has evidently perceived at a glance that it is totally unnecessary for the costume romancer to try for anything like a consistent use of the tongue of any one period. The thing to employ is a lingo such as any fellow (or his girl) can understand, with just enough funny words and constructions to go with the glaives and things. It is a good dodge to turn your phrase upside down, when you are tired of thinking up words such as belike and forsooth, arrant and mazzard. Or there are even simpler expedients. Mr. Farnol has an easy recipe, *e. g.*, "Then Beltane leaned him, panting, upon his staff, what time the fallen man got him unsteadily to his legs and limped after his

comrade." Nothing too much, you will observe: "panting him" and "limped him" would have surfeited the artless reader, who only asks for a touch of archaic flavor, served with a shaker. And this writer knows how a bit of homely modernism in the mouths of his mailed and wimpled figures will endear them to the man in the street, the maid at her typewriter. The heroic persons, with all their beauty and valor, are not above "bright thoughts" and "troubles of their own." One of them remarks, on occasion, with pleasant informality, that "the night is young yet"; and when Black Roger, the hangman, cries: "Let us be going while yet we may," we feel that it is only out of respect for the author that he has refrained from "while the going is good." Nor is sense necessary. "They walked amid the flowers with eyes that, an it be thy will, e'en now will I leave thee until thy came they to a stair and up the stair to a chamber" is a passage no doubt reflecting the author's modest confusion upon realizing that his hero and heroine are to be alone at last. Of that harmless pair we need only reveal the fact that Beltane is really a duke and therefore deserves, after due exhibition of his brawn and valor, the hand of the Duchess, who appears, with her charms and her coming-on disposition, on page 22.

To bower and tourney, after her not altogether profitable dealings with the Civil War, Miss Johnston, also, returns with gusto. Like Beltane, Garin is a youth destined to win his way upward, by strength of thew and bravery of heart, to mating with a lady of high degree. An imperishable theme, none better in the quiver of romance. Miss Johnston has made skilful if not masterly use of it. Her narrative, as always, shows ample movement and color: its chief weakness is that it is never for a moment able to descend from the high horse. Its persons are capable of a laborious playfulness here and there which we recognize in the offing as comedy about to relieve. But the spirit of humor is absent from her work, and therefore the truer dignity of poise. She writes always, as it were, with flushed cheek and knitted brow. Every page is done at the highest possible tension. Perhaps one ought to be very young and feminine and keen for emotion to enjoy her to the full. But she rarely offers the reader of more neutral mood the familiar affront of careless workmanship. If her diction flies high, it also flies firmly. One quaint slip we note. It is in a speech of the princess who is to be Garin's, to the villain who is, according to the best traditions, a count. Suddenly out of the frame of her stately speech steps the jaunty phrase, "There is where you come in, my lord!"

Miss Johnston's customary formality, intensity, and even humorlessness, are well suited to her theme. On the whole, it is safer to go the whole hog when you come to knights and troubadours and chivalry and courts of love. Here a little humor is a dangerous thing; a mere talent had better accept the mediæval idea or let it alone. Miss Johnston likes it all, the song, the color, the fantastic morals and sentiments (not least the blood-letting, for which she has always shown marked taste) of that fabled age. She has done a finished though by no means inspired piece of work.

Garin's long pursuit of his unknown mistress, his "Fair Goal," is, in its way, a quest not only of love but of a spiritual ideal. In the Middle Ages Mr. Newbolt also naturally finds a natural setting for his extended parable. "Aladore" is not aimed at the reader of historical romance. Mr. Newbolt is a poet, and his mood here, and, in a limited sense, his method, are poetic. Perhaps it is a prose poem; the present commentator hopes not, as he has never been able to admire that species of wingless bird, and as he admires "Aladore" sincerely. One may certainly say that, in form, but for the accident of its not being chopped up into lines, it is as much poetry as a great deal that passes for poetry in these days. It is, in fact, not bastard verse but singularly beautiful prose. Its inspiration, rather than its model, is the prose of Mallory: thence, perhaps, its rhythm and its clear vigor, not its diction. The archaic flavor has been successfully caught without burdening the page with strange words. Superficially, the tale is much like certain narratives of William Morris, for example "The Story of the Glittering Plain." But Morris was content to weave his brilliant webs after the old fashion: with a touch here or there of mysticism or symbolism, but for the most part rejoicing in the lusty narrative for its own human sake. Mr. Newbolt's tale, beautiful in itself, is a subtle and elaborate parable of life as we in this complex day know it. The motive of the Quest is here, once more. Aladore, like Morris's Glittering Plain, is a place of magic, where Ywain, after many adventures, is to find his ideal. But his ideal is not, as with Miss Johnston's Garin, the splendid dream of the Middle Ages, a perfect and deathless illusion. It is rather Truth, the truth of human kindness and of human obligations, a truth ennobling love, revealed by love, but not falsely confounded with it. The secret of service is Ywain's Fair Goal, service not of person or ideal or special cause, but of humanity: a secret never revealed to the age of chivalry. It is significant that Ywain begins his quest by making over his earthly property and lordship to another, that he may be free for real living and seeking.

Hempfield. By David Grayson. New York: Doubleday, Page & Co.

Readers of the "Spoon River Anthology" will recall what a prominent part in the life of that not very cheerful town is played by the *Clarion* and its proprietor, Editor Whedon. Not a glorious part, for the *Clarion* and its editor represent everything that is corrupt and insincere in country journalism. The ordinary rural newspaper, we suppose, stands somewhere between the Spoon River *Clarion* and the Hempfield *Star*, which, in making it the focus, or fulcrum, of his slight action, the present writer surrounds with his customary haze of sentiment. As against the grinding hypocrite, Whedon, we have here Anthy, great-hearted and beautiful maiden, who has inherited the paper from her father, and is determined to carry it on in his own noble and disinterested and unbusinesslike spirit. To her rescue comes chivalry in various guises. Farmer Grayson, for example, though he lives out of Hempfield, and is supposed to be a busy man, is so charmed by Anthy that he spends most of his time for some months, so far as we can make out, hanging about the *Star* office, that he may miss nothing of what happens to Anthy, and her uncle the Captain, and Fergus MacGregor, the printer, and Ed Smith, the efficiency expert, and young Nort, the wastrel (with a rich father) and leading juvenile, who is destined to make a man of himself, or be made a man of by that inky ingénue, Anthy. The scene of the newspaper office is well painted, and so is the village street, which is the second set. The plot invites you to smile with a pleasant little lump in your throat. The characters are picturesquely balanced. The Captain, who cannot be made to believe in flying-machines or the Democratic party; Fergus, who divides his allegiance between Anthy and Bobby Burns; Anthy, who writes letters to the ghost of Lincoln; Norton Carr, the young humorist with a heart; David Grayson, in the rôle of the benign old man: here are many of the most acceptable figures of village comedy. The whole affair is skilfully if somewhat unctuously managed. The writer has his function as a genial interpreter of rural charm for the city-bound, and must put his best foot foremost. "The Old Homestead" and "Shore Acres" have shown, once for all, how the thing should be done. To "put across" your village philosophy, you must spread it pretty thick. There are moments when, on the printed page, we weary exceedingly of the present writer's deathless complacency and insistent optimism.

Old Delabole. By Eden Phillpotts. New York: The Macmillan Co.

Mr. Phillpotts's scene here shifts from the Devon moors to the cliffs of Cornwall, with a consequent change in that physical atmosphere which counts for so much in his novels. Rounded tors give place to steep quarry-side, and moorland mists to the driving west wind which is the paramount force of nature along that coast. But the human theme, the human types, are strikingly like what this writer has been accustomed to present. The dialect is virtually the same, and is used with the same appalling frankness. We have New England rustics who can tell their neighbors what they think of them, but they are furious egotists, breaking an unwritten law of reticence. They must be angry, and they must be heard in silence; if you turn on them they are confounded

by your indecency. These people of Mr. Phillpotts have no such limitation. Speaking out is not a form of madness in their eyes; they are neither proud nor ashamed of it; and they take as good as they give.

The situation upon which the action is based is, rather oddly, one of which this writer has made use more than once. Mr. Howells's middle-aged lover, who finds himself wishing at the same moment to embrace a mother and her daughter, reflects that, after all the centuries, man is still "imperfectly monogamous." Apparently, Mr. Phillpotts thinks something of the same sort might be said of woman. Here again he represents a good woman equally in love with two men and helplessly dangling between them. Edith Retallack's choice of Wesley Bake instead of Tom Hawkey is determined by chance. The two are not (like the two males in "The Whirlwind") contrasting types. They appeal to the girl in much the same way: both strong men, sober, industrious, and with positions of authority among the "stone-men" of Delabole. Edith quarrels with Wesley on one of those matters of stubborn opinion which play such a part in rustic life—a question connected with property. Veering towards Hawkey, she is caught by his magnanimity and tossed gently back to her accepted lover. In the supreme matter of his love, Hawkey's reticence does not fail him. Old Delabole differs from Widecombe, not only in its physical contrast of climate and enjoyment, but chiefly as a stronghold of Methodism. The lives of these people are colored by their religion, though its strictness oddly entails a certain amount of half-recognized laxity, for example, in the sexual relations of youth and maiden. The tavern also flourishes beside the chapel, as it did among our forefathers on Massachusetts Bay. The flower of this community is old Grandfather Nute, with his unquenchable vitality, his innocent egotism, his real faith, and his knack at falling on his feet.

THE WAR EXPLAINED.

The Stakes of Diplomacy. By Walter Lippmann. New York: Henry Holt & Co. $1.25 net.

The "Stakes of Diplomacy" are the "weak" or "backward" countries. "These states are 'weak' because they are industrially backward, and at present politically incompetent. They are rich in resources and cheap labor, poor in capital, poor in political experience, poor in the power of defence. The government of these states is the supreme problem of diplomacy. . . . I use backward in the conventional sense, to mean a people unaccustomed to modern commerce and modern political administration" (pp. 87-8). It takes this combination of economic potentiality and political weakness to make the problem. "The desert of Sahara is no 'problem' except where there are oases and trade routes. Switzerland is no 'problem,' for Switzerland is a highly organized modern state. But Mexico is a problem, and Haiti, and Turkey, and Persia" (p. 93). Troubles begin when exploitation of these "weak" countries is attempted competitively by the "strong" nations. "The formula of modern Imperialism seems to be that financial groups enter a weak state and create 'national interests' which then evoke national feeling. The corruption and inefficiency of the weak state 'endanger' the interests; patriotism rises to defend them, and political control follows. The prestige of a Power in the councils of the world depends upon the weight of 'interests' protected and the fervor with which they are 'protected' (pp. 105-6). . . . Who should intervene in backward states, what the intervention shall mean, how the protectorate shall be conducted—this is the bone and sinew of modern diplomacy (p. 107). . . . Diplomacy has appealed to arms because no satisfactory international solution has been found for the Balkan, Turkish, African, and Chinese problems. This war is fought not for specific possessions, but for that diplomatic prestige and leadership which are required to solve all the different problems. It is like a great election to decide who shall have the supreme power in the Concert of Europe. . . . The ultimate question involved was this: whenever in the future diplomats meet to settle a problem in the backward countries, which European nation shall be listened to most earnestly? What shall be the relative prestige of Germans and Englishmen and Frenchmen and Russians? What sense of their power, what historical halo, what threat of force, what stimulus to admiration shall they possess? To lose this war will be like being a Republican politician in the solid South when the Democrats are in power in Washington. It will mean political, social, and economic inferiority" (pp. 108-9).

This is Mr. Lippmann's diagnosis of the trouble, and from the diagnosis the remedy irresistibly emerges. It is, simply, the "internationalization" of the backward countries by establishment of a rudimentary "world government." The Berlin Conference of 1885 was a sort of European legislature. The Algeciras Conference was another, and so was the London Conference following the Balkan wars. "But all these legislatures have had one great fault. They met, they passed laws, they adjourned, and left the enforcement of their mandate to the conscience of the individual Powers. The legislature was international, but the executive was merely national. The legislature, moreover, had no way of checking up or controlling the executive. . . . If the law was not carried out, to whom would an appeal be made? Not to the Conference, for it had ceased to exist (p. 131). . . . The beginnings of a remedy would seem to lie in not disbanding these European conferences when they have passed a law. They ought to continue in existence as a kind of senate, meeting from time to time (p. 133). . . . The development of such a senate would probably be towards an increasing control of colonial officials. At first it would have no power of appointment or removal. It would be limited to criticism. But it is surely not fantastic to suppose that the colonial civil service would in time be internationalized: that is to say, opened to men of different nationalities. The senate, if it developed any traditions, would begin to supervise the budget, would fight for control of salaries, and might well take over the appointing power altogether (pp. 133-4). . . . The important point is that there should be in existence permanent international commissions to deal with those spots of the earth where world crises originate. . . . The idea is not over-ambitious. It seems to me the necessary development of schemes which European diplomacy has been playing with for some time. It represents an advance along the line that governments, driven by necessity, have been taking of their own accord. What makes it especially plausible is that it grasps the real problems of diplomacy, that it provides not a panacea but a method and the beginnings of a technique. It is internationalism, not spread thin as a Parliament of man, but sharply limited to those areas of friction where internationalism is most obviously needed" (p. 135).

Now, other things than mere present peace will, in Mr. Lippmann's opinion, follow the successful internationalization of "backward states." Among these is the "democratization of diplomacy." This would follow the orderly development of commerce with these countries, with consequent elimination of the "adventurer" and his replacement by the many, whose interest in foreign affairs would thus be greatly increased. "That is not all, however. It can be maintained, I believe, that the effect will be to blur frontiers, to diminish the sense of sovereignty, and weaken separatism. The really internationalizing forces of finance, commerce, labor, science, and human sympathy, distracted and distorted to-day by 'national necessities,' will be given a freer chance to assert themselves" (p. 189). Mr. Lippmann advances this latter idea, however, only as an hypothesis. It is the democratization of diplomacy upon which he mainly relies for a permanent betterment of what are called "foreign politics":

> A people that was sophisticated about foreign affairs would be hard to lead, and its diplomats could not wield it with the same sense of sovereign power. But this loss of unity, dangerous under conditions to-day, would be a great blessing once the weak spots of the world were organized, for then the fearful tension of imperial competition would be relaxed, and the need for drilled submission, for presenting an unbroken front, would diminish. The effect would be double. The organization of backward countries would draw wider interests to them, and these wider interests, assuming control of diplomacy, would democratize it and weaken its sovereign pretensions. There would be less need of sovereignty, less need of rigid military frontiers, less need of docile, uncritical patriotism, and consequently a vast increase of human coöperation. The great empires will

cease to face each other as hostile rivals when the sources of their rivalry, the stakes of diplomacy, have been organized out of existence (pp. 203-4).

This is all very well. *If* the "backward" countries are the causes of national disputes, and these countries *can* be "internationalized," then the chances are that they *will* cease to cause national disputes. Also, it is quite likely that they can and will be "internationalized" in greater or less degree by some such method as that suggested by Mr. Lippmann. But is *that* all that we are to see in the great war?

Human activities can no doubt almost always be stated in economic terms; that is the truth underlying the modern superstition of economic determinism. Mr. Lippmann (maugre his youth and the rapidity with which he is producing books) has been clever enough to detach himself from the toils of Socialism so far as its more obvious fallacies are concerned, but he is still seemingly content with this, its basic philosophic assumption. He is entitled to his creed, and even to his superstition. But the effect of both is to make a book like "The Stakes of Diplomacy" read in these days as if it belonged to another age of time. Moreover, this book in a measure lacks some of the qualities which made its predecessors interesting. The flavor of youth has somewhat evaporated; the brilliant epigrammatic cocksureness and irreverence which amused and stimulated the reader of "A Preface to Politics" and "Drift and Mastery" are somewhat parsimoniously doled out in the "Stakes of Diplomacy," and the butter is spread much thinner in the last of the three books than it was in either of the earlier ones. Perhaps the dedication to "The Staff of the *New Republic*" is significant. The "Stakes of Diplomacy" is the stuff that a "journal of opinion" is made of. It does not, as did "A Preface to Politics," invite a second reading.

A LITTLE KNOWN TRIBE.

The Fighting Cheyennes. By George Bird Grinnell. New York: Charles Scribner's Sons. $3.50 net.

Because Indian wars are now mere memories, and the aboriginal bands that once kept the frontier in a continual state of unrest are broken and scattered, there is danger that we may lose entirely our historic touch with one of the most important elements that entered into the making of our country as we know it. Dr. Grinnell has presented, therefore, a valuable contribution to American sociological literature in his record of a group of red men of the highest type, who remain even to this day largely unspoiled by the vicissitudes through which they have passed. No other writer is so competent as he to perform such a service, for he has been the stanch friend of the Northern Cheyennes, and their chief interpreter to the outside world, for many years, and has repeatedly acted as the intimate medium of communication between them and their white well-wishers in the East.

Of all the Indians who have figured in the popular annals of border warfare, these are perhaps the least widely known by name. Half the transcontinental tourists who halt on their way through southern Montana to look over the Custer battlefield are unaware of the participation of any Indians save the Sioux in the annihilation of Custer's command, or suspect that within an easy day's ride of the railway is the remnant of the band responsible for some of the worst of the slaughter, including still a few old warriors who were in the thick of it. Almost all extant accounts of the events of that day have been derived from white sources, whereas Dr. Grinnell has drawn upon the Indians for their version. By piecing all the testimony together, and bearing in mind that the Indian story comes through channels more direct and less liable to adulteration than the white story, the conscientious historian can construct a fairly faithful picture of what occurred, and place the blame for the disaster at the proper door.

Quite as interesting as the history of a tribe notable for its splendid physique, its courage, and its steadfastness, are the occasional glimpses Dr. Grinnell gives us, between the lines of his chronicle, of the life, customs, and ideals of these people before their primitive characteristics had been perceptibly affected by contact with Caucasian civilization. The Indian method of fighting, with its avoidance of coming into close quarters with the enemy, running away when the enemy charges, but wheeling and returning to the attack as soon as the vigor of the charge seems at all relaxed, explains things which ordinarily puzzle the uninitiated reader of frontier war-stories. The philosophy which has bred up a race of wonderful warriors is worthy of special note, too, in these days so surcharged with the martial atmosphere. The Cheyennes trained their youth to feel that death was not to be dreaded on its own account, as it was better to die in the full enjoyment of one's vigor than to linger on till one's powers had failed and life held no more satisfaction or pleasure.

An incident as tragically pathetic in its way as the pilgrimage of Standing Bear and his band of Poncas, which became familiar to the public through its exploitation in the press at the time of its occurrence, is narrated by our author in his chapters on the bitter experiences of Little Wolf and Dull Knife. They, like Standing Bear, revolted against their inhumane removal from the bracing air and temperature of their northern home to the enervating climate of the Indian Territory, and the unadorned account of their struggles to escape makes a strong appeal to the sympathy.

Although the history of the tribe is traced in this book as far back as any sufficient data are obtainable, it is brought down, as the title indicates, only through the period of their active hostilities with the Government. "The fighting days of the Cheyennes have passed," says Dr. Grinnell in his final summary. "They are now learning the difficult lesson of civilization and work, but the lesson of thrift they have as yet hardly begun to learn. This we may hope will come later." The isolated situation of their Northern reservation, with their traditional enemies, the Crows, for their nearest neighbors, has not been favorable to their rapid advance in the arts of peace. But they seem to have retained much of their old energy, and their accomplishments in cattle-raising a few years ago, under intelligent supervision, fairly startled the experts in the Chicago stock yards; nor is it so very long since we had an outcropping of the ancient war-spirit in an incident which was picturesque enough to furnish the pivotal feature of a popular novel, and which only the coolness and common-sense of a Government agent prevented from drifting into bloodshed.

THE BALKANS.

Geographical Aspects of Balkan Problems in Their Relation to the Great European War. By Marion I. Newbigin. New York: G. P. Putnam's Sons. $1.75 net.

The world would seem to be large enough for both geography and history, but like emperor and pope in the Middle Ages, each usually tries to bring the other into subjection. Sometimes, however, they dwell together in harmony, and this is the case in Dr. Newbigin's book. She also succeeds amazingly well in an effort to be fair to both sides in the present "unpleasantness," and shows that a Briton, though a belligerent, can be more neutral in attitude than any neutral. Be it added that she directs an unexpected amount of new light upon a group of problems whose permanent solution would tax the abilities of a legate from the heavenly court.

Six chapters describe the setting of the geographical stage in the Balkan peninsula, including the position of the independent states, and of Austria-Hungary and Turkey, and the natural routes of communication. Six chapters deal with the peoples of the peninsula, its climates, and the modes of holding the land. A final chapter discusses the changes after the wars of 1912 and 1913, and an epilogue suggests readjustments of political boundaries to conform as best may be with geography and nationality. The value of the book is greatly increased by a dozen maps, noteworthy among which are those giving the lines of the Roman roads across the peninsula, the modern railways and railway schemes, and the distribution of peoples. There is, finally, a large map in colors, showing the present political boundaries and the chief cities and railways, upon a background of physical features. The style is almost devoid of technical expressions, and errors are very few.

Perhaps the most informing demonstration given by Dr. Newbigin is that of the

decisive importance of the two routes which run in approximately straight lines from Belgrade to Constantinople, and from Nish to Salonica. Less important when Rome exerted paramount influence than the east-and-west Egnatian Way, their significance rose with the greatness of Constantinople, and now is further enhanced by the lines of force which proceed southeastward from the allied central empires. Since the peninsula lacks a well-indicated natural centre, it has tended to be dominated by outside Powers. The peoples along the great roads have often had the uncomfortable choice between fleeing to the highlands or remaining in the paths of trampling armies. Conditions and circumstances have developed them into "powerful stocks of men."

Dr. Newbigin has not attempted a general historical survey of the Balkan problems from the geographical point of view, but has confined her attention to recent and present conditions. There is in the book an occasional over-emphasis on orography, as when the "Rhodope Upland" (maps 1 and 2) is represented as a solid triangular block, whereas (final map) it is more in the shape of a letter A, in which the openings represent the plains of Sofia and Philippopolis, making a way for the great southeasterly road. The half-dozen peoples are each situated in an area which can be defined fairly well by heights of land and drainage systems. Servia, before 1913, consisted mainly of the watershed of the Morava River, tributary to the Danube; Bulgaria included the southern half of the third or lowest basin of the Danube, together with the upper basins of the Maritza and the Struma; in both cases the outlets to the sea were in alien hands. Greece was the southern extremity of the Albano-Grecian highlands; Albania the similar region farther north; and Montenegro a smaller, higher portion to the northwest. The basin of the Vardar River constituted the greater part of Macedonia, occupied mainly by Bulgars, but desired by Servia for an outlet and by Greece for a possession. All of these regions have a severe Continental climate, except Greece, which enjoys the milder weather of the Mediterranean lands: the ploughing Slav thrives under the former, and the gardening, seafaring Greek under the latter.

In Dr. Newbigin's view, the settlement of 1913 was defective from the geographical standpoint in assigning the Vardar basin almost entirely to Greece and Servia, whereas its climate makes it Slavic, while its people are Bulgarian. Bulgaria was left limited in every direction, being cut back further than before from the mouth of the Danube, blocked by Turkish possessions from free access to the mouth of the Maritza, and shut off completely from the mouth of the Struma. Nor was Servia satisfied, since she failed to reach the sea. In concluding she suggests that Bulgaria receive free access to the sea along the last two rivers, together with the Vardar Valley. She remains discreetly silent as to the ownership of Salonica. Greece might be compensated for cessions to Bulgaria by the gift of southern Albania. Servia should receive an outlet to the Adriatic through the rough basin of the Drin in northern Albania, and should also be enlarged westward as far as the Narenta. Dalmatia and Croatia, however, for strategic and religious reasons, should be left to Austria-Hungary.

This solution is open to the criticism that in partitioning Albania and the Albanian people between Greeks and Serbs, it departs from the principles of both geography and nationality, the only two principles which seem to offer hope of a Balkan settlement. The same may be said in regard to the sharing between Austria-Hungary and Servia of the block of land which includes Servia, Montenegro, Bosnia, Herzegovina, Croatia, and Dalmatia: substantially that part of the drainage basin of the middle Danube which lies south of the Drave and the great river. This region belongs geographically and economically with Austria-Hungary, and is prevailingly inhabited by a single nationality, the Serbo-Croats. The criteria would be better satisfied if Albania were kept undivided, and, in view of its backward condition, were given to the tutelage of a Western Power, as Italy; and if the Serbo-Croatian region as a whole became an autonomous part of the Hapsburg Empire: neither Albania nor "Slavonia" possesses at present the spiritual unity which would make independence successful.

The fact that great estates conducted on the principle of tenant-farming prevail in Thessaly and Bosnia (and, it may be added, in Rumania), while Servia and Bulgaria have for the most part peasant proprietors, is probably due not to defects and excellences of the respective governments, but to the varying circumstances that arose during the emancipation from Turkish rule.

CREDITORS AND DEBTORS.

The Rights and Remedies of Creditors Respecting their Debtor's Property. By Garrard Glenn. Boston: Little, Brown & Co. $3 net.

This is a rare book. It covers a broad field, but is not big. It is original, though it embraces topics upon which many volumes have been written. It is the first attempt to coördinate the "various statutes and doctrines which are scattered through the body of our law," and present them as a "system afforded by our jurisprudence for the realization of debts out of the debtor's property." Our legal literature abounds in treatises upon judgments and executions, upon receivers, upon assignments for the benefit of creditors, upon insolvency and bankruptcy proceedings. Such books contain a great deal of useful information. Mr. Glenn does not undertake to supplant them. He is not in competition with their authors. It is his distinction that he offers a synthesis of the legal principles set forth in treatises of this kind and hitherto looked upon as rather loosely related one to another.

The ordinary method afforded by the common law to the creditor for enforcing his claim against a delinquent debtor was by judgment and execution. But a common-law execution could be levied on such assets only as a law court recognized as property. It could not reach equitable interests in lands or chattels, nor choses in action. To get at such forms of property, the creditor was compelled to file a bill in equity. Again, the debtor could defeat the creditor's remedy by execution by giving or fraudulently granting the legal title to his property to another. In such cases, also, the creditor was forced to go into equity, in order to set aside the voluntary or fraudulent conveyance, and thus remove the obstacle which the recalcitrant debtor had put in the creditor's way of enforcing his execution. The common law had no thought of distributing the property of an insolvent debtor ratably among his creditors. Its policy was to reward the vigilant creditor and leave the slothful one to his fate. Equity followed the law in this respect. It recognized the priority gained by an alert creditor in his race with others for judgment and execution, or for a creditor's bill. It also recognized the validity of a debtor's assignment of his property for the benefit of creditors, even when it preferred some creditors to others. "Both equity and law," to use Mr. Glenn's words, "gave the creditor who availed himself of the respective remedies which they afforded a priority of satisfaction over all creditors who should later institute proceedings in their own behalf. Upon this foundation has been constructed an enormous body of doctrine whose outlines" are presented in the first half of his treatise.

This body of law is characterized by Mr. Glenn as "the selfish system of realization," and is contrasted with the system of equal distribution, which has superseded the older remedies in many cases, and which, he thinks, has within itself forces that make for progress portending still further encroachments.

The doctrine of equal distribution of the debtor's property is important to the creditor only when the debtor is insolvent. If there is property enough to pay all debts in full, one creditor suffers no legal harm from an earlier judgment and execution by another. But if the property is insufficient to satisfy all claims, the question arises, "Is it fair that one creditor should be paid in full while others get nothing?" Modern legislation and judicial decisions are answering this question in the negative. Perhaps the most original and instructive chapters in this book are those in which the author traces the growth of the system of equality of distribution and explains the theory upon which courts and legislatures have proceeded in its development. It is impossible within the limits of this review to present an adequate synopsis of Mr. Glenn's discussion. Clearly, his views are the result of an extensive experience in winding up insolvent estates as well as of a thorough study of cases and statutes.

Gift Books

As was to be expected, there have been few gift books issued this year. The handsome importations which usually form a considerable part of the Christmas book trade have for the most part been forestalled by the war. London economy, we may well believe, will not permit the luxury of fine editions, and even American publishers have gone in more for substance than for show. We have selected a few volumes which, though not all are issued specifically as such, may be grouped in this class and may be recommended as worthy remembrances of the season.

In "The Glory of Belgium" (Doran; $5 net) Roger Ingpen describes the relics of mediæval Belgium. He admits in the introduction that, though he has spoken of these monuments as still extant, "in some cases the past tense will have to be substituted for the present." Yet just because his account refers to the situation before the war, the book will have added value. Its special feature is twenty plates in color by W. L. Bruckman, who fortunately gives us several scenes in and about Louvain.

From Dodd, Mead & Co. comes an attractive edition of Irving's "Knickerbocker's History of New York," issued at $2 net, in which may be found in engaging wash drawings by Maxfield Parrish our old friends Peter Stuyvesant and the other worthies of those times. The ancient motto of the text applies equally to the drawings:

De waarheid die in duister lag
Die komt met flaarheid aan den dag.

Though put forth in a limited edition, we take it that "Historic Virginia Homes and Churches" (Lippincott; $7.50 net), by Robert A. Lancaster, jr., will appeal to more readers than those residing within the limits of the Old Dominion. In a descriptive text of above 500 pages the author has placed 317 photographic illustrations, for the most part the work of his own rambles among Colonial churches, court houses, taverns, and the other landmarks which are wrought into the history of Virginia.

"Bypaths in Arcady" is a book of love songs, by Kendall Banning, with illustrations in photogravure by Lejaren A. Hiller. It is published by Brothers of the Book, Chicago. In an introductory note John W. Alexander calls attention to the difficulties which have to be overcome in the production of photogravures and to the success which on the whole this collection has achieved.

That well-known expert in gems, Dr. George Frederick Kunz, is the author of a fascinating study entitled "The Magic of Jewels and Charms," which has just come from the press of Lippincott ($5 net). In this volume Dr. Kunz takes the reader through the mazes of superstition and legend concerning precious stones which have grown up from the beginning of time. As such lore touches the history of all professions the book should appeal to the general public, and will undoubtedly be sought out by the scholar. It is a gift book with much more to commend it than ornamental value, though on this side alone it is an excellent bit of work.

A book which real Americans will welcome in these years when every nation is taking to heart its culture and traditions is "Old Concord" (Little, Brown; $3 net), by Allen French. The historical matter has been drawn from standard works, and the facts concerning persons of literary note from their own writings. Among the best features of the volume are drawings of old landmarks by Lester G. Hornby.

"On Wednesday, November 25, 1914, the workmen who were digging among the fire-scarred ruins at the extreme northeast corner of old College Hall unearthed a buried treasure. . . . It was the first stone laid in the foundation of Wellesley College. There was no ceremony when it was laid, and there were no guests. Mr. and Mrs. Henry Fowle Durant came up the hill on a summer morning—Friday, August 18, 1871, was the day—and with the help of the workmen set the stone in its place." "The Story of Wellesley" (Little, Brown; $2 net), by Florence Converse, gives a comprehensive sketch of the forty-four years following upon that day in which this institution has taken a foremost place in the education of women. The book includes a number of striking illustrations by Norman Irving Black.

We can not recommend too highly as a choice but inexpensive Christmas gift the "Dreamthorp, with Selections from Last Leaves" of Alexander Smith, which is reprinted by the Oxford University Press and issued at one shilling net. A few of the chapter headings—"On the Writing of Essays," "On Death and the Fear of Dying," "On the Importance of a Man to Himself," "Books and Gardens," "On Vagabonds"—will be enough to indicate to those not yet familiar with them the substance of these delectable papers.

We are glad to mention in passing (reserving fuller notice for a later date) Stephen Graham's "The Way of Martha and the Way of Mary," which the Macmillans have just issued at $2 net. It is a book of very readable essays on Russia by one who, of course, has made that country much his own.

A delightful volume of essays by Ian Hay, "The Lighter Side of School Life," is published in a second edition by Le Roy Phillips (Boston; $1.50), with illustrations by Lewis Baumer. These, in pastel, are so charmingly delicate and so amusing in themselves that one is ready to overlook the fact that they have no direct relation to the text. The book is dedicated to members of "the most responsible, the least advertised, the worst paid, and the most richly rewarded profession in the world." By these, wherever found, despite the fact that the life dealt with is wholly that of an English public school, the essays will be highly regarded. Boys are the same the world over, and so, in the main, are masters, and as for parents—*genus irritans*—as every schoolmaster knows, they are a nuisance always and everywhere. Those who are familiar with the adventures of the English Government in its various attempts at paternalism in educational matters will chuckle delightedly over the chapter on The Pursuit of Knowledge, and every schoolmaster will echo the conviction of the teacher, compelled by sickness to absent himself from his class, that "whoever of his colleagues is told off to take his form for him will indubitably undo the work of many years within a few hours."

John Martin Hammond has turned a field heretofore only lightly scratched in his "Quaint and Historic Forts of North America" (Philadelphia: Lippincott; $5 net). Mr. Hammond gives an exhaustive survey of his subject. Including Canada, and even Havana, as well as the United States, he tells the story of the strongholds of the country and the part that they have played in the careers of the early English, French, and Spanish adventurers, in the Revolution and the War of 1812, and in the Civil and Indian Wars. The book is written in exceedingly readable style, and is freely illustrated with excellent photographs.

A volume that will delight some and pique others of the ever multiplying descendants of the Pilgrim Fathers is Anna Hollingsworth Wharton's "English Ancestral Homes of Noted Americans," published by Lippincott with two kinds of binding, *viz.*, for descendants of the Pilgrims mentioned, half morocco, $4.50; for others, cloth, $2, net. Flippancy aside, this is a book that was well worth the writing, and that will be appreciated by all Americans who still value the Anglo-Saxon traditions of their race. Here are the originals of many good American names—the less distinguished, as well as the Franklins, the Penns, and the Washingtons—traced back to the dwellings in the home country where their ancestors had lived before them, and whence they set out to found a new empire. Miss Wharton writes in her usual engaging style, and the book is profusely illustrated with photographs.

"The Golden Legend," selected and edited by George V. O'Neill, S.J., professor of English in University College, Dublin, is issued by the Cambridge University Press (Putnam) for 3s. net. The selection is of twenty-two lives from Caxton's translation from the thirteenth century Latin of Jacobus de Voragine, and the editor's object, as stated, has been to prepare a popular, though not unscholarly, edition. The volume is accompanied by a biographical introduction and short notes.

In fitting commemoration of the fiftieth anniversary of Lincoln's death, Osborn H. Oldroyd has brought together under the title, "The Poet's Lincoln" (published by the author at "the House Where Lincoln Died," Washington, D. C.; $1), a large number of tributes in verse to the martyred President. An introduction on "The Poetic Spirit of Lincoln" is contributed by Marion Mills Miller. It would be easy to think of a number of poetical tributes of comparatively recent date which might have been included in the volume, but the editor had to be guided to a certain extent by considerations of space, and his selection on the whole is judicious and representative. The value of the volume is considerably enhanced by the large number of portraits of the President and illustrations of events connected with his career and with his death and burial. Brief biographies are also given of the authors of the poems.

The Putnams have published a handsome volume by Mrs. John Lang, entitled "A Book of Myths," with really beautiful illustrations in color by Holen Stratton. Mrs. Lang retells in singularly attractive style all of the celebrated and some of the less-known legends of the Greek mythology and a number of the northern myths as well. The volume is intended, according to the publishers' announcement, especially for young people. For them we can imagine no more fascinating reading; but the usefulness and charm of Mrs. Lang's book need by no means be confined to the young; many elders whose mythological lore has grown rusty will welcome so attractive a compendium as this, and in

reading of the youth of the world will gladly renew their own.

To "A Book of Bridges," published by John Lane Company ($6), Frank Brangwyn has contributed thirty-six impressionistic water-color views of famous bridges in Europe, and as many equally impressionistic sketches in black-and-white. Some of the water-colors are of great beauty, a few are distinctly muddy in color and texture, and the same is true of many of the pen-and-ink sketches, in which half-lights and shades are ignored, and clouds, water, earth, and stone have the same texture of nearly solid black. These faults—which are perhaps virtues in the eyes of critics of the advanced modern school—are, however, redeemed by the vigor and beauty of many of the views and the breadth of handling and sureness of drawing in nearly all.

The text, in five chapters and two appendices, by Walter Shaw Sparrow (who calls himself a "pontist" and his studies "pontism"), is a singular mixture of historic and scientific information, sentimental ramblings, and military furor. Mr. Sparrow is obsessed with the idea of "preparedness" in its most aggravated form, and the design of every modern bridge, without exception, is condemned as an easy prey to hostile engines of destruction. He waxes eloquent over the folly of building the Eads bridge at St. Louis, without regard to its military value and the danger of a negro uprising. "The black race breeds rapidly, and some day it may breed a great soldier, a dark Napoleon, who will find it no difficult task to organize a widespread society of bridge-wreckers. . . . What if one of them" [the steel arches] "was [*sic*] destroyed at a time when the double railway track over the river, and the wide roadway above for other traffic, were necessary to bring reinforcements to a stricken army?" Alas, "not a scrap of attention did he" [Captain Eads] "pay to military matters." "Every bridge in the United States is a target of this sort in one form or another." We may expect our militaristic shouters for preparedness to inaugurate presently, with the help of Mr. Sparrow's vaticinations, a new campaign for a half billion of dollars with which to fortify several thousand bridges, just as a starter! Apart from this hysteria over defence the book contains much curious and interesting information; the author has travelled widely and studied an extensive body of literature on his subject. It is unfortunate that this information is so confused in arrangement and so encumbered by irrelevant divagations as to be of little value to the serious student, in spite of a copious and entertaining index.

The second edition of Mr. W. H. Koebel's "Argentina, Past and Present" (Macmillan; $5 net) calls for no lengthy comment. The unstatistical character of the work has necessitated little revision, for the changes in Argentina during the last few years, great as they are, have been rather in magnitude than in kind. Of significant changes noted, the most striking is the removal of the United States as a competitor in the business of importing meat. An additional chapter on Buenos Aires amplifies and brings up to date the sketch of the crowded life of the Southern metropolis. The distinctly new feature of the volume is the introduction of a series of colored illustrations well in keeping with the descriptive text. The first edition appeared in 1911.

Notes

T. Fisher Unwin, London, announces the publication of "The Psychology of Leadership," by Abdul Majid.

A volume of J. A. K. Thomson's essays is published by George Allen & Unwin, London, under the title, "The Greek Tradition."

Paul Elder & Co., San Francisco, will publish shortly a children's phantasy, introducing the garden bronzes of children in the Fine Arts Colonnade of the San Francisco Exposition. It will be entitled "Little Bronze Playfellows," and is written by Stella G. S. Perry.

The following announcement of new and forthcoming books is made by the University of Chicago Press: "A Short History of Belgium," by Leon van der Essen; "Individuality in Organisms" (University of Chicago Science series), by Charles Manning Child; "Public Libraries and Literary Culture in Ancient Rome," by Clarence E. Boyd; "Parts of the Body in Older Germanic and Scandinavian," by Torild W. Arnoldson.

Were it not for the title, and for the name Pyeshkov that runs through it, one might think Maxim Gorky's "My Childhood" (Century Co.; $2 net) a typical piece of Gorky's fiction. The atmosphere of the volume is expressed in one of its own sentences: "A smell of rottenness, warm and woolly, like a sheep's fleece, crept in at the window" (p. 370). It is a tale of misery, at times physical, as when the child is cruelly and maliciously beaten by his grandfather, and always acutely moral. The lad witnesses the continual quarrels, extending to blows and worse, of his grandfather and his two uncles; he watches his grandfather beat his grandmother about the head; he attempts to stab his stepfather when that youth kicks his wife, the boy's mother, in the breast. He gradually learns of his mother's passionate, pleasure-loving, erring nature, over which he scarcely throws a mantle of decent reserve. He relates how his drunken uncles once tried to murder his father by pushing him into a hole through the ice and stamping on his fingers as he clutched at the edges. The father, fortunately sober, kept his face above water in the centre of the pool, and clambered out when his tormentors had left him to drown. Then he not only refused to denounce his brothers-in-law to the police, but contrived a story that would hide their guilt.

This most sordid narrative receives pathos and literary power from a strange, yearning tone which runs through it, and which is implied rather than directly expressed. The boy loves his kindly, drunken grandmother, whose gentle God of forgiveness he contrasts with the cruel, formalistic God to whom his grandfather prays. The lad's world is hideous, but from it he knows that there must spring something better:

> As I remember these oppressive horrors of our wild Russian life, I ask myself often whether it is worth while to speak of them. And then, with restored confidence, I answer myself—"It is worth while because it is actual, vile fact, which has not died out, even in these days—a fact which must be traced to its origin, and pulled up by the root from the memories, the souls of the people, and from our narrow, sordid lives."

And there is another and more important reason impelling me to describe these horrors. Although they are so disgusting, although they oppress us and crush many beautiful souls to death, yet the Russian is still so healthy and young in heart that he can and does rise above them. For in this amazing life of ours not only does the animal side of our nature flourish and grow fat, but with this animalism there has grown up, triumphant in spite of it, bright, healthful, and creative—a type of humanity which inspires us to look forward to our regeneration, to the time when we shall all live peacefully and humanely (p. 346).

In one of his letters Dostoievski complains that Turgenieff and Tolstoy write "no more than 'Landed-proprietors' literature.' And that kind of literature has said all it had to say—particularly well in the case of Leo Tolstoy." The remark was absolutely true at the time it was made, in 1871, though Tolstoy later showed that his genius was not bounded by the world of landed-proprietors to which he himself belonged. The Russia of "War and Peace" and "A House of Gentlefolk" is a thing of the past. The new Russia, inchoate and wretched, has produced no voices comparable to those of the older time. Gorky and his successors have not the calm power of Turgenieff and Tolstoy. But perhaps Gorky, with his faithful picture of a dark undercurrent of Russian life, and his note of hope, if hardly of cheer, may prove to be a prophet of a finer literature to come, as well as of a better social order.

There recently appeared from the Government Printing Office at Washington a new report on the fur seals of the Pribilof Islands ("The Fur Seals and Other Life of the Pribilof Islands, Alaska, in 1914," by Wilfred H. Osgood, Edward A. Preble, and George H. Parker. Washington, D. C.: Government Printing Office), which, if not the final word, is at least the latest word on the much-vexed problem which these animals represent. The present Commission was chosen at the request of the Secretary of Commerce by the National Academy of Sciences, the Smithsonian Institution, and the Secretary of Agriculture, in order that its personnel might be free from contact with past controversies. The report restates in admirable manner the essential facts of seal life, and it is profusely illustrated with excellent photographs and rookery charts. Interest in the report, however, centres almost exclusively in the conclusions of the Commission regarding the suspension of land sealing provided for in the Fur Seal law of 1912. It will be remembered that in 1911 the United States obtained the coöperation of Great Britain, Japan, and Russia in a treaty suspending pelagic sealing, the recognized cause of the herd's decline. In return for this suspension the United States agreed to share with Canada and Japan its commercial catch of male seals taken on land. In enacting the law necessary to give this treaty effect, Congress, in 1912, added a provision suspending land sealing, and consequently the commercial catch, for five years, providing also for its curtailment for nine further years, in all fourteen years, just one year less than the full life of the treaty.

Investigations made in 1912 and 1913, and reported to the Secretary of Commerce, indicated clearly the futile and wasteful nature of the suspension of land sealing, but these reports were put aside as biassed and influenced by past controversies. The new Com-

mission was sent to review the work. This is what the Commission of 1914 has to say regarding the law:

The condition of the fur seal herd in 1914, as set forth in this report, is such that resumption of commercial sealing on a moderate scale in 1915 could be undertaken with confidence that the protection and growth of the herd would not be jeopardized in the slightest degree (p. 103).

The blue fox industry, capable of yielding $50,000 or more per annum, is reduced to small proportions through lack of seal meat for food.

The continued suspension of sealing . . . will cause an estimated minimum loss of $2,700,000.

The suspension of sealing prevents the immediate determination of the proportion of seals which naturally survive to killable age —a most vexed and vital matter.

The law now offers no compensations for its many disadvantages (p. 105).

There are good reasons both from the standpoint of economy and from that of the welfare of the herd to resume commercial sealing at once (p. 148).

It is hard to see how a more complete indictment of the law of 1912 could be made. The criticisms are all moderately stated. Plainly it was the intent and hope of the Commission of 1914 that immediate steps would be taken to effect repeal of the law, even in time to save the commercial catch of 1915. The investigation was concluded in August, 1914. The report is dated January 23, 1915. It reached Congress only on February 17, in the closing days of the long session, too late for action. The commercial catch of 1915 is also wasted—in addition to the similar waste for 1913 and 1914. The fate of this report is quite in keeping with that of all scientific work done in recent years for the Government in the fur seal matter.

Mr. William S. Lloyd, of Germantown, Philadelphia, has issued a "Catalogue of various editions of Robinson Crusoe and other books by and referring to Daniel Defoe" which at once takes its place beside the work of Hermann Ullrich as an indispensable guide to Defoe bibliography. The pamphlet is not too carefully printed, and some of the assumptions in the notes—for instance, that, because few copies of the second edition of Crusoe have been found it must have been a small edition—are dubious. But as collector Mr. Lloyd has been singularly successful. He has paid his chief attention to "Robinson Crusoe" and, though he has copies in thirty-five other tongues, to editions of that book in English; but of English Crusoes he has gone far towards realizing his boyhood ambition to own the largest number of copies that could possibly be collected. The list includes 277 items, not all separate, but each, in some way or other, distinct. Cox's abridgment of 1719 is lacking; so are the abridgment of 1724 and the issues of 1726. There are seven printings of the first part and three of the second, for 1719. Special attention has been given to obtaining all the issues published by Taylor. But in an introductory letter from Professor Trent there is announced for the first time the existence of a second issue of the so-called fourth edition, which Mr. Lloyd has yet to find.

Norman Duncan's "Australian Byways" (Harper; $1.75 net) is a good book for the busy man to have at hand when he needs a five minutes' pause for diversion or amusement. Only now and then are any of its fifty-one hits of chapters linked by any closer relation than their general geographic background, and one may read at the random opening of the book without loss. Chapter headings like The Scowling Man, The Melancholy Landlady, and The Sentimental Smithy point the reader to some very effective bits of impressionistic characterization. Stories of the old gold-seekers, brave exploits of British police officers in arresting native criminals, uncanny feats of the "black trackers," whims of camels and cannibals, native sorceries and superstitions, with countless other subjects, have each their little turn and then pass out of sight. One picks up in two or three chapters the story, common to the annals of British colonization in various parts of the world, of the vital change which has taken place in the official attitude towards native populations, substituting the orderly administration of justice and the rendering of substantial material aid for the old disposition to look at the "blackfellows" in much the same light as the bushes in the jungle which must be cut and burned to prepare the soil for the plough. In this more enlightened policy the Queensland Mounted Police have established a record for character and efficiency something like that of the corresponding force in Canada, which deals so successfully with the Indians and half-breeds of the wild Northwest. In his characteristic way, Mr. Duncan gives us just a hint of all this in the few deft strokes with which he pictures the shocked surprise of a Queensland inspector on learning that a Police Inspector of New York was actually in custody, charged on apparently good evidence with complicity in a murder.

The first volume of Treitschke's masterpiece "Deutsche Geschichte im neunzehnten Jahrhundert" has now appeared in an English translation by Eden and Cedar Paul (McBride, Nast; $3.25 net). It is to be followed by five more volumes at intervals during the coming year. Thus the war is responsible for the production of a work which should have been available in English years ago. The translation is acceptably done; much of the ardor and eloquence of the original has indeed evaporated, but that was inevitable. The late Professor Cramb spoke of Treitschke as a combination of Carlyle and Macaulay, uniting the turbulent rhetoric and moral fervor of the one with the popular lucidity of the other. The translators have acted wisely in not seeking to reproduce such a combination of qualities. Their rendering is faithful without being too literal; only rarely does an awkward sounding sentence occur. They might have noted, however, that *Pathos* does not mean "pathos," as it has been several times rendered. The publishers state by way of recommendation that this early work of Treitschke is not to be confounded with the truculent chauvinistic pamphlets and utterances of his later years. Nevertheless, in this first volume, which begins with a wistful reminiscence of the old German Empire and ends with a stirring panegyric on the War of Liberation and that new glory of German history, "das Volk in Waffen," Treitschke already displays at times a type of patriotism which is repellently sectarian. The reader will easily appreciate his proud boast that he wrote only for Germans. Even here there are many indications of those three sentiments with which he has so thoroughly infected modern Germany: glorification of war, jealous hatred of England, and contempt for small states. The short introduction by William H. Dawson, perhaps the best English authority on things German, is a model of restraint and propriety in war-time. Each volume of the translation is to have a separate index—an advantage which the original does not possess.

"Le Pangermanisme" (Paris: Librairie Armand Colin; 50 centimes), by Charles Andler, professor of economics in the University of Paris, is one of the interesting series of "Etudes et Documents sur la Guerre," to which Bédier's pamphlet has formed hitherto the most noteworthy contribution. The brochure at once suggests to an American reader a comparison with Professor Usher's much discussed book. It is, of course, far more modest in scope and contains less speculation. On the other hand, it excels in the precision of its information. We learn, for instance, that the Pangermanic League, a definite organization of agitators, was formed in 1891 under the leadership of Dr. Karl Peters. This small but noisy band prosecuted its propaganda with unremitting vigor, in spite of obloquy and ridicule, and eventually succeeded in leavening public opinion through such popular auxiliary organizations as the Navy League, the Colonial Society, etc. It is Professor Andler's opinion that Pan-Germanism virtually began with the "neuer Kurs" inaugurated by William II when he dismissed Bismarck, and that the year 1897 marks the definite conversion of Germany to an imperialistic policy. The author knows the currents of German politics intimately and seems to have mastered the extensive and variegated literature of his subject. In reply to the objection that most of the Pangermanic utterances were irresponsibly freakish, he argues with much plausibility that the German Government tacitly sanctioned the agitation for many years and gradually conformed its policy to the programme of the party. As is natural in a Frenchman, Professor Andler devotes considerable space to the Moroccan question. Much of what he says here is rendered superfluous if we accept at its face value the recent frank disclosure of Dr. Paul Rohrbach, an unimpeachable authority, that Germany's interference in Morocco was based on neither rights nor genuine aspirations, but was only a feint in order to obtain concessions elsewhere—*e. g.*, in Central Africa. There is a short appendix on Pangermanism in Austria and Panmagyarism in Hungary.

HOLIDAY BOOKS FOR CHILDREN.

Publishers would be well advised at this season if they were to devote more attention than they do to producing attractive editions of juvenile classics. Few of these have come before us this year. Houghton Mifflin publishes a charming edition of Charles Kingsley's perennially fascinating "Water Babies" ($2 net), illustrated in color and black and white by that clever artist, W. Heath Robinson. From the press of Harper & Brothers we have an admirably printed edition, with illustrations by Louis Rhead, of Stevenson's "Treasure Island." Louisa M. Alcott's "Little Women" is illustrated in color by Jessie Willcox Smith, and republished now by Little, Brown & Company. Ginn & Company are responsible for two unpretentious but convenient and welcome volumes, Lamb's "Tales from Shakespeare" (48 cents) and Wyss's "The Swiss Family Robinson" (50 cents), the former accompanied by illustrations made from the outline plates in the Valpy Shakespeare, the latter illustrated by J. H. Stickney.

Oscar Wilde's collection of fairy stories in "A House of Pomegranates," which Wilde himself described, characteristically, as "intended neither for the British child nor the British public," is issued in a handsome edition by Brentano's ($3.75 net).

Second only in merit as literature for children to the well-tried volumes of the type that we have mentioned we may class certain kinds of anthologies. Such a volume is the selection of "Famous Old Tales," arranged by Henry Cabot Lodge and published by Houghton Mifflin (45 cents). This consists of a dozen of the best-known and most respectable English fairy stories, beginning with "Jack the Giant-Killer" and concluding with the tale of Whittington and his cat. Two other collections of fairy stories are Anna Alice Chapin's "The Everyday Fairy Book" (Dodd, Mead; $2 net) and "Fairy Tales Every Child Should Know," edited by Hamilton Wright Mabie, with illustrations by Mary Hamilton Frye (Doubleday, Page; $2 net). We may mention also under this head another publication by Ginn & Company, Robert Edward Francillon's "Gods and Heroes" (48 cents), which gives a good elementary idea of Greek and Roman mythology, and William Morris's "Stories from the Earthly Paradise," retold in prose by C. S. Evans (Longmans; $1.50 net). An anthology of verse for children which we can cordially recommend is Louey Chisholm's "The Golden Staircase," published by Putnams and effectively illustrated by M. Dibdin Spooner. Good also is the plan of Kate Dickinson Sweetser's "Ten Great Adventurers," which records the exploits of such typical historical heroes as Francis Drake, John Paul Jones, and Giuseppe Garibaldi. The volume, which is published by Harpers ($1.50 net), is fittingly illustrated by George Alfred Williams. Another historical book, but in more fictional form, is Commander Thomas D. Parker's "Young Heroes of the American Navy" (W. A. Wilde Company; $1 net).

Juvenile fiction appears to be as plentiful as the adult article. The camp and the boy and girl scout movement are the inspiration of several volumes, among which we may mention "Smuggler's Island," by Clarissa A. Kneeland (Houghton Mifflin; $1.25 net); "The Camp Fire Girls of Brightwood," by Amy E. Blanchard (W. A. Wilde Company; $1 net); "Boy Scouts of the Wildcat Patrol," by Walter Prichard Eaton (W. A. Wilde Company; $1 net), and "Camp Bob's Hill," by Charles P. Burton (Holt; $1.25 net). Historical in atmosphere is "Our Little Norman Cousin of Long Ago," by Evaleen Stein (Boston: Page); quite modern and somewhat sociological is Inez Haynes Gillmore's "The Ollivant Orphans" (Holt; $1.35 net), and the same may be said of "His Big Brother," by Lewis and Mary Theiss (W. A. Wilde Company; $1 net); modern, too, is "Surprise Island" (Harper; 50 cents), James H. Kennedy's treatment of Indians and fairies. Harpers publish "Robin the Bobbin," by Vale Downie (80 cents net). On the romantic side, yet not quite touching the domain of Fairyland, we have "The Kingdom of the Winding Road," by Cornelia Meigs (Macmillan; $1.25 net). Across the border of modern Fairyland is Abbie Farwell Brown's "Kissington Town" (Houghton Mifflin; $1.25 net), while "Oliver and the Crying Chip," by Nancy Miles Durant (Sherman, French; $1 net), would probably not have been written but for Lewis Carroll's White Rabbit. For children under twelve we have "The Mexican Twins," by Lucy Fitch Perkins (Houghton Mifflin; $1 net), and "Tommy Tregennis," by Mary E. Phillips (Dutton; $2 net), the last pleasantly illustrated and well printed, suitable for reading aloud. "The Big Brother Play-Book" (Little, Brown; 50 cents) presents the favorite fables of Mrs. Laura E. Richards in dramatic form, suitable for acting by children, and Elsie Hobart Carter's "Christmas Candles" (Holt; $1.50 net) contains a dozen acting plays appropriate to the season. "Beth's Old Home," by Marion Ames Taggart (W. A. Wilde Company; $1.25 net), is a story for young girls.

Under the heading, "Entertainingly Informative," we may class such volumes as: "Tell-Me-Why Stories About Color and Sound," by C. H. Claudy (McBride; $1.25 net); "Object Lessons for the Cradle Roll" (Pilgrim Press; $1), by Frances Weld Danielson, and two books of elementary nature-study done in fairy-tale form, by Thornton W. Burgess, "Mother West Wind 'Why' Stories" (Little, Brown), and "Tommy and the Wishing Stone" (Century; $1 net). More ambitious and more advanced is "The Children's Book of Birds," by Oliver Thorne Miller (Houghton Mifflin; $2 net), which has excellent illustrations. "What Shall We Read to the Children?" (Houghton Mifflin; $1 net) is a book of guidance for parents, by Miss Clara W. Hunt, head of the children's department in the Brooklyn Public Library.

For younger children we may list the following: "Who's Who in the Land of Nod," by Sarah Sanderson Vanderbilt (Houghton Mifflin; $1 net), charmingly illustrated by Ruby Winckler; "Nixie Bunny in Holiday-Land," by Joseph C. Sindelar (Chicago: Beckley-Cardy Company; 40 cents); "The Bunnikins Bunnies' Christmas Tree," by Edith B. Davidson (Houghton Mifflin); "The Sleepy Song Book," verse by various authors, music by H. A. J. Campbell, illustrations by Anne Anderson (McBride; $2 net); "Still More Russian Picture Tales," really entertaining tales in pictures for children by Valery Carrick, translated by Nevill Forbes (Oxford: B. H. Blackwell); "The Wishing Fairies," by Madge A. Bigham, illustrated by Fanny Y. Cory (Dodd, Mead; 75 cents net); "The Bylow Bunnies," by Grace May North (Fenno); "Little Miss Muffett Abroad," by Alice E. Ball, short verses on various countries with appropriate illustrations by H. Boylston Dummer (Pilgrim Press; $1 net); "Uncle Wiggily Longears," by Howard R. Garis, illustrated by Edward Bloomfield (Fenno; $1.50 net); "Tales to be Told to Children," by Mary Dickerson Donahey (Chicago: Howell Co.; 75 cents net). For children of mechanical or artistic turn of mind we have William Ludium's "The Scissors Book" (Putnam; $1 net), and Clifford Leon Sherman's "The Dot Circus" (Houghton Mifflin; $1 net).

Attention may be drawn to two series which lie before us. The Little Folks series has a distinct educational value. Three sets, each consisting of four volumes, have been issued under the editorship of Dorothy Donnell Calhoun (Abingdon Press; 25 cents net a volume): "Little Folks of the Bible," "Little Folks in Art," and "Little Folks from Literature." The general scope of the series may be indicated by quoting the sub-titles of the four volumes in the "Little Folks of the Bible": "Boys of the New Testament," "Girls of the Bible," "Boys in the Days of the Prophets," "Boys in Patriarchal Homes." In the volumes devoted to literature, quotations dealing with children are given from various authors, and at the end of each piece of text is appended a list of questions designed to test a child's intelligent understanding of what has been read. The other series is the Pogány Nursery Book in four volumes, "The Gingerbread Man," "Little Mother Goose," "The Children in Japan," and "Cinderella" (Robert M. McBride; 50 cents net each). Willy Pogány's pictures are so well known and so excellent as to need no endorsement. The text accompanying the pictures, supplied by various authors, is generally well done.

The hero of Ian Hay's delightful piece of humor, "Scally" (Houghton Mifflin; 75 cents), is a puppy which came to its owners from a pond, dragging a brick behind it, and grew up to be a *monstrum informum ingens*. Of the brief adventures of the dog and his masters, and of the part played by the hero in the wooing of Eileen and the poor curate, the little book is made, and there they may be read in a happy half-hour. Scally, we may observe, is brief for Excalibur, the name chosen by said Eileen for the dog because, like Tennyson's mystic blade, he "rose from out the bosom of the lake." We fear his origin was otherwise obscure, and if his family tree, like that of one of Thackeray's characters, did not show an ancestor *suspensus per col.*, he himself may be said to have entered fiction *submersus* by the same organ; but he enacts well the rôle ascribed to him in the sub-title of his biography, "a perfect gentleman."

Science

RESEARCHES IN MARINE BIOLOGY.

Papers from the Tortugas Laboratory of the Carnegie Institution of Washington. Vol. VI. Publication 183. Washington: The Carnegie Institution.

The present volume of highly specialized studies may be taken to represent one of the periodic fruits of research in a single field, that of marine biology, or as the index of the work of a great instrument designed for the advancement and diffusion of knowledge among men. Viewed in either way, this collection of papers reflects credit upon all concerned, for it represents biology in its fullest sense, in which physiological and morphological problems are attacked by the best modern resources of technique and experiment.

The director of the Tortugas Laboratory, Dr. Alfred G. Mayer, contributes three important papers upon the effects of temperature, nerve-conduction, and loss of weight in marine organisms, followed by others on regeneration, after removal of the nervous system, fusion-experiments in marine larvæ, permeation of tissues by alkalis, protozoan parasites, and the development of dimorphic spermatozoa in mollusks.

Prof. Ulric Dahlgren presents an interesting study of one of the electric fishes, the African Gymnarchus. Of the seven fishes known to produce electricity, two of which are elasmobranchs, this remarkable teleost is said to be the rarest. Some of its em-

bryos that were placed at the author's disposal were collected, we are told, by Dr. Samuel Budgett, an Englishman, "under conditions of sickness and hardship that few white men could stand," who lost his life as a result of this and other African experiences. Some may remember that fifteen years ago another young and enthusiastic zoölogist, an American, Dr. Nathan R. Harrington, also lost his life while engaged in a similar quest.

The Gymnarchus resembles a small or very short eel, having a long, pointed snout and a heavy dorsal fin that runs along the back to near the tip of its attenuated tail. When swimming backward, says the author, the animal uses this sensitive pointer like a finger to feel its way. The actual extremity of this "finger-tip" is somewhat blunt, and contains "the largest and best-developed portion of the electric organ, which fills the lateral parts of the body at this point almost to the exclusion of the ordinary muscle." The electricity-producing organ itself consists of four tubes or spindles, which traverse the hinder part of the body on either side and concentrate at the tail. These are disposed into an upper and a lower group, and lie as close to the skeleton as possible. Each spindle is composed of segments of a dense muscle-like substance, called the electroplaxes, embedded in a kind of "electric" tissue, which is highly vascular; moreover, the hinder ends of the electroplaxes are connected with medullated nerve-fibres, derived from the motor roots of the spinal nerves. The electric current, at the moment of discharge, would thus seem to travel from the tail towards the head.

Very little is yet known of the power of the shock which Gymnarchus can impart to man, but the native Arabs dread it to such an extent that they always give it a wide berth, especially at its nesting time. The electric organs are formed between the ninth and fortieth day and owe their development to a gradual transformation of certain striated muscles of the tail. The nerve-fibres supplying them originate in conspicuous electric-motor cells of the cord, and terminate in nerve-clubs which appear to be "embedded in an invagination of the surface rather than in a cavity in the substance of the electric layer."

The volume is concluded by a beautifully illustrated "History of the Spotted Eagle Ray," by Dr. E. W. Gudger. The eagle rays are rather prepossessing giants, and, owing to their remarkable color-patterns, are the most striking of all the flat-bodied selachians of North America. "Their wing-like, pointed pectoral fins" and "their long, slender, whip-like tails, armed with one or more serrated spines," not to speak of their jaws, filled with large pavement teeth, leave little chance for mistaken identity. This particular species, called by some of the old naturalists the Narinary, may be considered the "beauty" of the family; its whole upper surface is thickly studded with white, or bluish white, spots on a dark ground, while below it is as white as snow. In some of the larger specimens recorded, the length and breadth were six feet, and the tail of the same dimensions, while another, taken off Cape Lookout in 1912, had a spread of seven feet seven inches.
